George Mesta, president of the Mesta Machine Co., Pittsburgh, has sailed for Europe on a combined pleasure and business trip to last until November.

Joseph E. Sweeny now is salesman for the Ideal Concrete Machinery Co., Cincinnati, having been honorably discharged from government service.

Frank Smith, Bridgeport, Conn., has taken the position of credit manager of the Lincoln Twist Drill Co., Taunton, Mass. He served in the army ordnance department during the war.

J. Leonard Replogle has received the decoration of the chevalier of the legion of honor from the French government in recognition of his services during the war as director of steel supplies.

H. A. Daniels now is identified with the sales force in the Cleveland office of Manning, Maxwell & Moore, Inc., machine tools, cranes, etc. He formerly was sales manager for the Baush Machine Tool Co., Springfield, Mass.

Robert Voigtlander, who for the past seven years was manager of the architectural iron and bronze department of the Robert Mitchell Co., Ltd., Montreal, Canada, has been made southern sales manager of the Southern Brass Mfg. & Plating Co., Houston, Tex. Mr. Voigtlander's experience includes 19 years employment and association with brass foundries.

W. S. Vrooman, who for some time has been identified with the Cleveland Tool & Supply Co., Cleveland, handling machine tool correspondence, has become identified with the Cleveland-Duplex Machinery Co., 1224 West Sixth street, that city, as office manager. By this arrangement, President G. J. Hawkey will be relieved of some of his duties and will be able to give more time and attention to the trade.

Charles Russell, credit and office manager of the Russell & Erwin Mfg. Co., New Britain, Conn., has resigned

ROWLAND S. LEBARRE

Who as announced in THE IRON TRADE REVIEW of July 24, has been made general sales manager of the alloy steel department of the Interstate Iron & Steel Co., Chicago.

to accept a similar position with the Hart & Hegeman Mfg. Co., Hartford, Conn. Mr. Russell has been with the company 18 years.

H. A. Wolcott has been appointed Chicago district manager for the Ohio Locomotive Crane Co., Bucyrus, O. His headquarters are 1417-19 Lytton building, Chicago. Mr. Wolcott has had several years' experience in handling locomotive cranes.

George T. Trundle Jr. has resigned as chief engineer of the American Multigraph Co., Cleveland, after a service of 12 years. He has opened offices at 241 Brotherhood of Locomotive Engineers building, that city, as a consulting engineer. He will specialize in management, production, machine design and human relationships. During the war Mr. Trundle invented several machines for munitions production. Among these was a thread mill which greatly increased the American Multigraph Co.'s fuse production.

Joseph W. Peters is affiliated with the sales organization of the Reeves & Skinner Machinery Co., St. Louis, having resigned the secretaryship of the Engineers club of that city. W. E. Rolfe, 305 City Hall, will serve as secretary of the club until a permanent officer is elected.

W. L. Layton now is traffic manager at the main works of the Westinghouse Electric & Mfg. Co., East Pittsburgh, having been transferred from Springfield, Mass., where he has served the New England Westinghouse Co., in a similar capacity for four years.

Frank O. Leitzell has become affiliated with the Blaw-Knox Co., Pittsburgh, as an engineer-salesman in the sheet and tin mill specialties department. He formerly was assistant to the general manager of the H. K. Porter Co., Pittsburgh. Mr. Leitzell was graduated from Pennsylvania State college in 1907.

R. R. Shafter has returned to the sales organization of the Traylor Engineering & Mfg. Co., Allentown, Pa., maker of mining, milling, crushing and smelting equipment, after an absence of two years as general superintendent of the shipyard of the Traylor Shipbuilding Corp. Mr. Shafter will be New York district manager in charge of the Traylor Engineering & Mfg. Co.'s office at 30 Church street, New York City.

A. T. Miles, a member of the engineering department of the New Departure Mfg. Co., Bristol, Conn., has been elected a chevalier of the French legion of honor in recognition of his valuable services. Mr. Miles became an ambulance worker with the French army in 1916, obtaining a commission. In 1917, after America entered the war, he became identified with an American ambulance unit as first lieutenant and in addition to this latest honor, had received the French croix de guerre with palm and star.

Activities Described

For Reconstruction in Foreign Countries—Report of Council is Specific

Readjustment and reconstruction activities in foreign countries, particularly relating to industrial, financial and labor features, are described in a 188-page report just issued by the council of national defense. This is a compilation of reports of the most specific and informative character which have been published in the United States and abroad, and also a summary of United States commerce reports.

Much attention is devoted to reconstruction work in the United Kingdom, Germany and France. While Germany is attempting an ambitious program of socialization of industry, it appears that in Russia the plan has failed. "German business circles fully realize that the signing of peace only means the beginning of a new and even harder commercial war and that all the resources of business will be required to put industrial Germany on a sound basis," according to a recent commerce report, which proceeds to outline some of the means taken by Germans to re-establish her export trade. Among these are the organization of a liability company to open warehouses and establish agencies abroad, educational activities and exhibitions, and the creation of a bureau to deal with foreign questions other than political.

Attention is called to the fact that French manufacturers engaged in rebuilding projects are buying collectively and not as individuals, and that a "Societe Co-operative des Mines de Fer et de la Siderurgie des Regions Sinestres" is conducting commercial and industrial operations necessary for reconstructing the iron mines and steel works in the invaded districts. The Societe Mineraux et Metaux is taking a leading part in the purchase of metals in the United States. Control of the iron and steel consortium over imports was withdrawn early this year and the consortium exists now solely for the liquidation of stocks held in various parts of France.

London bankers are anxious to invest heavily in financing Belgium's industries, although Belgian financial institutions have arranged for a credit of $50,000,000 in the United States and are now seeking an additional credit of a like sum. British bankers have been relieved of all wartime formalities in financing exports.

Thirty British trades are co-operating in the government department of scientific and industrial research which aims at "a complete revaluation of science in the scale of British thought and practice," according to a commerce report. Much work is being done by the British government to assist the development of its iron and steel industry. The British Manufacturers' association has merged with the Federation of British Industries and many overseas trade commissioners have been appointed to keep the 16,000 members of the organization advised of the opportunities in foreign countries and of the activities of their competitors.

The Cuban government is going to create a geological survey which is to be modeled after that of the United States. Cuba is making especially earnest efforts to increase its output of chrome and manganese ore.

Obituaries

FREDERICK SARGENT, head of the engineering firm of Sargent & Lundy, Chicago, and expert in electrical generating stations, died July 26 at his home in Glencoe, a suburb of Chicago. He was taken ill while on a trip to England in May and did not improve. He was born in Cornwall, England, in 1859, and came to the United States in 1880, engaging as designer of steam engines for marine purposes. He was connected with the Sioux City Engine Co. and latter with E. P. Allis & Co., Milwaukee, now the Allis-Chalmers Mfg. Co. In 1884 he removed to Chicago and was consulting engineer of the commonwealth Edison Co. of that city. The firm of Sargent & Lundy was formed in 1891 and Mr. Sargent was consulting electrical engineer for the World's Columbian exposition at Chicago. During the recent war he was consulting engineer for the power station of the arsenal at Edgewood, Md., and for the United States government in other projects.

William Althoff, president of the Twentieth Century Brass Co., Belleville, Ill., and one of the founders of the Eagle Foundry and the St. Clair Foundry, died at Belleville, Ill., July 23, aged 70. He was born in Westphalen, Germany, and came to America when 11 years of age.

Patrick Kennedy, inventor of many electric lighting devices for steam railways, died July 21, at his home in Brooklyn, aged 69. Until five years ago he was chief engineer of the Consolidated Railway Electric Light & Equipment Co. Mr. Kennedy, in 1878, formed the firm of Kennedy & Diss, machinists, of which he became sole owner in 1894, continuing the business thereafter as the Kennedy Machine Works.

Robert D. Schulte, aged 71 years, former blast furnace builder, died Wednesday afternoon, July 23, at his home in Mt. Lebanon, Pittsburgh, after a short illness from pneumonia. Mr. Schulte, who was born in Germany, came to this country when 19 years old and has resided in the Pittsburgh district practically ever since. He was well known in the iron and steel trade. Previous to his retirement from active business 15 years ago, Mr. Schulte was associated with the late Harry Quigg.

La Verne W. Noyes, president of the Aeromotor Co., Chicago, died July 24 after an illness of several weeks of pneumonia and heart trouble, aged 70 years. He was born at Genoa, N. Y., and finished his education in the Iowa State college. He moved to Chicago in 1879. He had much inventive genius and perfected several harvesting machines. He had been president of the Illinois Manufacturers' association, the National Business League of North America and the Chicago Civic Federation. He was also a member of the American Association for the Advancement of Science and the president of the board of trustees of the Chicago Academy of Science.

Clarence W. Hathaway, who for the last eight years has been metallurgist for the Granite City Steel Works branch of the National Enameling & Stamping Co., Granite City, Ill., was drowned on July 19, while swimming in the Mississippi river on July 19. He was born in Columbus, O., in 1886 and received his higher education at Ohio State university. Before becoming affiliated with the National Enameling & Stamping Co., Mr. Hathaway had been employed by the United States Steel Corp., at Gary, Ind. He was a member of the American Chemical society, the Metallurgical Society of America and the American Ceramic society.

Better Orders

Are Reported by Manufacturers of Refractories—New Work Increasing

Pittsburgh, July 29.—Some producers of refractories in this district report that orders are coming in in good volume. Steelmakers who have not been in the market for a long time appear to have about cleaned up supplies that they had on hand and are seeking requirements for new construction and repair work. Most of the demand is for first quality, the market for the Pennsylvania grade being quoted at $36 to $40 per 1000 f.o.b. works. As a general thing prompt shipment is being asked. Some producers of refractories, however, report that business is only moderate but that they expect further improvement in the near future. Complaint is made from some districts of a scarcity of cars. In this connection it has been reported that the railroad administration is about to release 6000 cars which are said to have been accepted finally by the railroads.

Refractories

(Per 1000 f. o. b. works)

FIRE CLAY BRICK
(First Quality)

Pennsylvania	$36.00 to 41.00
Ohio	36.00 to 38.00
Kentucky	36.00 to 38.00
Illinois-Missouri	30.00 to 40.00

FIRE CLAY BRICK
(Second Quality)

Pennsylvania	$30.00 to 35.00
Ohio	20.00 to 25.00
Illinois-Missouri	25.00 to 30.00

SILICA BRICK

Pennsylvania	$40.50 to 45.00
Chicago	45.50 to 50.50
Birmingham	46.50 to 51.50

MAGNESITE BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 85.00

CHROME BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 90.00

BAUXITE BRICK
(Per Net Ton)

55 per cent	$ 40.00 base
76 per cent	100.00 base

Buyers Should be Notified

American Consul Wilbur T. Gracey, Monterey, Mexico, says that the attention of the consulate has been called to the difficulty that local firms are experiencing in securing acknowledgements of orders sent by them to the United States. This is a condition which was prevalent prior to the war, but with the added difficulties of trade incident to present conditions, the situation has been much intensified. It appears that firms here send orders to the United States and get no replies for several weeks or months, and in some cases numerous telegrams are sent without any replies being received. The failure to acknowledge receipt of orders causes a great deal of unnecesary trouble and anxiety, and it is believed that if American manufacturers could be brought to realize how important it is for buyers in foreign countries to know as soon as possible that their orders have been received and are receiving attention, and if possible the approximate date when goods might be shipped, it is probable that greater care would be taken in this matter.

Oppose Alabama Plan to Tax Iron and Steel

Birmingham, Ala., July 29.—Alabama coal, ore, pig iron and steel producers are opposing a bill in the legislature to place a tax of 5 cents per ton on coal and 3 cents per ton on iron ore, and an income tax and an excess profits tax. Representatives of the industries have been in Montgomery the past 10 days and have appeared before committees of the legislature. They claim the proposed tax will increase the costs of making pig iron 65 cents a ton.

Will Hold Exposition

From Oct. 27 to Nov. 8, an exposition of the manufactured and kindred products of the Mississippi valley will be held at the Exhibit building, St. Louis. It will be the first exhibition in this territory since the ending of the war. Exhibits are expected from each of the 20 states in the Mississippi valley territory, which furnishes most of the country's iron, coal, timber, wheat, corn, cotton, wool, live stock and a large portion of its manufactured products. Robert L. Burch is managing director. Foreign buyers are to be invited to attend the exposition, through the commerce department of the United States government. Delegates are expected to attend from Mexico, Cuba, West Indies, Central and South America, Europe and the Orient.

The annual convention of sales managers and district managers of the Aluminum Co. of America was held at the plant of the company at New Kensington, Pa., on June 10 and 11. A picnic for those in attendance and the 2000 employes of the company followed the conclusion of the convention.

Phenol Stocks

About to be Released by Government —Tar Products Lively

New York, July 28.—The release of some 27,000,000 pounds of phenol by the government will likely take place this week. The stocks, it is believed, will be handled by two producers and the minimum price will be set around 12 cents. The release of this phenol will come as considerable relief to consumers, who at this time find supplies rather difficult to obtain. At present, the market largely is nominal.

Following the recent reduction in prices, naphthalin continues in fairly good demand. Both the dye industry and drug trade again are in the market, and trading is on a larger scale than in several weeks. Current quotations in flakes run around 6½ to 7½ cents, and naphthalin in balls, 8½ to 9½ cents.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	0.08½ to .09½

Per 100 Pounds at Producers' Plants

Sulphate of ammonia	nominal

Contract

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plant

Phenol	nominal
Naphthalin, flake	0.08½ to .09½
Naphthalin, balls	.10½ to .11½

Per 100 Pounds Producers' Plants

Sulphate of ammonia	nominal

Both pure benzol and 90 per cent benzol are scarce, due to the continued good demand by the rubber industry and the large buying for motor fuel. Despite this shortage, however, prices on pure benzol remain unchanged at 24 to 28 cents per gallon for both spot and contract. Toluol also is scarce. Prices, though, continue to hold around 25 to 35 cents for spot and contract business. Solvent naphtha is fairly active at 22 to 27 cents.

No change as yet has come over the market on sulphate of ammonia. Domestic inquiry remains as quiet as ever, and export demand is unchanged in volume.

Capitalization of the British Dyestuffs Corp. is given as £10,000,000.

Drop Co-ordinated Credits Plan

Bankers Unable to Work Out Comprehensive Financial Aid for European Countries Which is Acceptable to Political and Industrial Powers—Independent Groups Will Assume Task—General Industrial Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

WITH the abandonment by the powerful group of New York bankers of comprehensive plans for bringing about a nationally-organized effort to extend financial assistance to Europeans, the way has been cleared for negotiation of individual banking credits in connection with export trade. The bankers, it is said, were compelled to give up what they believed to be an excellent scheme for co-ordination of the country's resources, because of the attitude of industrial interests and political powers. The floodgates will now be opened to the scores of competing requests for credits from many countries of the world.

Since the armistice $130,000,000 in credits have been advanced to European nations. The initial accommodation was the $50,000,000 acceptance credit for Belgium, after which came the $25,000,000 bond flotation for Sweden. Switzerland has disposed of $30,000,000 in bonds to American investors in the last few days, while Czecho-Slovakia has arranged with New York bankers for acceptance credits which may aggregate $25,000,000. Practically all of the European nations from neutrals to the central powers are feeling out the American investment market. Banking loans to Norway and Denmark are pending. Germany is trying to put through a huge commercial credit deal totaling at least $100,000,000. The most favorably talked of plan for aiding the late enemy country is to have banks in this country grant commercial credits which are to be used in the United States and to be guaranteed by German banks.

Announcement has been made by a Boston financier in Paris that a gigantic loan is to be sought in the United States next autumn sufficient to cover French, British, Belgium and Italian credits for a period of 30 years, or until these countries do not need any further help. That the issuance of such a loan is the only way to save Europe from collapse, is the conviction of the financial authority responsible for the announcement.

What the result will be of the bankers giving up the co-ordinated plan and throwing the burden of meeting the situation upon independent competitive groups, remains to be seen. Thus far the investment resources have absorbed with extraordinary ease all of the offerings, both foreign and domestic, that have been made. But the aggregate may prove too great, and securities of some nations too insecure to permit of full financial justice being done to all parties if no plan of allocation is adopted.

Precisely what constituted the chief difficulty in the way of the successful working out of the plan has not been intimated. Certainly the obstacles were many. In the first place it is doubtful if an exact inventory of needs of the various countries is available. This is evident from the fact that the credits required are variously estimated at from $3,000,000,000 to $10,000,000,000.

Possibly the government may be appealed to eventually, but it is not anticipated that such request would meet with success. The government has already advanced Europe all but nearly $500,000,000 of a $10,000,000,000 credit. Besides this $1,000,000,000 has been authorized to finance wheat shipments and purchases of government property abroad. Furthermore congress has authorized $1,000,000,000 to be extended in export aid by the War Finance Corp., practically none of which has been used as yet. Beyond this the government can hardly afford to go, in view of the active propaganda already being pushed to obtain a cancellation of the huge credits already extended.

Export Trade Hangs an Outcome

The plan of the bankers contemplated a vast co-ordination of the nation's resources in goods and credit and their allocation among the needy countries of Europe. Under this plan it would have been necessary for Europe to pool its resources as collateral against which the American corporation would have issued debentures. There is no present question more important to business as this one of foreign credits. The maintenance of America's prosperity depends largely upon the continuation of vast exports. While the possibilities for permanent development of export trade lie in the directions of the southern hemisphere and in the Orient, it is to this country's advantage that Europe's urgent temporary requirements be met, in order that the countries there do not break down.

Sir George Paish, the noted British economist, last week urged the cancellation of the American-Anglo loan to the allies, declaring that the economic and credit structures of those debtor countries are on the verge of collapse. Europe must buy raw materials here but even these can not be purchased unless the foreign exchange is stabilized, which may be accomplished by credits. If America fails to extend these credits, he says, exports will fall off drastically, prices may drop, industrial activity lag and depression prevail. Consequently it is up to this country to come forth with the credits as well as the goods. If this be impossible through independent measures then some form of co-ordinated effort will be imperative in the coming months.

How large a share the export situation is playing in the present recovery in the industrial situation is indicated by the fact that total exports for the fiscal year ended June 30 amounted to the unprecedented sum of $7,225,000,000 as compared with $5,928,000,000 in 1918 and $6,294,000,000 in 1917. In the five years since the outbreak of the European war America has piled up an excess of exports over imports amounting to more than $14,000,000,000, a total which corresponds roughly to the private and governmental credits advanced Europe. The excess of exports over imports for 1919 was $4,129,000,000, the largest in the history of the nation. Imports for the fiscal year were $3,096,000,000, a gain over last year, making total foreign commerce for the country $10,321,000,000. June exports of $918,000,000 were the highest record for all time for the country, and compared with $606,000,000 in May and with $485,000,000 in June, 1918. Only a portion of this stupendous increase reflects the advanced prices, the larger part

indicating the growing volume of shipments. Is the country willing to see this enormous and lucrative trade cut off?

Bethlehem Passes Extra Common Dividend

Notwithstanding the increasing volume of steel business directors of the Bethlehem Steel Corp. have decided to forego the declaration of the extra dividend of ¾ per cent, fearing that with the continued high cost of production and the present level of prices, profits would not justify any extra disbursement. The corporation has declared the regular quarterly dividends of 1¼ per cent on its A and B common stock, however. Since early in 1917 Bethlehem has paid 10 per cent on its common stock, until the end of 1918. In the first quarter of 1919 the stock was put on a 5 per cent regular basis with an extra dividend of 1¼ per cent declared for that period. In April the extra was ¾ per cent. The directors made the following statement:

"It was deemed expedient to make no extra distribution to stockholders at this time, feeling it wise to conserve the corporation's resources against the somewhat uncertain future.

"The corporation's shipbuilding plants are still producing at full capacity, principally on work taken during the war period. The steel plants as a whole are operating at about 60 per cent capacity; in some important lines at full capacity, but the small volume of orders from the railroads, who are normally the largest single purchaser, makes for an unbalanced order book.

"The corporation is continuing its policy of modernizing its plants and extending into new fields. To date this year it has spent $12,000,000 and has authorized, financed, and in course of execution further plant extensions at a cost of $20,000,000. When completed, this expenditure, in the main, will provide additional structural capacity at the Bethlehem plant, additional merchant plate and tinplate output, and a new sheet plant at the Maryland plant extension of dry dock and repair facilities at our various shipyards and the modernizing and extension of the American Iron & Steel plant at Lebanon. Material progress has been made in converting the purely war-time plants into various commercial pursuits closely allied to the different lines of our present business."

Equipment Finance Plan is Taking Form

After a meeting of the association of railway executives at New York, July 25, it was announced that the formation of a national equipment corporation to take up and finance, in a single operation, a large part of the $250,000,000 worth of equipment contracted for by the government and allocated to the various railroads, is under consideration with the government. Many of the strongest roads have joined in this movement, it was stated, in the belief that the relationship with the government would be simplified and that the general railroad situation would be benefitted. The question as to the extent to which railroad properties were maintained under government control, and the character of the control that is to be exercised after the roads are returned to private ownership also were discussed.

Shows Auto Demand

Striking improvement which has taken place in the automobile industry in recent months is reflected by the June quarter report of the Stewart-Warner Speedometer Co., which shows a large increase in earnings over the corresponding quarter of 1918. Net profits for the three months ended June 30 were $824,229 as compared with $716,728 in the same quarter one year ago. The first six months yielded net profits of $1,373,833 as compared with $944,310 in the first half of 1918. The totals are before provision for federal taxes, but after all other charges and reserves. In addition to the showing made officials state that the company has many unsettled government claims which will be paid in the near future. Sales in July are declared to be running 25 per cent greater than those of the same period last year. The company has no outstanding bank loans, and is in strong financial position.

Buys Propeller Plant

The George H. Thatcher Co. Albany, N. Y., has purchased the American Screw Propeller Co., Philadelphia, engineers and designers, and will bring this organization to Albany to act as its engineering and designing department on screw propellers and other marine work. The name of the George H. Thatcher Co. has been changed to the Thatcher Propeller & Foundry Corp.

British Firm Prospers

Directors of Pease & Partners, Ltd., a large firm of colliery owners and iron and steel manufacturers in the north of England, report a working profit on the year ending April 30 of £373,497 to which is added £104,547 undivided profit on the previous year, according to advices from the British correspondent of THE IRON TRADE REVIEW. They add £100,000 to the general reserve, pay a dividend of 12½ per cent free of tax for the year and carry forward £106,192.

Financial Crop Ends

THE Pittsburgh Steel Co. has filed an appeal in the common pleas court at Greensburg, Pa., from the $2,950,000 valuation placed upon its plant at Monessen, Pa. The statement declares that from 1916 to 1918 inclusive, the assessed valuation of the plant was $1,309,000 and that the local assessor fixed the valuation for 1919 at $1,950,000. When the Westmoreland county commissioners sat as the board of revision in Monessen in March, the Monessen assessors' figures were increased $1,000,000. This, the statement says, is an increase of 127 per cent in three years and is declared to be exorbitant.

* * *

Imbrie & Co., New York bankers, are offering an issue of $1,500,000 first mortgage 7 per cent sinking fund gold bonds of the United Iron Works, Inc., Titusville, Pa. The bonds are callable as a whole or in part, on not less than 60 days' notice at 105 and accrued interest.

* * *

Assignment for the benefit of creditors has been made by the Hyatt Steel Products Co., Ltd., Vancouver, B. C.. The firm has two plants, one for the manufacture of white metal and the other a steel foundry and rolling mill at Port Moody.

* * *

Ownership of the Inland Machine Works, St. Louis, has been acquired by O. G. Starks, who purchased the interests of all other stockholders. The industry has outgrown two plants already on its 15-acre site in the West End, and a new 3-story structure will shortly be erected

* * *

The Maxim Munitions Co., Derby, Conn., has been petitioned into bankruptcy by creditors and Harrison H. Henry, its president, has been made temporary receiver by the United States district court. A committee representing creditors also has been appointed. The Derby factory was under lease to the United States Cartridge Co., Lowell, Mass.

* * *

Capitalized at $3,000,000 the Iron Products Corp., New York, has been incorporated to absorb in a merger the Essex Foundry, Newark, N. J., and the Central Foundry Co., with plants at Newark, Baltimore, Medina, N. Y., Vincennes, Ind., Anniston, Bessemer and Holt, Ala. Both companies produce cast iron pipe, steam and flange fittings and similar products.

* * *

Brokerage firms throughout the country are disposing of the $6,000,000 6 per cent sinking fund gold notes issued by the Sloss-Sheffield Steel & Iron Co. The company plans to use the funds by paying off a $2,000,000 debt due Feb. 1, 1920, pay for the by-product coke oven plant nearing completion and to provide other developments.

Tool Buyers Reluctant to Close

Prospective Purchasers In Connection With Many Building Projects Apparently Are Withholding Business—Present Buying in Small Lots—Labor's Attitude Has Effect—Bethlehem Steel Co. Awards 19 Cranes

SIZABLE sales of machine tools are practically a missing quantity in the different machine market centers. Labor unrest is advanced in one district as the chief reason for the present diffidence on the part of buyers to close upon their requirements. They hesitate to invest capital in equipment while the labor market remains unstabilized. This lack of large business is being made up in a measure, in some districts by an increased number of small orders. These continue in good volume in practically all markets, particularly in Pittsburgh, Chicago and Cleveland. In the former, some sellers report that business is better than at any time since the armistice.

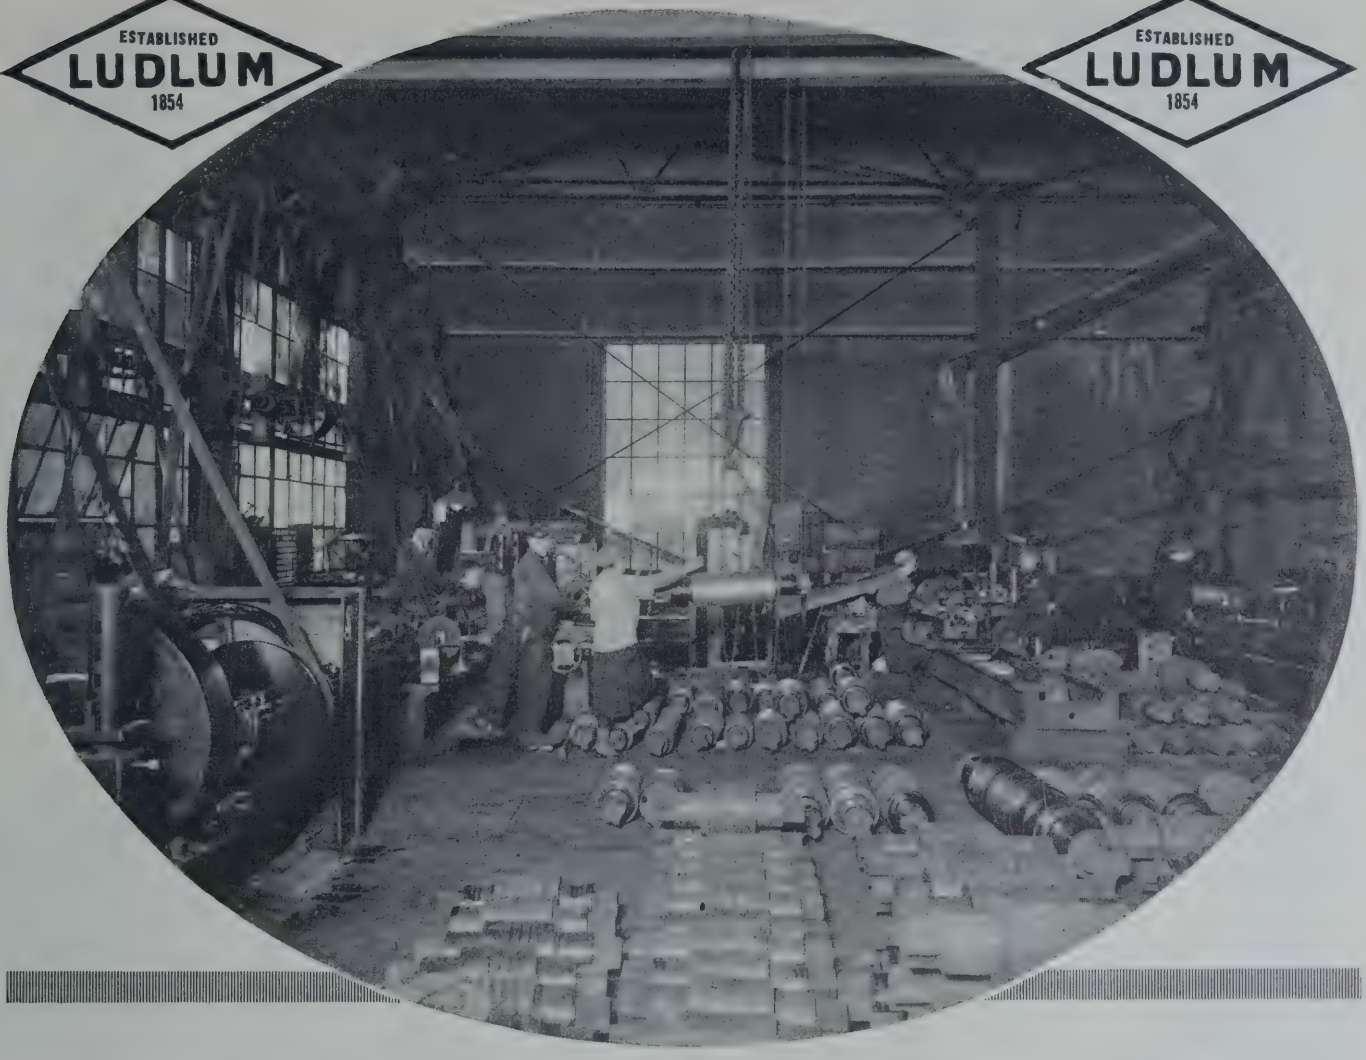
Price revision upward seems to be the order of the day. Everything points that way in Pittsburgh and in Cleveland, while in Chicago, shapers have advanced 15 to 20 per cent while two lathe manufacturers have marked their prices up about 10 per cent. Deliveries on some types of milling machines, planers and lathes are attractive at one to two months, while on other tools, three, four and five months is the time required for filling orders.

Orders placed do not come from any particular line of industrial activity, although in Chicago, the automobile, truck and tractor industries predominate. Practically every industry is represented on the order books of tool sellers and it appears that these manufacturers are rounding out their equipment to make their tool rooms and machine shops as efficient as possible.

Building activity in practically every territory presages some important sales of machinery in the near future. In the east, this is particularly noticeable, where heavy equipment is meeting a ready sale. The chief item of importance is the award of the Bethlehem Steel Co., of 19 cranes to the Alliance Machine Co., Alliance, O., for Lebanon, Bethlehem, Pa., and Sparrows Point, Md. The American Locomotive Works, also contracted for two 50-ton overhead cranes. Small crane inquiries are current from the National Marine Engineering Co., Scranton, Pa.; the Quaker City Corp., Philadelphia; Gregg Co. Ltd., Hackensack, N. J.; Sanderson & Porter, New York and Barr, Thaw & Frazer, Hoboken, N. J.

Many dealers believe that when once the railroads start to fill their tool requirements, other manufacturers will follow. Small lists from the Chicago, Burlington & Quincy and the Santa Fe roads have so far produced no orders. The New York Central is out with a small list in New York and the Pennsylvania is understood to be inquiring for some tools for Ohio shops.

Dealers in other cities are negotiating with Cleveland houses for their requirements. One fair sized inquiry comes from L. F. Seyfert's Sons, Inc., Philadelphia, for 14 tools and another comes from the H. F. Lyon Co., San Francisco, for 16 for export to Japan. This list has been circulated in Detroit, Chicago and elsewhere. Export business in the east and in the Cincinnati districts is reported to be in splendid condition, many tools going to European countries.



Eastern Tool Trade Reflects Building Activity

INCREASING building activity in the East, while not resulting so much in a direct demand for machine tools, nevertheless is making itself felt in the local equipment market. This is noticeable particularly through the channels of the metalworking industry, which is confronted with an improved demand for various fixtures and metal products, necessitating in many instances additional tools. No large lists are coming out from this source, yet the inquiries taken as a whole, present a fairly sizable amount of business. Further miscellaneous demand is also noted this week from the New England district, where manufacturers of equipment are giving much attention to the production of special tools.

A feature of the market is the revival of the list of the Standard Oil Co., 26 Broadway, New York, for shipment to Roumania. The inquiry originally called for more than 40 tools. It is understood that several revisions have been made. A small list now current is that of the New York Central railroad, including three fair sized lathes and two drills. Included in new projects to come before the attention of the eastern trade is a new plant for the Oliver Rim Co., manufacturer of automobile accessories, at Atlanta, Ga. A $200,000 addition will be erected by the Brown-Lipe-Chapin Co., gear manufacturers, of Syracuse, N. Y. The Hammond Steel Co., also of Syracuse, will expend $250,000 on the erection of a new rolling mill, power plant and other works additions. It is reported that the General Electric Co. will build a 4-story steel and concrete factory building near Newark, N. J.

The placing of a large order again features the eastern crane market this week, the Bethlehem Steel Co. awarding 19 cranes, ranging from 5 to 40 tons capacity each, to the Alliance Machine Co. Of this number, six 5-ton overhead cranes were for Lebanon, Pa.; 10 standard cranes, ranging from 10 to 40 tons capacity, and

ESTABLISHED LUDLUM 1854

A View of One End of our Roll Turning Shop

LUDLUM STEEL

In the machine shop illustrated above we do all of our own roll turning.

We also have an additional machine shop covering about one half acre of ground, in which are installed very powerful machine tools for the purpose of testing out the various grades of Ludlum Steel that we manufacture. In this shop we can reproduce any working conditions that exist in the machine shops of our customers.

Prompt shipments from our warehouse stock at Watervliet, N. Y., Detroit, Mich., Chicago, Ill., or Cambridge, Mass., handled through our District Offices.

two 5-ton charging cranes, for Sparrows Point, Md.; and one 15-ton standard crane for Bethlehem, Pa. Another sizable contract to be awarded during the past few days is that of the American Locomotive Works, involving two 50-ton overhead cranes. This business, despite previous reports to the contrary, was finally awarded the Champion Engineering Co. Other orders include one 10-ton overhead crane, with 48-foot span, placed with the Niles-Bement-Pond Co. and two 10-ton transfer bridges of 29-foot span, awarded the Victor R. Browning Co., Cleveland, for a naval project at Hampton Roads, Va. The Universal Winding Co., Providence, R. I., has bought a 5-ton electric overhead crane for a foundry. The Humble Oil Co., 26 Broadway, New York, has purchased a 15-ton handpower crane for Baytown, Tex. Fraser, Brace & Co., 1328 Broadway, New York, have awarded the Milwaukee Electric Crane & Mfg. Co. a 15-ton crane with 30-foot span.

New business includes an inquiry for a 10-ton crane, with 50-foot span, for the National Marine Engineering Co., Scranton, Pa.; two 20-ton electric cranes, with 16-foot and 18-foot spans respectively, for the Quaker City Corp., Philadelphia, both for export; and a 2½ to 3-ton crane, with 27-foot span, for the Gregg Co., Ltd., Hackensack, N. J. Sanderson & Porter, 52 Williams street, New York, are inquiring for a 2-yard bucket-handling crane, with a 34-foot span, one 5-ton electric crane, with an 18-foot span, and a 5-ton handpower, with a 27-foot span. This inquiry is understood to be in part an alternate proposition. The Hammond Steel Co., Syracuse, N. Y., will be in the market shortly for cranes and monorail equipment. The Adirondacks Steel Co., which is to build a new plant at Watervliet, N. Y., is expected in the market shortly for several cranes.

Shapers and Lathes Up in Chicago

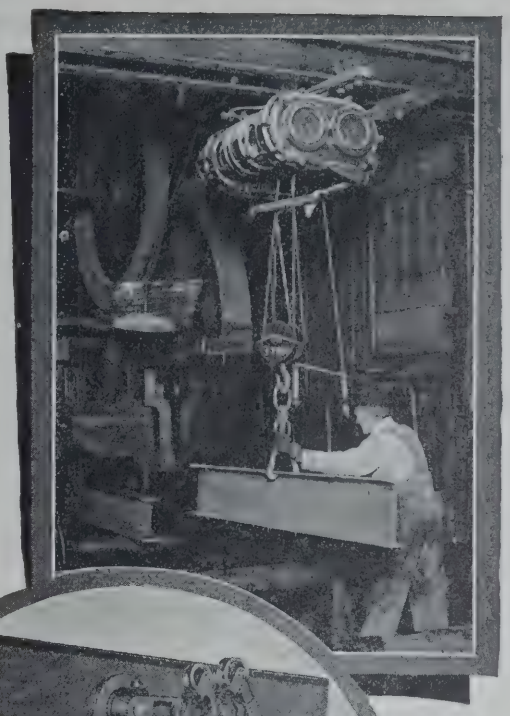
ADVANCED prices for machine tools in Chicago territory are beginning to be made in a small way and generally higher prices on all machine tool equipment is expected to follow shortly. One manufacturer of shapers has issued a list increasing his prices 15 to 20 per cent and two lathe manufacturers have made advances of about 10 per cent. A large volume of business continues to come to dealers in the Chicago district, made up almost entirely of small lots and single tools, and for the most part the lighter class of equipment. Practically no large inquiries are being received. A characteristic purchase recently made involved six light tools for a new manufacturing business about to undertake the production of an automobile tool. Heavy equipment is not in demand, although an occasional sale is made.

A recent equipment list issued for the Rock Island arsenal, including considerable foundry equipment, has not been closed. The machine shops at this arsenal have been filled up wherever additional machinery was needed from stocks already in possession of the government. Delivery from manufacturers has been slowed up considerably, although not yet as far removed as was the case during the war. Some isolated cases of labor disturbances have aided in this delay. Small lists issued by the Chicago, Burlington & Quincy and the Santa Fe railroads have not produced orders. Manufacturers of engines for trucks, tractors and automobiles seem to have large orders and are buying further equipment. The tractor demand is not as large as had been expected, but automobile demand is heavy.

Tendency is Toward Higher Prices

INQUIRY in fair volume exists in the Pittsburgh district for machinery and machine tools. Buying is of a general character, orders being rather evenly distributed among diversified lines. While individual sales as a rule do not involve large purchases, the aggregate business placed reaches a satisfactory total. Some sellers in the Pittsburgh district report that they have done a larger business in July than at any time since the armistice was signed.

The result of this business has been to extend shipments and there appears to be a distinct tendency toward higher prices, which some sellers think will develop



Disguised "Made in Germany" Equipment Seen in France

ELECTRICAL machinery and appliances are being made in Germany, shipped into Spain and Switzerland and from the latter two countries into France and then sold in France as though made in Spain and Switzerland, according to Jacques Languehin, a consulting engineer of Paris, who is visiting in Pittsburgh. Mr. Languehin gave assurance that his statement was correct because he handled German machinery and electrical products before the war, and since the armistice has seen the same kind of equipment in France, marked as though it were manufactured in Spain and Switzerland.

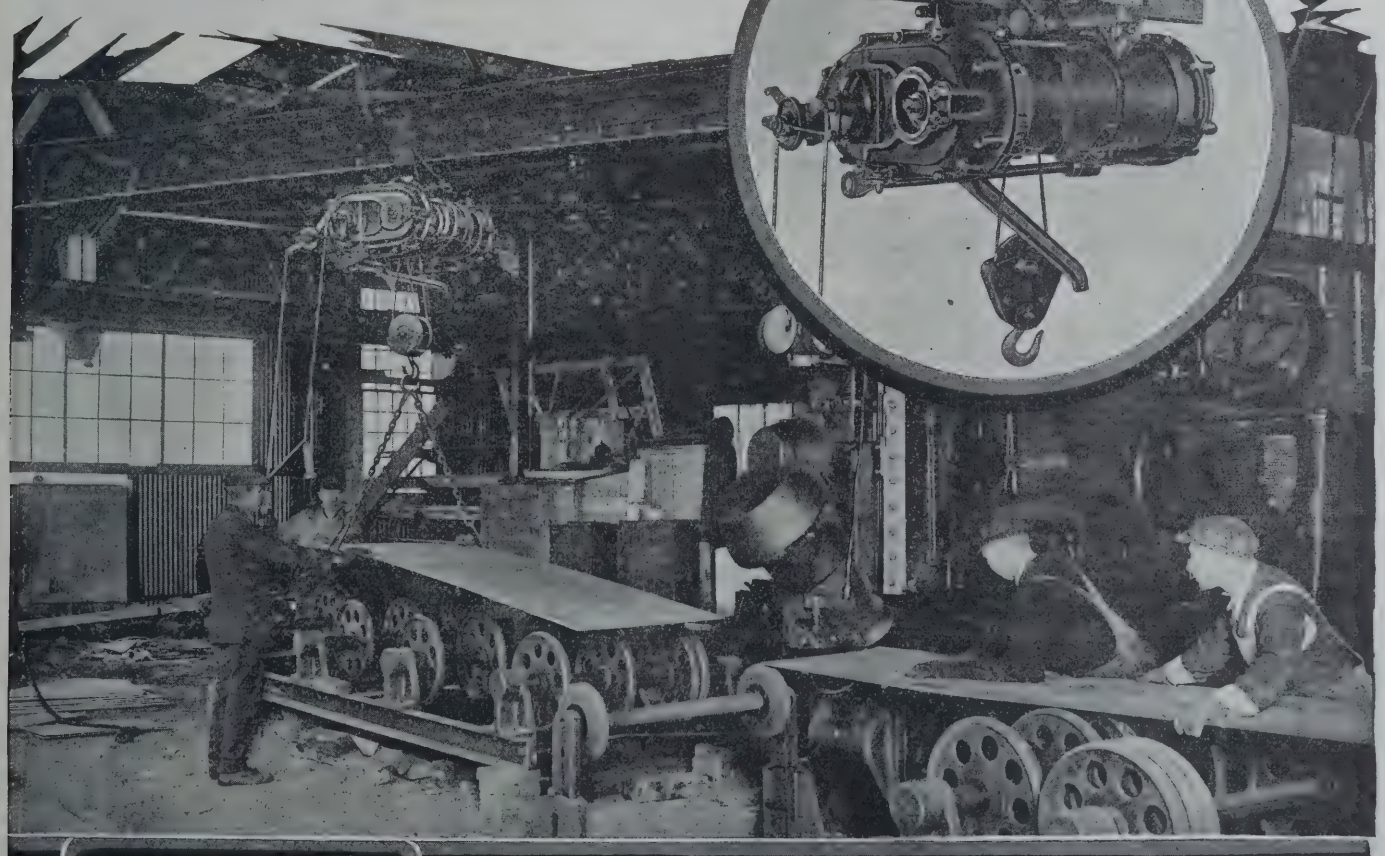
Mr. Languehin says France will not buy from Germany if it is at all possible to keep from doing so, but he added that persons not entirely familiar with German products sometimes are deceived by the methods used by the Germans. Mr. Languehin, who specializes in research and laboratory work, came to Pittsburgh to view its industries and said he had been especially interested in the Westinghouse plant in East Pittsburgh. Study is being made by him of methods employed by Pittsburgh industries. While in Pittsburgh he is making his general headquarters at the office of the bureau of foreign and domestic commerce, which is making arrangements for Mr. Languehin to visit the various plants he desires to see and has a representative of the office accompanying him.

Mr. Languehin said the plan being used by the Germans was possible owing to the prevailing rates of exchange, the German mark being so low in value that 8 marks now are equivalent to a dollar, as against four before the war. The franc has lost in exchange also, 7 francs making up a dollar, compared with five before the war. This question of exchange, Mr. Languehin said, will have an effect on business with America until the rate more closely approaches parity. It is his opinion that the rate now is too high for a considerable business with America because materials may be bought from other countries at less cost. He said, however, he believes the rate will become more favorable in the near future and then he expects a great deal of business as the French are desirous of trading with the United States.

For Speedy, Economical Handling of Heavy Work

INCREASED output, reduced costs and greater efficiency from mechanical equipment follows in the wake of the use of Link-Belt Electric Hoists.

They enable one man to handle pieces which would otherwise require a crew. They reduce the idle moments of your machinery while waiting for material to be handled in the old slow laborious manner.



Link-Belt Electric Hoists can be easily, quickly and inexpensively installed in old or new buildings. Monorail tracks can be attached to ceilings or girders anywhere. Little head room required. All parts are fully enclosed in dust proof, weather proof casings. They can be operated outdoors as well as indoors. Made in various capacities—floor or cage operated.

Our staff of engineers is at your service. Let them suggest quicker, easier, more economical ways of accomplishing hoisting and transporting service in your plant. Ask for our Electric Hoist Book No. 246.

within the next two months. Lathes and planers are being delivered in better time than most other lines of equipment, shipments of these two lines being promised generally in two months.

Small Lot Sales Prevail in Cleveland

AGGRESSIVE machine tool sellers in Cleveland and vicinity report the receipt of numerous inquiries and not a few of their proposals result in orders. In a way this combats the statements of a few dealers who claim that there is no business, that but a few inquiries worthy of note are being received and that those few seldom develop into orders. Dealers of this latter class in casting about for a reason for the sluggish market are divided. Some claim that the absence of railroad patronage is holding up general buying since large tool needs appear under the surface. Several, however, are firmly of the belief that underneath and underlying all is the labor question. As one prominent dealer stated, "No manufacturer is going to invest a large amount of money in equipment until he knows that labor has become more stabilized and will not make more stringent demands than already have been made. Labor will not cease its demands for larger wages, shorter hours, etc., until food prices are reduced."

Those dealers who report a satisfactory week say that their business is coming from diversified lines of manufacture and consists chiefly of orders for one or two machines. Most of the equipment on order is of a light character, although orders for heavy presses, boring mills and lathes have been taken. Deliveries continue to be post-dated, indicating that tool builders are busy. All indications are that prices will soon advance on those lines which have not already announced increases. Some lines, which did not announce reductions after the signing of the armistice, will remain stationary. It is understood that one line of presses has been reduced.

One of the largest lists in the Cleveland market comes from an eastern dealer. L. F. Seyfert's Sons, Inc., Philadelphia, wants one 42, one 48 and one 60-inch Bullard vertical boring mill; one 4 and one 6-foot Cincinnati Bickford radial drill; one 50-inch x 25-foot and one 46-inch x 33-foot Fifield lathe; one No. 3-B Milwaukee universal and one No. 3 Cincinnati universal milling machine; one 30 x 30-inch x 8-foot American, one 30 x 30-inch x 8-foot Gray, one 30 x 36-inch x 8-foot Gray and one 36 x 36-inch x 20-foot Gray planers; one 20-inch G. & E. shaper. Another dealer in the west is inquiring for a power driven wheel press 120 to 150-ton capacity. This is the H. F. Lyon Co., San Francisco, which also is seeking prices on a list of equipment for export to Japan. The list includes one lathe, 60-foot x 24-inch height to center, one 30-foot lathe, 30 inches height to center; one 10 x 18-foot planing machine; one 12 x 8-foot turning mill; one large and one small gear hobbing machine; five No. 2 horizontal universal and plain milling machines and one vertical milling machine, one 18 x 6-foot turbine casing boring machine; one gear cutter, five feet in diameter; one 1½-inch horizontal and one 1½-inch vertical portable radial drilling machine, all machines to be coupled with 220-volt, 3-phase, 60-cycle electric motors. The Fairbanks Co., New Orleans, La., wants a 25-foot x 60-inch Wickes lathe and a 10-foot Pitt lathe. Fayette R. Plumb, Inc., Bridesburg, Philadelphia, wants one guillotine shear to cut cold .70 carbon steel 5 x 1½-inch. The United States Chain & Forging Co., Pittsburgh, is in the market for a 48 x 48 x 12-foot planer as well as a heavy duty planer with solid housing to have direct motor drive, 240-volt, alternating current, 3-phase, 60-cycle motor. The L. A. Young Industries, Inc., Detroit, has been inquiring for shears and is ready to place its order. A. C. Woods & Co, Rockford, Ill., wants a double end punch and shear. The punch end is to have a 12 to 15-inch or a little larger throat, with capacity of one inch through one-inch stock, provided with architectural or structural jaw. The shear end is to have a 12 to 15-inch throat or a little larger with capacity to shear 1¼-inch medium steel bars. The American Die & Tool Co., Reading, Pa., wants turret lathes in first class condition. The Timken Roller Bearing Co., Canton, O., is understood to be still in the market for equipment for Canton but has closed on machine tools for the new plant at Columbus, O. The Ideal Electric & Mfg. Co., Mansfield, O., wants a 28-inch lathe. The Bayne Mfg. Co., Bushnell, Iowa, wants a new or second hand power bending machine that will make a 2-inch eye on rods ¼ to ½-inch in diameter. The Wilt Twist Drill Co. of Canada, Ltd., Walkerville, Ont., wants two No. 2-B universal milling machines.

Several engine companies have come into the market of late for equipment. The Bessemer Gas Engine Co., Grove City, Pa., is taking quotations on six 3 x 36-inch Jones & Lamson turret lathes. The Ball Engine Co., Erie, Pa., is erecting an addition to its steam shovel building and wants new equipment and machine tools. The Ajax Iron Works, Corry, Pa., manufacturer of oil pumping engines is erecting a 200 x 60-foot addition and will probably need equipment soon.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

BOSTON.—The Bahmann Iron Works Co. has been incorporated to build clay-working and sugar machinery in Dayton and Cincinnati, O., with $950,000 capital by John C. Bills Jr., Belmont, Mass.; George P. Davis, Waltham, Mass.; John E. Peakes, Newton, Mass.; Hugh W. Babb, Cambridge, Mass.; Aaron Smith, Boston; B. A. Patten and M. Joyce, both of Cambridge, Mass.

NORFOLK DOWNS, MASS.—The Pneumatic Scale Co. has let the contract for a reinforced concrete, 2-story addition to its machine shop to cost $75,000.

WEST SPRINGFIELD, MASS.—The Gilbert & Barker Mfg. Co. is to erect a corrugated steel, 30 x 80-foot building for furnace experimentation.

WOBURN, MASS.—The Woburn Machine Co. has let the contract for a 50 x 100-foot addition.

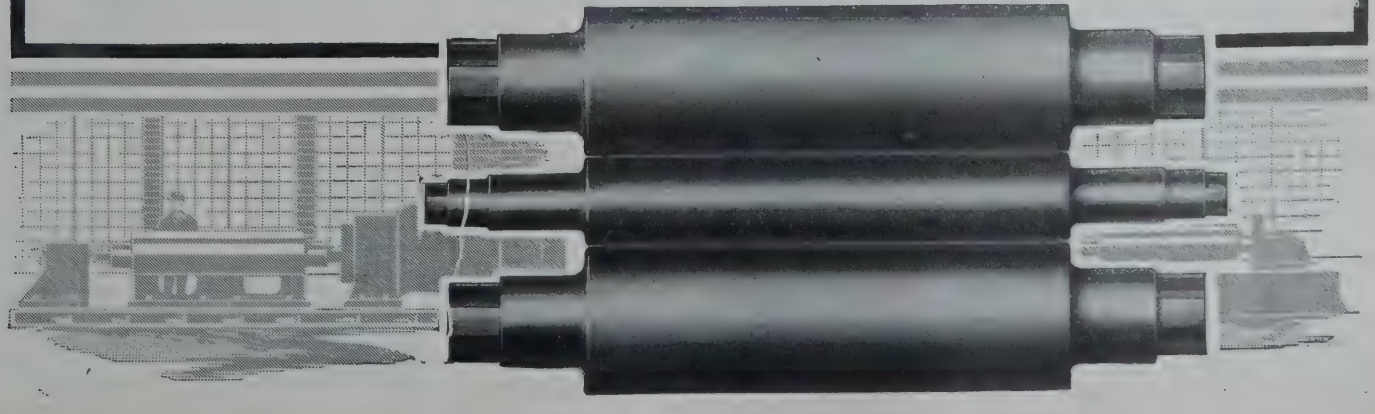
WORCESTER, MASS.—Bids have closed for a brick, mill construction, 4-story, 58 x 403-foot factory and office building and a 1-story, building for hardening and galvanizing for the Walden-Worcester, Inc., maker of wrenches, to cost $250,000.

AUBURN, R. I.—Bids have been closed for a brick, 2-story, 40 x 250-foot and 100 x 120-foot additions to the factory of the United Wire & Supply Co., to cost $100 000.

PROVIDENCE, R. I.—Bids will be asked for about Aug. 1 for a brick and reinforced concrete,

Say, Fella's,—

I've been 'round th' lakes on some boat for th' past week—a little of that vacation stuff. Had Hubbard rolls in all th' mills before I left, so figur'd there couldn't be any trouble. Haven't heard of any trouble from th' mill, so guess I used some judgment.



So Long,

Rolling Mill Jim.—

Hubbard Steel Foundry Co.

EAST CHICAGO, IND.

All Kinds of Iron and Steel Rolls and Steel Castings.

fireproof, 5-story and basement, 130 x 155-foot factory and public garage for Harry Fulford, metal ornaments, to cost $400,000, both of which have been leased.

BRIDGEPORT, CONN.—The J. D. Johnson Co., New York, maker of plumbing supplies, has let the contract for a brick, mill construction, 2-story and basement, 40 x 120-foot warehouse and office building and a corrugated iron, 2-story, 45 x 85-foot pipe storage building to cost $30,000.

MERIDEN, CONN.—Foster-Merriam & Co. have let the contract for a brick, 2-story addition, the first floor of which will form an extension to the foundry, while the second will be required for offices.

NEW BRITAIN, CONN.—The White Eagle Mfg. Co., maker of cutlery, is to build a 2-story, 33 x 80-foot brick factory.

NEW BRITAIN, CONN.—The Corbin Cabinet Lock division of the American Hardware Corp. is to build a large addition.

NEW HAVEN, CONN.—The American Radiator Co., Chicago, has let the contract for a brick warehouse to be used as an eastern distributing station.

PLAINVILLE, CONN.—The Trumbull Electric Mfg. Co. has let the contract for a 4-story factory addition to cost $75,000. An enameling room and steel press shop will also be built later.

PORTLAND, CONN.—The factory formerly owned by the Portland Mfg. Co. has been sold to the American Motor Truck & Tractor Co., New York. The building, which is 3 and 4 stories high, 85 x 350 feet, will be partially equipped with machinery at the present and the rest installed as needed.

STAMFORD, CONN.—The Dalton Mfg. Co., New York, builder of lathes, is to build a plant at Sound Beach.

North Atlantic States

ALBANY, N. Y.—A cupola and mill building costing $35,000 will be built by the Thatcher Propeller & Foundry Corp., at Thatcher and Learned streets.

BROOKLYN, N. Y.—The Atlantic Smelting & Reining Co. will start work shortly on the erection of a new $2,000,000 plant near Newark. Upon its completion the company will remove its main plant now located in Brooklyn. The plant will occupy the greater part of six acres.

BUFFALO.—The Wire Wheel Corp. will build a shipping plant here to cost $20,000.

BUFFALO.—The Jewel Steel & Malleable Iron Co. will build a plant here to cost $6000.

BUFFALO.—The M. Hayman & Co., 856 East Ferry street is erecting a steel foundry at a cost of $10,000.

BUFFALO.—The Rogers-Brown Iron Co. is erecting a steel-concrete machine shop on the Hamburg turnpike at a cost of $50,000.

GARRISON, N. Y.—The Canopus Iron Corp. has been incorporated at a capital stock of $1,000,000. The incorporators are R. I. Gutham, G. O. Angell and J. G. Pease.

NEW YORK.—The Schaefer Machine Co., Manhattan, has been incorporated with a capital stock of $25,000 to manufacture engineering and mechanical specialties of every kind.

NEW YORK.—The Lessman Loader Co. has been incorporated at a capital stock of $300,000 to manufacture machinery of all kinds. The incorporators are W. F. O'Keefe, E. E. Aberlee and J. H. Dowdell.

NEW YORK.—The Penberthy Injector Co., capitalized at $550,000, has been incorporated to manufacture brass and iron injectors. The incorporators are T. L. Croteau, P. I. Drew and H. E. Knox.

NEW YORK.—Plans are being prepared by the Brown-Lipe-Chapin Co., gear manufacturers, for a $200,000 addition to its plant. The work will include the erection of two buildings, one five stories high, 70 x 78 feet and the other two stories high, 50 x 50 feet. This latter an addition to the case hardening department will be completed first. Noble & Collins are architects in charge.

PASSIAC, N. Y.—The J. G. Schmidt Iron Works, 360 Harrison street, capitalized at $100,000, has been incorporated to manufacture structural steel and ornamental iron.

CANONSBURG, PA.—The Fort Pitt Bridge Works will build an addition 80 x 200 feet to its plant here.

ERIE, PA.—The Erie City Iron Works will build a plant 40 x 122 feet in this city.

ERIE, PA.—The Ball Engine Co. has awarded a contract for an extension to its steam shovel building, 116 x 185 feet. It is expected that the improvement will be completed within two or three months.

HOMESTEAD, PA.—The Homestead Valve Mfg. Co. has let the contract to the Austin Co., Pittsburgh, for a foundry 27 x 40 feet.

PHILADELPHIA.—The Hess-Bright Mfg. Co. contemplates a 2-story, 45 x 105-foot laboratory.

PHILADELPHIA.—A 1-story, 116 x 800-foot, steel frame foundry building will be built for the Dodge Steel Co., by the Austin Co.

PHILADELPHIA.—A $55,500 foundry, 116 x 180 feet, is being built by the Austin Co., Cleveland, for Kern Lodge, Morris building, Philadelphia.

PHILADELPHIA.—Smith Drum & Co., Allegheny avenue, engineer and machinist, has had plans prepared for a 1-story addition, 25 x 100 feet, estimated to cost $23,000.

PITTSBURGH.—The Pittsburgh Model Engine Co. has let a contract for a plant addition to cost $200,000.

PITTSBURGH.—Phil & Miller, Wabash building, has the contract for a sewage disposal plant for the Consumers' Mining Co., Hoboken, Pa.

PITTSBURGH.—The Duquesne Light Co. has sold $25,000,000 worth of bonds and proposes to build an electric power plant at Cheswick, Pa.

PITTSBURGH.—The Pittsburgh Truck Mfg. Co., capital $100,000, manufacturers of automobiles and accessories, has been incorporated by F. P. Lawders, James G. Murray and M. C. Lawders, Pittsburgh.

PITTSBURGH.—The G. L. Sullivan Co., capital $25,000, manufacturers of truck bodies, hoists, wheels, mechanical parts, etc., has been incorporated by Albert St. Peter, Pittsburgh; C. H. Boston, Wilkinsburg; W. A. Madigan, Mt. Oliver.

PITTSBURGH.—A plant addition consisting of a 2-story, 75 x 75-foot building will be built by the Basic Mineral Co., 834 Columbus avenue, manufacturer of a flux and deoxidizer for use in melting metals. The building, which will house the mill, laboratory and storehouse, will cost $25,000.

SHANKSVILLE, PA.—The Shanksville Electric Co. recently was incorporated with $5000 capital, by W. H. and C. E. Fox and J. O. Lambert. The company will manufacture electrical equipment.

SLATINGTON, PA.—The Modern Machine Works has leased property and will install machinery and equipment for a machine shop.

CAMDEN, N. J.—The contract for the erection of a 1-story, 48 x 66-foot pattern and clipping shop has been awarded by the Lutz Co. The cost will be $10,000.

ELIZABETH, N. J.—The Gnone Mfg. Co. recently was incorporated with $60,000 capital, by F. A. Hemphill, A. F. Bender and others, to engage in the manufacture of mechanical toys.

GLOUCESTER, N. J.—The city will rebuild the water works and receive bids in August. The new plant will cost $35,000.

IRVINGTON, N. J.—A 1-story brick and steel warehouse, having approximately 20,000 square feet of floor space, will be erected here by Wheelock, Lovejoy & Co., of New York, distributors of iron and steel products. William H. Lehman, also of New York, is drawing plans.

JERSEY CITY, N. J.—F. Ferguson & Son, 1122 Clinton street, operating a foundry, plans a new foundry estimated to cost $10,000.

LYNDHURST, N. J.—The Rotary Machine & Engineering Co. has been incorporated with $500,000 capital, by M. J. Noble, J. A. Freere and J. M. Freere.

MATAWAN, N. J.—A. P. Munning, metal worker, is having plans prepared for two 1-story additions, 42 x 150 feet and 42 x 115 feet.

NEWARK, N. J.—Jackson-Wardell Mfg. Co., manufacturer of tools, dyes and special machinery, will erect a factory on Frelinghuysen avenue.

NEWARK, N. J.—Plans have been prepared by the General Electric Co. for the erection of a 4-story, steel and reinforced concrete factory building.

NEWARK, N. J.—Kell Hock & Co., Inc., has been incorporated to manufacture machinery with $75,000 capital. Jacob Kell and Joseph Hock, of Newark, are incorporators.

Central States Activity

GREEN BAY, WIS.—A 6-story fireproof addition, costing $100.000. will be erected by the Morley-Murphy Hardware Co.

GREEN BAY, WIS.—The Miller Iron & Metal Co., dealer in scrap metal, junk, etc., will build a 3-story warehouse addition, 50 x 100 feet.

HARTFORD, WIS.—The International Steel Products Co. is increasing its capacity for manufacturing mufflers or silencers for gas engines.

JANESVILLE, WIS.—Schlueter & Kakuske have opened a boiler and machine shop here.

KENOSHA, WIS.—The Macomber & Whyte Co., manufacturing wire rope, cable, etc., is contemplating a large plant addition. George S. Whyte is secretary-treasurer.

KEWAUNEE, WIS.—The Commercial Club has guaranteed to provide a site and factory building for E. J. Duescher, Seattle, who is planning to open a plant for making oil burners and air compressors.

MAYVILLE, WIS.—The board of education has decided to build a high school, with manual training and domestic science departments, to cost between $90,000 and $100,000.

MENASHA, WIS.—The U. S. Tractor Co. is completing its new factory building.

MERRILL, WIS.—The Anson-Gilkey-Hurd Co. is equipping part of its plant with machinery for the manufacture of toys.

MILWAUKEE.—The Sivyer Steel Casting Co. is arranging for a new office building, 2-stories, 50 x 80 feet.

MILWAUKEE.—Articles of incorporation have been filed by the Central X-Ray Co., to manufacture, assemble, X-ray machines and other scientific instru-

FARRELL-CHEEK

STEEL CASTINGS

The Basis

of Farrell-Cheek Steel Castings Quality is in the choice of the right type of steel for your particular requirements. From laboratory to cupola, from cupola to converter, and thence to the molds, the metal that goes into every Farrell-Cheek casting is RIGHT. The experience of users of our castings PROVE it. If you want real high-grade Steel Castings made to special requirements we are able to serve you now. Immediate Delivery. Write us.

Farrell-Cheek Steel Foundry Co.

"Makers of Steel Castings that are a little better than the next best."

MEMBER OF STEEL FOUNDERS' SOCIETY OF AMERICA

NEW YORK, U.S.A.

Say you saw it in THE IRON TRADE REVIEW

ments. The capital stock is $100,000. The incorporators are F. W. Whitlow, Otto Herrmann and William Guillianne.

MILWAUKEE.—The Stewart Tractor Co. will take bids shortly for a tractor plant, 2-stories, 120 x 300 feet.

MILWAUKEE.—The Northwestern Motor Car Co., 2418 North avenue, is building a large garage, salesroom and shop building and has increased its capital stock from $75,000 to $150,000.

MILWAUKEE.—The improvements being made by the Vilter Mfg. Co., ice and refrigerating machinery, corliss engines, etc., at a cost of $125,000, include a new sand conveyor system for its foundries.

MILWAUKEE.—Articles of incorporation have been filed in behalf of the Draeger-Corbett Machinery Co., with a capital of $25,000. It will manufacture and deal in machine tools, etc. The incorporators are represented by George Katz, attorney, 120 Wisconsin street.

MILWAUKEE.—The Koehring Machine Co., manufacturing gasoline engines and concrete mixing outfits, will make extensions to its plant. A new assembling floor is under construction, and work will begin shortly on an erecting shop, combined with an office building, 75 x 330 feet.

MILWAUKEE.—Cahill & Douglas, consulting engineers, Gross building, have been commissioned to prepare specifications for equipment for a steam generating plant for the Briggs & Stratton Co., 1047 Louis avenue, which is doubling the size of its electrical and automobile parts plant.

MILWAUKEE.—The Surf Mfg. Co. has been incorporated with an authorized capital stock of $100,000 to manufacture all-metal, power-driven washing machines, etc. The incorporators are Alois Krahn, Oscar F. Fischedick and T. J. Hannan, attorney. Headquarters have been opened at 518 Grand avenue.

MONTFORT, WIS.—The board of education is taking bids until July 19 for the erection of a high school, 3-stories, 75 x 124 feet, costing $75,000. Manual training equipment will be purchased later.

OSHKOSH, WIS.—The Oshkosh Trunk Co. has a permit to make additions costing $85,000. The work includes a 1-story power plant addition, 37 x 87 feet.

OSHKOSH, WIS.—The Marnot Leather Mat Co. has been organized with $10,000 capital and will manufacture leather and wire mats, belting, and similar material and supplies. M. H. Goettman, Bart W. Heiss and Edward W. Goettman are the incorporators.

PORT WASHINGTON, WIS.—The city is making improvements costing $30,000 in the light and power plant.

RACINE, WIS.—The Hamilton-Beach Mfg. Co. is having plans prepared for a 1-story addition, with metal sash, to be 70 x 350 feet and to cost about $50,000 without machinery.

RACINE, WIS.—A $50,000 addition will be erected by the Racine Mfg. Co., manufacturer of automobile bodies, stools, etc. Edmund B. Funston is preparing plans for a 2-story building, 50 x 125 feet.

RACINE, WIS. — Stanley and Paul Keleske and Stanley Kalicicky have organized the Wisconsin Screw Co. with a capital stock of $25,000 to engage in the manufacture of screw machine products and automobile accessories.

RACINE, WIS.—Hans P. Johnson, operating a machine shop, has organized the H. P. Johnson Mfg. Co., with a capital of $50,000. The plant will be located at Indianapolis, where local capital has provided a factory site.

RANDOLPH, WIS.—The Randolph Hardware Co. contemplates a warehouse, 1-story, 32 x 60 feet.

SCHLEISINGERVILLE, WIS.—The Vim Tractor Co. will spend about $30,000 for new buildings and equipment.

SHEBOYGAN, WIS.—A $20,000 machine shop will be built by the H. R. Prange Co. It will be 60 x 100 feet.

SHEBOYGAN, WIS.—The Wald Mfg. Co., hardware specialties, will remodel its plant and build an addition costing about $15,000.

SHEBOYGAN, WIS.—Contracts will be let about Aug. 1 by the F. Blocki Mfg. Co., agricultural implements, for a new plant, 118 x 150 feet, costing about $50,000.

STOUGHTON, WIS.—The Stoughton Wagon Co. will build a factory addition.

STOUGHTON, WIS.—An appropriation of $45,000 has been made by the board of education for the construction and equipment of a central light, heat and power plant. The building will be 65 x 132 feet, two stories.

WAUKESHA, WIS.—The Chamberlain-Delworth Repairing Co. has been formed by George Chamberlain of Waukesha and A. L. Delworth, formerly of Minneapolis, to open a general machine shop.

WEST ALLIS, WIS.—The Gerlinger Steel Casting Co. will build a 1-story boiler house addition, 30 x 55 feet, costing $12,000.

WEST BEND, WIS.—A bond issue of $50,000 has been authorized by the common council for a 3-story addition to the high school to be equipped for manual training instruction.

WEST BEND, WIS.—The West Bend Aluminum Co., which recently completed factory additions, has arranged to make a bond issue of $200,000 to provide ample working capital, and new equipment, etc.

WAUKESHA, WIS.—Cahill & Douglas, consulting engineers, Gross building, Milwaukee, are preparing estimates for a steam generating plant for the R. L. Kenyon Co.

WAUPUN, WIS.—Instead of contracting with private concerns for the manufacture of license plates for motor vehicles, the state will furnish its own supply by installing a complete equipment of stamping, embossing and punching tools in a department of the Wisconsin state prison at Waupun.

ADRIAN, MICH.—The Adian Brass & Aluminum Casting Co. recently was incorporated with $25,000 capital, by Frank Bachrach, Morris Schmitzer and Louis Frank.

COLDWATER, MICH.—The Homer Furnace Co. has broken ground for its new plant.

CONSTANTINE, MICH.—L. Smith, Peru, Ind., is opening a foundry here.

DETROIT.—The Detroit Metallic Casket Co. contemplates a plant addition.

DETROIT.—The Liberty Starter Co. plans the erection of a plant addition.

DETROIT.—The Fisher Body Co. plans the erection of a 6-story plant.

DETROIT.—The Ford Motor Co. will erect a brick and steel service building.

DETROIT.—The Wilson Body Co. will build a power plant and factory building.

DETROIT.—The Detroit Gray Iron Foundry Co. has let contracts for a plant addition.

DETROIT.—The Burroughs Adding Machine Co. is reported contemplating a plant addition.

DETROIT.—The general contract has been let by the Peninsular Brass Works for a foundry.

DETROIT.—Work has started on the erection of a plant for the Detroit Seamless Steel Tubes Co.

DETROIT.—The Buhl Sons Co. contemplates the erection of an addition to its iron and steel warehouse.

DETROIT.—The Packard Motor Car Co. has increased its capital from $21,000,000 to $50,000,000 and plans to enlarge its facilities.

DETROIT.—Albert Kahn, architect, Marquette building, is taking bids on work involved in remodeling the Ford Shipbuilding plant at River Rouge.

DETROIT.—The Utility Machine Co., 400 Union Trust building, has been incorporated with $50,000 capital, by George K. Parsons and others.

DETROIT.—Dorr Miller, 138 Fort street, is president of the Dorr Miller Differential Co. recently incorporated at Portland, Me., with $750,000 capital.

DETROIT.—The Motor City Tool Co. recently was incorporated with $16,000 capital, by Frank Nichols, 1064, Cadillac avenue, Arthur Totz and Albert Leshke.

DETROIT.—The Federal Steel Co. recently was incorporated with $100,000 capital, by A. J. Kinnucan, 467 Longfellow avenue, D. L. Seymour and Thomas W. Hunter.

DETROIT.—The Steere Engineering Works, Detroit, and the Owosso Boiler Works, Owosso, have been merged under the former name and the Detroit works will be removed to Owosso.

DETROIT.—The paint and service buildings of the Commerce Motor Car Co., recently damaged by fire, are being rebuilt. The buildings were damaged to the extent of $80,000.

DETROIT.—The O. L. Anderson Co., Inc., general sheet metal manufacturing, recently was incorporated with $10,000 capital, by O. L. Anderson, Lafayette and Trumbull avenues and others.

DETROIT.—The Federal Screw Works recently was incorporated with $60,000 capital, by Oscar Schiller, David S. Diamond, 201 Palmer street east, and Russell A. Gunn, 794 Second street.

DETROIT.—H. C. Mills, W. O. Adams and Everitt Betts have purchased the Ann Arbor Machine Co., Ann Arbor, Mich., and the name has been changed to the Production Castings Co.

DETROIT.—The Detroit Carburetor & Mfg. Co. recently was incorporated with $10,000 capital, by David C. Kay, 931 Second street, C. E. Neff, 250 Commonwealth avenue and F. E. LaFehr.

DETROIT.—The Cecil R. Lambert Co. has been incorporated to manufacture metal products and machinery, with $10,000 capital, by Cecil R. Lambert, 114 Lothrop avenue, Alvin S. Evers and Thomas F. McCoy.

DETROIT.—The Hercules Machinery Co. has been incorporated with $50,000 capital, to engage in the manufacture and sale of power presses and broaching machines, by Trevor T. Murton, 55 Peterboro street, and others.

DETROIT.—The Senn Tool & Machine Co. has been incorporated to manufacture metalworking tools and machinery, with $30,000 capital, by Oscar F. Senn, 911 Trumbull avenue, Forest T. Ellis and Edward R. Nyland.

DETROIT.—The Detroit Spring Co. recently was incorporated with $50,000 capital to manufacture and sell springs, by James D. Cummings, 61 Jefferson avenue; W. W. Cummings, Toronto, Ont.; and Henry W. Cummings.

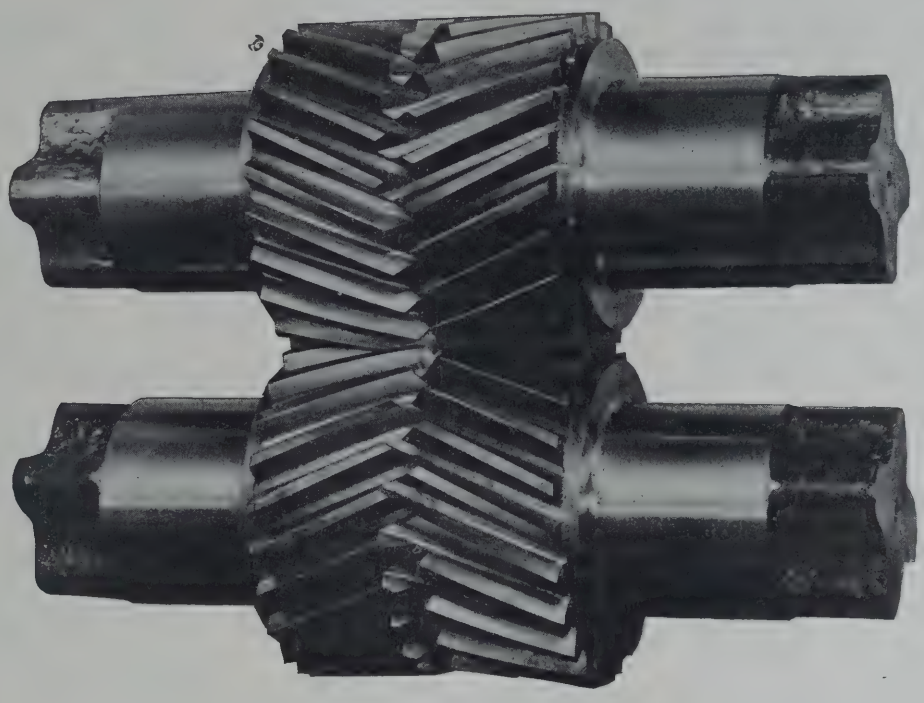
DETROIT.—The Crocker Air Line Co., for the manufacture and sale of air compressors, engines, etc., has been incorporated with $150,000 capital, by James Crocker, 115 Fort street, Mrs. Lee Crocker, and William H. Carter.

DETROIT.—The American Standard Tool Works, Inc., has been incorporated to manufacture and sell machinery, machine tools, etc., with $100,000 capital, by Homer R. Shafer, 60 Lafayette boulevard, Frederic Wiard and John Owen.

MARQUETTE, MICH.—The city of Marquette, Charles Petallic, superintendent, will build an electric light and power plant costing $150,000.

MUSKEGON, MICH.—The Continental Motors Corp., Jefferson avenue, E., Detroit, will build a 2-story engine manufacturing plant and power plant, 180 x 500 feet, costing $1,000,000.

CHICAGO.—The Triangle Motors Co., 2211 South Michigan avenue, has let a contract for a factory and salesroom.



CHICAGO.—P. Ballman has let contracts for a 1-story machine shop, 65 x 140 feet, to be built estimated to cost $10,000.

CHICAGO.—The Butler Street Foundry & Iron Works has let a contract for an addition, 25 x 125 feet, estimated to cost $25,000.

CHICAGO.—The Whitman & Barnes Mfg. Co. has awarded contracts for a 1-story forge shop, 100 x 500 feet, estimated to cost $225,000.

CHICAGO.—The Chicago Gear Co., 2823 Fulton street, has let contracts for a 1-story plant, 70 x 146 feet, estimated to cost $10,000.

CHICAGO.—Albert Pick & Co., manufacturer of

MILL PINIONS

MADE FROM

Open Hearth Steel Castings

We own and operate one of the largest steel foundries in the West, making castings from 1 to 100,000 pounds.

THE FALK COMPANY

MILWAUKEE, WIS.

AGENTS: Pittsburgh—W. O. Beyer, 1024 Park Bldg. New York—M. P. Fillingham, 50 Church St. Wilkes-Barre—Vulcan Iron Works. Denver—Denver Engineering Works. San Francisco—F. W. Grimwood, Rialto Bldg.

cooking apparatus, and metal novelties, 212 West Randolph street, has awarded a contract for an addition.

CHICAGO.—The Crawford Tool & Mfg. Co., 4810 West Twenty-second street, has broken ground for a 2-story machine shop, 28 x 120 feet, estimated to cost $20,000.

CHICAGO.—The Apex Appliance Co., manufacturer of washing machines and other mechanical devices, will build a 5-story plant, 100 x 260 feet, costing $275,000.

CHICAGO.—The Whitman & Barnes Mfg. Co., care J. C. Scanlon, 565 West Washington street, will build a 1-story forge shop, 100 x 500 feet, costing $500,000.

CHICAGO.—The Sheffield Steel & Iron Co., 332 South Michigan avenue, has been incorporated with $10,000 capital, by R. H. Halsted, H. C. A. Mitchell and George W. Gordon.

CHICAGO.—The Chrobaltic Tool Co., capitalized at $100,000, has been chartered to manufacture tools and mechanical devices, by R. S. Tuthill, Harold Beacom and M. J. Atkinson.

CHICAGO.—The Open Hearth Furnace Co. recently was incorporated with $100,000 capital, by B. F. Cowan and P. Zals to engage in the manufacture of furnace equipment.

CHICAGO.—The Gill Mfg. Co., E. P. Chalfont, president, 351 West Fiftieth street, manufacturer of automobile parts, will build a 1-story factory, 120 x 240 feet, costing $100,000.

CHICAGO.—The Monarch Carburetor Lock Co. of Illinois, 7 West Adams street, Chicago, capitalized at $100,000, has been chartered by Carlton E. Fox, B. T. Bancroft and J. A. F. Chandor.

PANA, ILL.—The Pana Engine & Mfg. Co., capitalized at $50,000, has been chartered to manufacture engines and machinery.

ROCKFORD, ILL.—The Rockford Milling Machine Co., W. A. Brolin, president, has increased its capitalization from $300,000 to $900,000, to build an addition to the Sundstrand Adding Machine Co., a subsidiary. The addition will be four stories, 60 x 250 feet. The Holm-Page Co. has the general contract.

ANDERSON, IND.—A 1-story, 60 x 180-foot addition will be built to the plant of the Laurel Motors Corp. on Sycamore street. C. E. Hayes is general manager.

FORT WAYNE, IND.—The Wayne Oil Tank & Pump Co. is planning a new tank shop for the manufacture of oil tanks. The new building will be 140 x 400 feet.

GOSHEN, IND.—The Winter Stamping Co. has been incorporated with a capital of $50,000 to manufacture metals. Directors are John Winter, Doretta R. Winter and Cecil L. Winter.

GREENSBURG, IND.—The United Engineering Co. has been incorporated with a capital stock of $150,000 to manufacture and assemble chassis for automobiles. W. S. Reed, Frank Hamilton and Will G. Smiley are directors.

HAMMOND, IND.—The Railway Motor Car Co. of America, has let contracts for a manufacturing plant, 1 and 2-stories, 100 x 150 feet, and a power house, 40 x 73 feet.

INDIANA HARBOR, IND. — The Edwards Valve Mfg. Co. is planning an extension to its plant for the manufacture of motor truck axles. The exact size of the building has not been determined.

INDIANA HARBOR, IND. — The William Graver Tank Works is planning to build a fabricating shop 76 x 180 feet, and a building 30 x 60 feet, for its engineering staff. The company is now in the market for equipment for the fabricating shop.

INDIANAPOLIS.—The Indianapolis Wire Hoop Co. has been incorporated with a capital stock of $10,000 to manufacture wire hoops. Directors are: Emmet M. Starns, H. Douglas and G. W. Whittington.

INDIANAPOLIS.—The Woodbridge Ornamental Iron Co., an Illinois corporation capitalized for $10,000, has qualified to do general manufacturing business in this state. William Woodbridge of Indianapolis has been named general agent.

ARCHBOLD, O.—The Acme Level & Mfg. Co. is reported contemplating a new plant here.

BUCYRUS, O.—It is announced that the New York Blower Co. will be moved to the plant at Laporte, Ind., as fast as the machinery can be released from service.

CLEVELAND.—The American Pattern Co., capitalized at $10,000, has been incorporated.

CLEVELAND.—The Stevens Iron Works Co. has incorporated with a capital of $50,000.

CLEVELAND.—The Cleveland Metal Products Co. has awarded a contract for a warehouse, 3-stories, 92 x 199 feet, to cost $150,000.

CLEVELAND.—The Sommer Adams Co., 2934 East Fifty-fifth street, contemplates a power house and factory building estimated to cost $75,000.

CLEVELAND.—The plant of the Crescent Brass Mfg. Co., Lake avenue, recently was damaged by fire. The loss has been estimated at $70,000.

CLEVELAND.—The Sommer-Adams Co., 2934 East Fifty-fifth street, has awarded contracts for a foundry and machine shop, 60 x 120 feet, to cost $35,000.

CLEVELAND.—The Interlake Engineering Co., 203 Scotham avenue, has purchased a site on which it will build a 2-story punch shop 45 x 80 feet, to cost $75,000.

CLEVELAND.—The Austin Co., 11612 Euclid avenue has the contract for a 2-story, 75 x 200-foot factory for the Superior Foundry Co., East Seventy-first street.

CLEVELAND.—A 1-story, 30 x 70-foot factory building costing $7000 is being built at East 131st and Taft avenue, by H. J. Walker, manufacturer of automobile parts.

CLEVELAND.—Plans are being made for a 3-story, 75 x 140-foot factory building for the National Copper & Smelting Co., Rose building. The building will cost $25,000.

CLEVELAND.—The P. A. Geier Co., which recently increased its capital from $250,000 to $400,000, plans to erect an addition plant to be utilized by the company's machinery division.

CLEVELAND.—The contract has been awarded for a 3-story, 40 x 120-foot factory and a 1-story, 45 x 160-foot assembling room for the Peerless Motor Car Co. The costs will be $40,000 and $25,000 respectively.

CLEVELAND.—Contract for a 2-story, 40 x 50-foot addition to the factory at 239 West Thirty-eighth street, has been awarded by the Cleveland Electro Metals Co., 421 Guardian building. The cost will be $6000.

CLEVELAND.—Plans are being prepared for a 3-story, 72 x 266-foot machine shop and a 1-story, 120 x 300-foot foundry additions to the plant of the Cleveland Metal Products Co. The cost will be about $75,000. Contract for a 3-story, 60 x 90-foot assembly plant was awarded recently to cost $120,000.

COLUMBUS, O.—A new tinning plant will be erected by the Solar Metal Products Co. in Starr avenue.

COLUMBUS, O.—The Columbus Conveyor Co. has let a contract for a plant, 1-story, 70 x 180 feet, to cost $30,000.

COLUMBUS, O.—Plans are being made by the Timken Roller Bearing Co. for a one-story, saw tooth roof type factory building to be erected on the nine-acre plot of ground owned by the company at Cleveland and Fifth avenues.

DAYTON, O.—The Brenneman Tractor Co. has been incorporated with a capital stock of $10,000 to manufacture farm tractors. A factory building will be erected a little later.

DAYTON, O.—The American Machine Products Co. has been organized with a capitalization of $25,000. Incorporators are Robert G. MacKenzie, Walter N. Frank, Fred G. Miller, Wellmore B. Turner and Lester L. Cecil.

DAYTON, O.—The Dayton Handle & Golf Co. has been incorporated for $150,000 to take over the plant of the Dayton D Handle Co. Considerable enlargement will be made to the golf department and the manufacture of farming tools will continue as before. The new company was incorporated by L. W. Crandall, H. H. Stewart, J. F. Ballin and Harry C. Bratt.

HAMILTON, O.—The Hamilton Machine Tool Co. has taken out a permit for a small plant addition.

HAMILTON, O.—Purchase of 143 acres of land has been made by the Hamilton Furnace Co. The capacity of the plant will be increased in the near future.

JACKSON, O.—The Jaxon Steel Products Co., General Motors Corp., is building a factory 100 x 120 feet. The Austin Co., Cleveland, is the contractor.

KENTON, O.—A contract for an addition, 41 x 80 feet, to the Ohio Machine & Tool Co. has just been awarded to the Bellefontaine Bridge & Steel Co.

LORAIN, O.—The Lorain County Electric Co. contemplates a power plant addition, 40 x 300 feet.

MARIETTA, O.—Extensive improvements are being made to the plant recently purchased by the Pittsburgh Sheet, Tin Plate & Steel Co., from the Pittsburgh Sheet & Tin Plate Co. in East Norwood. The new company is installing new machinery and is overhauling the old.

MARION, O.—The American Malleable Castings Co. has let a contract for a foundry addition, 60 x 70 feet, to cost $30,000.

NEWTON FALLS, O.—The Ohio Structural Steel Co., recently incorporated for $75,000 will take over the Heltzel Steel Form & Iron Co., of Warren and will make extensive additions to the branch plant at Newton Falls. J. W. Heltzel is the chief incorporator.

RAVENNA, O.—A third plant of the Perfection Piston Ring Co., with plans at Newark, N. J., and Cleveland, will be finished here about Sept. 1. The company expects to merge the Cleveland plant with the Ravenna plant at a later date.

SPRINGFIELD, O.—The Superior Gas Engine Co. is building a 2-story machine shop 60 x 80 feet, a 2-story foundry service 32 x 113 feet and a 1-story foundry 112 x 282 feet. T. A. Graham is the contractor.

TIFFIN, O.—Two stories are to be added to the main plant of the Hollis Tractor Co., which is remodeling the old strawboard factory to suit its needs. The addition will be used for the offices and the engineering department.

WARREN, O.—Work has been started on the factory building, 100 x 400 feet, for the Supreme Motors Co. C. H. Davies is general manager.

WELLINGTON, O.—The Sterling Foundry Co., with a capital stock of $150,000, has been incorporated by R. E. Clisby, C. M. Ross, V. M. Clisby, A. W. McHenry and S. H. Hummell.

WHEATLAND, O.—Contract for a 70 x 250-foot power house and machine shop for the Slick-Knox Steel Co. has been awarded to the McClintock Marshall Co., Pittsburgh. A large assembling plant also is being considered.

YOUNGSTOWN, O.—The Lumen Bearing Co. has been incorporated with a capital of $250,000 by H. P. Parrock and others. Purchase of several acres of land for a factory site was effected several weeks ago. Construction will begin at an early date.

LOUISVILLE, KY.—The Belknap Hardware & Mfg. Co. recently filed amended articles of incorporation.

MOREHEAD, KY.—The Consolidated Hardware Co. has been incorporated with $50,000 capital, by E. F. Maggard, S. M. Bradley and F. M. Cook.

BECKLEY, W. VA.—The Raleigh County Register Co. has had plans prepared by H. M. Miller, Roanoke, Va., for a machine plant in this city.

CHARLESTOWN, W. VA.—The Charlestown Heat & Light Co. has been incorporated with $50,000

capital, by Jay Gates, A. Howard Ritter, Carl W. Penninger and C. S. Newhall.

FAIRMONT, W. VA.—Bids are being taken for a brass plant to be erected in this city by the West Virginia Metal Products Co.

FAIRMONT, W. VA.—Guy Borden will have charge of building the plant of the West Virginia Metal Products association here to be 300 x 600 feet.

HUNTINGTON, W. VA.—The Kyle Smith Aircraft Co. will be taken over by the Ohio Valley Car & Mining Machinery Co. which will make improvements to its plant.

MARTINSBURG, W. VA.—The Martinsburg Heat & Light Co. has been incorporated with $100,000 capital, by Jay Gates and others.

MORGANTOWN, W. VA.—The Cook Process Co. has been organized with $100,000 capital to operate a steel plant here. Incorporators are Alfred Sondheimer, Montclair, N. J.; O. J. Van Pelt, George C. Beach, Roscoe Stewart and S. E. White.

PARKERSBURG, W. VA.—Plans are being made to build a 1-story, 105 x 220-foot foundry for the Parkersburg Rig and Reel Co. The cost including the equipment will be $150,000. Day & Zimmerman, 611 Chestnut street, Philadelphia, are the architects.

WHEELING, W. VA.—Repairs are being made to the plant of the Follansbee Bros. Co.

WHEELING, W. VA.—The Center Foundry & Machine Co., Main and Twentieth streets, is making alterations to its plant.

WHEELING, W. VA.—Work will be started soon on an annex 125 x 250 feet to the plant of the J. E. Moss Iron Works.

Throughout the West

KANSAS CITY, MO.—A new corporation is to be formed to take over the plant of the Thomas Track Appliance Co., which operates a foundry here.

ST. JOSEPH, MO.—Sixteen 100-horsepower boilers are being installed by the Missouri Iron & Steel Co., just north of Brandsville. It is expected that these boilers will increase the output of the furnace 100 to 105 tons per day.

ST. LOUIS.—The Chester Iron Foundry Co. contemplates a foundry.

ST. LOUIS, MO.—The St. Louis Metal Ware Co., 2507 Broadway, is having plans prepared for a plant, 250 x 450 feet. R. L. Neidringhaus, care owner, is engineer.

ST. LOUIS.—The Gravois Foundry Co., 5001 South 38th street, will build a 1-story and a 2-story foundry 62 x 235 feet. The building will cost $10,000.

ST. LOUIS.—The 2-story machine shop of the Colcord-Wright Machinery & Supply Co., 1223 North Broadway, recently was damaged by fire. The loss has been estimated at $28,000. J. W. Wright is president.

ST. LOUIS, MO.—P. J. Bradshaw, architect, International Life building, is making plans for a 3-story machine shop 150 x 250 feet for the Washington University Corp., to be leased to the Weber Motor Car Co.

LITTLE ROCK, ARK. — The Berg Safety Crank Co., Joseph C. Berg, president, will build a plant for the manufacture of automobile locks and gasoline engine devices, at a cost of $25,000.

CISCO, TEX.—A $30,000 machine shop will be built by D. M. Howard for sharpening tools for oil well use. The shop will be known as the Howard Tool Co.

DALLAS, TEX.—The Kibbe Tractor & Implement Co., capitalized at $50,000, has been chartered by Louis G. Kibbe and associates.

EASTLAND, TEX.—The Howard Tool Co. is reported planning the erection of a machine shop at an estimated cost of $30,000.

HOUSTON, TEX.—The Houston Compress Co. will build a machinery repair shop.

HOUSTON, TEX.—The Reed Roller Bit Co., capitalized at $250,000, has been chartered by Neils Esperson, C. E. Reed and J. H. Greshy.

MINERAL WELLS, TEX.—The Central Power & Light Co. has been incorporated with $250,000 capital, by Ira J. Kerr, Roy R. Poe and M. B. Milburn.

SHERMAN, TEX.—Plans are being made for an electric power and light plant costing $650,000.

WICHITA FALS, TEX.—The Contractors' Machine & Supply Co., capitalized at $300,000, has been chartered by H. R. McClintock, C. J. Lurie and R. T. Crawford.

BEGGS, OKLA.—The Beggs Power & Ice Co. is reported planning to build a $100,000 electric light plant.

COMANCHE, OKLA.—This city has voted $35,000 in bonds for electric light and waterworks improvements.

GARBER, OKLA.—This city has engaged Black & Veatch, Interstate Bank building, Kansas City, Mo., to prepare plans for an electric light plant and waterworks.

PAWHUSKA, OKLA.—This city is preparing preliminary plans for an electric light plant.

PAWHUSKA, OKLA.—The Ferguson-Hurley Motor Co. will equip a machine shop and repair station at an estimated cost of $40,000.

TULSA, OKLA.—The Oklahoma Iron Works will build a plant costing $500,000, equipment being about half this sum.

TULSA, OKLA.—The city of Tulsa has voted $5,000,000 in bonds to build a waterworks system. H. A. Pressey is engineer.

ATCHISON, KANS.—The Bailor Plow Co. is constructing a factory and office building and will erect an assembly building, 80 x 150 feet.

KANSAS CITY, KANS.—The Municipal electric light plant will be enlarged and equipment added at a cost of $400,000.

ST. JOHN, KANS.—Plans are being prepared by Burns & McDonnell, Kansas City, Mo., for rebuilding and extending the waterworks and eletric light plant at a cost of $50,000.

WICHITA, KANS.—The Coleman Lamp Co. will take bids shortly for a plant, 2-stories, 100 x 140 feet.

WICHITA, KANS.—The Kansas Gas & Electric Co. is having plans drawn for a power plant addition, 3-stories, 70 x 120 feet, to cost $275,000.

BEATRICE, NEBR.—The Beatrice Iron Works, including the buildings, was recently sold at public auction for $35,000. The buyers were Dr. H. A. Hepperlen and H. A. Thompson.

OMAHA, NEBR.—The Nebraska Iowa Steel Tank Co., Thirteenth and Willis street, has let a contract for a plant, 122 x 225 feet.

OMAHA, NEBR.—Additions to the plant of the Omaha Structural Steel Works, 48th and Leavenworth street, will consist of a foundry 80 x 119 feet and a machine shop 41 x 278 feet costing $20,000 and $25,000 respectively.

KELSO, WASH.—Contract for the substation here was awarded by the North Coast Power Co. to H. A. Strand, construction to begin at once.

SEATTLE.—The Draper Engine Co. is reported contemplating the construction of a plant addition.

SEATTLE.—The Power Appliance Co. recently was incorporated with $250,000 capital by C. J. Mahoney, C. F. Hallett and others.

SEATTLE.—Shaw Metal Mfg. & Spinning Co. has been incorporated with $100,000 capital by H. A. Shaw and others.

SEATTLE.—Universal Tractor Attachment Co. has been incorporated with $50,000 capital by Samuel Glenn and others.

SEATTLE.—Further development of the city's Cedar river hydroelectric power plant at a cost of $420,000 has been provided for by the utilities committee of the city council.

SPOKANE, WASH.—The International Steel Co., L. L. Bair, president, has bought a 5-acre tract and is preparing to build a rolling mill costing $10,000.

SPOKANE, WASH.—A 5-acre site near the Milwaukee railroad has been purchased by the International Steel Corp., which intends to erect a steel rolling mill to cost $100,000.

SPOKANE.—The International Steel Co. has purchased five acres and it is reported, will erect a $100,000 steel plant. L. L. Blair is president. The plant is to have a rolling mill and electric furnace.

TACOMA, WASH.—The old plant of the West Coast Steel Co. is being fitted up for the manufacture of tractors by the Blewett Tractor Co., which was recently organized with $100,000 capital. A. R. Blewett heads the company.

KLAMATH FALLS, OREG.—The Klamath Heating Co., recently organized, is reported planning to build a central heating plant to cost $40,000.

OREGON CITY, OREG.—The state highway commission is planning a bridge 385 feet long over the Milametter river of structural steel encased in concrete to cost $268,000. C. B. McCullough is state bridge engineer.

ROSEBURG, OREG.—Wm. Polman, owner of the light and water plant here, is making an inspection of the property with a view to making improvements.

TOLEDO, OREG.—The Fisher-Storey sawmill damaged in a recnt fire is to be rebuilt. It will be motor-driven, being supplied with power by a plant erected at the mill.

LOS ANGELES.—The Monarch Carburetor Lock Co. recently was incorporated with $100,000 capital, by Samuel M. and Benjamin M. Bancroft and Frank E. Greth.

Business in Canada

MONTREAL, QUE.—The Automatic Gage & Supply Co,, Ltd., has been incorporated to manufacture automobiles and other vehicles and accessories with a capitalization of $100,000.

MONTREAL, QUE.—H. C. Johnson, Ltd., Bank of Toronto building, has been awarded the general contract for the erection of a $12,000 foundry building here for the Canadian Steel Foundries, Ltd., 120 St. James street.

MONTREAL, QUE. — The Laval Industrial Co., Laval de Montreal, will build a 2 and 3-story, 40 x 70-foot factory on the Boulevard. Metal stampings are the product of the company. The new plant will cost $22,000.

MONTREAL, QUE.—The Charles H. Russell Co., Ltd., has been incorporated to manufacture products and articles in which wood, iron and steel are used, etc., with $20,000 capital stock; by Arnold Wainwright, Felix W. Hackett, Joseph J. Harold and others.

St. Louis	21.50 to 22.00

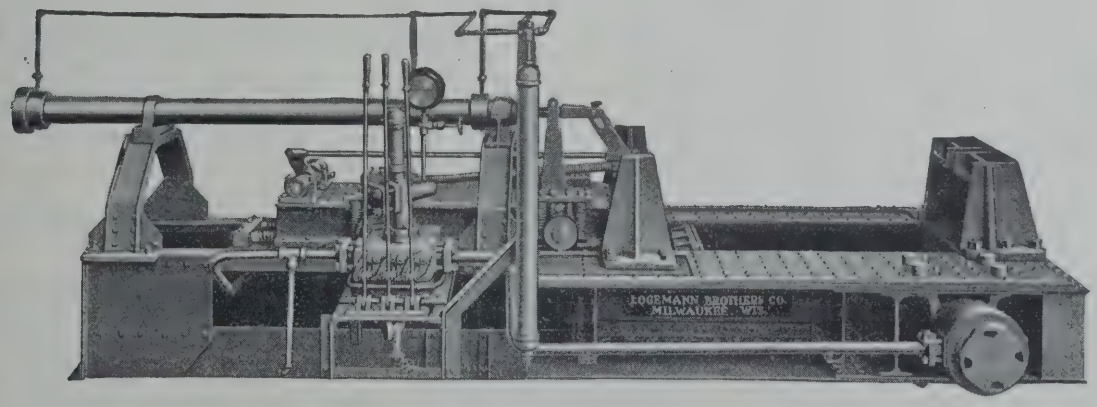
BOILER PUNCHINGS

Chicago	$24.00 to 25.00
Eastern Pennsylvania	23.00 to 24.00

When the Scrap Market Is Dull

While seeking a more favorable market the best form in which to hold your sheet scrap, etc., and the form that always commands the best prices is the dense hydraulically compressed bundle.

Thus less storage space is required—under roof to prevent loss from corrosion; and because of greater car tonnage under minimum car rate, you add from 25% to 50% freight savings to your profits.



For greatest compression, largest daily output, at lowest operating cost, use

LOGEMANN Double Ram Hydraulic Scrap Metal PRESSES

You can enjoy the advantage of the accumulated experience from hundreds of Logemann scrap bundling presses now in use.

They embody a simplified mechanism that requires no special skill to operate rapidly. Press and pump are so designed that all the motive power applied is utilized, thus reducing power cost.

Powerfully built, all working parts constructed to resist the severest strains—selected material, first class workmanship—all minimize upkeep cost and insure lasting efficiency.

A medium sized press is shown; there are smaller and larger sizes in standard models.

Advise character and daily tonnage of your scrap and let us suggest press best suited to your requirements.

Logemann Brothers Co.

3126 Burleigh Street
Milwaukee, Wis.

Builders of Baling Presses and Hydraulic Machinery

(*Concluded from Page 329*)

MONTREAL, QUE.—The Thomas Davidson Mfg. Co. is building a large addition to its plant on Delisle street. The gray iron foundry work has been discontinued at the main plant and a new modern foundry building 74 x 100 feet is being erected at Turcot, adjoining the steel plant.

MONTREAL, QUE.—The Lignite Utilization Board of Canada, 80 St. Francois Xavier street, Lesslie R. Thompson, secretary, will shortly install power house equipment as follows: Three 125 horsepower horizontal tubular return boilers with usual fittings, for 125 to 150 pounds steam pressure, one steam driven boiler feed pump; two 200 kilovolt ampere, 110 volt, 3 phase, 60 cycle, gasoline or oil driven emergency lighting sets; one standard underwriters' steam fire pump, 1000 U. S. Gallons per minute, 125 to 150 pounds steam pressure.

COCHRANE, ONT.—The town council is making preparations for the construction of an addition to its waterworks plant and system to cost $30,000. Engineer, E. Casewell.

GUELPH, ONT.—The Lang Mfg. Co. has awarded the contract for the erection of a machine shop to be constructed on the Harris street side of its present plant. The company which at present conducts a general machine shop business proposes to take up other lines of manufacture as soon as the new plant is completed.

HAILEYBURY, ONT.—It is announced that the United Iron & Machinery Co. will call for bids at an early date for the erection of a foundry and machine shop to cost $75,000.

HAMILTON, ONT.—The J. Spencer Taner Co. of Canada, Ltd., is making preparations for the building of a factory here to cost about $100,000.

HAMILTON, ONT.—W. J. Westaway, 72 James street north, has been appointed engineer for the building of a factory here to cost $600,000 for Perritts & Spencer of Bury, England.

NIAGARA FALLS, ONT.—The L. & P. Mfg. Co., Ltd., has been incorporated to conduct a general foundry business and to manufacture machinery. The company is capitalized for $50,000.

OTTAWA, ONT.—The Beach Foundry Co. is erecting a foundry here to cost $75,000.

OTTAWA, ONT.—The Battery Engineering & Supply Co., Ltd., has been incorporated to manufacture machinery and electrical appliances with a capital stock of $50,000.

PARRY SOUND, ONT. — The town council has awarded the general contract for an electric light plant, generating station building, dams, conduits, etc., costing $65,000 to W. M. Fletcher & Co., 155 Bloor street west, Toronto, Ont., and the electrical apparatus contract to the Canadian Westinghouse Co., Ltd., Hamilton, Ont.

TORONTO, ONT.—Dodge Brothers will build a plant here for the manufacture of automobiles, etc., to cost $60,000.

TORONTO, ONT.—Plans are being prepared by C. A. P. Turner, for the construction of a reinforced concrete factory building 60 x 280 feet for the Northern Aluminum Co.

TORONTO, ONT.—Soren Bros., Ltd., with a capital stock of $250,000 has been incorporated to manufacture tin, granite and sheet metal ware. The directors are Moses Soren, Louis Soren and Alfred Branson.

TORONTO, ONT.—The Wilson Motor Body Co., Ltd., has been incorporated for $40,000 to manufacture automobiles, cycles, engines and vehicles. The directors are Henry H. Davis, Edward H. Brower and William W. Lang.

TORONTO, ONT.—The Chase Tractors Corp., Ltd., has been incorporated to carry on the business of iron and steel founders, mechanical engineers and manufacturers of all kinds. The capital stock is $200,000.

TORONTO, ONT.—The Chase Tractor Corp., Ltd., has been incorporated to manufacture farm tractors, motor cars, machinery, implements, etc., with $2,000,000 capital stock; by James L. Ross, 72 Isabella street; Arthur W. Holmested, Room 43, 20 King street east; and others.

WALKERVILLE, ONT.—The Interchangeable Counterbore Tool Co. of Canada, Ltd., has been incorporated with $200,000 capital stock to manufacture tools and other metallic products.

WATERFORD, ONT.—The town council is contemplating construction of waterworks plant and system to cost about $40,000.

New Trade Publications

THREAD MILLER.—A 4-page folder describing a thread miller has just been issued by the Smalley-General Co., Inc., Bay City, Mich. The miller described is a powerful machine designed to do heavy and exacting work. The machine is said to mill threads with one revolution of the work and is used in the manufacture of automobile parts, pipe fittings, flanges, oil and gas well supplies, and in tool rooms. Various features of the machine are explained in detail in the folder.

LOCOMOTIVE CRANES—The United States Crane Co., Chicago, has just issued a 16-page bulletin describing a 20 to 30-ton locomotive crane for grab bucket, hook block or magnet service. The crane described is mounted on a cast steel frame supported by two 100,000-pound capacity trucks. The boom is 50 feet long and the safe lifting capacity of the crane without track clamps is 10 tons at a 15-foot radius or 4 tons at a 50-foot radius. All parts of the crane are described and illustrated.

ELECTRIC PRECIPITATION.—The recovery of valuable material from smoke and gases is the subject of an attractive 24-page booklet just issued by the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. The advantages of electrical precipitation and the principles involved in the methods used are fully explained. It is stated that there are three different methods of arranging electrical apparatus for electrical precipitation. Each of these methods is outlined and the electrical equipment for each is fully described and illustrated.

BLOWERS.—Much valuable information on rotary positive blowers, gas exhausters, pumps and vacuum pumps, couplings, blast gates, relief valves, feed devices and governors is contained in bulletin No. 70 issued by the P. H. & F. M. Roots Co., Connersville, Ind. Complete tables giving sizes best fitted for various uses with capacity, speeds and other data useful to the engineer feature this bulletin. The principle utilized in the impellers and blowers made by this company is clearly set forth. Many illustrations assist in making plain the text.

PNEUMATIC CONTROLS.—The Parker Appliance Co., Cleveland, is distributing a small booklet devoted to pneumatic controls for commercial vehicles. A system of air brakes for use on motor trucks and trailers is described and illustrated. The equipment consists of a compressor mounted on the motor, a storage tank, an unloader, which automatically relieves the pump when the working pressure is excessive, a distributing valve, a hand control and brake cylinders. A diagram of the various parts of the equipment and the necessary piping for motor trucks and trailers is shown.

ELECTRIC COMPRESSORS AND DRILLS.—An attractive 36-page booklet describing electric air compressors, portable electric drills and electric valve grinders, has just been published by the Black & Decker Mfg. Co., Baltimore. The air compressors described are of an unusually compact design and consist of a motor which imparts power to a piston by means of a train of gears and a connecting rod. The air passes from the cylinder into a condensation chamber, from which it is delivered for use. The compressors are made in various sizes and for various purposes. The electric drills described are equipped with a pistol grip and a trigger switch, and are made in six sizes, varying in capacity from $\frac{3}{16}$ to $\frac{7}{8}$-inch diameter holes in steel. The electric valve grinder is similar in many respects to the small electric drill, the spindle being fitted with a detachable bit.

Opportunities Abroad

Information Can be Obtained From the Bureau of Foreign and Domestic Commerce at Washington. Requests Should be on Separate Sheets and Should be Accompanied by Opportunity Number

The purchase of cold-drawn seamless steel pipes for electrical heating and isolators for electrical contacts is desired by a man in Switzerland. Quotations should be given c.i.f. Cette. Correspondence should be in English. Opportunity No. 29990.

General hardware lines, cutlery, hollow ware, flat ware and house furnishing goods are desired by a firm in Spain. Quotations should be given f.o.b. American port. Correspondence may be in English. Opportunity No. 29991.

A man in Australia wishes to act as agent in the far eastern countries for American exporting houses desiring to sell motor cars, tools and machinery. Opportunity No. 30007.

An importer in Belgium desires to purchase fire engines, ladders, hardware, bronze, copper, bicycles and motorcycles. Opportunity No. 30002.

The agency for the sale of building materials, hardware, domestic and general, motor accessories, electrical machinery and fittings is desired by a man in England. Opportunity No. 30004.

A man in Australia wishes to act as agent in the far eastern countries for American exporting houses desiring to sell motor cars, tools, machinery and leather. Opportunity No. 30007.

A company in Switzerland wishes to secure the agency for the sale of machine and other tools, automobile accessories, tin plate and carborundum wheels. Quotations should be given f.o.b. New York or c.i.f. French or Italian ports. Opportunity No. 30015.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, August 7, 1919 *No. 6*

July Output Shows Trade Growth

Increase of 48 Blast Furnaces in Operating List is Shown and Production is Increased by 360,626 Tons—New Orders Keep Ahead of Rising Output—Labor Conditions Greater Factor in Some Districts

JULY carried forward in an accelerated way the turn of iron and steel conditions which came in June and production figures for that month impressively measure the extent of this further growth of business. It is shown by the statistics of pig iron production that the surprisingly large gain of 48 blast furnaces was made by the active list in July. Of this increase, 37 were contributed by the steel works or nonmerchant stacks and 11 by the merchant producers. The strong trend toward increased steel works output is shown by the fact that not a single furnace supplying these plants was blown out in July. The heavy gain in the number of furnaces in blast brought about an increase of 360,626 tons of pig iron in July over June. The July total was 2,474,654 tons as against 2,114,028 tons in June and 2,107,729 tons in May. The number of furnaces in blast at the close of July was 247 compared with 199 in June and 197 in May.

New business is more than keeping pace with the expansion of production. With one or two exceptions buying continues on a very liberal scale and receding deliveries and growing order books attest the strong position enjoyed by most producers. Nevertheless, a highly conservative attitude continues to be maintained with regard to price advances which manifestly in some products at least seem more than warranted by underlying conditions.

Mills Are Filled Up

In several finished lines, the mills are taking new business sparingly or avoiding it entirely because of their filled-up conditions. Wiremakers have enough business on their books to keep them fully engaged for three months at least. The largest producer of lapweld pipe is sold up five to six months. Sheet tonnage entered in July was close to a high record for that product, and in this product specifications are greatly in excess of output. The scarcity in sheet bars has grown more pronounced and this is reflected by the fact that the American Sheet & Tin Plate Co. has been drawing upon Chicago mills for supplies for the Pittsburgh district. Steel bar demands are heavy and are widely spread over the various channels of consumption so that deliveries are steadily lengthening. Plate business is improving but in a slow fashion. Car steel inquiries and purchases in the Chicago district continue to foot up a good total.

Iron Buying Is Active

Reports of probable price advances seem to have stimulated renewed interest among pig iron buyers and the past week has shown a considerable burst of new inquiry and an increased volume of sales. There is a stronger movement toward negotiations for next year and some of the larger buyers are figuring in this, notably certain automobile builders and other important consumers in the Detroit district. The amount involved runs up to 25,000 tons or so. A steelmaker in the St. Louis district is inquiring for 10,000 tons of basic. Cleveland makers have advanced prices 50 cents, a Buffalo interest has raised its schedule $1 to $1.75 for next year and corresponding action has been taken by several individual producers in eastern Pennsylvania in the south and elsewhere. Supplies of iron are not so freely obtainable and fully 50,000 tons of export inquiry could not be quoted on because the metal was not available.

Good Selling for Export

Export business is in good volume despite the obstacles of the European exchange situation. Although England continues a fairly active purchaser, the Orient and South America offer the most promising field for immediate business. China has bought 15,000 kegs of nails in addition to various other lots of steel and pending inquiries from that country include 20,000 tons of rails, 15,000 tons of shapes and 2000 tons of ingots. Japan bought 3000 tons of blue annealed sheets and 1000 tons of light rails. New sales to England include 2000 tons of steel bars, 1500 tons of iron bars and 1000 tons of pipe.

Labor conditions continue to play some direct or indirect part in plant operations here and there. The strike of railway shopmen has restricted the supply of cars and motive power for the mills in the Chicago district and has caused the banking of several blast furnaces at South Chicago and Gary. Wire production at Cleveland remains greatly curtailed because of the refusal of the leading maker to grant the excessive demands made by the industrial trainmen.

Steel Breasts the Tide

EXTRAORDINARY opportunities for great national service have come to the iron and steel industry of this country on several occasions. During the war, iron and steel supplied the foundation for the full tremendous effort which this country made in building up an offensive strength which was destined to be unparalleled among all belligerents, had not the armistice checked the development of these plans. The unstinted energy and the determination with which iron and steel manufacturers put their facilities at the disposal of the nation and its allies is engrossed imperishably upon the records of the great conflict and it has been fitly said it constitutes one of the brightest pages in the history of the industry.

Iron and steel producers now are confronted with a new situation of national moment in which they are certain to play a large part. The continuing rise of prices for necessities of life manifestly has reached the stage where it has become more of a sociological than an economic problem. Accordingly it urgently demands the highest quality of statesmanship and the exercise of broadgaged methods to supply the remedy and to soothe the restless public mind. It has become manifest to thinking men that to allow prices to continue their upward trend regardless of the underlying economic conditions, means the courting of increasing unrest, business unsettlement, and in the end possibly some form of radical reaction.

Every advance of prices that now is made means but another impetus given to the "vicious cycle" all along the line, which in the end means little or no advantage to either employer or employed. It would seem that the time has arrived when sound business counsel calls for a firm and advanced stand by some interests or branch of industry, sufficiently powerful or capable of leadership to throw its weight against the present reckless movement and to breast the tide.

Apparently, this role is falling to, or is being recognized and accepted by the leaders of the iron and steel industry. It is perfectly plain that in various lines of finished products, present conditions of supply and demand would warrant a substantial advance of prices. Yet the leaders in the industry are exerting their influence against any advances at this time and in fact are refusing to put up their schedules regardless of the circumstances. Such advances in iron and steel prices as have recently been made have been confined to individual producers here and there and by no means have been of a general character. Most of the iron and steel being sold today is at prices which voluntarily were reduced at the suggestion of the industrial board in March. Iron and steel stand alone as the only materials to be so reduced.

The position against higher prices of the ruling thought of the iron and steel industry is doubly strengthened by the market position which these materials hold today in general commerce. Despite good operations and a demand that is piling up unfilled orders on makers' books, prevailing prices on pig iron and the important forms of finished steel are from 15 to 20 per cent below the level in effect at the time of the signing of the armistice. This is in decided contrast with the comparative price situation that rules on foodstuffs and various other materials that are fundamental to daily life. Furthermore, prices on iron and steel in effect at the time of the armistice were arbitrarily low because of the government control. In fact, the prices on various iron and steel products as fixed by the government were from 25 to almost 150 per cent lower than those established by the open market conditions prior to Sept. 24, 1917, when the controlled market began.

The policy being followed by the leaders of the iron and steel industry today is one of the most wholesome and hopeful examples of collected business judgment and patriotic wisdom that is to be seen in the present convulsion of hysteria which the country is experiencing over the intolerable conditions of living cost. It affords a rallying point for all business sincerely anxious and willing to do its part in bringing the country back to a state of reason and common sense.

How Government Defeats Own Purposes

REQUESTS for bids on government-owned machine tool equipment in former war plants arouse less interest each time an announcement of a proposed sale is made. Why should interest lag, when at first it was so keen? An answer to that question would carry the story of how the government defeats its own end by lack of business methods.

When proposals first were invited bids were filed by many bargain seekers. Prices named in some cases were so low that they were rejected. Bids which offered reasonable prices were pigeon-holed and action on them delayed so long that the bidders placed orders elsewhere.

Lately, however, a clause has appeared in requests for bids which has had an effect similar to a "hands-off" sign, or a red lantern. This clause makes a bidder responsible for the tool or group of tools after he has been notified that his bid has been accepted. The government is not responsible for fire, accident or theft, and while opportunity is offered for inspection before the bid is filed, it does not guarantee the tool's condition subsequently. No insurance or assurance of any kind is given. The clause follows:

(ACCEPTANCE OF PROPERTY:) After the property has been transferred to the purchaser (which transfer becomes a fact as soon as has bid has been accepted), the United States government will not be responsible for loss by fire or other causes, neither will the United States government be responsible for undiscovered wear or other defects, as it is assumed that the bidder is thoroughly familiar with the property for which he is submitting his offer.

Tool dealers declare that if an individual or a company endeavored to inaugurate or adopt the measures now being pursued by the government, they could not expect to remain in business very long. It would be impossible to sell tools or machinery on such a basis.

Unbusiness-like methods accounted for the government's failure to place orders efficiently and economically in wartime. Unbusiness-like methods made for delay in acting on claims which had to be settled following the signing of the armistice. And unbusiness-like methods in peacetime explain the government's failure to sell its tools, and why it is necessary for it to find berths for them in different government departments, such as the arsenals, navy yards, etc.

Testing Steel With X-Rays

APPLICATION of the X-ray to metallurgical problems is a development that promises considerable advance in the testing of steel. Equipment has been developed capable of sending the rays through four inches of steel, revealing various facts as to the internal structure. A hole 1/64-inch in diameter and of the same depth drilled in a 2-inch piece of steel will show plainly in a radiograph made with an exposure of two minutes.

Flaws and cavities in steel thus are disclosed, and flakes in the interior are brought to notice of the observer. Faulty welds in iron ½-inch thick have been detected by this means.

This use of the X-ray may come into common practice, supplementing other tests in cases where absolute soundness is the essential. It may have the effect of bringing about economy of design in cases where an unnecessarily large margin of safety has been allowed, by demonstrating the sufficiency of a smaller section.

Much progress has been made in this new application and a recent meeting of the Faraday Society of London, presided over by Sir Robert Hadfield, was given over to demonstrating methods and results.

Give Government Tools to China?

A BULLETIN recently issued by the bureau of foreign and domestic commerce, points out to the machine tool industry the wonderful opportunity offered for the introduction of American-made machinery in China. The bulletin intimates that it would be advisable if American manufacturers would install machinery in engineering schools and colleges in China, free of charge, or at a low cost, stating that England had already done this and is introducing its equipment throughout that country.

To do this the American manufacturer undoubtedly would have to expend a large sum. No doubt in the end he would reap financial return through cultivating the growing market in China for American tools. But why should he invest his money, time and labor to install machinery gratis in a foreign country, when the government could do it much more easily, both financially and diplomatically?

At the present time the government has on its hands machine tools valued at many millions of dollars. After much debate a bill was reported to the house several weeks ago to sell the tools to technical schools in this country at 10 per cent of their cost value. Why could not the government install some of this equipment in China at the same rate, or for that matter gratuitously? That is a thought for today. It is the government's duty to help increase foreign trade as much as possible. A large outlay is provided yearly to support a branch of the public service instituted for this purpose. Here is an opportunity for constructive trade promotion which the government could carry out entirely with its own devices. If it is a good investment for the manufacturers to demonstrate American tools in China, it is a better one for the government possessed as it is at present of its great surplus of machinery, which it is trying so zealously to put out to the best advantage.

Iron and Steel Prices

Iron Advances More Numerous

Cleveland Interests Put Up Schedule 50 Cents—Higher Schedules Also Adopted by Producers at Buffalo, Eastern Pennsylvania and in the South—1920 Malleable Sold $1 Up—Supplies for this Year More Restricted

Chicago, Aug. 5.—June and July transactions in pig iron by Chicago producers have brought furnace books to a position where the present rate of selling will exhaust 1919 production before the end of this month. The inquiry now in hand is sufficient to take up a large part of the unsold tonnage for last half. Melters are seeking to book as much iron as possible before an increase is made in price, which seems imminent. Some instances have been known where buying for last half delivery has been much in excess of melting requirements and buyers are planning to pile this iron for use next year. Buying for 1920 delivery at $2 over present quotations is not active and seems to be limited to melters who desire to protect castings contracts. A malleable consumer in Wisconsin has closed for 5000 tons of that grade. A stove manufacturer in Wisconsin has taken 500 tons of malleable and wants 2000 tons of foundry. A Chicago machinery manufacturer wants a round tonnage of basic. Another basic inquiry calls for 500 tons. An Illinois manufacturer of sewing machines wants 500 tons of fourth quarter foundry. A machine tool builder in Wisconsin is seeking 500 tons of foundry for first quarter. Inquiry for silveries is active, and the grade is difficult to obtain. An inquiry for 500 tons for prompt delivery has not been placed. One Jackson county furnace is selling for fourth quarter, subject to strike adjustment. A sale of 500 tons of low phosphorus iron was made here recently and this grade is around $41 delivered. One large maker of southern iron has issued a new schedule, starting at $27.50 for silicon 1.75 to 2.25, and advancing for each 0.50 silicon as follows: $28.60; $29.75; $30.95; $32.20; $33.50; $34.85. The highest figure applies to 4.75 to 5.25 silicon. This is an increase in silicon differentials over the prevailing scale. The Illinois Steel Co. has sold the production of its idle stack at Milwaukee and will blow it in immediately. The strike of railroad shopmen is limiting shipments of coke and iron to foundries. Coke supply to blast furnaces is safe for the time being.

New England Situation Mixed

Boston, Aug. 4.—The pig iron market here is erratic and spotty. Some dealers report stiffening prices and others report a softening tendency. A few orders of comparatively large tonnage have been placed during the week and this brings the aggregate of total sales through Boston dealers above that of any other week in July. However, the buying generally, that is from jobbing foundries, has noticeably dropped off. This week's inquiries were good. A Massachusetts machine manufacturer is asking for 1500 tons for first half delivery and another Massachusetts consumer wants 1000 to 2000 tons of 2.75 to 3.75 silicon iron. The Worcester foundries are all back in operation again; in many cases after long periods of idleness due to labor troubles. Some of the foundries are not yet working on anything like a normal basis. Two sales of Buffalo No. 2X 2.25 to 2.75 silicon are reported at $28.50 furnace, and a sale of 2.50 to 3 silicon eastern Pennsylvania iron sets a new figure for that territory at $31 furnace. Many small tonnages have been placed for 1920 delivery but these are kept as quiet as possible for furnaces are reluctant to establish any price for the new year. Most sales have been at practically the same figure as for last quarter although small sales at above $1 concession are reported, while others have been placed at a premium.

The aggregate of the past week's sales through New England dealers is approximately 10,500 tons. The 20,000-ton inquiry of the E. & T. Fairbanks Co., St. Johnsburg, Vt., is thought to cover the requirements of several eastern plants under Fairbanks control, for the annual consumption of the Vermont foundry is less than the amount of the inquiry.

New York Market Active

New York, Aug. 4.—A greatly improved tone characterizes the eastern pig iron market. Inquiries are out for 30,000 to 40,000 tons for delivery during the first half of 1920. Although some first half foundry has been sold during the past week, there is no anxiety to quote for such shipment. In fact, the majority of the furnaces will not quote on first half, due to the uncertainty generated by the labor situation and the lack of assurance as to future costs. Indications are multiplying that the pig iron market is well sold up for the next few months. Export inquiries for fully 50,000 tons could not be quoted on owing to the lack of iron. Of four southern furnaces, only one had some tonnage to spare for third quarter, and this represented only a limited amount. Prices continue to show a tendency to advance. One Buffalo maker has advanced to $28, furnace, for No. 2 plain (1.75 to 2.25 silicon), $29 for No. 2X (2.25 to 2.75 silicon), and $30 for No. 1 (2.75 to 3.25 silicon). The same interest now is asking $29, furnace, for malleable. A Pennsylvania maker has sold a large

tonnage of foundry at the equivalent of $31.75, delivered, New Jersey tidewater, for No. 2 (2.25 to 2.75 silicon). Western charcoal iron producers have retired from the market. Quite a few eastern furnaces are out of the market on foundry and few are willing to sell. While the Worthington Pump & Machinery Corp. closed on a portion of its inquiry and several sales were made in excess of 1000 and 2000 tons each, bookings have not been as large during the past week as in the preceding week. Therefore, there has been little opportunity to ascertain whether prices such as $30.20, delivered, which the Crane Co., Bridgeport, Conn., is reported to have paid for 2.25 to 2.75 silicon could be duplicated. Extensive business has been transacted here at $29 eastern Pennsylvania furnace, for No. 2 plain (1.75 to 2.25 silicon). The latter figure does not yet represent the minimum on eastern Pennsylvania iron. Included in export business were some small tonnages of foundry which brought the equivalent of $32.75 and $32.25, delivered Newark, for 2.25 to 2.75 silicon. One moderate tonnage of foundry was included for China. The Virginia Iron Coal & Coke Co., has sold some iron on the list which it sent out July 26. This iron involves mainly high manganese and high silicon foundry, based on $27.75, furnace, for 1.75 to 2.25 silicon, but the minimum in case the extras do not bring it above that figure, is $30, furnace.

Prices Show Much Firmness

Pittsburgh, Aug. 5.—While pig iron sales lately have been on a considerably smaller scale than they were last week, consumers are no less interested and a fairly good day-to-day business is in progress. A sale of 1000 tons of malleable for first half at $28.25 furnace or $1 advance is noted. Higher prices are asked here and there but in at least one instance the higher figure is sought as a desire to forestall further business as the producer is well booked over the remainder of the year. Few of the furnaces now have much surplus tonnage, while among consumers the tendency is to be protected on supplies over the remainder of the year. Consumers of low phosphorus pig iron are particularly active in preparing for the future for while the steel foundries, the principal users of this grade, at present are far from busy, owners seem to fear higher prices later. Several thousand tons of low phosphorus have been placed by a Pittsburgh district consumer in the past week or 10 days. The business has gone chiefly to a valley producer and is understood to have brought from $39 to $40 furnace for copper-free iron. An inquiry for 2000 tons of this grade which has been before makers for several weeks, has not been closed. Not much has been done lately in bessemer iron, but one inquiry for 500 tons for last half from a Pittsburgh district user is current. Another sale of 3000 tons of basic to a Pittsburgh district steel manufacturer for last half at the full market price of $25.75 valley is noted. Foundry iron sales are fewer than they have been not because of a lack of demand, but because makers serving this territory are well booked. The stack of the Clinton Iron & Steel Co., Pittsburgh, was blown out last week for relining, but the furnace of the Sharpsville Furnace Co., Sharpsville, Pa., which has been down for about two months, was blown in yesterday. Announcement that the ocean freight rate on pig iron to United Kingdom ports has been cut from $16 to $12 per ton is viewed here with much interest for it means that producers even as far west as the valley can land basic iron in the English market at less than the last quoted price of the home makers. It is figured that $25.75 valley would mean about $31 on board ship, Atlantic seaboard or $43 laid down in England, which is $1 below the recent quotations of English producers.

Prices Spread at Buffalo

Buffalo, Aug. 6.—Though two furnace interests are out of the market for this year's delivery, business is fair. One interest reports bookings of about 5000 tons of foundry and 4000 tons of malleable. The malleable was sold at the old price of $27.25, although the price has been increased by at least one other interest to $28. The furnace selling the iron reports having very little more iron for last half delivery. Inquiry is good, one being for 4000 tons, another for 2000 tons and two others 300 and 550 tons, all for foundry iron. This particular maker is deliberating whether to open his books for 1920 delivery and may decide within a week. Another interest has already accepted 1920 tonnage at an advanced price. Its prices now are as follows: Malleable, $29; No. 2 foundry, $28; No. 2X foundry, $29; gray forge, $27.50. As other interests have not advanced this leaves a perceptible spread in the schedule.

Cleveland Producers Advance

Cleveland, Aug. 5.—Two Cleveland producers of foundry and basic have advanced their prices for delivery this year 50 cents to $27.25 furnace for the base grade of 1.75 to 2.25 silicon, effective Aug. 4. No sales yet have been made at the new level. These producers are not quoting for next year. New business has come out freely during the past week as the reports of impending or actual advances seem to have caused many consumers to come rather hurriedly into the market. One interest sold 14,000 tons, principally foundry grades. Another has booked as much business since Aug. 1 as during all July when sales were in fair volume. Another seller whose business mainly is outside the Cleveland district closed 12,000 tons of foundry and malleable in the week. There is an active inquiry for first quarter of 1920 and beyond but only occasional sales are being made for that delivery. Some of the larger buyers numbered among the automobile builders are sounding out the market on round tonnages. The aggregate of this business is probably 20,000 to 25,000 tons. A scale manufacturer has inquired for 10,000 tons of 1.75 to 2.25 silicon for last quarter and first quarter for eastern delivery and for 3000 tons for a Michigan plant. The Westinghouse Electric & Mfg. Co. is inquiring on a nominal tonnage of foundry iron for first quarter for its Cleveland plant. It is learned the large inquiry for basic from the Trumbull Steel Co. has been satisfied, and it is reported it went to a Pittsburgh seller at a slight concession. A northern Ohio consumer has been figuring on 5000 to 6000 tons of basic for this year. Shipments are increasing and furnace stacks are declining, the reduction in this respect being the greatest the past week of any recent weeks. The B stack of the Detroit Iron & Steel Co. has gone out. The A Buffalo Union furnace and the Cherry Valley and Dover stacks are about to resume.

Inquiries for 1920 Increase

Cincinnati, Aug. 4.—Business in pig iron is slowing down, although more southern furnaces have made it known that they are willing to accept last quarter orders at the regular schedule of $26.75, Birmingham, for 1.75 to 2.25 per cent silicon. Reports that iron is growing scarcer in all districts are being received here. Several southern producers are trying to relieve the situation by blowing in idle stacks. The situation in southern Ohio is unchanged. Complaints are heard of a car shortage. Inquiry for first quarter foundry iron is growing but so far neither northern nor southern melters have formally opened their books for that delivery. It is stated that such quotations as have been made are at an advance of $2 per ton. An inquiry for a round tonnage of basic for first half shipment has been received from the St. Louis district, but so far has not been acted upon. A little more interest is being taken in malleable for first quarter shipment, but none has been sold recently for that delivery at any price.

St. Louis Market Active

St. Louis, Aug. 2.—Several important producers of pig iron and selling agencies report the past week by far the most active since the recent movement set in. Buying is general with all melters of foundry iron, and the character of business closed is reassuring. The tonnages changing hands are large in the aggregate, although single sales are only of medium size. Most of the buying is by interests well covered over the balance of the year on estimated requirements, but which need additional metal to fill out on new business. A Granite City steelmaker has been figuring on 10,000 tons of basic for this year. Prices are strong. In one or two instances southern furnace interests are unwilling to sell heavily for last quarter, and none has opened books for 1920 business. Available tonnages, both North and South, are rapidly disappearing, and sales are well in excess of production. Steady purchasing during the past few weeks has cut deeply into stocks, and the relighting of idle furnaces will be necessary. A leading Birmingham interest sold 2000 tons of No. 2 foundry (1.75 to 2.25 silicon) which went to consumers in the St. Louis district. Total sales for the seven-day period amount to between 6000 to 7000 tons, including all grades. Southern sellers now refuse to absorb any part of the freight charges. Their quotas for this market for the

balance of the year are much smaller than a few weeks ago, due to the steady stream of small transactions, and buyers are showing anxiety to cover on new business. Stove makers and other specialty manufacturers have been seeking low-grade pig iron to use in place of cast scrap and stove plate, but there is relatively little iron of this class available, either northern or southern.

Southern Market Gains Strength

Birmingham, Ala., Aug. 5.—The pig iron market in the South is gaining strength. Sales are being made for delivery during the third quarter of the year, and a few for the fourth quarter. All quotations are f.o.b., furnaces, and there is no longer any absorption of freight charges. The make has been increased by the blowing in of two furnaces, a charcoal stack of the Shelby Iron Co., and a furnace of the Alabama Co. at Gadsden. During July the Sloss-Sheffield Steel & Iron Co. started up a North Birmingham furnace, and the Jenifer furnace also went into blast. Two more furnaces may resume operations this month. No business has been booked in the South for delivery during 1920 although inquiries still come in. A few sales of iron of special analysis have been made at from $3 to $3.50 per ton above regular quotations, which are on a basis of $26.75, for No. 2 foundry (1.75 to 2.25 silicon). Reports from other territories of an increase of $2 per ton in iron prices have had a stimulating effect and considerable buying is expected to come out.

Tin Plate

Specifications Liberal, But New Orders Are Few and Small

Pittsburgh, Aug. 5.—While new orders for tin plate are few and small, makers still have a considerable amount of unfilled tonnage on their books upon which they are receiving liberal specifications. Supplying these demands keeps the plants of both the American Sheet & Tin Plate Co., and the independents running close to 90 per cent of capacity. It is doubtful, however, if this rate can be maintained to the end of the month, for the principal requirements of the manufacturers of containers for perishable foods have been largely provided for and it is not considered probable that many new demands will develop until well into the fourth quarter of the year. Export business lately has not been large, but this condition may be ascribed more to the fact that consuming countries have pretty well covered their needs rather than to the foreign exchange situation, as most of the business has been with nations having a fairly favorable rate of exchange. As is the case with the sheet mills, the scarcity of sheet bars tends to keep the tin mills from reaching scheduled operations. No important cutting of prices is noted, although stock sales, which are made at 25 to 50 cents per box below base, include a comparatively large amount of standard plate.

Spot Coke Market is Easy

Furnaces and Foundries Well Supplied, as Loaded Cars Accumulate in Yards — Contract Business Active

Pittsburgh, Aug. 5.—An accumulation of loaded cars in the Connellsville district, and an extremely limited demand form a combination that is keeping the market here for spot coke easy. Blast furnaces and foundries are protected against coke requirements by shipments against contracts booked several weeks ago for last half. Current requirements of both grades are limited and while operators generally are asking $4, ovens, for standard furnace, too much "stranded" fuel is available at around $3.90, ovens, to allow much acceptance of the higher figure. Spot sales of foundry coke are being made generally at $4.75 to $5, although some of the larger operators who are in a position to curtail or increase production in keeping with consumption are inclined to ask for more. The market is a little stronger than it was last week, for while sales are impossible at any advance, it is a fact that some producers of foundry coke lately have been able to do $2.40 on coal and that figures out about $4.10 on coke, or 20 cents a ton above the present spot market. The contract market in furnace coke is a little more active, one contract for about 5000 tons a month to run from Aug. 1, to Dec. 31, having been placed by a valley furnace interest, whose stack went into blast yesterday. Although details as to the price are withheld, it is understood that the contract is a flat price one and that it was less than $4.50, ovens. An inquiry for 10,000 tons a month or more for the remainder of the year from a valley steel manufacturer having his own by-product coke ovens is in the market. Much speculation is current as to the motive behind this inquiry; some interpret it as meaning that the steel company is anticipating the failure to get sufficient supplies of coal because of a car shortage, while another theory is that the company is not obtaining its full requirements from its ovens. An inquiry for 10,000 tons a month for first half shipment also has come out, but operators are disinclined to quote that far ahead owing to the uncertainty over the labor situation. Contract foundry coke is quotable from $5.25 to $5.50, ovens, but no important sales have lately been concluded. Production of Connellsville coke in the week ended July 26, according to the *Connellsville Courier*, was 190,025 tons, compared with 164,220 tons in the previous week.

Domestic Fuel is Advanced

Boston, Aug. 4.—The softness in southern beehive coke market has not been reflected in the trading here. Some beehive coke is reaching this market, but it is hard to obtain and delivery is uncertain. The local by-product producer reports good business. During the week several shipments were made to New Brunswick foundries, among which the one to Sackville, N. B., has particular interest for the order was received by wire and was declared to be urgent. Domestic coke advanced on Aug. 1 to $11 and an advance in industrial coke is looked for in the near future.

Complain of Car Shortage

Cincinnati, Aug. 4.—From all producing districts there are complaints as to growing car shortage. Connellsville prompt coke developed a weak spot last week but now is regaining strength, and furnace coke today is quoted around $4.25, ovens, while foundry grades are quoted at $5.50. New River foundry coke is very firm at $8 and Wise County and Pocahontas 72-hour grades are held around $7.50. A little foundry coke is being sold for shipment during the first half subject to price revisions.

More Coke Needed in South

Birmingham, Ala., Aug. 5.—Foundry coke producers in this section are receiving inquiries as to how soon they will be able to take contracts. Quotations have not changed on any grade.

Fair Volume

Of Ore Sales Made in Small Tonnages—Dock Men Strike

Cleveland, Aug. 5.—Sales of Lake Superior ores to independent furnace interests during the past week approximate 250,000 tons, a gain of about 100,000 tons over the new tonnage placed in the preceding week. While some improvement is shown, a large proportion of the sales are in small lots, some of special grades, to round out supplies already on hand at the furnaces.

One interest sold 80,000 tons, all of which sales were made up of orders ranging from 5000 to 20,000 tons. Another placed 60,000, mostly of a special grade of manganese ore. A third placed 40,000 tons, mostly bessemer, while another sold something in excess of 50,000 tons, made of various grades, including considerable low silicious ore.

Shipments from upper lake ports picked up during the last few days of July and the month's total amounted to about 9,173,000, two shipments being estimated and exact figures still being in the course of compilation. This is 1,193,000 tons in excess of the June shipments, but 1,486,000 less than shipments in July, 1918.

The strike of workmen on the iron ore docks at Marquette, Escanaba and Ashland has suspended all shipments from those docks, and some apprehension is felt that it may extend to the mines and interfere with operations. The present monthly wage base of the dock workers as established last year is $154 for day and $161.50 for night work. The men demand an increase of 33⅓ per cent in wages.

Steel Scrap Goes Higher

Reports Persist of $22 to $23 Sales at Pittsburgh and Valleys—Cast Above Pig Iron at St. Louis—Chicago Market Up

FOR COMPLETE SCRAP PRICES SEE PAGE 400

Philadelphia, Aug. 5.—While sales of scrap in this district are not so heavy, the market is advancing by reason of buying in other territories. Several thousand tons of heavy melting steel have been sold here for Pittsburgh shipment at $23 delivered. A round lot of rerolling rails also has been sold at $28, Pittsburgh. The most important developments in the east were the purchase by the Worth Steel Co. of 1000 to 1500 tons of heavy melting steel at $20 delivered and the decision of the Alan Wood Iron & Steel Co. to accept several thousand tons of heavy melting steel due on old contracts closed last year at $29 delivered plus the commission. Sales in this market consist almost entirely of small lots. However, all scrap is scarce and this applies even to wrought despite the inactivity of the puddling plants.

Sell for Future Delivery

Boston, Aug. 4.—The scrap iron and steel market here has continued on the even keel established some weeks ago. No. 1 machinery has been more active than other grades. A sale of 300 tons for fourth quarter was made at $28 delivered. This is not only of interest for its price indication but it is unusual for scrap to sell here for future delivery; and although the transaction is not large it points to the fact that higher prices are expected by some scrap consumers. Other No. 1 machinery scrap sold from $25 to $26.50, delivered. One order at the higher figure went to a western Massachusetts concern. A slight break in the competition among dealers has been in evidence and the feeling is that the speculative buying cannot continue at a price level above that now offered until the steelmakers enter the market in earnest. Labor conditions among foundries are improving.

Some Grades Are Advanced

New York, Aug. 4.—A better demand is in evidence in the local scrap market for borings and turnings, and as a result, prices on this material have advanced. Machine shop turnings and clean cast borings are now holding at $11 to $11.50, f.o.b. New York, and mixed borings and turnings at $9.50 to $10. Quite a little of this material is being bought by blast furnaces, it is stated. No particular change has been noted in the demand for heavy melting steel, both eastern and western Pennsylvania consumers continuing in the market for fairly good tonnages. As high as $22 has been reported as having been paid by Pittsburgh consumers in this market; however, it is believed that the tonnage bought at this figure is negligible. Dealers nevertheless are making slightly higher offerings, the market now being around $16 to $16.50, f.o.b. New York.

Quieter But Still Strong

Pittsburgh, Aug. 5.—While dealings in scrap iron and steel here have diminished considerably in the past few days, due to the fact that several of the steel companies recently in the market for heavy melting steel have covered their present requirements, it cannot be said that the slowing down of buying has produced any weakness. The market appears as strong as it has been at any time recently, for holders have unbounded faith in the future. One of the larger of the independent steel manufacturers is about to make further purchases, and since Pittsburgh consumes vastly more scrap than it produces, prices here are subject to the influence of those in outside markets. All other consuming markets are strong and news from the East that government shell steel has been sold for delivery into the Pittsburgh district at from $24.50 to $25 per gross ton, delivered, is considered significant. Business has been done recently in heavy melting steel at $22 and $22.50, delivered, and while a quotation of $23 as yet has not been established by sales, that price is being asked. Bundled sheets are at least $1 a ton higher than a week ago and an even greater rise has occurred in baled sheets, both grades being in demand because heavy melting steel is not freely offered. Steel foundries are not heavy buyers of low phosphorus scrap and $25 is a maximum on sales, notwithstanding shell steel scrap sells at a higher figure. Higher prices have been established on all kinds of railroad scrap, with iron axles now quoted up to $31. As much as $32 has been offered, delivered valley, for the latter. Blast furnaces are taking a good many lots of borings and this demand largely accounts for a substantial advance in that grade.

Sell Buffalo Scrap in Valley

Buffalo, Aug. 6.—Demand for heavy melting steel, machine shop turnings, cast borings and stove plate is strong. Local mills, however, are not active in the market with prices of heavy melting close to $20. Dealers claim valley mills are paying $22.50, delivered, although outside demand has diminished. Dealers are very active in the market at present. No. 1 machinery cast is quoted at $24.50 to $25.50 and No. 1 railroad wrought at $23 to $23.50.

Cleveland Market Puzzling

Cleveland, Aug. 5.—Scrap iron and steel prices here have grown firmer and the market more puzzling. The market is being kept active largely through dealers' trading, although rumors are afloat that one large melter here has paid $23 for a round tonnage of melting steel. One user reports having obtained at $19 to $20. Bundled sheets, old steel rails, turnings, borings, No. 1 country mixed steel, pipes and flues, heavy cast, agricultural malleable, No. 1 railroad wrought, rerolling rails and No. 1 busheling all participated in pipe advances in the past few days. Dealers continue to offer the quoted or higher prices for fair-sized lots. As for the past few weeks, the market continues strong, even with the larger melters quiet, giving a foretaste of what may be expected when some real buying is done in the future.

Chicago Market Stronger

Chicago, Aug. 4.—Quotations on iron and steel scrap in the Chicago market have moved up $1 on practically all grades, while some have been advanced $2 to $3 per ton during the past week. No. 1 cast, which has passed the price of pig iron, has remained stationary. Rerolling rails continue to be unusually scarce and have climbed rapidly, at least $3 per ton advance being registered during the past few days. A western railroad recently sold a small lot at $33 per gross ton on track. An independent steelmaker which has not bought much heavy melting steel for several weeks is in the market for a round tonnage. Under present circumstances this is likely to send the market much higher as the supply of this grade is not sufficiently large to make dealers safe in committing themselves for heavy tonnages at the present level. A recent sale of 6-inch gothic billets by the government at Chicago in which 5000 tons was awarded to each of three bidders has been rejected by headquarters at Washington, and the material will be offered on new bids. The bids ranged from $24.67 to $24.88. Railroad offerings are unusually scarce. The Santa Fe has just closed a list containing 1400 tons, and the Southern offers 1250 tons in which is included 150 tons of rerolling rails.

Cincinnati Market Quiet

Cincinnati, Aug. 4.—There is very little buying of scrap either by foundries or steel mills, and the market is quiet. Some inquiry for first half supplies has come out but dealers are slow in making figures. Recent advances now appear to be well established. Receipts of country scrap are heavier, but little is coming from the railroads. Steel turnings are not much in demand.

Cast Scrap Near Pig Iron

St. Louis, Aug. 2.—Higher prices and continued speculative activities among dealers are the principal features of the scrap market. Dealers are bullish, and are throwing down all varieties of old material. Steel works are not purchasing and declare they will not do so until they have more orders. Rolling mills are making some purchases, but most of them are fairly well covered, and all are refusing to pay prices asked by the dealers. The market here has almost reached a point where rolling mill grades may be shipped profitably to other districts. During

the week a tonnage of busheling was sold for shipment to Chicago. Many dealers' yards are heavily loaded, and the same is true of a number of the storage yards of industrial plants. A close observer of the scrap market here remarked that there is no doubt outside capital has become interested in scrap iron and steel speculation. No scrap is arriving from the country. Railroads are the chief producers, but most of them are selling in comparatively small lots. No lists are before the market, although the Wabash railroad and the St. Louis Terminal Railway association are expected to have one each within the next day or two. Cast scrap and stove plate are in great demand, and almost impossible to get. The price of cast scrap is very near that of pig iron. Cast at around $28 per gross ton seems to be too expensive, and foundries are seeking low grades of pig iron to substitute for scrap. Bids are to be taken by the St. Louis district ordnance office on 1184 gross tons of cast steel ingots for forging 240-milimeter common shells which are at the plant of the Curtis & Co. Mfg. Co., and on lots of 975, 661 and 248 partially completed 155-milimeter and 8-inch common steel shells.

Southern Market Still Lags

Birmingham, Ala., Aug. 5.—While it is not declared there has been an upward turn in the scrap iron and steel market, the increased optimism now prevailing is significant. Dealers are selling a little scrap. A statement emanating from one of the larger interests is that present quotations represent the prices at which dealers are buying. Heavy melting steel is being held for $20 while current quotations are around $15 to $16. Shortage of railroad cars is causing some concern.

Sheet Bars

Shipped to Pittsburgh From Chicago—Supplies Scarce—Canada Wants Rods

Pittsburgh, Aug. 5.—Demands from the sheet and tin plate mills for sheet bars are so heavy and insistent that manufacturers are experiencing considerable difficulty in keeping abreast of their specifications. Actually, most of them are behind in their deliveries and open market offerings are practically nil. The shortage of sheet bars, while not really acute, is serious and operations of some of the sheet mills are somewhat restricted because of the lack of sheet bars. Illustrative of the condition of the market is the fact that the American Sheet & Tin Plate Co. recently was obliged to bring sheet bars from Chicago to the Pittsburgh district at a freight rate of $4 a ton as compared with $1 a ton, the average freight on tonnages from the usual sources of supply. A good demand is noted for small billets, especially from the bar mills, and forging billets, while not particularly active, are doing somewhat better than they did recently. The latter are strong at $51 Pittsburgh. Wire rods are in demand especially for export, an inquiry from Canada calling for 5000 tons. Makers, while holding to a base of $52, Pittsburgh, for soft rods for domestic consumption are quite generally quoting $57, Pittsburgh, against export inquiries. Most makers have some rods for sale due to the fact that their finishing mill operations are restricted by a shortage of labor.

Sheet Bars in Demand

Cleveland, Aug. 5.—A shortage of sheet bars continues to be indicated by the active inquiring some of which is coming from companies which ordinarily produce their own supplies. Specifications against contracts are heavy. Billets and slabs are not as active as sheet bars but they are being called for in an increasing amount.

Demands Are Growing

Pittsburgh, Aug. 5.—Demands for strip steel have further expanded in the past week or so. While hot rolled continues to lead, cold rolled in sales, both grades are sharing in the improvement. Mill operations, which a few weeks ago ranged from 60 to 70 per cent of capacity, now are around 80 per cent. While the principal demand still is from the automobile manufacturers, other consumers are buying more freely. Provision of supplies has been made by consumers who have been out of the market since the war crowded them out. Some shading on prices on both hot and cold rolled steel is going on but an increased proportion of the business is at full quotations.

Sheet Record

Closely Approached in July—Specifications Greatly Exceed Output

Pittsburgh, Aug. 5.—Last month was one of the biggest in sheets in the history of the industry, and with specifications greatly exceeding production, practically all of the manufacturers have carried into this month a considerable tonnage from July. Manufacturers are well sold for the remainder of the year, and new demands from domestic consumers and also from abroad are heavy. No letup has come in the Japanese demand for tin mill black sheets, while lately Holland, South America, and Norway and Sweden have been providing a large volume of business in the various kinds of sheets. Practically no shading of prices now is observed; on the contrary, talk persists of advances although the American Sheet & Tin Plate Co., is adhering to the March 21 levels on business for the remainder of this year. Apparently some of the buyers of sheets who recently placed some sizable contracts below the regular market quotations have some doubt about deliveries against these orders and are seeking protection from other manufacturers against such an exigency. Sheet mills are running around 87 per cent of capacity and would schedule even a higher rate if difficulty was not being experienced in securing supplies of sheet bars.

Chicago Demand is Heavy

Chicago, Aug. 4.—Consumers of steel sheets are in need of large supplies and are inquiring heavily, while producers are turning down much business. The leading independent in this market is selling nothing, having obligations practically sufficient to carry through the present year. Other sheet mills are choosing from among the inquiry and thousands of tons are being refused.

Pick Orders

In Wire Products and Many Are Refused—Price Ad vanced Continues

New York, Aug. 4.—The situation in the wire market is beginning to resemble that which prevailed during the war. Mills are carefully scrutinizing business they place on their books, and this is true in the case of regular customers. Orders for amounts in excess of the customers' usual requirements are declined. Mills in practically all cases have enough business on their books to keep them busy for at least three months. Despite this advantage, the leading interest is not expected to follow the advances which recently were made by independent wiremakers. In view of the extent to which this interest is refusing business, however, it is not expected that there will be any dislocation of the present relations of buyers and sellers. It is considered likely that before long, business will be going at two sets of prices—that which is being quoted by the leading interest and that which the independents are asking.

Supplying Only Regular Trade

Pittsburgh, Aug. 5.—Wire mills have so much business in sight that those who have not advanced prices practically are out of the market and are entertaining only such inquiries as are coming from regular customers. Demand is as urgent as ever and the advances sought by most of the independent manufacturers would be paid promptly if this would insure prompt shipments. Manufacturers are having such difficulty in bringing up mill operations to the rate demanded by present bookings that only a small part of the new business offered at the higher prices is being accepted. Practically all manufacturers are feeling a scarcity of labor, and find it almost impossible to attain scheduled operations. Deliveries are falling behind orders constantly. Makers of cut nails are swamped with business and the principal one in this district has virtually withdrawn from the market. This manufacturer no longer is quoting carload lots, but on less than carloads has a price of 5.025c, Pittsburgh.

Still Quotes Old Prices

Chicago, Aug. 4.—Although advances in quotations on wire and wire products on the part of independents were made several weeks ago, the leading interest continues to quote at the lower price, and has not given any indication of going to a higher level. Under the circumstances, it is entertaining a heavy inquiry and is picking carefully such business as it can take. Jobbers are specifying heavily on their contracts. Most mills are filled as far ahead as they desire to take business.

Bar Demands Are Heavy

Consumption in All Directions Continues to Increase—Rerolled Bars Are Higher—Large Rivets and Bolts Up

Chicago, Aug. 4.—Inquiry for soft steel bars is stronger than has been the case for a long time, demand coming from all sorts of consumers, one feature being a heavy demand for concrete reinforcing bars. In spite of the absence of railroad demand the mills are well filled in this department and find they have about as much on their books as they desire. An exporter has been inquiring in this market for 1000 tons of soft steel bars for August delivery at San Francisco, for export to the Orient. While 2.35c, Pittsburgh, was offered, delivery could not be guaranteed, and the business has not yet been placed. A like quantity for September delivery probably will be taken by an independent mill.

Bar iron continues steady at 2.62c, Chicago mill, but inasmuch as an increase of about 5 per cent has been made in labor costs on the new card, an increase is expected shortly. Orders are in good volume, mostly for spot business and mills have business ahead for about three weeks.

Hard steel bars rerolled from rails have been advanced $2 per ton to 2.55c, Chicago mill. Bookings on the new basis are satisfactory, coming from general manufacturers. Scarcity of rerolling rails is limiting the tonnage makers can take on.

Inquire for 1920

New York, Aug. 4.—Steel barmakers have received a number of inquiries from consumers in this district for steel bars for first half of 1920. The consumers figure, it is said, that costs are going to increase and so they feel that they would not be able to duplicate the present prices if they waited until the end of the year. The mills in all cases, however, refuse to quote on first half. Current demand continues brisk and the mills are receiving good specifications for current delivery.

Mills Pretty Well Sold Up

Pittsburgh, Aug. 5.—Demands for merchant steel bars still are large with makers here and the mills rapidly are filling up. Comparative little demand ever comes to Pittsburgh from the agricultural implement manufacturers and the present is no exception, but other users are ordering and specifying quite freely. Larger sizes hitherto in lighter demand than the smaller sizes lately have been moving more freely. The market for iron bars is showing increased strength due to the fact that scrap rapidly is rising in price and labor costs have gone up. Pittsburgh district makers of common merchant iron bars are quoting 2.75c base, Pittsburgh, while for refined iron bars, they are asking 3c and holding firmly to those prices. Demand is larger than it has been at least for iron bars.

Specifications Are Liberal

Cleveland, Aug. 5.—Buyers of steel bars are specifying freely against contracts and every sign points to a continuing growth of consumption of this product. Contracting is going along steadily mostly for the last quarter. On some sizes deliveries are up to eight and nine weeks. Some makers of reinforcing bars are promising deliveries in eight weeks and have virtually withdrawn from the market. Scarcity of rerolling rails is an increasing factor in this market and prices are firmer. The Truscon Steel Co. has taken 200 to 300 tons for the Henderson-Overland garage, Youngstown, O.

Rivets and Bolts Up

Pittsburgh, Aug. 5.—Expectations of higher prices for rivets have been fulfilled, and makers this week have announced an advance of $4 per ton effective Aug. 1, putting boiler rivets to 4c per pound Pittsburgh, and structural rivets to 3.90c. Small rivets, which were advanced a few weeks ago, are not affected. Further advances are noted in carriage and machine bolts, of from 5 to 10 per cent, also effective Aug. 1. No material changes have been made in nut prices. Makers of these products are heavily booked, bolt business being especially large. Full plant operations are the rule where labor shortages are not interfering.

Bolt Demand is Strong

Chicago, Aug. 4.—With an advance of 10 per cent by manufacturers of bolts and nuts in Ohio, western mills are likely to follow shortly. This is in addition to the 5 per cent increase made a fortnight ago. Western mills are operating at about 90 per cent capacity, which is as full as usual conditions will warrant. Inquiry for business in this line is strong and bookings are in proportion. This appears to be the strongest department of the steel market.

Mills Keeping Busy

Pittsburgh, Aug. 5.—Hoop and band mills in this district are well engaged and are not promising better deliveries than three weeks. Not only is there a fair amount of business in the narrower widths from the packing-case and cooperage interests but makers of automobile accessories also are free buyers of band steel. Most makers are holding to the March 21 base of 3.05c, Pittsburgh, for both hoops and bands. One maker has advanced bands to a basis of 3.50c, Pittsburgh, but this is regarded in the trade as merely an announcement of the withdrawal of the manufacturer from the market.

Large Rivets Are Advanced

Cleveland, Aug. 5.—Operations of manufacturers of nuts, bolts and rivets continue at a satisfactory rate. Specifications from jobbers continue to be received for third quarter. Prices are firm on nuts and bolts. Rivet makers say it is too early to witness the effect of the advance of about $4 per ton but claim that sufficient business is on hand to keep them busy the remainder of the year. This advance in rivets became effective Aug. 1. Boiler rivets now are $4 per 100 pounds instead of $3.80, Pittsburgh, and structural rivets $3.90 instead of $3.70. Small rivets remain unchanged at the advanced level of several weeks ago. Two or three inquiries from abroad for nuts, bolts and rivets come in each week and some export business is being booked. Wages have been increased in nut, bolt and rivet plants. Some difficulty is being experienced by makers in obtaining satisfactory deliveries of bars and wire.

Demand Could be Better

Pittsburgh, Aug. 5.—While much better off than they were a few weeks ago in the matter of orders, makers of cold-rolled shafting still are far from being busy. The great bulk of the demand comes directly or indirectly from the automobile and tractor builders. The March 21 base of 28 per cent off list is fairly closely observed.

Quiet Market

Continues in Ferroalloys—Italy is Buyer of Spiegel Tonnage

New York, Aug. 4.—The spiegeleisen market, which for a time was relatively more active than ferromanganese, has quieted down. Some large sales of spiegeleisen for export to Italy were made last week. Prices are unchanged at $35 a ton for 18 to 22 per cent alloy.

The market for special steelmaking ferroalloys shows little change. Some lots of English ferrotungsten and ferrochrome and an offer of carbon free ferrovanadium from France are in the market, but so far as known there has been little buying of foreign alloys, despite the lower prices mentioned.

One American maker of ferrotungsten continues to quote below $1.20 a pound contained, but other makers are asking this price to $1.30.

There are many inquiries for small lots of ferrochrome. The price of this alloy is unchanged at 32c per pound contained for alloy of 4 to 6 per cent carbon.

The ferrovanadium situation remains strong, a leading maker being unable to obtain sufficient supplies of high grade mineral. However, prices are unchanged at $6.50 to $7 a pound contained, for alloy running 35 to 40 per cent.

Little Going On

Pittsburgh, Aug. 5.—Hardly enough business is going on in ferromanganese to give much basis to quotations. While domestic makers are quoting $115, delivered, for 78 to 82 per cent material, it is probable that they would accept $110. Most consumers are well protected against their requirements over the next few months and the fact that English ferromanganese, although of lower content than American, can be bought at around $109, delivered, Pittsburgh district,

also tends to depress the market for the domestic product. Domestic manufacturers appear fairly confident of holding prices around present levels. Of course, if the English manufacturers make a further reduction, it might be necessary for them to meet such a cut, but in well-informed quarters it is believed that the English material now is as low as it will be, and little fear is entertained that any considerable quantity of German ferromanganese will come into the country. The latter runs high in phosphorus and this renders it unsuitable for domestic consumption. The possibility of an import duty on foreign ferromanganese also is advanced as a reason for expectations that current quotations will not be materially shaded. Both the inquiry for and sales of speigeleisen are small. This alloy is quoted from $31 to $35, furnace, from 18 to 22 per cent material. Not much has been done recently in 50 per cent ferrosilicon but most makers are pretty well sold ahead, and it is doubtful if a price of less than $85 could be done. Carload lot sales of bessemer ferrosilicon are being made at $49.75, furnace, for 10 per cent.

Expect Ship Plate Order

Release of Five Ships to Pacific Yards Calls for 15,000 to 20,000 Tons Additional—Car Tonnage Coming Out—Market Improves

Chicago, Aug. 4.—Notice has been received from the government of the release of five ships being built at Pacific coast yards, but the tonnage of plates and other material required for their construction is not known. It appears that the builder has some material on his yard which will be utilized, but it is believed between 15,000 and 20,000 tons will be required to complete the craft. Material for car repairs is an important factor in the market at present, and a total of about 20,000 tons has been placed in this market recently. About 3000 tons is now pending for the same purpose. A recent purchase of plates and other car material for the construction of tank cars amounted to somewhat more than 10,000 tons, of which about half was taken by the leading interest. A carbuilder in the vicinity of St. Louis is inquiring for 5000 tons of steel for refrigerator cars. The leading independent producer of plates is sold up for the remainder of 1919, and cannot accept more than a small additional tonnage. Considerable inquiry is being entertained now from exporters to the Orient, but they are finding difficulty in placing this business.

Demand Drags in East

New York, Aug. 4.—Plate demand has reflected no marked improvement in this district. In fact, this is about the only finished steel product for which demand still is dragging. Such orders as are being placed now involve only small tonnages. A few good-sized lots have been under negotiation for some weeks but there is no assurance as to when they will be closed. The export inquiries which were reported as having come out a few weeks ago, and which involved considerable tonnage in the aggregate, have not yet been closed.

Demand Still Improving

Pittsburgh, Aug. 5.—Although plate mill capacity here is not heavily taxed at present, operations are heavier than they were recently and the demand still is improving. Universal plates, however, are not sharing to any considerable extent in the betterment. Makers of tanks still are busy and large tonnages in grooved and sheared plates are being taken in connection with the demand for the larger sizes of line pipe. Car builders are getting few orders but the repairs ordered by the railroad administration to old cars is expected to bring out some business. The Memphis Steel Construction Co., Pittsburgh, recently took an order from the Beacon Oil Co., Boston, for 2500 tons of steel for tanks, condenser boxes and other refinery equipment.

Pipe Mills Are Delayed

Large Volume of Orders Seeking Acceptance—Leading Interest Sold Up Five to Six Months—Differential on Cast Pipe Raised

Pittsburgh, Aug. 5.—Pipe manufacturers are so heavily booked on lapweld sizes as to be indifferent to new business, a large volume of which still is seeking takers. The leading interest is sold from five to six months ahead on lapweld pipe and the position of the independents is pretty much the same. The advance announced by the Wheeling Steel & Iron Co. some weeks ago has not yet been followed by other producers, but the market is strong at the March 21 figure. Buyers in their anxiety to secure supplies are not paying much attention to prices. Improvement recently noted in buttweld pipe continues and practically all manufacturers now are shipping more than they are producing. Boiler tubes also are selling better but mechanical tubes, except for seamless stock, are in fair demand only.

Large Pipe is Placed

New York, Aug. 4.—The placing of 1500 tons of 16-inch pipe constitutes the largest municipal tonnage to be awarded in the eastern cast iron pipe market of late. The name of the successful bidder has not been announced. No other municipal business of size has been active for some time. Another sizable tonnage awarded recently is for South America, involving about 1000 tons and this went to the United States Cast Iron Pipe & Foundry Co. at around $47 f.o.b. New York, a figure well under the eastern domestic market. This company is said to have taken several fair sized export tonnages within the past month. Sellers continue to report a good volume of private demand. These interests state that their operations at present are limited only by the shortage of labor. Most shops in the east are now operating at 50 to 60 per cent of capacity, and in a few instances are doing as high as 75 per cent.

Class Differential Raised

Chicago, Aug. 5.—An increase in the differential between class B and class A cast iron pipe from $1 to $2 per ton has been put into effect, thus raising the price of class A pipe $1 above the previous level. The base quotation on class B pipe remains unchanged. Western sales offices are entertaining few inquiries requiring public bids but routine inquiry and sales make a fair total. Most demand is for small sizes and shops are much in need of orders for the heavier pipe. The United States Cast Iron Pipe & Foundry Co. has taken 125 tons at Decatur, Ill., and 200 tons of specials at Sterling, Col., and is low bidder on 1250 tons at Akron, O. The Colorado Fuel & Iron Co. has taken 800 tons at Sterling, Col., and the American Cast Iron Pipe Co., 350 tons at Portsmouth, O.

Southern Makers Talk of Increase

Birmingham, Ala., Aug. 5.—Pipe makers express themselves in favor of an advance in cast iron pipe, and intimate that before 1920 selling is begun an increase will be in effect. A labor shortage is felt, especially at soil-pipe plants. Demand for sanitary pipe is more active than it has been in many months, and this activity is expected to continue. Both cast-iron and soil-pipe plants are melting larger quantities of iron.

Small Jobbers Advance

New York, Aug. 5.—Although at least two leading warehouse interests are adhering to old prices a new schedule has been put into effect by a number of small jobbers. An advance of 25 cents per 100 pounds has been made in shapes, plates and bars, these descriptions now holding at 3.72c, 3.92c and 3.62c, respectively, and an advance of 50 cents in bands and hoops to 4.57c. No change has been made in sheets or structural rivets. The adoption of the new schedule, it is asserted, has not been due to any particular increase in demand but rather to the fact some jobbers were finding the former differential insufficient to meet higher operating costs. While similar advances have been made in Philadelphia and Baltimore it is understood that the new levels have not been rigidly adhered to. No reports of shading by local jobbers have been noted.

Awards Are of Fair Total

New Contracts Somewhat Less in Volume But General Showing is Good—Big Cleveland Job in Prospect

New York, Aug. 4.—No large volume of business characterized the local structural market during the past week; in fact, trading for the time being at least, appears to be undergoing a lull. However, as this is a seasonal development no particular significance is being attached to this inactivity. Aside from the lot of 6000 to 7000 tons, mentioned last week for a government hangar at Lakehurst, N. J., specifications for which since have been issued, an inquiry for 1200 tons for a bank building in Jersey City appears to be the largest new business to come out. Included in the week's awards is a lot of 650 tons for a shop for the American Locomotive Works at Schenectady, N. Y.

New England Awards Delayed

Boston, Aug. 5.—The new structural steel work in New England is marking time at present. Plans for many sizable buildings and at least six steel bridges are now completed in architects' offices in Boston; but there is a great reluctance on the part of owners to give the word for actual work to start The cause of this is largely traceable to unsettled labor conditions and to the difficulty of obtaining funds. The actual tonnage on the books of New England construction companies is larger now than two weeks ago. Construction on the Nelson buildings in Brighton, Mass., which will take approximately 1500 tons of steel has been held up on account of financial negotiations.

Big Bank Job in Sight

Cleveland, Aug. 5.—Demand for structural shapes in this territory is moderate, and fabricating shops are still operating at about 50 per cent of capacity. The Massillon Bridge Co. took 675 tons for a new building for the White Automobile Co., Cleveland, and the King Bridge Co., 554 tons for the Paul building, Cleveland. The county building commission has decided to reject all bids submitted recently for the Cuyahoga county jail and to readvertise. On this job the King Bridge Co. submitted a bid of $111.90 a ton for fabrication and erection of 1700 tons. This was in excess of the county architect's estimate on a tonnage basis but the total was $41,000 less than the estimate, which called for 2100 tons. The commission has not decided on the tonnage on which new bids will be taken. The Foote-Burt Co. will require 900 tons for a new manufacturing plant, while the largest job offering in this territory is the new bank building for the Citizens Savings & Trust Co., and the Union Commerce National bank, which, preliminary estimates show, will require between 12,000 and 15,000 tons of steel.

Prices Are Softer Again

Pittsburgh, Aug. 5.—Structural lettings lately have been fairly numerous and include one or two of good size, but the market on fabricated material, which recently was beginning to develop some strength, has had a recurrence of the softness of a short time ago. This is due to the fact that hardly enough business is passing to give all shops a share and competition for jobs has been pretty sharp on the part of those lacking orders. The bridge across St. John's river, Jacksonville, Fla., involving about 4000 tons, bids on which recently were taken, has been awarded the Bethlehem Steel Bridge Co. The new Baltimore & Ohio railroad bridge to cross the Monongahela river at Third street, Pittsburgh, has not yet been placed. The American Bridge Co. has taken 700 tons for a bridge over Sandy river in Kentucky, while the McClintic-Marshall Co. has received 2400 tons of miscellaneous work which includes 800 tons for the new mill buildings of the Youngstown Sheet & Tube Co., Youngstown, O., and 300 tons for a new building for the Superior Steel Corp., at Carnegie, Pa. The shape mills here are not crowded with business, but in the main the March 21 prices on plain material are being well maintained.

Chicago Selling is Slow

Chicago, Aug. 5.—Continuance of the building strike in Chicago keeps the structural market much below its natural volume and contractors are slow to take on new business until they have some assurance of the wage scale. Business coming from outside the immediate Chicago district is fairly good, but is being received mostly in small lots with request for immediate delivery. Some of this material is being ordered for fabricators' stocks. The largest tonnage placed in the west recently involves 661 tons, which will be furnished by the Missouri Valley Bridge & Iron Co., to the Montana State Highway commission for various state bridge. Bids are being taken on 1200 tons for the Blackhawk hotel, and an equal tonnage for an addition to the store of the Stix, Baer & Fuller Dry Goods Co., St. Louis. Plans for the John Crerar library building, Chicago, which originally called for 2500 tons are being given a further revision.

CONTRACTS AWARDED

Loew theater, Cleveland, tonnage indefinite; general contract let to Craig-Curtiss Co.

Buildings for Timken Roller Bearing Co., Columbus, O., about 900 tons; bids being taken.

India street pier, Brooklyn, 500 tons, to an independent shop.

Cotton mills in New England, 500 tons, to the American Bridge Co.

Shop for American Locomotive Co., Schenectady, N. Y., 650 tons, to McClintic-Marshall Co.

Pier shed No. 218, New York barge canal terminal, New York City, several hundred tons, to the Lehigh Structural Steel Co.

Factory building for the West Virginia Pulp & Paper Co., Tyrone, Pa., several hundred tons, to the Lehigh Structural Steel Co.

Number of buildings for American Valve Co., Coxsackie, N. Y., several hundred tons, to the Lehigh Structural Steel Co.

Paul building, Cleveland, 554 tons; to King Bridge Co.

Building for White Automobile Co., Cleveland, 675 tons; to Massillon Bridge Co.

High school for Cleveland Heights, O., 200 tons; to T. H. Brooks Co.

Plant addition for Harrison Radiator Corp., Lockport, N. Y., 100 tons of reinforcing bars; to John W. Cowper Co., Inc.

Service station for Kelly-Springfield Tire Co., West Fifty-fourth street, New York, 500 tons to Hinkle Iron Works.

Apartment house, West Manhattan, 700 to 800 tons to Hinkle Iron Works.

Two schools Jersey City about 500 tons to Fagan Iron Works.

Warehouse for Pittsburgh Gage & Supply Co., Pittsburgh, 900 tons; to the McClintic-Marshall Co.

New mill buildings for the Youngstown Sheet & Tube Co., Youngstown, O., 800 tons; to the McClintic-Marshall Co.

Service station in New York for the White Motor Co., 400 tons; to the McClintic-Marshall Co.

New buildings for the Superior Steel Corp. at Carnegie, Pa., 300 tons; to the McClintic-Marshall Co.

Bridge over St. John's river, Jacksonville, Fla., 4000 tons; to the Bethlehem Steel Bridge Co.

Bridge for the Pittsburgh Coal Co. across Sandy river, Kentucky, 700 tons; to the American Bridge Co.

Foundry addition and engineering building for Kohler Co., Kohler, Wis., 500 tons; to Worden-Allen Co., Milwaukee.

Erecting shop and office building for Koehring Machine Co., Milwaukee, 150 tons; to Wisconsin Bridge & Iron Co., Milwaukee.

Pig casting machine for Thomas Furnace Co., Milwaukee, 100 tons; to Worden-Allen Co., Milwaukee.

Bridges in Montana for the Montana State Highway commission, 661 tons, to Missouri Valley Bridge & Iron Co.

The Drake Hotel, Lake Shore drive and Walton place, Chicago, 442 tons, to the Vanderkloot Steel Works.

Extension to the Robert Dollar building at San Francisco, Cal., 173 tons, to the California Steel Co.

Cotton Mills at West Warren, Mass., 200 tons, to American Bridge Co.

Globe building, Boston, 250 tons, to New England Construction Co.

CONTRACTS PENDING

Bank building at Jersey City, 1200 tons, bids asked.

Abattoir for the United Dressed Beef Co., New York City, 600 tons, contracts pending.

Building for Foote-Burt Co., Cleveland; 900 tons; bids being taken.

County jail, Cleveland; tonnage indefinite; new bids to be taken.

Bank building for Citizens Savings & Trust Co., and Union Commerce National bank; 12,000 to 15,000 tons; bids to be taken soon.

Blackhawk Hotel, Chicago, 1200 tons. Bids being taken.

Addition to store of Stix, Baer & Fuller Dry Goods Co., St. Louis, 1200 tons. Bids being taken.

John Crerar Library, Chicago, 2500 tons. Plans being revised.

Car Buying

Has Not Yet Made its Appearance—Light Rail Demand Good

Chicago, Aug. 4.—An inquiry for 400 refrigerator cars for a Chicago packer has come out. Other inquiries for cars which have come out recently have not resulted in sales. Demand for light rails is increasing and some inquiry is being received for delivery over entire last half. The total tonnage is satisfactory, the average lot being about 500 tons. Some inquiry is being received for

standard steel rails in small tonnages for builders of frogs and switches, and also from industrial concerns and industrial railroads. Buying of track fastenings has increased somewhat.

Demand Only Fair

Pittsburgh, Aug. 5.—Small orders for standard rails are coming from American railroads but they are chiefly for repairs and do not bulk large. Some foreign business also is being rolled here but the combined tonnage is proving no tax on mill capacity. Fair demands are coming out for light section rails, chiefly in connection with coal mining operations. The market is somewhat stronger on light rails to the extent that few manufacturers now are quoting less than 2.45c Pittsburgh. Jobbers are ordering small spikes quite freely. Little activity is noted in standard spikes as the railroads are buying close to actual needs.

Spiegel is Sold

The St. Louis district ordnance office has sold 476 tons of spiegeleisen to a Chicago interest, the accepted price being $32.76 per ton. This material was located at the Scullin Steel plant, and under terms of the sale must be removed within 15 days.

Pipemaker Buys Tonnage

Eastern Pig Iron Market Tends Upward—Plate and Shape Orders More Liberal—Japan and England Are Buyers

Philadelphia, Aug. 5.—Heavy purchases by the leading cast iron pipe maker has been one of the features of the week in this district. Foundry iron still can be had at $28 and $28.50, eastern Pennsylvania furnace for No. 2 X, but these figures are becoming less frequent. A Lehigh valley maker has a minimum of $30 furnace for 2.25 to 2.75 silicon and another after selling 1500 tons at $28 furnace from 1.75 to 2.25 and $29.25 for 2.25 to 2.75 silicon, has advanced $1. On central Pennsylvania foundry iron, $27 furnace for 1.75 to 2.25 silicon and $27.50 to $27.75 on 2.25 to 2.75 silicon are minimum. As high as $28 and $29 furnace has been done on 2.25 to 2.75 silicon. A Virginia maker has made sales mostly for prompt shipment at a minimum of $30 furnace for 1.75 to 2.25 silicon with a $1 differential for 2.25 to 2.75 silicon and for 2.75 to 3.25 silicon. The volume of foundry business the past week was fairly large. A western inquiry for 2000 tons of low phosphorus is current. Copper-free iron is from $35 to $38 furnace according to analysis. One eastern maker quoted $30 furnace on 6000 tons of basic for export.

Steel plate demand reflects some upturn as result of which eastern mills are operating on fuller schedules. The largest pending lot in the market is 21,000 tons of plates and 7000 tons of shapes and some bars for battleships Nos. 49 and 50 to be built at Brooklyn. Bids will be opened Aug. 15. Considerable tonnage now in the market originates in inquiries for tank cars and for oil tanks. The Ball Locomotive Works is placing 4500 to 6000 tons of plates for 150 locomotives for the Polish government. Included in the new plate orders are round tonnages for Japan and England.

Eastern shape demand continues to improve so that some makers in this section now are rolling to capacity while the schedules of others reflect great improvement. There is great increase in the number of structural projects. Bids are to be taken on tonnages for new buildings for the Republic and Northwestern Trust companies here. A lot of 1200 tons of ship shapes for France have been practically closed as well as 1500 tons for domestic yards.

The American Locomotive Co. has an order for 25 new locomotives for the railroad administration, making a total of 35 received recently.

The Sun Oil Co. has an inquiry out for a large tonnage of lapweld pipe. Practically all mills are out of the market on both lapweld and merchant pipe except to regular customers.

A new foreign spiegeleisen inquiry calls for 1500 tons of 18 to 20 per cent.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	‡Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
July 30	23.75	53.25	6.00	7.55	33.00	9.25
July 31	23.75	54.00	6.00	7.45	33.00	9.375
Aug. 1	23.75	53.50	6.00	7.35	33.00	9.25
Aug. 4	23.75	54.25	6.00	7.55	33.00	9.25

‡American Smelting & Refining Co.'s price.
*July shipment from Singapore, c.i.f. New York.

NEW YORK, Aug. 4.—The nonferrous metal markets were quiet last week, while the market tone generally was soft, due to resale offerings of copper, lead and zinc by speculators who were anxious to take their profits. Producers, however, maintained a firm position and as this week opened there were signs that speculators were about cleaned out of metal. The zinc market, in particular, suffered from the activities of second hands, declining from 8c on July 25 to 7.35c on Aug. 1. On Aug. 2, however, the market turned and by Aug. 4, sellers were quoting 7.65c. An item in the action of the zinc market may have been the closing of the Anaconda Copper Mining Co.'s electrolytic zinc smelter at Great Falls, Mont.

The month of July was the most active this year from the standpoint of sales. Producers sold over 225,000,000 pounds, as against 200,000,000 pounds in June and 207,000,000 pounds in May. Production in 1918 averaged 200,000,000 pounds monthly, but output has been so curtailed this year that monthly production now is not much over 50 to 60 per cent of capacity. In other words, sales and probably consumption are far in excess of production. The producers did not do much business the past week, being comfortably sold up for August and September and not having opened their books for October. However, some of them are opening up their books for October shortly. The producers have been quoting 23.50c for electrolytic copper for spot, August and September delivery. The quotation for October is about 24c. Outside sellers offered electrolytic copper for spot delivery as low as 22.75c but little metal was available at this price. A more general quotation in the outside market for spot and August was 23c.

The lead market reflected profit taking activities of dealers, who offered metal for prompt shipment as low as 5.75c, New York, as against the leading producer's quotation of 6c, New York. Independent producers did not attempt to meet the outside price.

The tin market advanced sharply in London the past week or 10 days, due to large buying of futures and to scarcity of spot tin in the United Kingdom. The market here also strengthened. The first cargo of Lamb & Flagg tin to arrive after the lifting of restrictions on imports came last week on the steamer Port Bowen. This grade of tin was permitted to enter from England after Aug. 1. Straits and Banca tin in England and Canada will be entered after Aug. 15. There has been a good deal of buying of Straits tin for shipment from the East Indies, at prices about as follows: July shipment (due to arrive October), 54.25c to 54.50c; August shipment, 54c to 54.25c; September shipment, 53.75c to 54c. Spot high grade tin is quoted 69c to 70c; spot 99 per cent tin 66c to 67c.

The antimony market continues strong at 9.25c to 9.50c, duty paid, New York. Germany has bought about 500 tons for shipment from New York; several hundred tons for shipment from the Far East and also some for shipment from England.

Buy Ordnance Plant

The Tacony Steel Co. has purchased the plant of the Tacony Ordnance Corp., Philadelphia, and the two companies have been consolidated. The ordnance corporation was organized in August, 1917, by J. B. Warren, then secretary and now president and general manager of the Tacony Sheel Co., and George Satterthwaite, vice president and treasurer. A modern steel-making plant was built in about seven months and the corporation made large caliber gun forgings for the army. The Tacony Steel Co. manufactures a variety of products but specializes in carbon and alloy steels in rolled bars, forgings and special shapes. With the acquisition of the ordnance plant, having an open-hearth equipment, the company will control the quality of its product from melting to shipment. District sales offices are located in New York, Cleveland and Boston.

The Baldwin Locomotive Works has closed contracts for the sale of 150 locomotives to Poland, the third sale by this company to Poland within the last several weeks. Payments will be made in seven annual installments, the first due in three years.

Warn Exporters of Higher Prices

Can Undersell England on Rods in Denmark — Some Foreigners Resent Advances in American Market — China Purchases Merchant Stocks—Germany In Market Both As Buyer and Seller

NEW YORK, Aug. 4.—Although England continues a fairly active purchaser, the Orient and South America offer the most promising markets for American iron and steel exports. The European situation grows daily more desperate and in one instance it is known that the British have conditioned their proposal to purchase in the United States upon a fixed rate of exchange. Despite the declining interest in the European trade situation due to the impossibilities of continued selling against the declining rate of exchange, exporting houses are optimistic and declare that the total business for the country is running in excess of normal despite the temporary slump. Inquiries in the market for 25,000 tons of pig iron find difficulty of fulfillment despite advancing prices. Coke sales to Italy and Belgium are balked only by high freight rates.

The Orient is the most active customer. Some important sales have been made to China. Among these have been noted 15,000 kegs of nails, 250 tons of wire, 150 tons of plates, 300 tons of bars, and 10 carloads of pipe. China also is buying tin plate and other miscellaneous products. These purchases, while individually small, show satisfactory totals. They represent only the normal commercial business, and today the greater percentage of that business is coming to the United States. Some important projects are in view in China and large inquiries, depending upon credit extensions, are in the market. Among such inquiries are 20,000 tons of rails and 15,000 tons of shapes. China also has sent in an inquiry for 2000 tons of ingots, but some question is raised in connection with this. It is difficult for the exporters to understand how the Chinese can use such material. Another inquiry is for 1000 tons of light rails.

One house has sold India 2000 tons of bars, and a more recent sale of 100 tons of bars was reported. India also has purchased 2000 kegs of nails, 50 tons of plates and a small tonnage of sheets. Another sale of 700 tons of sheets and smaller tonnages of plates and structurals to that destination was noted.

Japan is still doing business by cable and not a week passes without some sale of importance being consummated. That country has been purchasing sheets, tin plate, bars, plates and wire. While the tonnages of the individual orders are small they are larger than the normal individual orders received from South America. A sale of 3000 tons of blue annealed sheets to Japan was completed last week. Japan has also purchased 1000 tons of light rails.

The Dutch East Indies have purchased three carloads of pipe, 50 tons of plates, 70 tons of sheets, and 2000 kegs of nails. Holland has purchased for the Dutch East Indies a little over 500 tons of miscellaneous products from one house.

New Lines in Latin-America

Porto Rico has bought 300 tons of sheets. Argentine is practically a dead market although sales are being made to other South American countries. Brazil is buying corrugated sheets, nails, barbed wire, rails, etc., whereas Colombia and Peru are sending in orders for barbed wire, staples, horseshoe nails, tin plate and similar merchant stocks. A sale of 100 tons of bars, 100 tons of angles, 2000 cases of tin plate and 20 tons of sheet copper to Brazil is reported.

Of all Europe, England is still the best market. British purchases consist chiefly of the essentials. Their domestic billet price is said to be less than our export price and as a consequence no longer are the British attempting to obtain any of that material on this side of the Atlantic. The British have been filling up on tin plate orders, however, and their prices have been advancing.

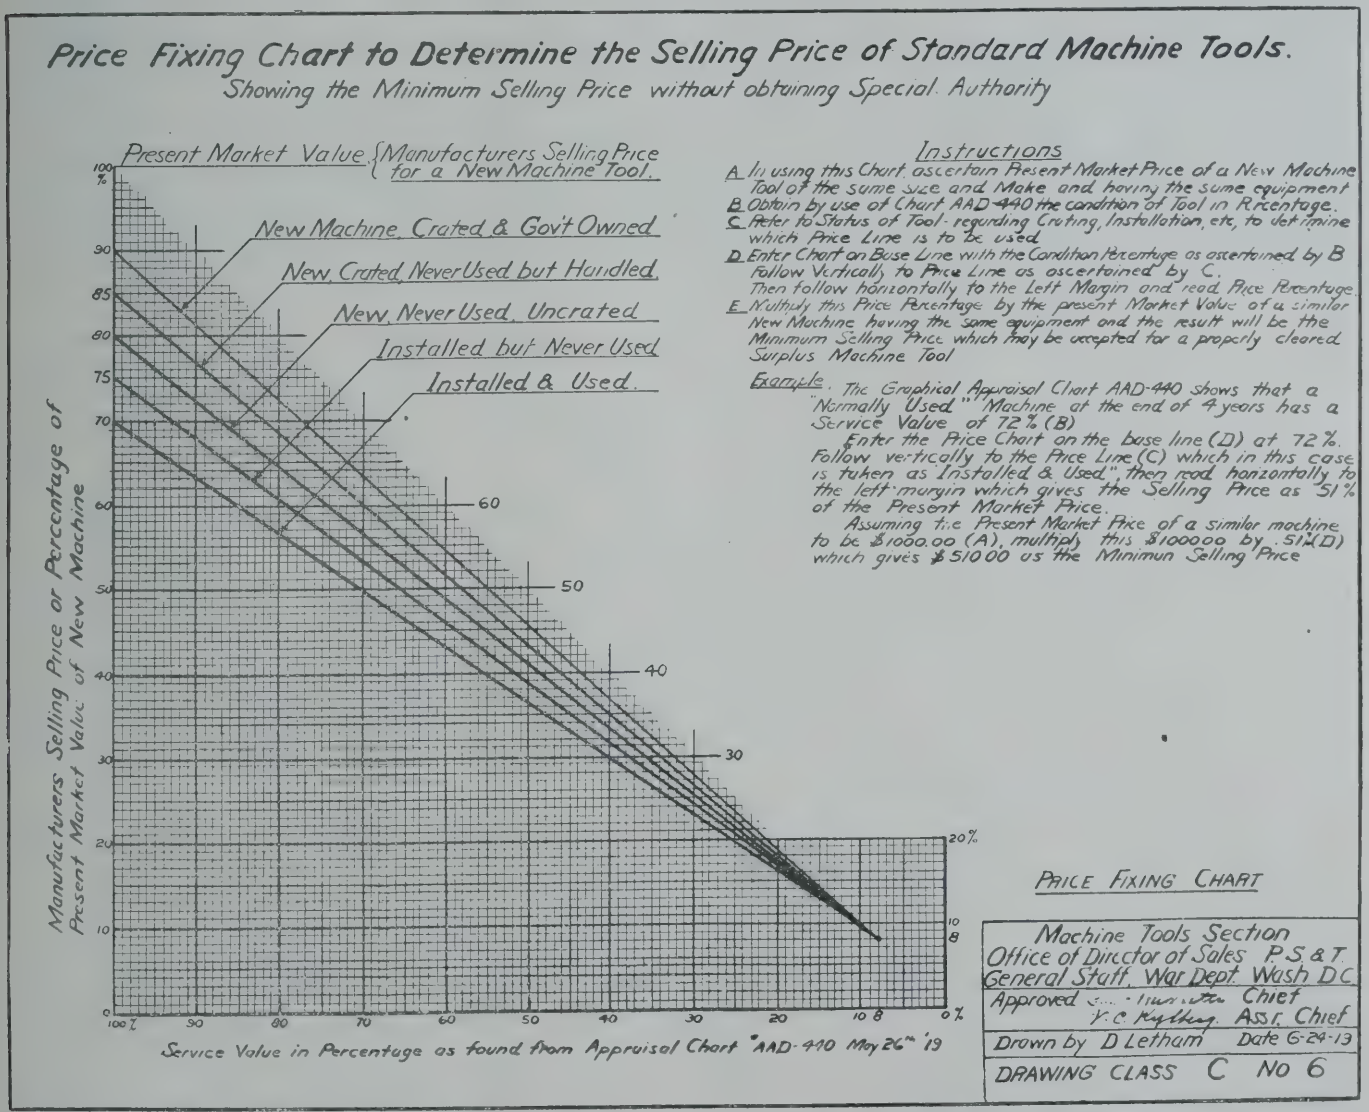
Among the orders for finished material recently placed is noted 500 tons of hoops and box strapping. This is typical of the kind of material England is now seeking here. A few important sales during the past week have been made. England has purchased 1000 tons of pipe, 1500 tons of iron bars, and 2000 tons of steel bars. The reason for the rod and bar purchases is easily seen. American rods, it is said, can be sold at $81 c.i.f. Liverpool, as against an English domestic price of $87.50. Based upon this price quotation an American house has made a quotation on an inquiry from Denmark for 3000 tons of rods, believing that he can better the English competition.

Americans also have invaded the English market with nuts and bolts and some interesting sales are reported. A sale of 300 tons of steel joists has been made to British clients.

France continues to send in many inquiries but very little business is being done. Some machinery has been sold as well as some sight samples. The individual inquiries received are for pipe, hoops, sheets, bars, and structurals. They are for tonnages varying from 500 to 1000. A sale of 200 tons of plow shapes to France was reported. It is not only the decline in exchange and the straining of credit that is placing a check on the sales to France, but it also is a question of import regulation by the French themselves. American salesmen and prospective French customers are harassed over the arbitrary regulations and are interested in seeing the French adopt some permanent trading policy. At the present time Switzerland is selling the French much machinery, Germany is selling her finished iron and steel products, and both England and Belgium are making sales in France.

That American export agencies appreciate the fact that France will turn to buying American iron and steel before many months is attested to by the activities now underway. It is known that one important agency is planning the construction of huge warehouses in one of the French ports. These warehouses have been projected however merely upon the assumption that French import restrictions cannot last forever, that reconstruction must be started sooner or later, and that money for the work will be provided. At present the agency is even forbidden to bring into France the material with which to construct its desired warehouses. Italy has purchased 1000 tons of bars, and some spiegeleisen. Germany has purchased a quantity of copper.

Export iron and steel prices are stiffening up, although no definite changes in quotations were noted during the past week. It is expected that within the next month the price of sheets will be advanced and later bars will go up.



Adopt Plan to Fix Tool Prices

War Department Announces Price Chart to be Used in Conjunction With Appraisal Chart Published June 12 in Disposing of Government-Owned Machine Tools—District Offices to Make Sales Under 72-Hour Option

WASHINGTON, Aug. 5.—The problem of fixing prices for machine tools to be disposed of by the war department is believed to have been solved by the adoption of a price-fixing chart. This is to be used in connection with the graphical appraisal chart explained in THE IRON TRADE REVIEW of June 12. Price fixing of machine tools is the third distinct step in the disposition of this equipment, following inventorying and appraising which in turn follows settlement of contractors' claims. The explanation accompanying the chart tells how it is to be used.

The war department, in determining the minimum sale price of any machine tool, will do so by having the machine tool section, in co-operation with representatives of the various bureaus having machine tools for sale, compute the selling price from the chart based upon the present market price of a similar new tool. Actual selling is to be done by the district office of the bureau holding title to the machine and in the bureau district in which the prospective buyer is located. Each district sales force is empowered to sell all materials listed

(*Concluded on page* 350)

THE use of the price-fixing chart is dependent upon two things: first, the present condition of the machine tool, i.e., the remaining service value as determined from the graphical appraisal chart published on page 1562 of THE IRON TRADE REVIEW of June 12, 1919; and, second, the present market price of a new machine tool as determined from the manufacturers' net prices on file in the machine tool section of the office of the director of sales.

Having ascertained the percentage condition of the machine tool from the graphical appraisal chart, enter the price fixing chart on the base line at the corresponding point. Now read vertically to the price line which corresponds to the present status of the machine tool, such as "installed and used," "new machine crated," etc. At the intersection with this line read over horizontally to the left and this will give the selling price in percentage of the present market value of a similar new machine.

Then ascertain the current manufacturers' selling price for a similar new machine tool from the files of the machine tool section of the director of sale office and multiply this price by the percentage previously derived from the chart.

Attention is called to the fact that when a new machine has been in storage for less than a year no allowance is made for obsolescence, as the service value of the machine is considered to be 100 per cent, but when a new machine has been standing for more than one year its service value falls below 100 per cent and the exact percentage must be computed from the graphical appraisal chart using the line "light use, best upkeep" for a new machine.

Iron Output Gains 13.3 Per Cent

July Increase of Production After Turning Point in June is Large—Merchant Output Shows Gain of Over 20 Per Cent—48 Stacks Blown in of Which 37 Are of Steel Works Class

REPRESENTING the second month of recovery after an 8-month steady decline, July production of coke and anthracite pig iron made a large gain and almost equalled the figure for April of this year. An increase of 13.3 per cent over the June production is shown compared with the 3.6 per cent increase of June over May. The July output represents 70.6 per cent of the high mark production of September, 1918.

Production for July reached 2,474,654 tons, an increase of 360,626 tons over the June figure of 2,114,028 tons. Daily production was 79,827 tons, 9360 tons more than the 70,467-ton daily output of June. Production is climbing at a much greater rate than that by which it fell up to June and at

MONTHLY PRODUCTION

	1919	1918	1917
January	3,306,279	2,403,227	3,159,839
February	2,947,555	2,318,242	2,649,935
March	3,088,023	3,209,996	3,255,813
April	2,474,374	3,273,355	3,328,061
May	2,107,729	3,451,884	3,413,677
June	2,114,028	3,316,148	3,260,234
Total 1st half.	16,037,988	17,972,852	19,067,559
July	2,474,654	3,408,584	3,337,442
Total 7 months.	18,512,642	21,381,436	22,405,001
August		3,378,479	3,238,970
September		3,413,223	3,140,742
October		3,482,392	3,296,286
November		3,347,844	3,198,597
December		3,434,114	2,885,380
Total 2d half..		20,464,636	19,097,417
Grand total..	18,512,642	38,437,488	38,164,976

the present rate of gain the indications are that production will closely approach the high point in a relatively short time.

Although the output of steel works or nonmerchant furnaces was responsible for the gain in production in June, the merchant furnaces largely were responsible for the sharp gain

AVERAGE DAILY PRODUCTION

	1919	1918	1917	1916	1915
Jan.	106,654	77,523	101,930	102,319	51,323
Feb.	105,270	82,794	94,641	106,157	59,521
March	99,614	103,548	105,026	107,343	66,009
April	82,479	109,112	110,936	107,517	70,484
May	67,991	111,351	110,119	108,535	72,747
June	70,467	110,538	108,675	107,127	78,998
July	79,827	109,954	107,659	103,907	82,687
Aug.	.....	108,983	104,483	103,156	89,510
Sept.	.....	113,774	104,691	106,935	94,478
Oct.	.....	112,335	106,332	113,167	100,656
Nov.	.....	111,595	106,620	110,593	101,174
Dec.	.....	110,602	98,077	102,715	103,278
Av.	87,471	105,293	104,562	106,610	81,022

in July. Steel works produced 1,909,541 tons compared to 1,647,085 tons in June, an increase of 262,456 tons. Merchant stacks produced 543,943 tons to 436,359 tons in June, an increase of 107,584 tons. Daily production of the nonmerchant furnaces was 61,598 tons, 6695 tons greater than the 54,903 tons in June or an increase of 12.2 per cent. The daily production of merchant stacks was 17,546 tons compared to 54,903 tons in June. The increase, 3001 tons, is a gain of 20.6 per cent.

Active stacks in blast on the last day of the July numbered 247, a gain of 48 over the 199 active on June 30. The gain of June over May was only two stacks. The putting into blast of 37 nonmerchant furnaces is responsible for the large gain while no stacks of this class were blown out. Of merchant stacks, 17 were relighted in July and six were blown out thus making a net gain of 11 stacks.

Production for the first seven months of this year totals 18,512,642 tons, 2,868,794 tons less than for the same period in 1918 and 3,892,359 tons less than for the first seven months of 1917.

Ferro production for July with 13,340 tons was 3883 tons less than the 17,223 tons in June. Spiegeleisen output also dropped from 13,361 tons in June to 7830 tons in July.

Silicon Range Is Set

A silicon range of from 1.75 to 2.25 per cent has been adopted as a standard description of No. 2 foundry iron by leading southern foundry pig iron producers. This formerly was the range for No. 3 foundry in the South as up to the adoption of a general classification of No. 2 foundry as 1.75 to 2.25 silicon by the war industries board in the days of price regulation during the war. Since the lifting of government regulations there has been some confusion over what constituted this grade.

Adopt Price Fixing Plan

(*Concluded from page* 349)

as belonging to its bureau even though the machine tools may be in other districts. For this reason all materials are subject to prior sale.

To avoid duplicate sales the district office making a sale requests the bureau office here for a serial number covering the materials being considered by the prospective buyer. In granting this sales number it is understood it is regarded as a 72-hour option to the district office for its customer. The sale must be completed within that time, beginning at the time the number is issued here, or the number and option are canceled. A certified check from the buyer for the amount of the sale and in possession of the district office consummates the deal. The bureau office here is notified and the surplus material checked off. Under the plan the machine tool section is kept constantly informed as to the progress of the sale in all bureaus and can control the sale of surplus machine tools by making such revisions in the price chart as may become necessary.

JULY PIG IRON

States	No. of stacks	No. in blast last day of month: July	June	Total tonnage made: Merchant	Nonmerchant	Totals: July	June

Modernizing Freight-Handling Methods

Portable Conveyors are Adapted to Many Purposes

TOO much economic importance cannot be attached at this time to the educational campaign looking toward the development of the country's facilities for speedier and more efficient handling of freight recently begun by American manufacturers of equipment serviceable to this end. That there are mechanical means for coping with the deplorable situation existing at most terminals throughout the country is known to the engineering profession, but exporters and civic and federal authorities generally have yet to be aroused to the vital necessity for more adequate provision or to be brought to a realization that mechanical facilities are to be had for such programs.

For years the tendency in this country has been to point to the excellent conditions prevailing at many of the leading terminals abroad, and then deplore the lack of interest manifested in this problem by the engineering profession on this side. In a measure, this assumption, until recently, has not been without foundation. The brunt of the burden of studying terminal conditions in the United States and devising mechanical means for facilitating various much-needed improvements has been carried by the few, and it was not until the costly traffic congestion of the past few years that engineers and equipment manufacturers became alive to the importance of the question and its tremendous possibilities.

However, by the aid of the exceedingly valuable work long carried on by a relatively few able and public-spirited engineers, the progress in recent months has been rapid. It has been through their unstinted cooperation with equipment manufacturers that methods for promoting the movement of material have now become so modernized as not only to compare most favorably with those abroad, but to surpass them. This has been demonstrated by records made at the newer terminals in this country, and is further indicated by the foreign demand for American material-handling equipment. In fact, there has scarcely been an important development at any of the larger terminals throughout the world within the past two years which has not resulted in the installation of American machinery to the exclusion of practically all other equipment.

Work is Only Begun

While constructive action has finally been taken at some of the leading shipping centers throughout the United States, the work of improving freight-handling methods in this country has only been fairly begun. This fact is appreciated when it is realized that in addition to the numerous terminals in the south and along the eastern and western seaboards, there are now more than 6000 inland waterway terminals. This number, according to leading authorities, will be increased at the present rate of development to more than 10,000 before another year has elapsed. It is stated that there are now more than 250,000 railroad terminals throughout the country.

It undoubtedly has been the growing realization of the vast potentialities of this branch of the equipment field that has contributed so greatly to the widespread interest manifested by manufacturers of material-handling machinery in recent months, and a concrete instance reflecting this awakened interest may be found in connection with the recent proposal of the city of Providence, R. I., to install at a municipal pier a number of special gantry cranes on which more than 17 companies submitted bids. Prior to the war or even during hostilities when plant capacity in most instances was absorbed to the utmost by more standard work, it is doubtful if there would have been more than three companies to display interest in this kind of a project.

Owing to the urgency for building up a large export trade, it is probably at the ocean terminals that the most acute need of adequate

INCLINED ELEVATOR AT PIER IN NEW YORK HARBOR

facilities prevails. During the war efforts bearing on the establishment of a merchant marine were concentrated largely on the construction of ships, and the expense of operating them was a matter of second consideration. However, with the attention of the country again directed to commerce and trading, the question of costs assumes an aspect of primary importance, and the handling of freight at the marine terminals has been so large an item of expense in the past that attention to this phase of the export problem falls little short of a national duty.

The great trouble all along at many of the larger seaboard terminals, particularly at New York, has been in the handling of miscellaneous freight. The problem of moving bulk freight, such as coal, ore and grain, has been successfully solved, and the cost rates, established along the Great Lakes, have long been the lowest in the world. But the handling of bulk cargo is one thing and the movement of package freight is quite another, and it took the shock of war to bring equipment manufacturers to that point of concentration on the subject which resulted in rapid advance.

In their study of the package freight question, one of the first and perhaps the most vital problems confronting equipment manufacturers was that pertaining to the direct loading of ships. This is done in the instance of ocean-going vessels through the deck hatches, and in the case of coastwise vessels and also boats carrying general cargo on inland waters, through side ports. Heretofore, in this latter instance, the transference of material has been done almost entirely by manual labor, thus entailing considerable expense through loss of time in port, resulting in extra dock charges, etc. To overcome this difficulty some ingenious methods have been devised.

Breakages Reduced to Minimum

One of the most popular methods entails the use of the portable conveyor. This device has been described as an animated gang plank, which can be pushed from the wharf into the vessel. It is designed to move packages of medium size and weight and the service it will perform is limited only by the speed with which the freight can be fed, unloaded and stored. By use of gravity conveyors in assisting in this latter work, it is asserted that not only the loading, or unloading, time can be cut in half, but that the breakage which usually represents a large item of expense can be reduced to a minimum. The conveyors are usually operated by a 3-horsepower motor.

Another device to have proved quite satisfactory at some of the terminals where installed is one commonly referred to as the inclined elevator. It is an endless chain, run on motor-driven sprockets and provided with lugs for engaging the axle of a truck on an incline haul. This installation has been found particularly desirable at terminals where there is a variation in water level due to tides, and where the wharves to accommodate coastwise vessels have been built with adjustable ramps. At the Weehawken, N. J., piers of the New York Central railroad, where a number of these inclined elevators have been installed, an increase of from 20 to 40 per cent is reported in the amount of material handled. A reduction in labor cost of two to three cents per ton on freight moved also is reported.

Gantry Cranes Economical

In the handling of material through deck hatches, as is necessary in the instance of ocean-going vessels, gantry cranes are not infrequently used to advantage. It is generally conceded that where volume of tonnage warrants it the gantry crane is probably the most economical and efficient of all transfer equipment. Where conditions do not justify the installation, there is little left to do but use the cargo mast, where the

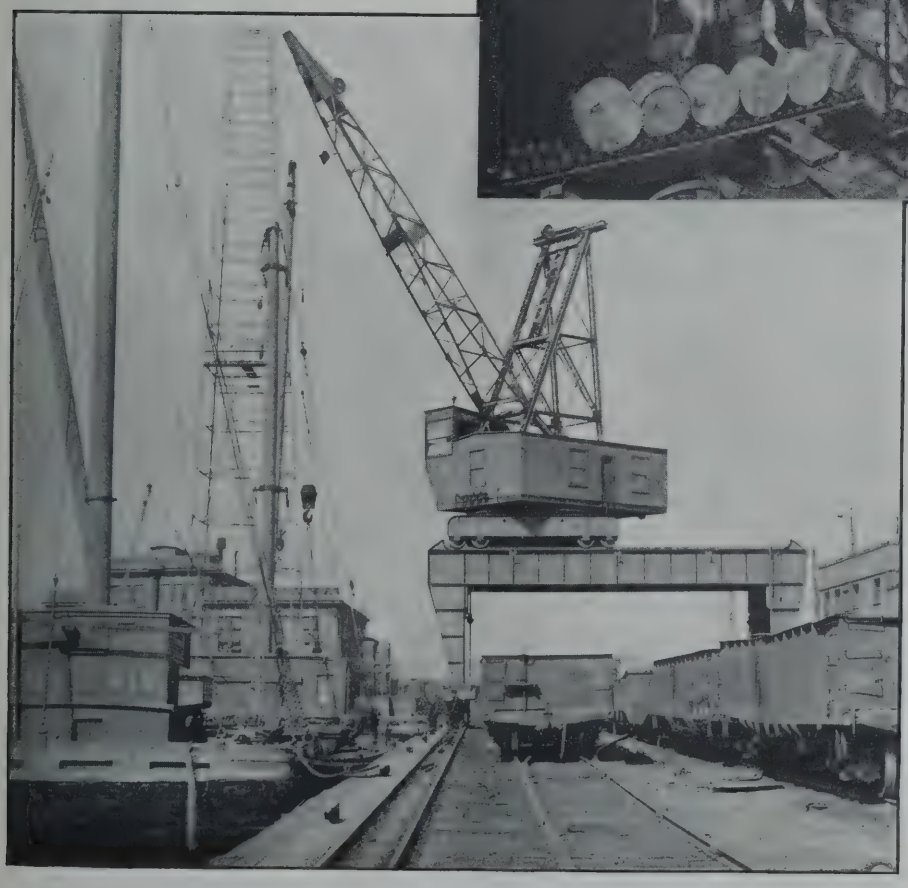
ship's tackle and wharf winches can be employed together, or the ship's tackle only, where there is no wharf equipment.

Another factor in deciding the advisability of installing cranes is the question of space. To obtain the utmost efficiency, it is necessary that the sheds set well back from the water's edge. This gives a greater area of deposit for the freight as it comes from the hold, and is in itself an advantage in the operation of the crane. In estimating the economy of the crane, the fact also is to be considered that the service is not limited alone to the brief period a ship is in port. Between times, the crane can serve the craft which collects or distributes the cargo of a ship. In fact, the lack of equipment on most craft of this description makes machinery on shore highly necessary.

Tier Conveyors Find Favor

With the advent of various mechanical devices for the direct loading or unloading of ships, it has been necessary to devise means for expediting movement of freight from the unloading machines and means for stacking it. For this work, tiering conveyors have come into favor, especially where the freight is of standard size. By the use of these machines, the freight not only can be handled more speedily, but considerable more storage space can be utilized. In most instances the space employed is increased more than 200 per cent.

Overhead tiering machinery also is producing excellent results. This equipment is run on overhead side rails, and with one or more traveling cranes spanning the floor space, forms an adjustable loop system. While many of the pier sheds are as yet unequipped with apparatus of this general character, steps are being taken toward equipping them. Undoubtedly the greatest advantage to be derived is in the acceleration of the ship's turnaround.

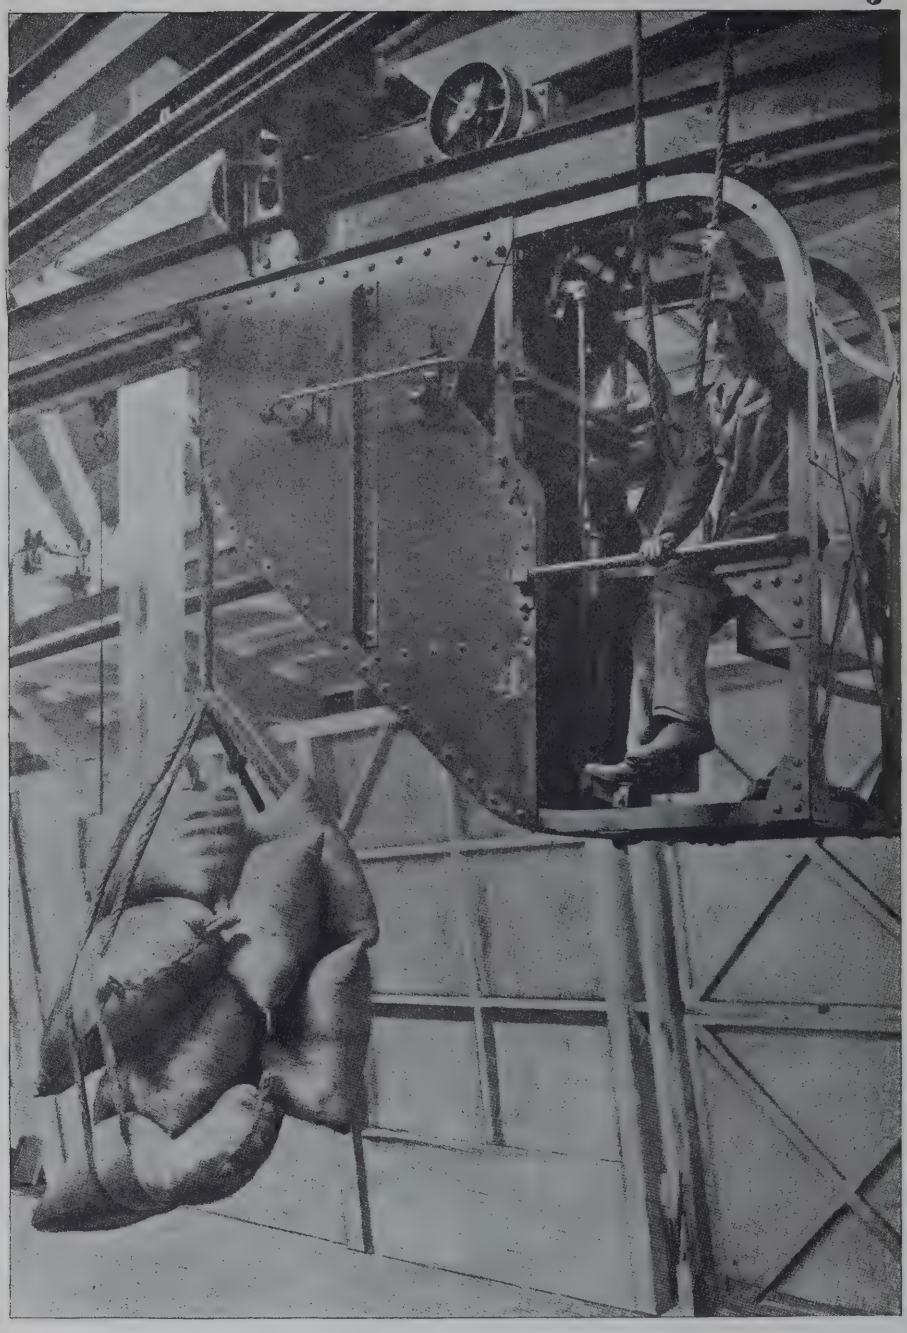


A vessel in port is considered a liability, and where manual labor is relied upon a ship is forced to remain in port, according to figures supplied by the United States shipping board, from 20 to 30 per cent of the time. This period, it is claimed, can be reduced to less than 5 per cent by the adoption of proper mechanical methods.

Conveyor in Operation 25 Years

Electrically operated trucks also are used to considerable advantage, particularly where the hauls are of some length. For the shorter movements, up to 200 feet, engineers concede that the hand truck is still supreme.

Possibly the oldest mechanical conveyor system in commercial operation may be found in the warehouses of the Federal Sugar Refining Co., Philadelphia. The equipment has been in continuous operation for more than 25 years, and is of particular interest inasmuch as it reflects the progress made by some American manufacturers years ago in the development of mechanical devices for the handling of package freight. The conveyor was designed to have an average speed of hoist of 40 feet per minute and an average speed of travel of 600 feet. The average load at the Federal warehouses is 3000 pounds.



THIRTY-TON GANTRY CRANE AT DELAWARE & LACKAWANNA PIERS IN HOBOKEN, N. J., AND, ABOVE, NOVEL METHOD OF HANDLING PACKAGE FREIGHT

Norfolk to Have Great Terminal

Perhaps the most modern terminals in the country at present may be found at Seattle, Wash., and Galveston, Tex. At the latter port, it is said a ship's turnaround can be facilitated more speedily than at any other marine terminal in the United States. Great improvements are being made at Norfolk, Va. It is asserted that upon completion of the

MECHANICAL CONVEYOR HAS BEEN IN OPERATION 25 YEARS IN WAREHOUSE OF FEDERAL SUGAR REFINING CO., PHILADELPHIA

work now under way, Norfolk will be the most modern of all seaport terminals. Here every effort is being made to unite mechanical, engineering and architectural construction, all parts being designed and laid out in relation to the whole.

Hog Island Has Great Facilities

Among the best equipped piers in the country are those now engaged in fitting out ships at Hog Island. At these piers, seven in all, there are 28 locomotive gantry cranes, with a capacity of about 30 tons each. M. C. Brush, president of the American International Shipbuilding Corp., operating the Hog Island yard, states that at no other commercial pier in the country does there exist 50 per cent of the modern appliances for the handling of cargo that now are in operation at Hog Island. In the opinion of some experts, Hog Island is the greatest potential terminal in the United States, but whether the yard will be converted into a terminal upon the completion of its shipbuilding program is a question still to be decided.

It was brought out at the recent meeting of the Material Handling Manufacturers' association in New York City that plans have been formulated and adopted for considerable terminal development at several other large ports. San Francisco, it was stated, will spend about $8,000,000; Portland, Ore., approximately $5,000,000, and Los Angeles, $4,500,000. Other large expenditures will be made along the Pacific coast.

It would seem as if it were in the West that the greatest progress is being made at this time, but a number of cities along the eastern seaboard are becoming more thoroughly alive to the importance of this movement, and much interest is being displayed at the port of New York. Through this port passes more than 40 per cent of the country's export commerce, and consequently the work to be undertaken will be of benefit to the entire country. Some engineers express the belief that the most important part of the project is not the improvement and reconstruction of the pier sheds and warehouses already in existence, but the new plans proposed for Staten island and other points around the harbor. Nevertheless, they believe the greater use of mechanical equipment at many of the warehouses and pier sheds along the North and East rivers will go far in solving the question of handling freight at the port of New York.

Railroads Plan Improvements

Possibly the most important improvement now under contemplation at New York is one calling for the expenditure of more than $200,000,000 by the Central railroad of New Jersey and the Lehigh valley rail road. According to the plans recently approved by the officials of these railroads, 1100 acres will be developed in what is known as the New Jersey flats, at the mouth of Newark bay. Actual construction is now awaiting approval of the war department, which, it is believed, will be granted without considerable delay.

The principal features of this project include a coal-handling plant, mechanical dumping towers, coal thawing plant, ship repair plant, dry docks, oil supply plant, warehouses, grain elevators, barge terminals, car storage tracks and switching yard, locomotive roundhouse and repair shops, pier storage sheds, ground storage area and free landing zone. The coaling dockage provided in the plans gives room for fifty 500-foot vessels.

As a general proposition, however, public carriers, such as the railroads and steamship lines continue to view the problem of port development more or less passively. And it would seem that for the time being at least little can be expected of these interests. As in the past, the major expense of the handling of material at the ports is paid by the shipper,

PIERS AT HOG ISLAND ARE AMONG THE BEST EQUIPPED IN THE COUNTRY FOR THE HANDLING OF MATERIAL

and ultimately by the consumer. Some excellent work has been accomplished by private interests, but results most to be desired will not materialize until city, state and federal authorities have begun constructive action.

Properties Give Monel Metal Broad Uses

While the strength of monel metal rods has been an important factor in many instances, there are other distinctive peculiarities of this natural product of the nickel-copper sulphide ores of Ontario, Can., which have carried considerable weight in their selection, according to a paper by Hugh R. Williams, technical research department, of the International Nickel Co. The ultimate strength of rolled monel metal, rounds, squares, rectangles and hexagons frequently has been shown in tests to exceed 100,000 pounds per square inch.

Permanency of finish has increased the use of this metal particularly for articles of hardware. When polished it has a handsome color similiar to that of burnished nickel and does not tarnish readily. It offers great resistance to chemicals, especially those of an acid nature, which permits its use in a number of industries such as the dye industry where parts of the machines are made from monel metal and in the dairy industry in milk handling apparatus. The metal has been used for pickling pins, tie rods, pump rods, bolts and nuts. Although nitric acid will attack the metal, other acids virtually do not affect it. It is interesting to note in this connection that a piece of metal immersed in cold 40-degree sulphuric acid for 56 days showed no loss in weight and that fine metal turnings when placed in a vessel of the same acid and kept at boiling temperature for 48 hours showed a loss of less than half of 1 per cent.

The metal retains its strength to a large degree when under high temperatures and the coefficient of expansion is practically the same as that of steel. Thus it may be used as a component part of mechanisms without danger of warping or deformation which sometimes occurs under thermal strains where metals of different coefficients of expansion are used. This property makes monel metal suitable for engine parts and steam turbine and impeller blades. In internal combustion engines, the low heat conductivity, the resistance to hot gases and high temperatures and the thermal expansion and contraction make this. metal adaptable for exhaust valves.

Audible Electric Signals for Shop Calls

A paper entitled "Audible Electric Signals in Industrial Plants," recently presented at a meeting of electrical engineers at Rochester, N. Y., by V. Karapetoff, professor of electrical engineering, Cornell university, deals with automatic devices for locating important executives and employes in noisy plants such as rolling mills or boiler shops. Powerful electric horns, designed to operate on the shop lighting circuits, are installed throughout the plant while the control is located adjacent to the telephone switchboard. When a person is desired, the telephone operator is requested to send out his call. By simply setting the code number of the desired party on the device and pulling a lever, the proper call is sounded in all parts of the plant. After the device has sounded the call for the desired number of times, usually three, it ceases to operate. When the party being summoned hears his call, he goes to the nearest shop telephone and reports, whereupon the operator connects him with the calling party or delivers the message. Should the first series of calls fail to locate the person wanted, the series can be repeated by pulling the lever again.

The electric horn gives a very suitable signal for noisy shops but depending upon their location, electric gongs, bells, buzzers, air whistles, or incandescent lamps may be substituted. By means of such signals, a fire call may be sounded throughout the entire plant at one time. A further application of loud electric signals is that of extensions to telephone bells in noisy shops. The small bell operates a relay which in turn sounds the loud signal. Electric signals are also used in some plants for warning signals on cranes and hoists, for calling a locomotive, or for indicating the beginning or end of an operation.

Examine Workmen Before Hiring

Thorough Physical Examination Measures Men's Fitness For Jobs to Be Filled—Rejections Reduced to Minimum Due to Hospital and Surgical Treatments — Accident and Death Insurance Part of Plan

BY CHARLES F. WILLIS

PHYSICAL examinations of workmen previous to employment started with an effort to prevent the spread of tuberculosis, for tuberculosis may be detected in its early stages and cured. But it was soon found that many other diseases were detected and the saving of lives made possible. The physical examination does not mean the elimination of the unfit but rather the measuring of a man's physical fitness and placing the man where he can do the best for himself, his fellow worker, and the company.

The objects of physical examination are: The early detection of illness, particularly at a time when a full restoration of health is possible; the protection of employes from infection caused by working in contact with contagious diseases; the discovery of a man's physical limitations, in so far as his possibility for rendering good service is concerned; assistance to the safety movement by eliminating association in hazardous occupations with men whose physical condition renders them likely of accident to themselves and others; and the lessening of time lost by sickness.

Illness Prevention Has Advantages

Statistics published by the United States department of labor show that 22.54 per cent of idleness is caused by sickness, with an average number of 7.71 weeks idle; whereas only 1.66 per cent is caused by accident with an average number of 8.98 weeks lost. Sickness is responsible for almost one quarter of the economic losses due to unemployment.

The physical examination, however, will not stand as a preventive of illness and accident unless followed by the most minute detail. The employment of healthy men to do work in unhealthy surroundings is nothing short of criminal.

Many mine managers have recognized for some time the importance of illness-prevention work, but they have appreciated that illness cannot be prevented by the physical examination alone any more than by improvement in sanitation, sick benefits, free medical advice alone, or any one of the other factors entering into it, and that only by the combination of all of these factors can results be secured and the benefits obtained. The experience of those who have been active in illness-prevention work is that it has paid big dividends in money, satisfaction, continuity of work, and contentment.

May be Provided by State

Another reason for the lack of adoption of the physical examination has been the financial unpreparedness of the average employe to meet the exigencies of sickness, which delays early detection and treatment. While without doubt this some day will be cared for by the state with some form of insurance, there are many ways of caring for it at the present time, and the mines where physical examination is in vogue do not allow that feature to stand in the way of its success.

The Copper Queen branch of the Phelps Dodge Corp., operating in Bisbee, Ariz., has had the physical examination as part of its general plan for prevention of illness and accident and the improvement of the physical caliber of its workmen for a number of years. The methods adopted have been very beneficial to the operators and more so to the employes.

In the early days of the Copper Queen mines, sickness was common, epidemics not infrequent, and accidents an everyday occurrence. Soon, however, a plan was devised which not only included better health for the employe, better working conditions, and better living conditions, but also better social and recreational facilities.

Hospital Not Self-Supporting

A contract-hospital system is a common factor in nearly all mining communities today, but the ordinary hospital of the mining camp is not aimed so specifically at illness prevention as is the one at the Copper Queen. Its desire is to be as liberal as possible, and does not, by many thousands of dollars, support itself by its fees. The loss is more than made up by the greater satisfaction given the employes and in the knowledge of the officials of the company that the hospital is performing the best service possible and that the doctors are not using their positions to obtain money from the men on various pretexts. As is usual in contract-hospital systems, elective operations are charged for, and occasionally disputes arise as to what constitutes an elective operation. As the object is not merely to cure men but to keep them well, in the Copper Queen hospital any operation that will improve health is ordinarily considered necessary and is performed without extra charge.

The liberality of the hospital policy would not be possible if it were not for the physical examination. It would not be feasible for a company to employ men irrespective of their physical condition and allow all the same hospital privileges. The physical examination becomes to some ex-

Gompers Is Answered

ONCE again the subject of physical examinations prior to employment has been brought into the limelight. At the recent meeting at Pittsburgh of representatives of 24 international unions of iron and steel workers, the abolition of the physical examination was made one of 12 points upon which to call a general strike in the iron and steel trades. In the accompanying abstract of a paper to be presented before the September meeting of the American Institute of Mining and Metallurgical Engineers in Chicago, the author who is consulting supervisor of the department of industrial relations, maintained by the Phelps Dodge Corp., at Bisbee, Ariz., takes up and disposes of the five objections to physical examinations raised by President Samuel Gompers of the American Federation of Labor. Mr. Willis discusses the methods inaugurated for physical examination of prospective workmen at his company's Copper Queen mines and shows that only those men are rejected for whom work cannot be found or whose physical condition would prove hazardous to their fellow workmen.

tent the selection of risks, and because of this selection the very liberal policy is made possible.

The Copper Queen also maintains a beneficial association for its employes, which is nothing more nor less than a cheap form of insurance against sickness and death outside of work. This insurance only costs the workmen 1¾ per cent of his daily wage up to a maximum of $2.19 per month; and in case of death by accident or sickness while off duty, one year's wages are paid the dependents, not exceeding $1500. In case of the loss of time by accident, one-half wages are paid during disability, not exceeding $62.50 per month. In case of the loss of a hand or a foot, both hands or both feet, or both eyes, one year's wages are paid, not exceeding $1500; and in the case of the loss of one eye, one-half year's wages are paid, not exceeding $750.

The support of the employes' beneficial association comes from the recognition of the Copper Queen officials that the health of the workmen and their continuous employment is worth money to the company. Without doubt it is worth more to the men themselves, but the company is willing to pay a proportion of the necessary expense, the percentage depending on the number of the employes who are members of the association. It is a cheap form of insurance, but the physical examination makes it possible.

The physical examination was also made a part of the general plan for the improvement of conditions for workmen due to its relation to the safety movement. In no other industry, as in mining, is the safety of a man more interwoven with that of his fellow workmen.

In line with the general improvement in health and physical fitness of their employes, the Copper Queen has installed every sanitary convenience that seemed practical.

Gompers Objects to Examinations

Samuel Gompers, president of the American Federation of Labor, is responsible for the following arguments against physical examinations: (1) The apprehension in the minds of the workers that if their deficiencies are ascertained, they will be discharged and will have to walk the streets in idleness and thus aggravate their situation and condition. (2) The rejection of the unfit, which practically means condemnation and suffering for those depending on him for support. (3) The fact that many applicants for work have been weakened and enfeebled by long periods of unemployment, lack of proper nourishment, etc. (4) That there is a tendency on the part of the companies working in illness prevention to extend their sphere of jurisdiction into the homes. (5) That there is no provision for the care of industrial cripples.

Doubtless some of these objections would be tenable if the physical examination were carried out with those objects in view. But the employer who carries out the examination for the purpose of building up a physically perfect working force rather than for the benefit of the employe himself, will ultimately defeat the real purpose and object desired.

Two years later, however, as chairman of the committee on labor, Mr. Gompers recommended to Secretary of Labor Wilson that medical examination of applicants be made one of the functions of the government recruiting agency. This recommendation was the outcome of a conference held in New York, July 15, 1918, and embodies the consensus of opinion of exphysicians and public health workers.

Methods at the Copper Queen

The method of carrying out the physical examination by the Copper Queen answers well the arguments against such examinations. The large number of cases that come to the attention of the medical examiner are not cases of illness that require hospital or sanitorium treatment or necessitate the laying off of the man. Full preservation of the rights of the employes is maintained and the matter of following up the results of the examination by re-examination and treatment is strictly optional with the men. The examination does not increase the authority of the employer over the workman, and, except in a few cases, it has been the desire of the employe to correct defects and maintain good health.

To secure privacy, the examiner's room is fitted with five private rooms, all of which open directly upon the doctor's room but are not open to each other.

The attitude of the examiner is important. Dr. R. B. Durfee, who conducts the examinations of the Copper Queen, emphasizes the fact that the examination is done in order that the workman may have a better knowledge of his own condition. He is told of his condition as the examination progresses, wherein he can help himself, where treatment is necessary, and where changes in his living conditions would improve his health. Many of the men are given information that is invaluable to them.

During the six months' period, ending June 30, 1918, the medical examiner of the Copper Queen mines examined 2342 men, 88 of whom were rejected. Of these 88, 20 were conditionally passed by the mine superintendent and put to work. Therefore, the rejections amounted to about 30 in 1000, as against several times that number in the army. It readily can be seen that the Copper Queen policy is not the rejection of the physically unfit, but rather the placing of men where they are best fitted and where the safety and health of their fellow employes is not impaired. A careful examination is made of the heart, for this has its influence upon safety. Mining is arduous work and involves much heavy lifting; therefore a careful examination is made for hernia, a serious natural weakness common in every walk of life. A comparatively simple operation cures the disease in a short time. Out of over 2300 examined, 48 were found to have severe cases of hernia. Practically all of the 20 men conditionally passed by the mine superintendent were men having hernia, which was to be corrected by an operation later.

It is only in the case of active tuberculosis that rejection is made; in ordinary cases of lung weaknesses men are placed in out-of-door work where the danger of contagion is small and where the likelihood of cure is large. But seven men were rejected for tuberculosis. Men with this disease in an active stage are unable to do a day's work and, what is more important, they are likely to extend the disease to other workmen when working in a confined place. But six men were turned down because of their eyes. Those with ordinarily poor eyesight are not rejected—practically every case amounts almost to blindness. If eye tests had been common in industries in the workman's early life, the sight of the now useless eyes could have been saved in many cases. Occasionally cases of trachoma are found, which call for special care in order to protect other workmen from the contagion of the disease.

Two Rejected for Defective Hearing

The rejection on account of defective hearing is a matter of degree. But two men were turned down for this cause during the six months, both of whom were cases in which there would have been considerable danger to themselves.

It is not uncommon to have men making application for work who have one arm, one leg, or who have not the use of their arms or legs; and while there are occasional positions in which these men might be placed, and it is the policy to do so whenever

possible, usually rejection has to be made. But one man was rejected on this account.

Men having venereal diseases in an acute and contagious state are rejected, although there was but one case of this in more than 2300 men examined.

Drugs, alcoholism, and morphine were responsible for the rejection of four men. Such men are dangerous to others.

Bright's disease accounted for one man, fever for three, measles for one, and teeth for one. Bad teeth lead to indigestion, which in turn clogs the mental and physical powers and makes a person stupid and inefficient. They also send germs in increased quantities to the lungs and heart, tighten joints, and cause rheumatism. Rejection is only in extreme cases, however, for this reason.

It can be seen then from the foregoing that the Copper Queen method is by no means the rejection of the unfit, but rather the rejection of those almost totally crippled and those who are a menace to their fellow employes. There can be no question of the advisability of the physical examination, whether it is considered from the humanitarian standpoint, or the selfish cash-conserving standpoint. It adds to the workers' physical comfort, gives them better employment for longer periods, removes as far as possible danger from contagion, and improves conditions in their homes and in the community. By paying attention to physical defects in time, defects that would be overlooked if such physical examinations were not made, hundreds of employes have been refitted for work who would otherwise be jobless because partly incapacitated. Moreover, the health education imbibed by the workers extends to their families.

The fear that has been expressed that the practice of applying the rule of physical fitness will rule some men out of industry is shown, by the records of the Copper Queen, to be of little weight, because very few applicants are barred from industry because of their physical defects.

Roll-Scouring Copper

By M. E. Duggan

In sheet and other mills, the rolls are scoured by holding a copper block between each pair of rolls while they are rotating. Owing to the nature of the service these blocks perform they are soon worn out and have to be discarded. As shown in Fig. 1 when the working face of the copper is worn out, there is still a large piece of copper remaining. It is of no further use and has to go back to the pot for remelting. This involves waste and extravagance, so the holder shown in Fig. 2 was adopted. Here we have just the necessary amount of copper placed where it is needed. When the blocks wear out it is a simple and inexpensive matter to replace them.

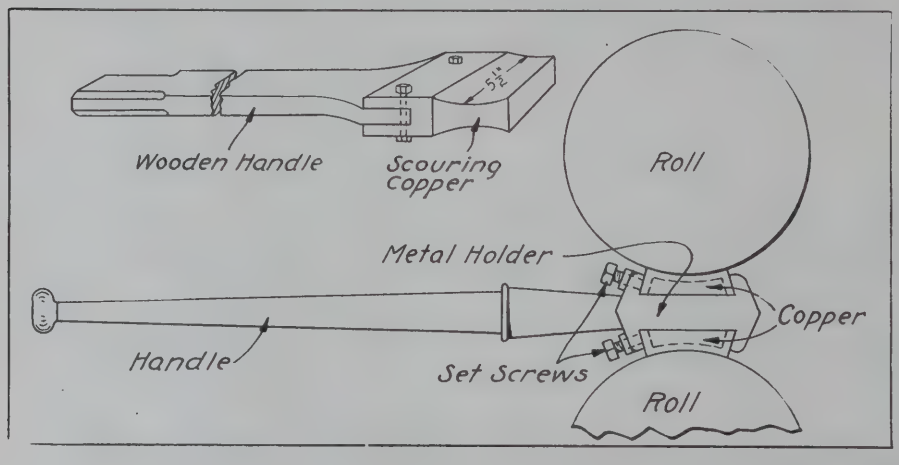


FIG. 1—ROLL SCOURING COPPER AS USUALLY MADE. FIG. 2—IMPROVED TYPE OF SCOURING COPPER

The holder is made with a cored and tapering hole into which is fitted a round wooden handle. This arrangement makes the tool quite easy to manipulate and is a feature which is much appreciated by the operator. The copper scouring pieces fit into dovetailed recesses and are held in position by the set screws as shown.

New Shape Book Issued By Cambria Steel Co.

The Cambria Steel Co., Philadelphia, has recently published the twelfth edition of Cambria Steel, a handbook of information relating to structural steel. The edition of 1919 is revised to conform with modern practice and a wider range of structural shapes and contains much new and useful information.

The table of steel ingots has been modified by the addition of more sizes and styles. A number of new cross-sectional illustrations have been used to show new sections, particularly of bulb angles, car channels, ship channels and a wider range of T-bars. Some space has been devoted to drawings and tabulations of standard ship sections and angles selected as standards for shipbuilding on Nov. 20, 1918. Rolled safety floor plates and buckle plates are newly listed. To correspond with the new standards of connection angles, all former tables relating to them have been modified. The tables of weights for various substances and materials have been considerably enlarged and specifications for structural and boiler steel have undergone revision.

Some of the tables and information which has been added to the new addition pertain to flat and corrugated steel sheeting, roof truss dimensions and stresses, moments of inertia or rectangles, sizes of wrought spikes and wood screws, wire gages shown in a combined table, decimal equivalents of nonbinary fractions, square roots and cube roots of fractions, weights of circular steel plates, trigonometrical formulae, squares and cubes of numbers and fractional intervals, combinations and factors of π (Pi), relations in circular segments, volumes and surfaces of solids, minutes and seconds expressed in decimals of a degree and vice versa, and metric and customary measure conversion.

Cadmium As Substitute For Tin

During the war practically every belligerent nation was hit by a shortage of tin and campaigns for its conservation and the discovery of a substitute were carried on extensively. Germany was probably the first nation to use cadmium as a substitute for tin. Solders containing as high as 30 per cent of cadmium and 2 per cent of tin instead of the customary 40 or 50 per cent were used.

According to a bulletin recently issued by the United States geological survey, there are about 600 tons of cadmium accumulated annually in this country as dusts and residues, by-products of the lead and zinc industries. About 100 tons of metallic cadmium is recovered from these by-products. If all the cadmium dusts and residues were treated, the output of metallic cadmium would be small in comparison to the 19,000 or 20,000 tons of tin annually used in this country in solder.

Fig. 1—View of Fabricating Plant of Birmingham Steel Corp., Showing Wood Construction Necessitated by Inability to Secure Steel

South Has War-Built Fabricating Shop

ERECTED during the latter part of 1918 to furnish structural work to shipbuilders engaged on government contracts, the plant of the Birmingham Steel Corp., Birmingham, Ala., now is one of the largest fabricating shops in the south. The organization of this company was a result of the placing of a second order for twelve 5000-ton steel cargo vessels with the Mobile Shipbuilding Co. by the Emergency Fleet Corp. early in the summer of 1918. Inasmuch as practically all of the fabricating capacity of the Mobile company already was engaged on essential government work, it was necessary to look elsewhere for the needed facilities. By arrangement with the Emergency Fleet Corp., it was agreed that the company was to build a fabricating plant in Birmingham. In September contracts were awarded for a plant of structural steel designed to deliver 4000 tons of fabricated work per month. Owing to the shortage of steel, the war industries board refused to grant a permit for the structural shapes required for the buildings, whereupon the plans were immediately revised, wood being specified instead of steel. Approximately 1,000,000 feet of lumber and 650 tons of iron work were used in the construction of the main building. A general view of the plant is shown in Fig. 1. The arrangement of the various departments of the plant and the disposition of the larger machines and furnaces are indicated in Fig. 2.

The material crane runway, shown at the left of Fig. 1, is 100 feet wide and 600 feet long, and straddles a standard gage railroad track on which 12 to 15 cars of raw material can be stored at one time. The bridge is of the curved chord Pratt truss type and supports two 5-ton, 2-motor electric hoists. The plans contemplate two bridges but at present only one is in use. The office building is a 2-story, 50 x 120-foot brick structure the second floor of which is used as a drafting room. The ground floor contains general and private offices.

The main shop building, approximately 250 x 400 feet, comprises three 80-foot units, each traversed by two 36-inch gage industrial tracks extending to the centers of the raw and finished material storage yards. Turntables have been installed at convenient intervals. Structural work is fabricated in the west half of the building, while the east half of the central unit and the west half of the east unit are devoted to plate work. The angle shear and friction saw are in an extension to the west unit and are served by a traveling crane of 32-foot span. Material will be delivered to the layout marking skids either by the industrial tracks or the 32-foot traveling cranes and, after being layed out, will be handled by the 30-foot jib cranes on which 3-ton electric hoists are mounted. It is the purpose to handle the material by the jib cranes from the marking skids adjacent to the machines and from these skids, the material will be handled by 2-ton chain hoists suspended on trolleys from the 12-inch I-beams arranged longitudinally over the center of the punches. All three of the

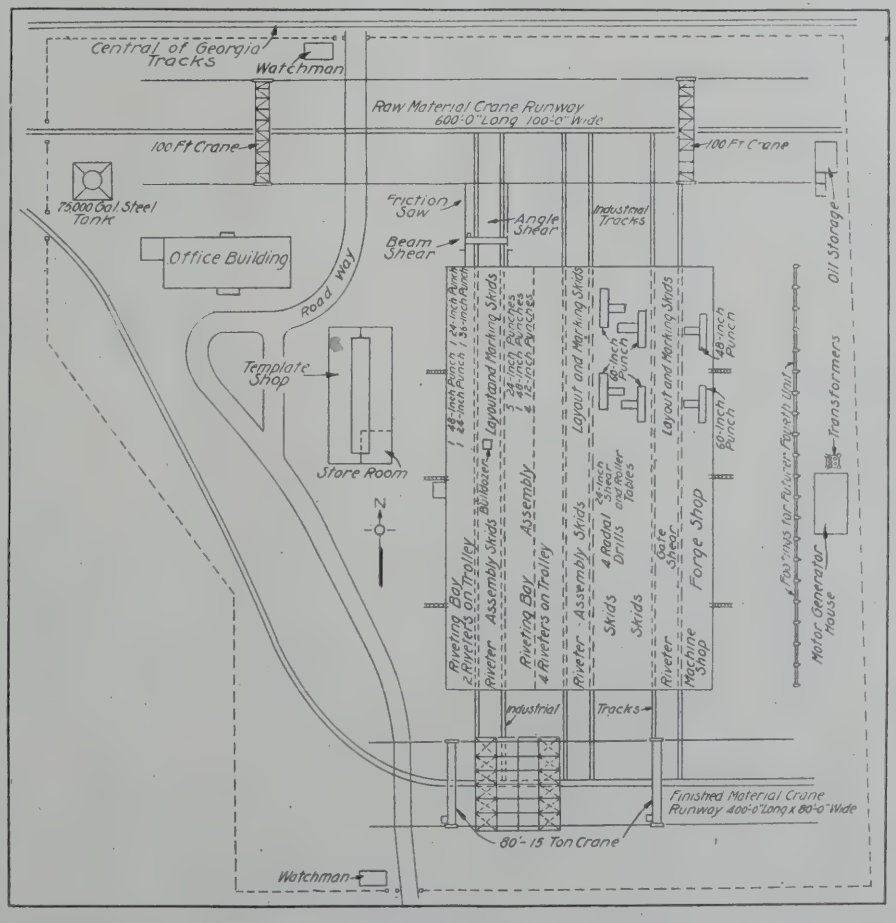

FIG. 2—LAYOUT OF THE PLANT SHOWING GENERAL ARRANGEMENT OF THE YARDS AND MACHINERY

units for a length of 180 feet at the north end of the building are of low construction. An 80-foot 10-ton electric traveling crane is operated in each unit of the higher portion of the shop, and accounts for the difference in height. It is expected that material weighing more than three tons will be handled in the lower portion of the building.

The plate shop is equipped with five 60-inch and one 48-inch punches, each equipped with a Lysholm table and a 32-foot, 3-motor traveling crane to handle the material from the plate marking skids to the table and from the table to the industrial tracks or to the high portion of the shop. A 30 x 60-foot machine shop for the maintenance of shop equipment occupies the southeast corner of the building. In the south portion of the third unit on the east side are blacksmith tools and furnaces. A 10 x 30-foot plate furnace with a bending floor at each end has also been installed.

Three 4500-gallon tanks secured from second-hand tank cars and placed in a concrete pit on the northeast corner of the property provide ample facilities for oil storage. The tanks are just low enough that a tank car standing on the adjacent siding can drain into the tank by gravity. Adjacent to the tank pit is an oil pump house, the floor of which is at such a level that the oil flows to the pumps by gravity after first passing a twin strainer. Two vertical, single-acting triplex pumps, arranged for motor drive by means of a counter shaft, are employed to force the oil from the storage tanks to the distributing system. It is planned to use only one pump at a time, the second being for emergency. An accumulator, with a chamber of about 50 gallons capacity is set to maintain an even pressure of about 15 pounds per square inch on the oil at the nozzles of the burners. All pipe is laid to grade so that it will drain to a pump at the pump house.

Electric power is secured from lines of the Birmingham Railway Power & Light Co. Current is supplied to motor-generator sets and the air compressor at 2200 volts while the plant machinery uses power from a 220-volt line. A 75,000-gallon steel water tank on a 100-foot tower and a complete system of 6 and 8-inch mains affords fire protection for the plant.

The design of the various structures and the machinery layouts were under the supervision of G. S. Bergendahl, chief engineer. M. E. Allen, assistant general manager, was in charge of the construction. H. L. Brittain and Frank McLaughlin are president and general manager, respectively.

Novel Arrangement Of Uptakes

NOVEL construction and arrangement of the uptakes and their manner of connection with the downcomers are the main features of the blast furnace shown in the accompanying illustrations which recently was patented by Julian Kennedy, Pittsburgh. Fig. 1 is an elevation of part of the furnace while Fig. 2 is an enlarged sectional view showing two of the uptakes and a portion of one of the downcomer branches.

Mr. Kennedy sets forth that one object of this blast furnace is to provide a construction and arrangement of the uptakes which will prevent the discharge of an undue amount of the finer material in the burden or charge of the furnace. Another object is to provide an arrangement that will permit the downcomer being carried underneath the skip track.

The blast-furnace structure is shown at *2*, while *3* is the superstructure at the top of the furnace, *4* the skip track and *5* the dust catcher. The top of the furnace is equipped with a number of uptakes, *6*, which are arranged in pairs at opposite sides of the furnace. In the illustrations, however, the uptakes at but one side are shown. The downcomer is shown at *7*. This unit is provided with a branch pipe, *8*, with which one pair of uptakes are connected.

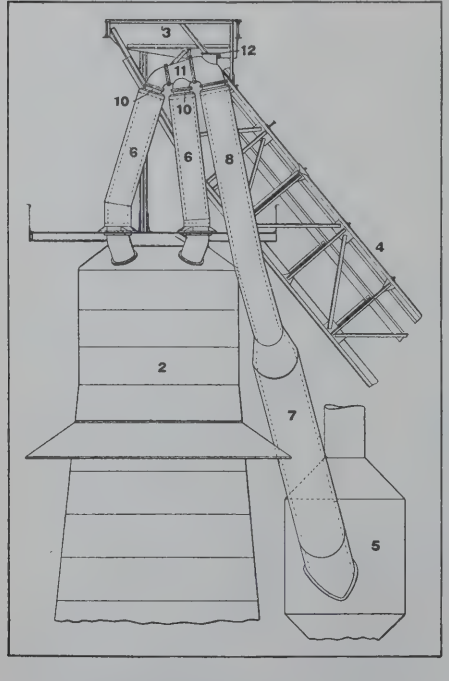

FIG. 1—BLAST FURNACE WITH UPTAKES AND DOWNCOMERS ARRANGED IN PAIRS

Inner Walls Act as Baffles

The two uptakes of each pair are equipped at their upper ends with restricted outlets, *10*, which are arranged to discharge into a common connection, *11*. This is elbow-shaped and leads to one of the downcomer branches as shown in Fig. 2. Both uptakes of each pair are connected behind the corresponding branch of the downcomer and their general arrangement is such that the downcomer may readily extend across the furnaces underneath the skip track. The uptakes are inclined so that they are oblique to the vertical axis of the furnace. Through this design, it is pointed out, the inner walls of the uptakes act as baffles to catch and throw down a part of the finer material which forms the furnace charge, particularly in the case of explosions.

The discharge of such material is further limited by the restricted outlets, *10*, at the upper ends of the uptakes. The combined effect of these two features, it is said, is to throw back into the furnace a considerable portion of the fine material which would otherwise find its way into the downcomer.

By placing both uptakes of each pair at the same side of the downcomer branch with which they connect, it is pointed out that there will be no confusion of the draft currents in these connections, the discharge from both uptakes of each pair passing in the same direction into the downcomer. The connections, *11*, are made of gradually increasing cross sectional area to accommodate the added volume discharged from the inner uptake of each pair. Each of the connections, *11*, is equipped with a relief valve, *12*.

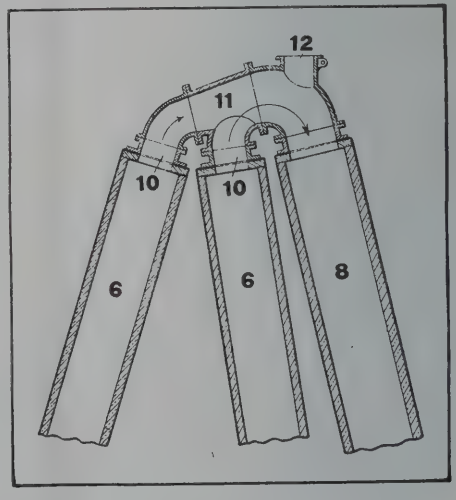

FIG. 2—SECTION OF UPTAKES ELBOW AND RELIEF VALVE

Classifying Indirect Expenses

General Outline of Modern System For Apportioning Expenses is Given — Factors Figured on Floor Area, General and Individual Factors Explained — Value of Standard and Comparative Bases

BY M. H. POTTER

THE advantages of grouping all indirect expenses into their specific classes instead of treating them in accordance with the ordinary accountancy method has been dealt with in previous articles in THE IRON TRADE REVIEW. Inasmuch as indirect expenses are incurred in connection with the carrying out of certain functions it follows that each indirect expense can be classified under the production factor of which it is an inactive part.

Indirect expenses, whether assumed by the manufacturer or purchaser, can be expressed as manufacturing factors. It is self-evident that indirect expenses are all chargeable to actual production either in one department or another, and that they are in some measure fundamental to the work.

This is the sixth article in a series written by M. H. Potter for THE IRON TRADE REVIEW on the application of modern accounting methods in industrial plants.

Fig. 1 shows the factors which are figured on the floor area and percentages which are chargeable to the amount of floor area used by the various departments in production. The remaining factors which are chargeable to all production factors and are known as general factors, are shown in Fig. 2. Apportioning of these factors will be dealt with in detail later. Factors which are chargeable to certain production departments and which are known as individual factors are shown in Fig. 3.

Two Distinct Elements

As the object of the system is to divide and subdivide all expenses of an indirect nature and to apportion them to actual production costs, Fig. 4 may be referred to to cover expenses of an indirect nature which are generally found in most manufacturing enterprises. It is important, however, that indirect charges which are related to certain departments only be so tabulated that they are not confused with any of the general factors.

It is obvious that the cost of production should include both direct and indirect expense, and that idle machinery and similar wastes caused by the absence of work should not be included. To determine such actual costs proper and definite methods of apportioning indirect expenses also will be explained later. It should be remembered that there are two distinct elements, actual expense, indirect but chargeable to actual production, and indirect expense chargeable to idle machinery, idle floor space, etc.

This feature of the system described in THE IRON TRADE REVIEW illustrates its practical value as a standard and comparative basis for figuring

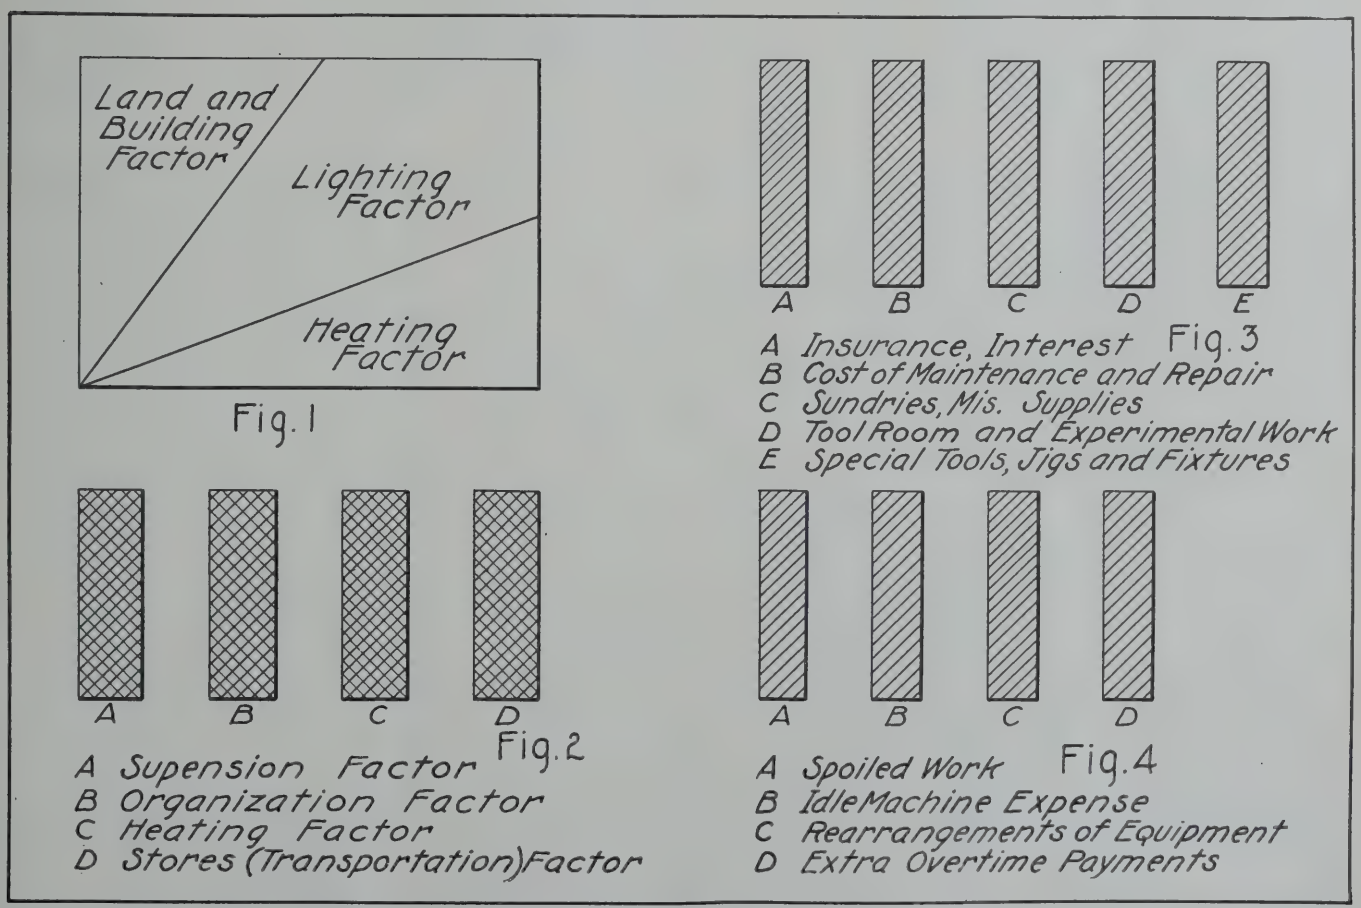

FIG. 1—FACTORS FIGURED ON FLOOR AREA. FIG. 2—GENERAL FACTORS. FIG. 3—INDIVIDUAL FACTORS. FIG. 4—SOME INDIRECT EXPENSES

production costs, inasmuch as only directly related indirect expenses are charged to production costs. No argument is involved when only indirect charges are figured and added to production costs, but this is seldom accomplished by the regular methods of accountancy. From a practical viewpoint machine rates when accurately figured are of more value to the manager of an industrial establishment than department rates. Therefore, the next article in this series will deal with the apportioning of the indirect factor to machine rates.

Building Morale In Industrial Relations

BY GEORGE E. HOLMES

THE element of morale in industry has so long been ignored by many manufacturers that its sudden appearance as such an important factor has led many to believe that it is something born of the war.

As morale is the oil that has made the wheels of commerce turn smoothly and permitted men to launch personal ambitions in the form of large enterprise since the founding of industry, the only excuse one would have for ignoring its existence would be a lack of perception.

In the earlier days of industry the words "interest" and "confidence" were more in use in describing this spirit of an organization. The employer and his men were in daily contact. They realized that the part they both played in the functioning of the establishment spelled its success or failure. There was a unity of purpose that precluded misunderstandings. They met on equal ground and their discussions were always carried on as constructive suggestions from both parties.

Owing to the tremendous growth of industry and loss of this old-time personal contact there has been created a feeling as of two distinct classes. This feeling has been accentuated to such a degree that in place of friendly tolerance there has come about decided feelings of suspicion and ill-will.

The management class, or capitalistic, as it is commonly called, has in many instances made enormous expenditures in its efforts to secure again that old-time spirit of friendly co-operation from its employes. Systems of most every conceivable nature have been tried out with varying results, but the fundamental principle underlying the creation of a lasting morale seems to have been overlooked in most every instance.

Morale, being a condition entirely of the mind, must be considered from its psychological aspect only. The physiological bearing that bonuses, profit-sharing, welfare or betterment service will have upon this should be examined only in their relation to the effect they will have upon the mind of the recipient.

Regardless of the motive that has prompted the act, the first consideration must be just what viewpoint the worker is likely to assume when anyone of the previously mentioned plans are instituted by the management, without first having prepared his mind for its reception. The criticism that has been made at all times of these different attempts at a creation of morale in industry has in no way been aimed at the motive or the idea, but rather at the method of application.

It is a simple matter to satisfy one's self as to the average quantity of mentality possessed by our workers in industry. Works managers, superintendents and foremen, the men who are in personal daily contact with the worker, realize that with few exceptions they have progressed mentally beyond the stage where they are satisfied with being told that they should show more interest in their work and put more "pep" into their arm "because the boss wants them to."

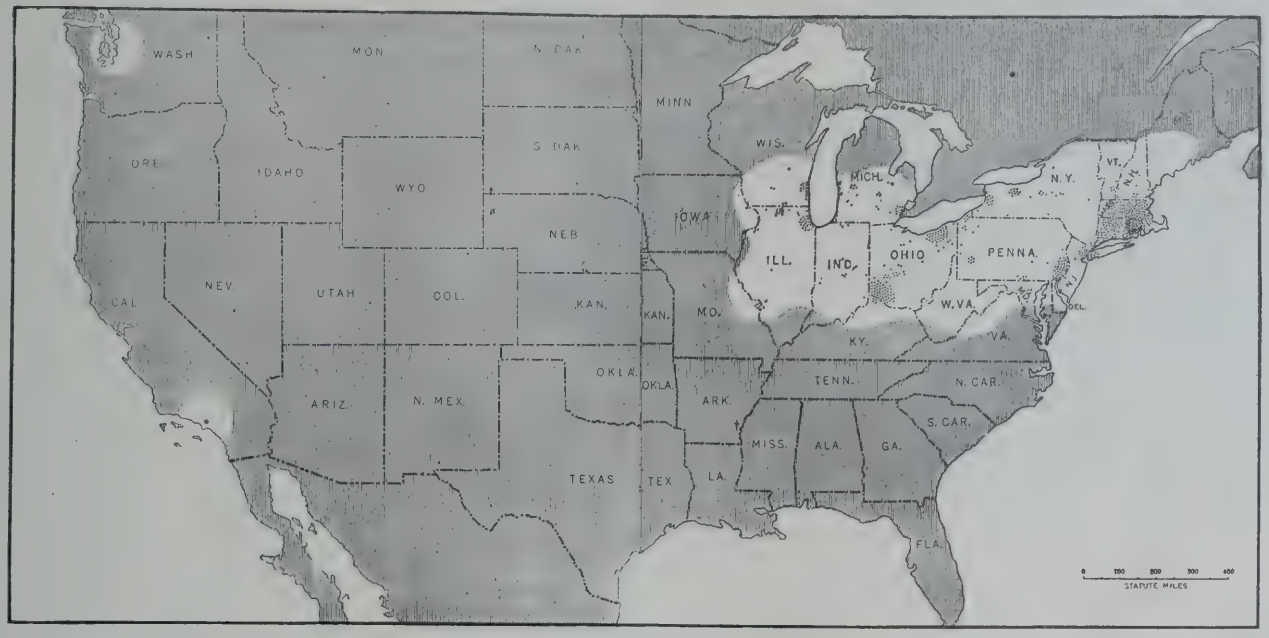
Owing to the loss of the old-time personal contact, the boss is unable to explain to them just why he asks this. If it were possible today for him to sit down and have a heart-to-heart talk with each of his workers, and also listen to their side of the question, there would be little doubt of the return of that morale that is so much in need today. He could undoubtedly convince the foremen that the employment department was their biggest asset, and convince the workers that medical and dental clinics, safety and sanitary commissions, and the clubhouse and its recreational activities, were investments that were paying them handsomely.

That form of plant activity, commonly called industrial democracy, has for its foundation a belief in the need of a man having a chance for expression, that through expression on the worker's part will be opened the door to his consciousness, so that his view if wrong may be corrected, and, if beneficial, be taken advantage of, to the betterment of himself and all concerned. Its objective is a lasting morale gained by knowledge on the worker's part that the management desires to co-operate with him in his work, to remove the fear of arbitrary discharge, to assist in creating continuous employment and to provide for sickness, old age and death.

Money being the high point in man's consciousness, the first spark of interest has been kindled by creating new sources of profit for both the management and the worker. Such matters as labor turnover, loss in supplies, tools, etc., idle machinery and breakage, and, in some instances, quality of production, have been discussed. Instead of considering these matters as necessary losses, the managements have completed itemized statements to be prepared, and the figures have been submitted to the workers with a proposition to split "fifty-fifty" in any saving they are able to effect. If it is possible to create sufficient interest on the part of workers in such matters, the percentage of losses thus sustained will be greatly reduced. Both the workers and the management will secure considerable additional profit, but their chief profit will be the establishment of a firm friendship and a channel through which they can equitably adjust all their differences. After such friendship and co-operation are established, energy previously expended in argument will be directed to constructive thought and that will result in the building of an industrial morale of everlasting qualities.

The author of this article is general manager, Industrial Relations Service, New York City.

Book Review



The Turnover of Factory Labor, by Sumner H. Slichter; cloth; 442 pages, 5½ x 8¼ inches; published by the D. Appleton & Co., and furnished by THE IRON TRADE REVIEW for $3 net.

Dealing with the present-day labor unrest and its resultant high cost of operation and production, this book seeks to furnish reasons and explanations for the various conditions and to offer methods to minimize labor turnover. It is

said that in the average plant annual terminations of employment by discharge, resignation, or other causes approximate the average number of workers employed. Such a turnover involves a large expense and it becomes necessary for the business man and manufacturer to adopt preventive measures which are based on sound principles in the employment and training of employes and the proper attitude to be taken in their handling.

The author was special expert on labor turnover of the federal commission on industrial relations and as a result of extensive investigation for the commission together with many private inquiries, he has compiled complete statistics which bear out his statements. He maintains that a definite and well planned labor policy is as necessary as standardized methods of manufacture and that means are necessary to provide for the formulation and execution of such a policy. Briefly this might be said to be the fundamental principle on which the treatise is built. The book is well arranged and the tabulated figures are so distributed as to be clearly associated with the text matter for ready reference.

Machine Tool Output Increased In Wartime

Map reproduced by courtesy of the Allied Machinery Co. of America, New York.

STATISTICS compiled and published by the machine tool section of the war industries board show a phenomenal growth of the tool building industry under war conditions. In 1914, 310 companies in the United States were engaged in the manufacture of machine tools. They employed 30,082 persons and turned out a product worth $50,000,000. In four years, or by 1918, the value of the annual output had grown 10 times to approximately $500,000,000, while 68 additional companies had entered the industry and the total number employed had increased to 77,154. This shows a percentage of increase of 22 per cent in number of companies engaged, 156 per cent increase in number employed and 900 per cent increase in value of product.

The geographical center of the machine tool industry gradually has been shifting from the East to the Middle West. Ohio unquestionably is now the greatest tool building state, with Cincinnati and Cleveland, respectively, the two largest tool producing cities in the country. With the number of employes as a basis, the 10 largest cities in the United States follow:

	No. firms Oct., '18	No. employed Oct., '18
Cincinnati	39	9150
Cleveland	21	6227
Providence, R. I.	4	5647
Hartford, Conn.	9	4072
Worcester, Mass.	16	3521
Philadelphia	15	2494
Hamilton, O.	5	2173
Bridgeport, Conn.	9	2090
Rockford, Ill.	12	2026
Rochester, N. Y.	8	1873

Cincinnati employs more persons in the manufacture of machine tools than does the entire state of Massachusetts. That city, with 39 establishments in the industry, has 9150 persons engaged while Massachusetts with 48 plants, employs but 8111. Ohio employs 3421 more than does Connecticut and Massachusetts together. The six largest toolbuilding states, judging from the standpoint of number employed, follow:

	No. firms Oct., '18	No. employed Oct., '18
Ohio	94	20,895
Connecticut	33	9363
Massachusetts	48	8111
New York	33	6880
Pennsylvania	36	6467
Rhode Island	6	6382

In the interval between January, 1914, and October, 1918, one tool manufacturing establishment was started in each of 21 towns which up to the end of 1913 had had none. These gave employment to 1069 people.

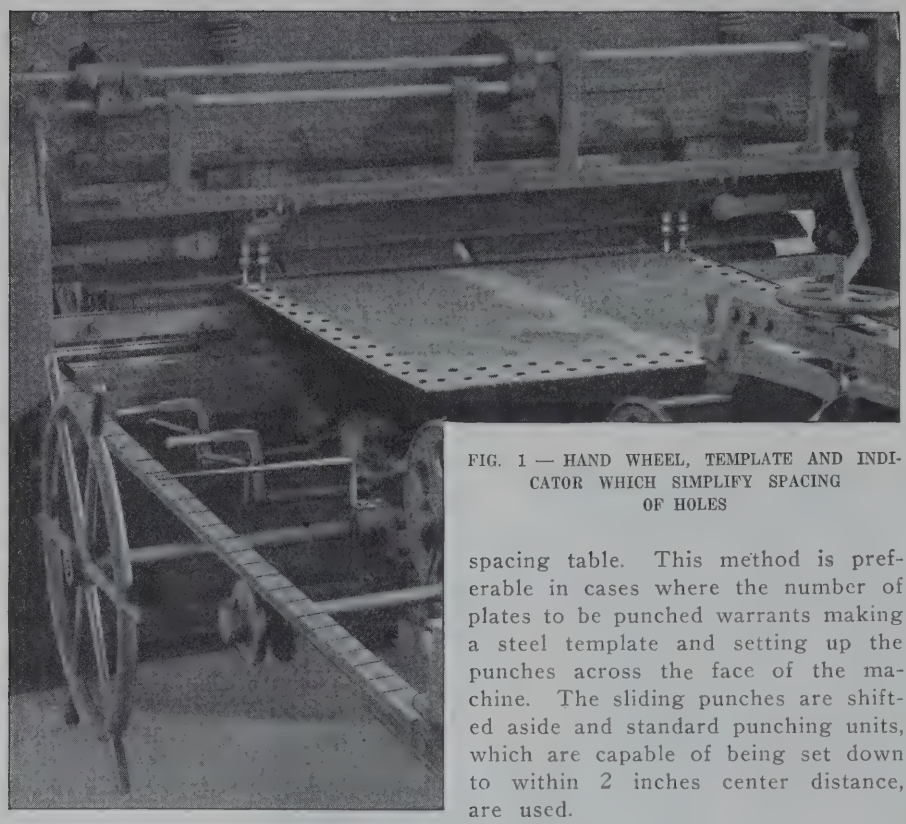


FIG. 1 — HAND WHEEL, TEMPLATE AND INDICATOR WHICH SIMPLIFY SPACING OF HOLES

Punch Irregularly-Spaced Holes in Plates

A specially designed machine for punching irregularly spaced holes in plates recently was built by the Thomas Spacing Machine Co., Pittsburgh. The machine, shown in Fig. 2, was installed at the plant of the Great Lakes Engineering Works, Detroit.

The wide plunger of the machine is fitted with sliding punches permitting it to punch one or more holes in any predetermined location without shifting the plate sidewise. The machine may be used in any one of three ways, depending upon the nature of the work. When it is used as a simple punch the holes to be punched are laid out and marked. The sliding punches of the machine are moved from side to side in the plunger by means of hand levers. It is not necessary to shift the plate sidewise.

The machine also may be used in connection with a template and indicator as shown in Fig. 1. In this case the plates are not marked beforehand, the spacing lengthwise being derived from a wooden template which travels with the plate. The crosswise spacing is determined by a template moving with the punches. The movement of the plate is controlled by a hand wheel and that of the punches by hand levers.

The machine also may be used as a multiple punch with a hand operated spacing table. This method is preferable in cases where the number of plates to be punched warrants making a steel template and setting up the punches across the face of the machine. The sliding punches are shifted aside and standard punching units, which are capable of being set down to within 2 inches center distance, are used.

The punches are of the floating type. The point of the punch rests on the plate until the correct register is made. This is done by shifting the plates lengthwise and moving the punch crosswise. When the mark is reached, an electric contact controlled by a foot lever operates the punch through the medium of a magnet. The table is similar to that of an ordinary hand operated spacing table except that the operator remains stationary near the punch. The movement of the plate is controlled by a traveling carriage to which the plate is clamped. The carriage is made of light weight steel, its length being a little in excess of that of the largest plate to be fabricated. The carrying rolls are fitted with ball bearings and are independently mounted on the shaft. The plates are carried through the punch in a straight line by means of side and rail guides. Centering clamps are provided to enable the operator to position the plates properly.

Recovers Lubricating Oil

A method of recovering oil which has been used for lubricating purposes is described in a recent issue of the *American Gas Engineering Journal.* During the war it became necessary at the works of the Mid-West Engine Co., Indianapolis, to recover as much oil as possible. The lubricant was contaminated with carbon, gasoline, water, metal filings and chips from machinery and miscellaneous dirt.

The oil is collected in barrels and left to stand for a time to deposit by gravity as much of the foreign matter as possible. It is then drawn off into reclaiming tanks. Gas burners under these tanks drive off the water and the lighter oils. This heating agitates the oil and makes it lighter, thereby causing a rapid separation of the matter still held in suspension. Great care must be exercised in boiling the oil in the tank to prevent overflowing upon

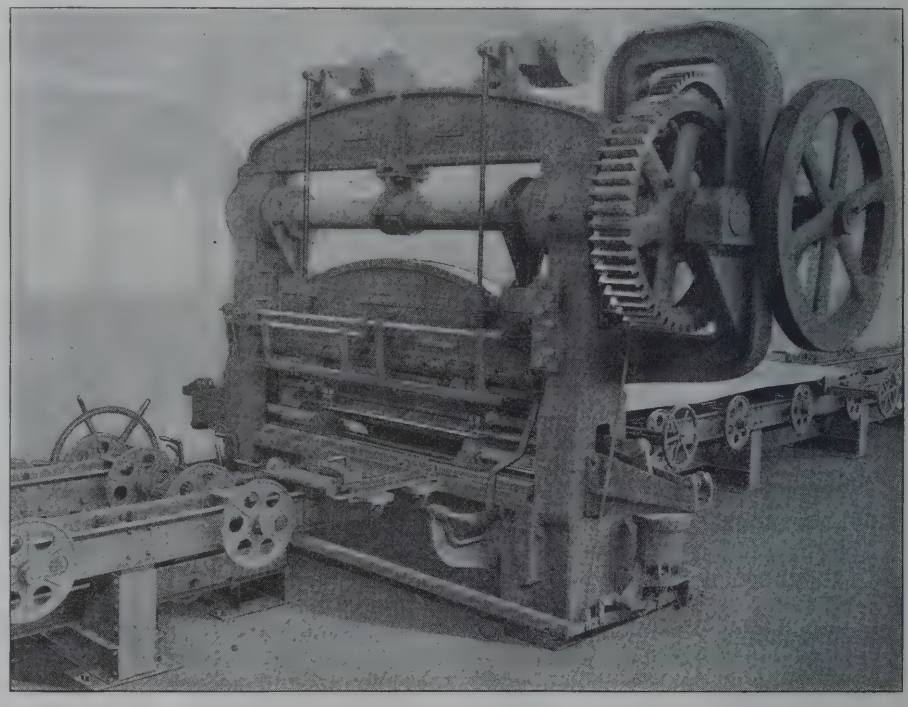

FIG. 2—MACHINE EQUIPPED WITH SLIDING PUNCHES WHICH ELIMINATE NECESSITY OF SHIFTING THE PLATE CROSSWISE

the burners. When the oil reaches the agitated state it is kept under control by playing a gas flame from a torch upon it. Recovered oil treated in this manner is almost identical in composition to new oil, according to comparative analyses that have been made.

Calls Automobile Builders Largest Tool Users

An attractive 16-page pamphlet entitled "Metal Working Machinery" has just been issued by the Allied Machinery Co. of America, New York. The development of the machine tool industry is traced from its beginning in New England to the present time and a map showing the centers of machine tool production in the United States is reproduced. In commenting upon the rapid growth of the industry in the past decade, the writer of the article attributes a considerable amount of this increase to the influence of the automobile industry which has superseded the railroads as the largest user of machine tools. According to the booklet, the present annual production of 1,153,000 automobiles and motor trucks, coupled with the maintenance of 2000 general machine shops by the railroads of the country, has done much to stimulate the growth of the machine tool industry. A map showing the location of foreign sales offices of the Allied Machinery Co. appears in the booklet.

Makes Oil Cupola Ligher

An oil-burning machine, which is adapted for cupola lighting, recently has been developed by the Clayton & Lambert Mfg. Co., Detroit. The equipment consists of a seamless tank, 15 feet of air hose and 15 feet of oil hose, oil and air control valves, and the burner. The

FASTENER FOR HEAVY BELTS

burner can be operated with compressed air or steam, under pressures varying from 30 to 100 pounds. This apparatus, equipped with a 2½-inch burner nozzle, is said to consume approximately 6½ gallons of oil per hour and about 58 cubic feet of free air per minute. It produces a full flame of 18 inches. Burners having nozzles of 2½ inches in diameter are recommended for lighting cupolas ranging from 42 to 70 inches in diameter and burners having nozzles of 3 inches in diameter are preferable for cupolas from 80 to 96 inches in diameter. The burners also are adapted to various kinds of work in foundries, railway shops, shipyards, etc., boiler shops, and in many other types of industrial plants.

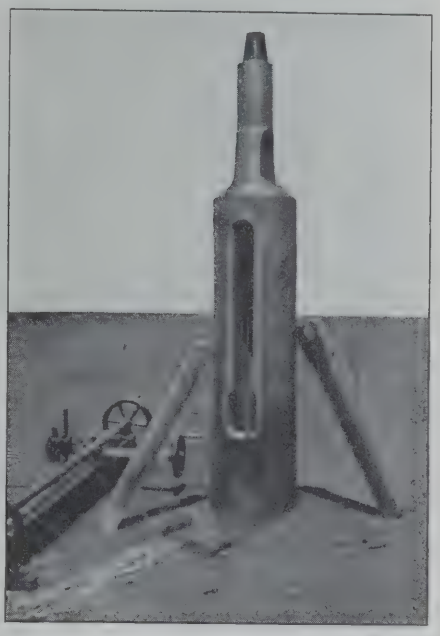
OIL BURNER FOR LIGHTING CUPOLAS

FIG. 1—MACHINE WHICH GUIDES BLOW PIPE AND ENABLES OPERATOR TO FEED IT AT UNIFORM RATE

Blowpipe Performs Work Of Machine Tools

Slots which ordinarily are cut by means of machine tools recently were made in a large slip socket by an oxy-acetylene blowpipe. The sections, removed from the socket, which is shown in Fig. 2, each measured 3 inches wide, 3 inches thick and 26 inches long. The socket, which weighs 1600 pounds, is used in connection with tools employed in fishing for drills which have broken loose from the drilling cable in oil and gas wells. The work on the socket was performed at the plant of the Acme Fishing Tool Co., Parkersburg, W. Va.

The equipment used on this job consisted of an ordinary oxy-acetylene blow pipe and a straight line cutting machine, both manufactured by the Oxweld Acetylene Co., Newark, N. J. The cuttng machine, which is shown in Fig. 1, consists of a holder for the blowpipe which moves along a lead screw and is capable of crosswise adjustment. This device enables



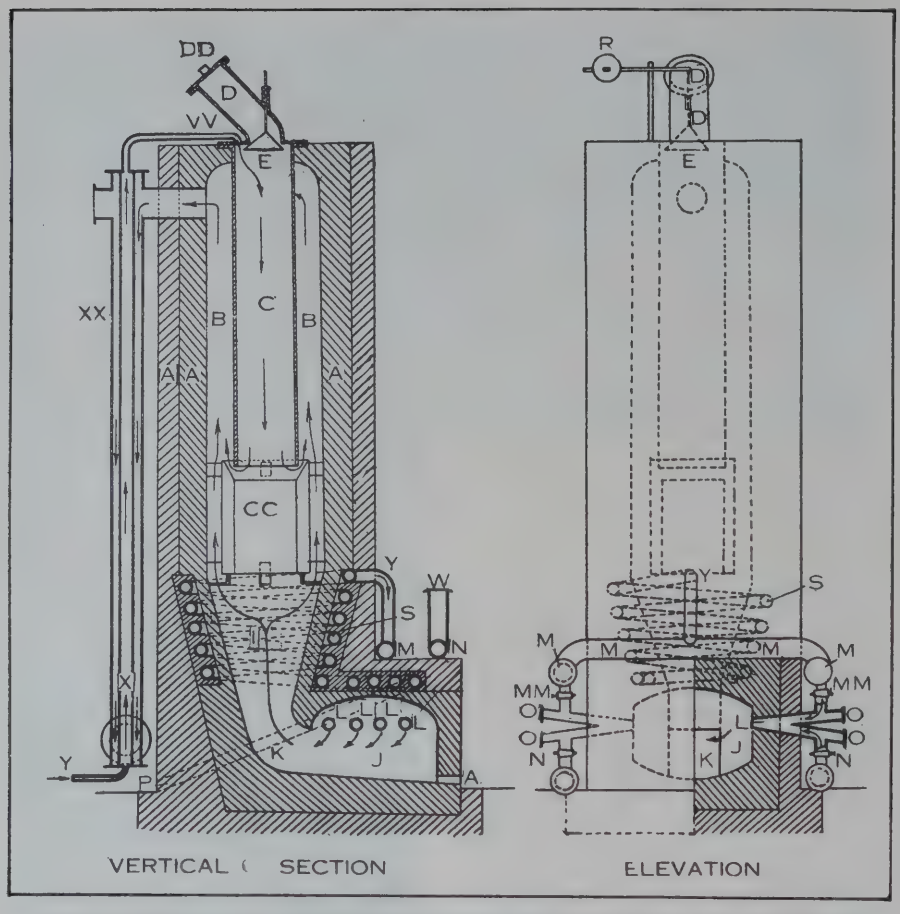


FIG. 2—SLOTS CUT IN SLIP SOCKET BY CUTTING BLOW PIPE

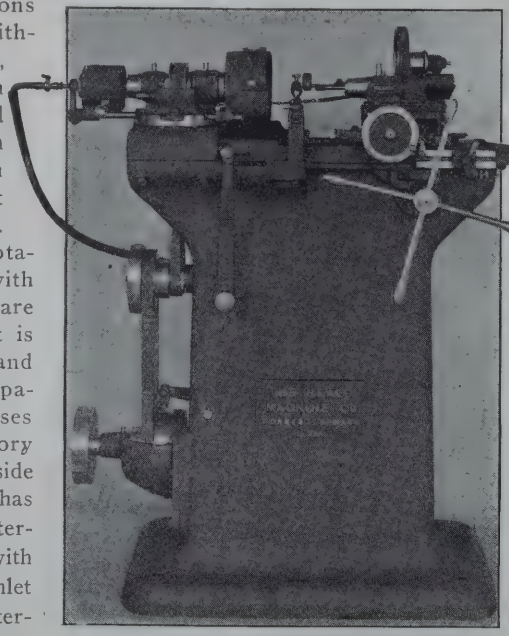
the operator to move and guide the blowpipe along a given line and to feed it at a uniform rate of speed. In the case of the slip socket, the cutting was done so smoothly that no finishing was necessary. The time stated for completing each cut is 8 minutes.

Designs Belt Fastener

A new belt fastener, designed for belting varying from ⅜-inch upward in thickness, recently has been perfected by the Flexible Steel Lacing Co., Chicago. The fastener consists of two rectangular steel plates which clamp on either side and are connected by bolts which go through the belt. The top plate has two round holes which are countersunk to hold special cone-shaped nuts, while the bottom plate has two special square seats which fit around the square heads of the bolts. The accompanying illustration shows the construction of the upper and lower plates and the position of the special bolts and nuts. It is stated that this fastener gives a joint of exceptional high tensile strength combined with the essential features of smoothness.

VERTICAL SECTION AND ELEVATION OF APPARATUS FOR MAKING STEEL DIRECTLY FROM IRON ORE

Invents Way To Make Steel Direct From Ore



For the manufacturing of steel directly from iron ore, a Spanish inventor, Luis Tegero Grouselle, recently devised and patented the apparatus shown in the accompanying illustration. He sets forth that his object is to obtain the same reactions as in blast-furnace practice, but without any contact with free carbon, in order that the operation when completed will produce steel and not cast iron. The illustration shows a vertical section and an elevation in a plane at right angles to the vertical section. The apparatus consists of an adaptation of a blast furnace provided with a hearth, the dimensions of which are governed by the quantity of ore it is desired to smelt. The reducing and fusing functions are entirely separated and are brought about by gases of a different nature. The refractory masonry body, *A*, is armored outside and contains a chamber, *B*, which has an extension of the refractory material, *C. C.* Chamber *C* is charged with ore through the hopper, *D*. The inlet door, *D D*, and the bell, *E*, open alternately. The bell *E* is opened by means of a lever with a balance weight, *R*. The object of the sealed-top arrangement is to prevent air from getting in, or gases from escaping during the charging operation.

Hydrogen or hydrogenated gas is admitted through the pipe, *V*. The gas circulates in an upward direction in the pipe, *X*. This pipe is equipped with internal-radiation ribs which are heated by the hot escaping gases of the furnace circulating in a downward direction in the flue, *X X*. The gas enters the chamber, *C*, through the pipe, *V V*. It filters through the ore in a downward direction and escapes through the annular space left between the chamber, *C*, and *C C*, and through the chimney, *X X*.

The ore reduced in the chamber, *C*, follows its path through *C C* and arrives at the stack, *I*. Here it is heated by the heat generated in the tuyeres, *L*, which are supplied with nonhydrogenated gases generated separately through the orifice *P*. This air is heated by waste heat as it circulates in the coils, *S*. It is admitted cold at *P* and escapes hot at *Y* in order to pass to the collector, *M*, which distributes it to the tuyeres, *O*. The nonhydrogenated gases for fusion are admitted at *W* and pass to the collector, *N*, which also distributes them to the tuyeres, *O*.

After the hearth, *J*, has received sufficient metal, this is cast through the opening, *A*. The gases coming from the tuyeres, *L*, circulate in the fusion chamber, *J*, and pass through *K* and *I* into the chimney *X X* after having filtered through the reduced ore.

Production of the gas, the admission of air and the temperature are regulated by valves in the tuyeres and by the greater or less admission of hydrogen or of reducing gas into the reducing chamber.

GRINDER EQUIPPED WITH AUTOMATIC WATER AND WORK-HEAD STOPS

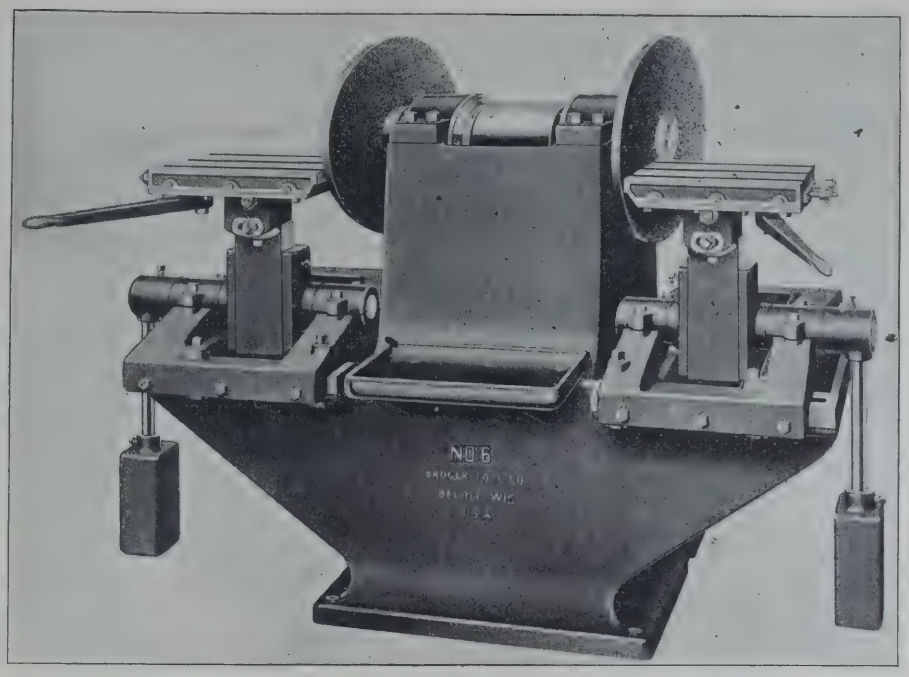
Builds Internal Grinder for Small Work

Extensive tests have just been completed by the Heald Machine Co., Worcester, Mass., on a new internal grinder designed for small work. As indicated in the accompanying illustration, the work head is driven by a cross belt through the base from a four-step cone pulley. The flow of water and the revolving of the work head automatically stop when the grinding wheel is withdrawn from the work. This is accomplished by a friction clutch in the base of the machine operated by a lever which is tripped by a small dog on the table. When the operator desires to resume work he simply pushes the lever to the vertical position, thereby starting the work head and water.

The machine is equipped with a collet chuck having a capacity for material from ⅜ to 3 inches in diameter. The feed to the cross slide is calibrated to 0.00025 inch. The feed lever controlling movement of the slide is at operator's left, the pilot wheel actuating the movement of the table is at the right. The grinding wheel head has a solid

adjustable taper bearing at the wheel end and revolves in ball bearings at the pulley end. The machine is equipped with an automatic wheel guard which covers the wheel as it is drawn from work. The grinder is designed for work ranging from ¼ to 2 inches in diameter and 4 inches long.

Grinder Has Rockershaft Of Novel Design



A single-spindle type disk grinder, embodying several unusual points in the design of the lever feed work table, ball bearing spindle mounting and rockershaft construction, is being manufactured by the Badger Tool Co., Beloit, Wis. The feed table of the machine, which is shown in the accompanying illustration, is equipped with a back stop and micrometer screw stop, and is provided with a wheel truing attachment. The leverage obtained through the toggle joint action minimizes the physical energy required on the part of the operator when heavy cuts are being taken. The toggle joint and lever are designed with a view of increasing the pressure exerted on the table as it approaches the grinding disk. It is said that this is a very important feature inasmuch as the cut is started when the pressure is light and the leverage is increased after the sharp points have been removed from the work. This practice is claimed to preserve the life of the grinding disks.

The spindle revolves in ball bearings which are mounted in boxes designed to eliminate trouble caused by dust or grit. Provision has been made for draining off the lubricant and cleaning the housings.

The rockershafts are mounted in saddles so that the ends have rigid bearings on each side of the box supporting the lever feed work table. This construction is said to impart rigidity to the table, make it practicable to do accurate grinding, and increase the life of the abrasive disks.

Talk Of Steel Plant

Construction of a steam plant adjoining the present plant on Lake Union has been authorized by the city council of Seattle, the bill having been passed authorizing the issuance and sale of $1,250,000 of light and power utility bonds to cover the cost. J. D. Ross, superintendent of lighting presented a communication to the council setting forth an inquiry from the Tivani Steel Co. asking if the city would be in a position to supply 20,000-horsepower at $10 a year per horsepower for fine years' as an inducement for the company to begin the construction of a steel plant. It is declared the first unit would cost $5,000,000.

DISC GRINDER WITH ROCKERSHAFT WHOSE ENDS ARE MOUNTED IN SADDLES

Fire Brick Output of 1918 Sets Record

According to a recent bulletin of the United States geological survey, department of the interior, the production of firebrick in 1918 showed a decrease in quantity and increase in value over the figures of 1917. The quantity produced in 1918 was equal to 1,373,674,000 nine-inch equivalent brick, which when compared with the quantity produced in 1917, shows a decrease of 257,642,000 or 16 per cent. The value of firebrick marketed in 1918 was $63,637,000 which when compared with the value in 1917, shows an increase of nearly 10 per cent. This is the largest value ever recorded by the geological survey for firebrick and is more than twice as great as that in any other year, except 1917, and more than three times as great as that in any other year prior to 1916. The quantity reported for 1918 was the greatest recorded except that for 1916 and 1917. The average price per thousand during 1918 was $46.33. Stove lining, another refractory, also showed a large increase in value when compared with 1917.

PRODUCTION OF REFRACTORIES

		1917	1918
Fire brick:			
Quantity	M..	1,631,316	1,373,674
Value		$58,012,264	$63,637,000
Average value	per M..	$35.56	$46.33
Stove lining		$619,882	$730,000

Mining Properties Merged

Consolidation of the Lock Haven Mining Co., Inc., and the Lock Haven Fire Brick Co., both of Lock Haven, Pa., for which papers have just been filed, will give the new company control of extensive coal and clay sites. The property of the two companies adjoins on the Tanguas Scootack creek at the headwaters of the Susquehanna river, about 7 miles west of Lock Haven. The combined tracts will include over 3000 acres of high-grade fire clay and coal land.

Mining operations have already been started on the property, a coal mine being opened up within a few hundred feet of one of the oldest mines in Pennsylvania and is near the location of the first blast furnace in the state at Farrandsville. The old mine was operated in 1842, when the coal was hauled by wagon to the Susquehanna river where it was put on barges. No railroads were available then. Now the Pennsylvania railroad has a switch through the property and the New York Central railroad has purchased a right of way and will lay tracks soon.

Controls Weeks Patent

The American Metallurgical Corp., Philadelphia, recently has come into control of the Charles A. Weeks patent issued Feb. 15, 1910, on a rocking type of furnace for manufacturing nonferrous alloys. The corporation expects immediately to commence on the production and installation of furnaces of this type.

Price Investigation Far Reaching

Principle of Government Control, Brought to an Issue by Demand for Lower Cost of Food and Clothing, May Finally Include Iron and Steel—President's Cabinet Studying Problem Raised by Railroad Employes' Ultimatum

WASHINGTON, Aug. 5.—Whether price fixing or control over the distribution of necessities, or a combination of both, is essential to the economic welfare of the country is one of the questions which probably will be settled through the concentrated efforts now being made by the government to solve the problem of the high cost of living. Ideas as to the solution are many, varied and more or less confused and it may require two or three weeks more for deciding on a tentative course to pursue. Among the ideas advanced are price fixing and regulation of distribution of supplies, and it seems certain the advisability of adopting both or either as a national policy will be settled once and for all.

That some solution of the high-cost-of-living problem will be found is generally believed here. With the question uppermost in the minds of every American from the President down, and with him leading the fight for betterment of conditions, opinions are almost unanimous that this time a way out will be found.

Whether additional legislation will be needed has not been determined, but judging from the number of bills and resolutions proposed in congress the statutes may require amendment. It is on this as well as other phases of the general question that time is needed by the President, his cabinet and advisers and the law makers.

The question whether or not the railroad employes are entitled to another increase in wages seems secondary in importance in the opinions expressed here that if the trainmen's brotherhoods and unions had not raised the question sharply the living problem might have brought about dire results. As it is, the new demands so astounded Director General Hines that he felt the authority given the President under the railroad act of 1918 would not be sufficient, and he took the matter to the President with the suggestion congress provide additional legislation. That brought to the President's mind the seriousness of the situation, with the result he asked the house to defer its five weeks' recess and take up problems related to the high cost of living and the railroads.

It has long been recognized that an increase in freight rates alone would meet the continuous deficit shown in government operation of railroads. The director general, however, always pointed out that an increase in rates would only further advance living costs. Before he had time to decide what to do the railroad brotherhoods made it plain that the 25 per cent freight advance of June, 1918, had more than offset the wage increases allowed during the year. While the director general's suggestion, passed on by the President to congress, that a board of higher authority than the interstate commerce commission be created to handle both wage and rate matters crystallizes the railroad problem it has served to show that something else must be interjected to decide the vexing question.

Submits Bill for Commission

Commissions, boards, committees, etc., are being suggested and urged; resolutions and bills have been introduced; investigations and studies are already being made; suggestions and plans are pouring in, and from them all may spring the answer. Limiting profits, elimination of middlemen, punishing profiteers and conspirators, control of distribution, price fixing, marking cost prices on all commodities, and numerous other solutions are being considered.

The President's suggestion, now being studied by his cabinet officers under the chairmanship of Attorney General Palmer, will be made in a week or 10 days, it is expected. Congressional investigations will not be completed for two or three weeks, if then. At that time the final course will probably be determined.

Congressman George Huddleston, of Birmingham, who recently said price fixing was the only solution, backed his words with action and introduced a bill which would create a trade commission. This commission would have power to fix prices of the necessaries of life and basic commodities, could forbid all combinations among producers and dealers to fix prices or to limit production. It also could forbid the sale of any commodity at a higher price than in effect on Nov. 11, 1918, or above any price the commission might fix. It would require that the cost price and the sale price be legibly marked on every article offered for sale.

The commission would be composed of five members appointed by the President and their nominations would not have to be confirmed by the senate. Salaries of these officials would not exceed $5000 annually. They would serve five years and penalties under the act would be a maximum of five years in prison or a fine of $5000 or both. The bill would appropriate $1,000,000 to carry out its provisions. It defines necessaries to include:

Iron and steel, coal and coke, tools, building materials and supplies, gas, electricity, transportation, food, feeds, clothing, medicines, furniture, furnishings and dwellings and apartments for hire.

Many Express Views on Basing Problem

WASHINGTON, Aug. 5.—The federal trade commission's announcement of its intention to investigate the economic value of the practice of the iron and steel industry of selling steel products based on Pittsburgh appears to have met a nationwide response. Views of consumers and communities already have begun to reach the commission, although most of the communications received have been requests for copies of the application filed by the Western Association of Rolled Steel Consumers for issuance of a complaint against the group of principal producers in the Chicago district. The time limit set by the commission for the submission of statements of views is Sept. 1 and preparations are being made for

docketing hundreds, and perhaps thousands of them.

Just what steps will be taken after Sept. 1 cannot be determined now but among them will be the consolidation and grouping by the commission of the various views submitted and the complaints and arguments accompanying them. It is intended to have public hearings, but just when these will begin and on what detailed topics, are dependent upon the volume and diversity of the submissions. The commission is convinced the problem presented is of prime importance to the industry and the nation and realizes its ultimate settlement will require long, careful and detailed study.

Before the basing point question reached the commission it had received the attention of William C. Redfield, secretary of commerce, who had considered complaints made by iron and steel consumers. Secretary Redfield was powerless to act, however, and referred the subject to E. H. Gary, chairman of the United States Steel Corp. What Judge Gary said in reply has not been disclosed, but prior to receipt of the secretary's communication the corporation's chairman had been in communication with John S. Miller, counsel for the Western association. It was in an informal conference with the federal trade commission that Judge Gary and Mr. Miller arranged for the procedure in the present case.

Redfield Points Out Difficulties

In his letter to Judge Gary Secretary Redfield expressed the following views, which he had previously stated to a complainant after consulting some of his advisers:

"While the practice of using Pittsburgh as a basing point on all iron and steel shipments cannot be defended as a strictly logical proposition, the custom dates back into the early history of the trade and any change would be very disturbing to the entire industry. If the iron and steel business cuts loose from Pittsburgh as a basing point there is no logical reason why every community in the country where iron and steel are produced should not be made a basing point. This would include among others Chicago, Birmingham, Buffalo, Youngstown, Cleveland, Philadelphia, Duluth, Wheeling, Milwaukee and Colorado.

"There is no stable ground between adhering to the present custom, arbitrary and illogical as it may appear, and a wide open readjustment between producers and consumers, which would result in chaos for a considerable time. The consuming interests have established their business to meet existing conditions and any radical change would seriously disturb their relations with the plants as well as with the customers. The ultimate result would be that every producer and consumer would be largely limited to their own particular zones and cut off from other centers by freight rates.

"It is said that the only company which would have any advantage under such conditions would be the steel corporation which, in addition to present advantages, is the only company having producing units in nearly all the above mentioned centers. This in itself is advanced as a grave reason for not disturbing the present arrangement. While theoretically every community should enjoy the advantages and suffer the disadvantages of its natural geographical location, our industries not having been established upon this basis the question becomes one of weighing the advantages which would be derived from a change against the disturbances which would result, especially at a time when industries are faced with a solution of many disturbing factors resulting from war conditions."

Liquidation Board Is Reduced

Washington, Aug. 5.—The personnel of the United States liquidation commission in Europe has been reduced from five to three as a result of the intention of the war department to have C. W. Hare, director of the division of sales, handle the disposition of surplus material belonging to the American expeditionary forces. Mr. Hare is now in Europe, accompanied by a staff which includes Alfred LeMar in charge of machine tools. Edwin B. Parker, chairman of the commission, and formerly commissioner of priorities in the war industries board, will continue with Henry F. Hollis, ex-enator, and Col. James H. Graham. The resignations of Brig. Gen. Charles G. Dawes and Homer H. Johnson have been accepted.

Battleship Contract Let

Washington, Aug. 5.—Contract for the construction of battleship No. 54, to be named the MASSACHUSETTS, has been awarded by the navy department to the Fore River Shipbuilding Corp., Quincy, Mass. This ship, which will be of 43,200 tons displacement, is the last of the authorized battleships to be contracted for.

May Build Steel Plant

Texas City, Tex., Aug. 4.—It is reported that as a result of the recent purchase of 3000 shares of the American Iron & Steel Co. by Peabody, Houghteling & Co., of Boston and Chicago, the deferred plans of that company for the construction of an iron and steel plant here will be carried out. Financing of the project was under way at the time the war began. The company was incorporated in 1913 with a capital stock of $10,000,000. It owns valuable iron ore beds in the northeastern part of Texas.

At the time the transaction was made the holdings of the Texas City company, including the townsite of Texas City, with 3000 town lots and 3000 acres of adjacent land, were sold at receiver's sale to Peabody, Houghteling & Co. This company also purchased 500 shares of the Texas City Electric Light & Water Co., 150 shares of the Texas City Passenger & Pier Co. and 351 shares of the Texas City Street Railway Co.

Report Ferroalloy Plant Possible in Washington

The Spokane, Wash., school of mines reports that a ferroalloy plant is possible in the state, not only from a theoretical but a commercial viewpoint. Ores in central and eastern Washington have been examined, and mineralogists believe there is a supply sufficient to justify the beginning of a new industry. Ores of manganese, chromium, molybdenum, tungsten and iron in Stevens, Ferry, Okanogan and Chelan counties were tested by Dean Howard and Prof. C. G. Warfel. Results showed that there is considerable hematite in the Kulzer property at Valley, and that it is of suitable grade for use in ferroalloys. The examination also convinced them that there is no likelihood of mines of chromium or manganese being opened in the near future, and that, considering Washington deposits alone, the only alloying metals of importance of which there promises to be a supply in reasonable quantities are tungsten and molybdenum.

Erie Builders Organize

Leading builders, contractors and supply dealers of Erie, Pa., have reorganized the Erie builders' exchange, which has been inactive since 1909. Headquarters have been established at 208-209 Commerce building, and the following officers have been elected: President, C. A. Constable; vice president, Karl E. Morrison; secretary, B. W. Schafer; treasurer, D. S. Milloy; business manager, Harry A. Holmes. One hundred and fifty firms are identified with the new organization.

The Connecticut Metal & Chemical Co., New Britain, Conn., has increased its capital stock from $200,000 to $300,000.

Coal Development

In Kentucky on Big Scale—Corporation Subsidiary Building City

(*Special Correspondence*)

Whitesburg, Ky., Aug. 4.—The United States Coal & Coke Co. is proceeding rapidly with the building of the new city of Lynch, and more than 5000 men are employed on this work. The company, which is a subsidiary of the United States Steel Corp., has started the development of 20,000 acres of Black mountain coal lands, and it is planned soon to have a daily capacity of 10,000 tons, according to an announcement of the company. The coal will be shipped to South Chicago, Joliet, Ill., and Gary, Ind., for coking. It is said to be one of the best grades of coking coal in eastern Kentucky.

Nearby is the big plant of the Wisconsin Steel Co., a subsidiary of the International Harvester Co., which is mining a fine grade of by-product and coking coal. Millions of dollars are being expended in development work around Benham and Lynch.

The Louisville & Nashville railroad is considering a further extension of 20 miles up Cumberland river, terminating in Letcher county, the center of an extensive coal field. A large part of the properties of the Virginia Iron, Coal & Coke Co. will be reached along the headwaters of the river.

Bailey P. Wooten, J. G. Green and H. T. Taylor have organized the West Virginia & Kentucky River Power Co., with $6,000,000 capital, taking over the Kentucky River Power Co., the Logan County Electric Power Co., and the Tug River Electric Co. It is the purpose of the company to begin at once to rebuild the transmission lines reaching practically every section of the Kentucky coal fields. A new plant will be built, probably in the vicinity of Hazard, near the center of the Elkhorn coal fields.

Grace Stack Out After Seven Years Run

The Grace furnace of the group of three stacks of the Brier Hill Steel Co., Youngstown, O., has been blown out, after seven years continuous operation, during which time more than 1,000,000 tons were made. This is the first time the furnace, which has a daily capacity of 450 tons, has been blown out for relining. This stack and the furnace of the Struthers Furnace Co., Struthers, O., are now the only stacks in the Mahoning valley district which are out for relining. It is expected the Grace stack will be placed in blast the latter part of August. Orders for relighting No. 1 furnace of the Haselton furnaces at Youngstown, have been issued by the Republic Iron & Steel Co. This furnace was recently relined. Relighting of this stack brings into service all furnaces of the Haselton group, and the only Republic furnace in Youngstown now inactive is the Hannah stack.

Settlement is Reached

New York, Aug. 3.—A tentative settlement of the 5-week's strike at the plant of the National Conduit & Cable Co., Hastings-on-Hudson, New York, was reached yesterday afternoon, the strikers promising to return to work this morning if $1000 cash bail put up by a few strikers when they were arrested a few days ago was returned to them and the charges dropped. When the money is returned, the men will go back to their old jobs, but instead of the increase of 13 cents they demanded, they will receive three cents with a promise of more later on if they speed up production.

Change Firm Name

The South Halsted Iron Works, Chicago, has changed its name to the Vanderkloot Steel Works, the change becoming effective July 15. No change has been made in the officers and personnel of the company. P. S. Vanderkloot is president and William J. Vanderkloot is secretary and treasurer.

Ask Police Protection

The Wharton Steel Co. has asked the Morris county, New Jersey, authorities to furnish police protection because of the disorder of strikers. Vice Chancellor Stevens has granted an order directing the mine, mill and smelters' union to show cause why they should not be enjoined from interfering with employes of the Wharton company. Labor disputes have caused considerable trouble at the plant since April 8.

Install Converter

Victor R. Browning & Co., Cleveland, manufacturers of cranes and hoists, have installed a steel converter at their Mansfield, O. plant.

The Chester Shipbuilding Co., Chester, Pa., carefully is investigating its water front on the Delaware river with a view to constructing a large drydock there, at an approximate cost of $2,000,000.

Conference Board Makeup Displeases Foundrymen

Chicago, Aug. 4.—Objection is made by the National Founders' association to the personnel of the national conference on labor proposed in resolutions introduced in the house and senate. In a protest sent to Washington it is claimed that the representatives of capital as named in the senate resolution do not represent manufacturers and that the manufacturers of the country would be without a voice in the proceedings. The senate resolution proposes as the representatives of capital Charles E. Hughes, John D. Rockefeller, J. Pierpont Morgan, E. H. Gary, J. Ogden Armour, Williak K. Vanderbilt, Daniel Guggenheim, Francis S. Peabody and E. T. Stotesbury. A letter sent out by the association says:

"There is not a representative of the manufacturing interests of the country named in this personnel. Union labor is represented by eight officers of unions, by Frank P. Walsh, and also by the secretary of labor. The government is directly represented by the secretary of the interior and the other nine men are identified with gigantic financial operations, with the exception of Charles E. Hughes. The backbone of our industry is the comparatively small manufacturer and the great corporations do not properly represent the prosperity of the country. Furthermore, John D. Rockefeller, J. Pierpont Morgan, J. Ogden Armour, William K. Vanderbilt, Daniel Guggenheim, Francis S. Peabody and E. T. Stotesbury are not in actual touch with manufacturing. E. H. Gary is directly concerned in an active way with a great corporation, but he is chairman of the board only, and is a lawyer by profession. The manufacturers of the country who are represented in the great employers' associations, have no representation whatever. It is imperative, therefore, that manufacturers should take a very direct interest in these resolutions and should submit a most emphatic protest against any conference which excludes those who are vitally concerned with the result of the conference.

"This resolution is another evidence of the fact that our manufacturers are ignored in matters in which the government proposes to interfere in industry. Due deference to the financiers mentioned in the resolution, who are patriotic citizens, does not alter the fact that they are not representatives of the manufacturing interests. This is a particularly opportune time for registering the views of the manufacturers with the government and stating plainly that the findings of any such conference will not be tolerated. It is a case of pseudo-legislation and interference upon the great body of industry which has been given no representation."

The General Welding & Mfg. Co., Milwaukee, has increased its capital stock from $10,000 to $20,000.

June Imports and Exports Gain

Tonnages Reach the Highest Point Since Fall of 1917—Semifinished Exports More Than Doubled in One Month While the Imports Show a Corresponding Decrease

EXPORTS and imports of iron and steel products for June continued their progressive gain according to the monthly statistics of the bureau of foreign and domestic commerce. As a result, exports reached the highest point since December, 1917, and imports were the largest since August of the same year. The June total for exports reached 561,020 gross tons compared with 422,282 tons for May, an increase of 138,738 tons or 32.9 per cent. The high record point for exports in the country was in December, 1917, with 653,344 tons. The large rise in June was due in a considerable measure to the increased foreign shipments of semifinished material which increased from 20,771 tons in May to 46,016 tons, a net increase of 25,245 tons or 121 per cent. Pig iron exports, while showing a gain of 7.2 per cent, were not unusual. The June figure was 39,758 tons, an increase of 2671 tons over the May total of 37,087 tons.

The gain in imports was 17.7 per cent, the June figure of 21,056 tons being 3171 tons greater than the 17,885 tons in May. The previous high figure, which was in August, 1917, was 26,129 tons. With the exception of ingots, blooms and billets and steel rails, gains were shown in all imports. Pig iron imports rose from 2428 tons in May to 7684 tons in June and tin scrap rose from 5 tons to 555 tons. Gains in other products were not relatively large.

While the importation of steel billets, ingots and blooms declined, the exports of these semifinished forms increased and more than doubled the May figure. The exports of wire rods and steel bars also were more than twice those of the preceding month, while wire, sheets and plates and pipes and fittings showed substantial gains. The figures show that 1732 tons of ship and tank plates were exported during the month compared to 3354 tons one year ago.

Iron ore imports increased from 28,164 tons in May to 30,605 tons in June.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

FORREST E. CARDULLO has been appointed chief engineer and designer for the G. A. Gray Co., Cincinnati, manufacturer of planers, to fill the vacancy caused by the resignation of Ernest Richter. Mr. Richter served in that capacity for 31 years and recently retired from active service.

W. F. Pollock, manager of the Victor Saw Works, Springfield, Mass., has returned from a business trip to England.

R. Sanford Riley, president of the Sanford Riley Stoker Co., Ltd., Worcester, Mass., and Detroit, has gone to Europe for a two months' business trip.

William H. Holt, for the past four years assistant superintendent of the Woonsocket Machine & Press Co., Woonsocket, R. I., has resigned owing to ill health.

Thomas P. Davis has been appointed chief engineer of the Duquesne Steel Works of the Carnegie Steel Co., at Duquesne, Pa., to succeed William Ahlen, who resigned recently to return to his home in Sweden.

Arno W. Gaebelein, formerly captain in the ordnance department of the United States army, now is in charge of the recently established New York office at 50 Church street, of the New Britain Machine Co., New Britain, Conn.

Jerome R. George, vice president of the Morgan Construction Co., Worcester, Mass., who has been in Europe since the first of the year, was 52 year old, Aug. 2. He was scheduled to have sailed for this country July 21.

Walter H. Penfield, treasurer of the Colt's Patent Fire Arms Mfg. Co., Hartford, Conn., was recently elected a vice president of the corporation in addition to F. S. Nichols and S. G. Stone. Mr. Penfield will continue as treasurer.

Ralph S. Gildart, for several years advertising manager of the P. B. Yates Machine Co., Beloit, Wis., and Kitchener, Ont., has become associated with the Kelvinator Co., Detroit, manufacturer of mechanical refrigerator units for domestic purposes. Mr. Gildart has just been released from the army after 18 months' service.

Charles F. Morgan, vice president and assistant treasurer of the Morgan Spring Co., Worcester, Mass., now a part of the Clinton-Wright Wire Co., of that city, has resigned to become assistant treasurer of the Morgan Construction Co., Worcester.

Melvin Hart, of the Stanley Works, New Britain, Conn., is going to Japan to take charge of the works branch purchased there several months ago. Mr. Hart who is the son of George P. Hart, president of the Stanley Works, was discharged from the army recently with the rank of lieutenant.

Robert F. Herrick, Milton, Mass., president of the Reed-Prentice Co., Worcester, Mass., and several other Massachusetts industries, and Charles G. Washburn, Worcester, prominent in the wiremaking industry, have been appointed by Gov. Calvin Coolidge, of Massachusetts, as members of a commission to study the street railway situation in that state and to report to a special session of the legislature to be called in November.

S. J. Thomas recently was added to the sales force of the Biggs-Watterson Co., Cleveland, dealer in machine tools, etc. Mr. Thomas has had many years experience in designing and building machinery, fixtures, etc. He spent several years in the engineering department of the Fosdick Machine Tool Co., Cincinnati, but left last year to do war work for the Peters Cartridge Co., as engineer in its Cincinnati works.

Horace S. Baker, late colonel of the 111th engineers in service in France, has associated himself with Frank D. Chase, Inc., Chicago, as engineer in charge of work for the General Motors Corp., Janesville, Wis. He is a graduate of Northwestern university and Boston Tech., the latter in 1903. He was engaged in railroad work several years and from 1906 to 1917 was employed in various capacities as engineer by the city of Chicago.

Harry M. Giles, who recently succeeded Oscar Otto as general superintendent of the Westinghouse Electric & Mfg. Co.'s plant at South Philadelphia, Pa., was the guest of honor at a banquet given July 31 at the Hotel Adelphia, Philadelphia, by officers and heads of departments of the company. Mr. Giles, who is 50 years of age, has been associated with the Westinghouse company since 1907, and before that was connected with the Corliss Engine Co., in an engineering capacity. Prior to his promotion to his present office, he was superintendent of the marine erection department of the company.

John McGrath, formerly connected with the Ingersoll-Rand Co. and the Bethlehem Steel Co., who has just returned from foreign service in the engineering corp of the American expeditionary forces, has associated himself with the D. M. Osborne Machinery Co., Cleveland, in the capacity of salesman and expert production engineer. The sale and demonstration of heavy-duty production lathes will receive Mr. McGrath's personal attention.

Gregory Brown has been engaged to take charge of the engineering department drafting room of the Norton Co., Worcester, Mass., succeeding Howard W. Dunbar, former assistant chief engineer of the Norton Grinding Co., promoted to sales manager of the grinding machine department of the Norton Co. Mr. Brown is a graduate of Stevens institute and has been occupying a responsible position with the Western Electric Co.

Phillips F. Jarvis has resigned his position as sales manager for the territory controlled from the St. Louis office of the Sullivan Machinery Co., Chicago. The territory has been divided up and new appointments announced. Marion C. Mitchell, has been appointed sales manager for the territory in Indiana and Illinois with a temporary office at No. 2006 Railway exchange, St. Louis. Don M. Sutor, formerly manager of the El Paso office, has been appointed sales manager for Kentucky, Tennessee, Missouri, Arkansas, Oklahoma and Kansas with offices in St. Louis. Daniel H. Hunter has been made sales manager for the oil territory with headquarters in Dallas, Tex.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

J. H. SCHOENLY who recently succeeded R. L. Kift as vice president and general manager of the Bethlehem Construction Co., Bethlehem, Pa., at one time was the southern and southwestern sales agent for the Phoenix Iron Co., with headquarters at Baltimore. He left this position to become receiver of the Roanoke Bridge Co., Roanoke, Va., and after completing his work there, was appointed assistant sales manager of steel products for the Simonds Mfg. Co., Lockport, N. Y. He left the latter company to become associated with Joseph F. A. Comstead in the capacity of domestic sales manager. Mr. Schoenly became identified with the Bethlehem Construction Co. on July 1.

W. H. Perry Jr., is in charge of equipping a small foundry for the Simmons Mfg. Co., Racine, Wis., manufacturer of metal beds.

Karl G. Roebling, president of the John A. Roebling's Sons Co., Trenton, N. J., has been elected a director of the American Ship & Commerce Corp., New York City.

Captain F. W. Shackelton, who was superintendent of construction in the new plant to be erected by the Truscon Steel Co., Youngstown, O., in Japan, has departed for that country.

H. M. Steele, former vice president and general manager of the Liberty Steel Co., has been appointed operating manager for the Newton Steel Co., which is erecting a plant at Newton Falls, O.

W. F. Reulman has been appointed local manager in charge of the new Detroit office and warehouse of the Edgar T. Ward's Sons Co., steel merchants. The Detroit address will be 660 West Fort street.

A. E. Braum, president of the Farmers' Deposit National bank, of Pittsburgh, has been elected a director of the Pressed Steel Car Co., Pittsburgh, to fill the vacancy caused by the death of T. H. Given. J. H. Beal of the firm of Reed, Smith, Shaw & Beal, of Pittsburgh, was elected a director to succeed J. H. Reed who is resigning from all industrial boards on account of the present status of the co-director act. Mr. Reed is president of the Bessemer & Lake Erie railroad, subsidiary of the Carnegie Steel Co.

Lieut. M. J. Carpenter recently returned from Archangel, Russia, where he spent last winter with the 339th infantry, and has resumed his duties as manager of the Foundrymen's Supply Co., Inc., Milwaukee.

I. L. Bergvall, superintendent of the Cumberland Shipbuilding Co., Portland, Me., has resigned to accept a similar position with the Fore River Shipbuilding Co., Quincy, Mass., a subsidiary of the Bethlehem Shipbuilding Co., Ltd.

B. L. COGSHALL
Who, as Announced in THE IRON TRADE REVIEW of July 24 and 31, Was Made Assistant to the President of the Pittsburgh Steel Co., Pittsburgh.

William T. Paquin, who has been connected with the Osgood Bradley Car Co., Worcester, Mass., since he was discharged from the service in February, is now superintendent of storage for the Middletown Car Co., in La Rochelle, France.

Vincent A. Lambiase, who has been engaged for a number of years in the sales promotion work of the Celite Products Co., 11 Broadway, New York City, will represent the interests of the company in the Bronx, Brooklyn and Long Island districts.

H. G. Faskbinder, formerly foundry superintendent of the Minneapolis Steel & Machinery Co., Minneapolis, recently was appointed to fill a similar position with the Stover Mfg. & Engine Co., which also controls the Stover Engine Co., Freeport, Ill.

L. H. Elliott, secretary and treasurer of the Bourne-Fuller Co., Cleveland, will retain these offices, although he has been made vice president and secretary of the Upson Nut Co., Cleveland. In the latter position he succeeds Norris J. Clarke, who has become president of the Lake Erie Bolt & Nut Co., Cleveland.

W. T. Gregory, formerly pattern shop superintendent, has been appointed manager of the foundry of the Michigan Motor Castings division of the General Motors Corp., Buick plant, Flint, Mich. He succeeds W. H. Goldstein, who recently became foundry superintendent of the Nash Motors Co., Kenosha, Wis.

D. B. Stokes, eastern sales manager of the United States Cast Iron Pipe & Foundry Co., has been made western sales manager with headquarters in Chicago. He succeeds A. J. Goodhue, who was made sales manager emeritus Aug. 1. W. G. Savage, assistant western sales manager, has been made eastern sales manager with headquarters at Philadelphia.

W. B. Douglas has been appointed superintendent and A. E. Nyberg production manager of the W., & B. Douglas Co., Middletown, Conn., maker of pumps. Mr. Douglas is vice president of the company and Mr. Nyberg formerly was cost, production and stock expert with the Remington Arms-Union Metallic Cartridge Co., Inc., Bridgeport, Conn.

A. H. Dillon, vice president of the Liberty Steel Products Co., New York, who has just returned from abroad on business matters, reports that there is developing a better understanding on the part of the French people who are beginning to realize more and more the assistance that the United States has rendered them. He expressed the opinion that the French are very resourceful people and that they are destined to work out a proper and successful solution of their reconstruction problems.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

JOSEPH G. BUTLER JR., Youngstown, O., has announced that he will begin work on the history of the Mahoning valley in the near future. R. J. Kaylor, publicity manager of the Youngstown Sheet & Tube Co., Youngstown, and Albert A. Reilly, editor of the *Youngstown Telegram,* will collaborate with Mr. Butler in the preparation of data for the volume. Since this history will deal extensively with the valley's industries and with biographical matter relating to founders and leaders, the iron and steel industry will occupy a prominent place.

F. S. Easterly, secretary of the Stalmaker Steel Co., Pittsburgh, recently resigned and has been succeeded by M. B. Summers.

Kenneth R. Hare has been made district manager for the Transportation Engineering Corp. of New York, with headquarters in Chicago.

E. O. Johannson, originator of the tools which bear his name, recently was elected honorary president of the American Society of Mechanical Inspectors.

Frank McLaughlin recently was promoted to the position of vice president of the Mobile Shipbuilding Co., Mobile, Ala., retaining his duties as general manager.

Charles L. Fitz has assumed charge of the new works of the Drop Head Projector Co., Fond du Lac, Wis., manufacturing portable motion picture machines for schools, colleges, salesmen, etc.

William Lewis, former superintendent of the sheet plant of the Western Reserve Steel Co., has been appointed to take charge of operations for the Falcon Steel Co., which is building a plant at Niles, O.

A. H. Stolzenbach, secretary and treasurer of the Diamond Coal & Coke Co., will join the organization of the Hillman Coal & Coke Co., Pittsburgh, which has acquired a controlling interest in the Diamond company, it is reported.

Lawrence B. Chapman, for the past four years on the technical staff of the Electric Boat Co., New London, Conn., engaged on technical problems of submarine design and construction, has been appointed associate professor in the new course of ship construction and marine transportation which has been instituted in the department of civil engineering of the Lehigh university, South Bethlehem, Pa.

W. H. Goldstine has resigned his position as manager of the gray iron foundry of the Michigan Motor Castings Operating Co., Flint, Mich., the plant of the Buick Motor Co., to accept a position with the Nash Motor Car Co. of Kenosha, Wis.

William H. Hart, who was president of the Stanley Works, New Britain, Conn., for 31 years and treasurer for 51 years, having been identified with the company since its organization, celebrated his eighty-fifth birthday anniversary on July 25.

P. McDonald has retired after many years as proprietor of the Grand Rapids Boiler Works, Grand Rapids, Mich., having sold his interest to R. C. Loosemore and A. A. Brown, who will continue the business, which was established almost 50 years ago.

A. E. Braun, president of the Farmers Deposit National bank, Pittsburgh, at the regular quarterly meeting of the board of directors of the Pressed Steel Car Co., held in New York last Thursday, was elected a director to fill the vacancy caused by the death of T. H. Given.

R. C. Gosrow, electrometallurgist to the North American Co., New York, and sales manager of the Pittsburgh Furnace Co. and the General Steel Co., Milwaukee, has gone to Seattle to engage in electrometallurgical engineering work and metallurgical and industrial sales engineering.

Hon. George M. Wright, chairman of the board of directors of the Clinton-Wright Wire Co., Worcester, Mass., was a speaker at the dedication of the bridge across Lake Quinsigamond, Worcester, July 31, he having been mayor and signed the contract for the construction of the bridge.

J. B. Highland, for 18 months general factory superintendent of the LaCrosse Tractor Co., LaCrosse, Wis., has resigned to assume active charge of a large wheat ranch near Kirwin, Kans. Factory and office executives presented Mr. Highland a gold watch at a farewell dinner given in his honor.

Nathaniel G. Burleigh, assistant director of the department of industrial engineering of the Winchester Repeating Arms Co., New Haven, Conn., has been appointed to the professorship of industrial organization and management of Dartmouth college, Hanover, N. H. He graduated with the class of 1911.

M. F. Marcuse, has assumed charge of the publicity department of Rownson, Drew & Clydesdale, 68 William street, New York. Mr. Marcuse is of English parentage but of American citizenship. He had been engaged in the export business for the past seven years, having traveled through western Europe, South America and the Far East. He was formerly with the International Oxygen Co. and the Prest-o-Lite Co.

M. J. Gregory, who since 1916 has been foundry superintendent for Dodge Bros., Detroit, has been appointed to a like position with the General Motors Corp. He will operate the foundry department of the new Samson Tractor division, Janesville, Wis., when completed. At present he is located in the main offices of the General Motors Corp., Boyer-Campbell building, Detroit. Prior to 1916, Mr. Gregory was affiliated with the Brown & Sharpe Mfg. Co., Providence, R. I.

J. Leonard Replogle, president of the American Vanadium Co., has been named one of the directors of the American Ship & Commerce Corp., which will be the holding company for Cramps, Kerr Steamship Co., and other interests in the big eastern ship building and operation merger. Other directors named to date are H. F. Kerr, president of the Kerr company; Parmely W. Herrick, Cleveland; G. M. Dahl, vice president Chase National bank, New York; Joseph W. Harriman, president Harriman National bank, New York; John L. Ogden, F. B. Keech & Co., and P. M. Chandler, banker.

France Offers Pig Iron to Britain

Quotes Equivalent Of $31.75 On Foundry Iron, f. o. b., Antwerp, Agreeing to Ship 10,000 Tons A Week—"Lorraine In Competition For World Markets," French Declare—Higher Prices For Iron at Paris

BY FRANCIS MILTOUN
Paris Correspondent of The Iron Trade Review

FRANCE has an ambition to be an exporting country. It is a new role for her in the metal industries. Products of the Lorraine mines and plants are being sold in England. It is an innovation for France.

The French government has made an offer to the British government to send each week 10,000 tons of No. 3 foundry iron, made in Longwy, at a price of 217 francs, 50 centimes per ton, f.o.b. Antwerp. This at the present rate of exchange is close to £7 10s, and the equivalent of $31.75 per ton at the ruling price of the dollar in Paris.

The high sterling exchange makes this, from the point of view of the English, a practical export bonus on behalf of French producers. A well-informed journal states: "This is but the commencement, and it is possible that the results will be most dire for British furnaces. Lorraine competition is already making itself felt in world markets."

Various plants of Lorraine and Luxemburg have sent a representative to England, a former important official of the Stahlwerksverband, particularly having in view the possibilities of entering the English market with rolled plates and bands. The "new current of trade" is manifesting itself, and there is much conjecture as to England's attitude.

Jobbers were offering Longwy pig iron (1.5 to 3.25 per cent silicon and 1.5 per cent of phosphorus) delivered in the Paris district at $43.30 per metric ton in 10-ton lots recently. This corresponds to normal prices. Ferrosilicon is offered by the electro plants of the Alps, around Grenoble, at $54.70 a metric ton, net with prompt deliveries. This figure is considered interesting from the fact that the best quality of hematite is quoted at $51.60.

* * *

Favor French-Belgian Alliance

The finances of the Belgian metallurgical industry are in excellent condition. Reserves of Belgian companies were such before the war that with aid which is to come from reconstruction and readjustment in various quarters they will be on a productive basis before any other country of continental Europe.

A quasiofficial project for the establishment of a cartel between French and Belgian metal industries is receiving favorable consideration in Belgium and it is not wholly unacceptable on the French side of the border. It foresees the economic possibility of a combination which shall make the best possible use of the minerals of France and the coal of Belgium, the product to be marketed for joint account in its proper relative proportions. *Pourparlers* have been begun and are said to be progressing favorably.

The following comparison shows the physical condition of Belgian industry and progress made toward recovery:

Production in tons	May, 1913	May, 1919	Per cent
Coal	1,800,000	1,100,000	60
Coke	125,000	36,000	28.8
Iron	210,986	4,065	1.9
Steel	154,821	7,351	4.7
Steel (Martin)	17,717	7,579	42.
Semifinished material	127,075	3,431	2.7

* * *

Iron Production Reduced

Strikes in the metal trades show no signs of abatement in districts where the workmen have gone out for adjustment of relations bearing upon the new 8-hour law. Modifications in some instances have enabled many companies to operate on part time, whereas a fortnight ago their plants were shut down. The automobile industry, in particular, has suffered and it seems impossible for any automobile manufacturer in France to meet his program for the present year.

Prices have been affected by the reduction of working time to eight hours and the increase of wages. To a great extent the trade refuses to make prices for iron and steel for future delivery without a clause admitting readjustment of price, and has where possible, cancelled obligations for deliveries at prices which were fixed before the present stringent conditions were imposed by labor.

Blast furnaces are seeking to increase production but are hampered by difficulty in obtaining coke. The 8-hour law has reduced production, and additional shifts have added 50 per cent to the labor cost, and also have caused a labor shortage.

* * *

Strike Leaders Germans

The recent unrest in the metal trades and mining industries in old France naturally spread to the reoccupied regions. It is a question if the strikes there were not engineered by German sympathizers.

At Metz electrical energy was lacking, and for a part of a day street cars and lights were out of commission. Employes of the electric generating plant quit when the workmen of the factories went out. On the following day the Hagondange works of the Thyssen company shut down, and then the Paix plant at Knutange. At the latter plant, of the 2000 strikers, by far the majority were German. The French administrator of the district, summoned the strikers to return to work or they would be expelled from the territory of Thionville.

As at Knutange, the strikers at Hagondange were mostly German subjects, striking for what reason no one seems to know since the 8-hour demand had been granted the first of June, three weeks previous.

At the Forges de la Paix, in Knutange, the strikers committed considerable sabotage. They succeeded in drawing the fires of two blast furnaces, burning out the stoves and in allowing 15 tons of steel to solidify in the converters, in addition to seriously damaging the electric equipment throughout the plant.

At Rombas a detachment of French troops from Metz occupied the plant and was forced to take into custody many German leaders among the strikers. These were transported to the fortress of Metz and later expelled from French territory. Next day the strike at Rombas was ended.

* * *

Metal Institute Formed

There is being organized at Nancy, the center of the Lorraine industry, a metallurgical and mining institute. Its organization is being pushed by Mon-

sieur Petit, the doyen of the faculty of sciences of Nancy, and Monsier Leprince-Ringuet, engineer-in-chief of mines. It is proposed to work in close co-operation with the chamber of commerce of Nancy with a view to furnishing economic and industrial information throughout the region.

The Normandy iron ore mines, which were first brought to efficient production by the Germans just previous to the war, are being kept in operation by the French, and numerous plants for utilizing the ores have been erected while still others are planned. One of the most important is that of the Societe Normande de Metallurgie, which ultimately is expected to rank with the first steel producers of France. Its new plant at Mondeville is expected to be completed before the end of the year and will be capable of producing 400,000 metric tons of steel per annum. Its location is on the banks of a canal leading to the sea.

* * *

German Production Wanes

The German Steel and Iron Industrial association publishes the following statistics on production in Germany:

	April, 1918	March, 1919	April, 1919
Pig iron, tons.....	819,340	554,138	434,971
Steel, tons 1,192,148		654,893	442,442
Rolled steel and forgings, tons	849,381	493,544	337,378
Semisteel, tons ...	67,997	62,477	44,809

* * *

Form Export Body

With a capital of $2,000,000 a new association has been formed in France for the export of metal products. It is composed of middlemen and dealers in metals and metal products, of which the chief are Beraud-Sudreau et Cie, of Bordeau; Jacques Marchand et Cie, of Paris; Pichard, Pezieux et Cie, of Paris; the Societe des Fers et Metaux, of Rouen, and Gros, Pere et Fils, of Chalon-sur-Saone.

This is the first concerted action of French iron and steel manufacturers in seeking foreign markets on a scale of wide application, rather than in specialized lines.

With the acquisition of Lorraine, French steel production probably will exceed 11,000,000 tons, which leads the French to believe that with Germany's production at but 10,000,000 and that of England about the same, and the fact that the normal consumption of France is estimated at not more than 6,000,000 tons, 5,000,000 tons will be available for export.

Those best qualified to judge state emphatically that the exportation of iron and steel and their products is vital to the prosperity of the country, and the only means of liquidating, even in part, its debit balances abroad. It is unlikely that any of France's exports will go to the United States because for years to come France will be more or less dependent upon the United States.

* * *

Italy's Ore Dwindles

Italy's reserves of iron ore are estimated to be only 14,000,000 metric tons, distributed as follows: Traverselle, 1,000,000 tons; Val de Cogne, 5,000,000; central Italy, 2,000,000; Sardinia, 6,000,000. Production of pig iron at present is at the rate of 400,000 tons per annum.

This situation is not without concern for Italy's metal industry as it is thus shown that in about 20 years its reserves will be exhausted. On the other hand, it is believed that the Elba and Appenine discoveries will lead to a very considerable increase, if prospects are sustained.

Italy is not particularly endowed with minerals, but her metallurgical industries have recently advanced considerably. The creator of its steel industry was Benedetto Brin, a former minister of marine, the first to suggest steel ships for the fleet. Italy's production of 846,000 tons of steel per annum is shown to have been possible only by the importation of more than the equivalent of its own supplies of pig iron. The Elba ore mines made a profit of $1,900,000 in 1917.

The coal crisis also is disconcerting to Italian manufacturers. Great Britain promised Italy 750,000 tons of coal per month soon after the armistice, but is reserving the right to reduce this to 100,000 tons.

* * *

Ballbearing Plants Merged

The tendency of French automobile manufacturers is toward specialization. An organization has been formed to be called the Compagnie d'Applications Mecaniques. It is an outgrowth of the Societe Francaise de Roues Automobiles and the Societe Francaise des Roulements a Billes, manufacturers of removable wheels and ball bearings. Among the directors of the new company are Rene de Knyff, of the Panhard Co.; Robert Delaunay-Belleville, Robert Peugeot and Louis Renault.

The company is manufacturing ball bearings in its Ivry factory in the suburbs of Paris, employing 2500 workmen, and has just established another plant near Lyons.

Before the war ball bearings used in France chiefly came from Germany. Germany almost had a monopoly of the industry in Europe. The new organization is manufacturing 200,000 sets a month already, and is seeking to make French industry independent of foreign bearings. An export business is looked for, and a favorable market already has been found. In two years of operation the two parent companies, on a combined capital of $2,400,000, made profits of about $1,200,000.

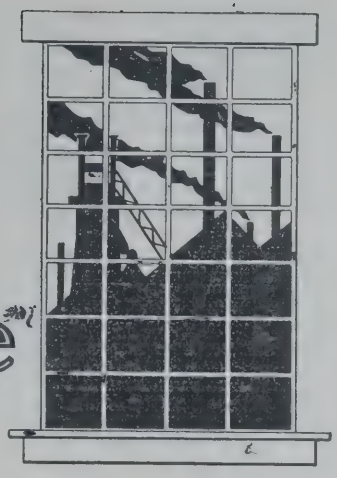
* * *

Swiss Repair Equipment

The minister of public works recently was questioned in the French parliament as to whether it was true that French railway locomotives had been sent to a Swiss firm for repairs to the detriment of French labor. The reply was as follows:

"These locomotives have been sent to the shops of the Swiss federal railways by virtue of an accord passed with the Swiss government during hostilities for the repair of locomotives for the P. L. M. railway. The agreement dates from 1917, and it is a fact that the facilities offered by private industry in France at the present time are not sufficient to permit us to renounce this exterior aid."

* * *



May Lose Spanish Ore

England is concerned over the possibility of the shutting off of Spanish iron ore because coal shipments to the peninsula are so considerably curtailed, owing to a lack of English coal and tonnage. Unless coal can be sent to Spain, Spanish ores cannot be sent to England. The return cargo is necessary for successful overseas shipping, whether by tramp or liner. The foundries have appealed to the board of trade in England to establish some means whereby the reciprocal traffic may be continued. Spain demands coal in exchange to the extent of 174,000 tons per month, which is a minimum. The return cargo amounts to something like 2,000,000 tons of Spanish ore in a year. England is badly in need of this ore, at least until France can spare ores from her Briey fields to feed British furnaces.

The Supply Manufacturer, the official publication of the American Supply and Machinery Manufacturers' association, now appears in magazine form, instead of as formerly on a mimiograph, and contains much of interest to the trade as well as being neat and attractive of appearance in get-up. F. D. Mitchell, secretary-treasurer of the association, is the editor of the publication.

Little Stories of Business Life

RAIL LIFE IN SUBWAY

UNDER the heading, "Your Life and the Life of a Rail," the *Subway Sun,* published by the Interborough Rapid Transit of New York, gives some facts about the rails it uses. It says:

"The subway is the safest railroad in the world. And we keep it safe. One thing, for instance, steel rails. The life of a subway express rail is about three years, one-third being replaced each year. It is done at night. Such rails, on the big steam railroads, last about 10 years. On sharp subway curves we replace rails in 90 days. We have been using about 38 miles, 3000 tons, of the best open hearth rails a year on the subway and about 30 miles on the elevated. Subway rails cost $30 a ton in 1914 but they cost $47 a ton now."

Incidentally, the *Subway Sun,* copies of which are posted in each subway car for the enlightenment of the passengers, has about the largest circulation of any publication in the world, provided most of the 2,000,000 daily riders are readers. The editor must be concise, as he is limitem to 50 or 100 words. The name of Theodore P. Shonts is signed to each article, so he presumably is the editor of the *Subway Sun.*

PLAYING SAFE

WOULD a New York chauffeur, skilled in threading the dangerous traffic of the big city, be good material for an airplane pilot? Early in the war it was sometimes said that these men, with their quick eyes and steady nerves, would be admirably qualified to make fliers. On the other hand, there were those who maintained that success in air work depended to a large extent on education and mentality. At any rate, there is one New York chauffeur who wouldn't be a howling success in the air. His name is Joseph and his hue is almost ebony. Not long ago he walked into the office of his employer, E. L. Goldschmidt, well known in the metal trades, on the seventeenth floor of the office building at 90 West street, New York. He was puffing and blowing so vigorously that a visitor asked him what was the trouble. And Joseph replied, between gasps:

"I jes done walk up all them sebenteen stairs. Yo-all don't catch dis nigger ridin' in none of them there elebators!"

MAKING LIGHT OF CLAMS

BUTTONS and acetylene would seem to be widely separated in the scale of industrial operation, yet they may have a close connection if experiments now under way at Keokuk, Iowa, yield results that are expected. Keokuk has cheap electric power from the great dam in the Mississippi river and thus offers advantages for operations in which cheap electric power is a factor.

In the making of calcium carbide from which acetylene gas is produced, one of the raw materials is calcium or lime, which is charged with coke and sawdust and other ingredients into a retort and heated in the electric arc. Nature has stocked the Mississippi river with millions of clams, harvested for their shells, from which scores of button factories punch out the button blanks. The remainder of the shell, usually more than half, is waste and small mountains of this material are found along the river. Now it is proposed to use the almost pure lime in the shells for making carbide. The resulting gas has a thousand uses in industry to which the clam never could become a party otherwise.

ASSURANCE WINS FAITH

AN employe who had saved $1000 in our employes' building and loan association fund came in one morning and asked for the full amount," said W. A. Grieves, assistant secretary of the Jeffrey Mfg. Co., Columbus, O. "He got the money. In about an hour he appeared at the window with it saying he wished to redeposit it. On being asked if the deal for which he said the money was needed had fallen through he replied that he did not have a deal on, but he just wanted to see whether he could get the money or not."

Mr. Grieves tells this story to illustrate the point that in industrial relations workers do not always care for what they seem to want—that in many cases all they want is the assurance that they can have what they want if they really want it. As for instance, employe representation.

CLOTHES DON'T COUNT

LIEUT. JEFFREY METZEL, chief engineer of the United States destroyer SHUBRICK, was discovered recently in a not altogether pleasant mood. He was examining a glaring streak of white paint across the blue blouse of a newly pressed suit which he was wearing. Investigation proved

the grouch to be against the government. The SHUBRICK, which is the latest boat to be accepted by the navy, was turned over before the paint was dry. It seems that the contractor's insurance policy on the destroyer ran out at noon two days before the paint would be dry and to cover the extra two days the insurance company asked for an additional $1000 in premium. By contract the government must pay the insurance while boats are in civilian hands and the extra $1000 looked a lot bigger than the cost of a navy blouse or two so the boat was accepted with the paint wet.

USING EVEN THE SQUEAL

PACKERS of meats have been said to have utilized everything about the hog except the squeal. Breaking up coal into its derivatives has gone this one better and not even the squeal is left when the process is completed. After the great variety of medicinal and mechanical compounds which cover most of the domain of chemistry in the organic field are extracted the residue from which nothing else can be taken under present knowledge is a pitch which is used for pavements and the like. But before the point of fractioning is reached an interesting development has been brought about. Gasworks have been developed of a type called "balanced" in which coal is treated in a retort for the production of gas for commercial use, coke being one of the by-products. In many plants this latter is sold for fuel but in the balanced plant it is used in a further process for the production of more gas. The entire carbon content thus is utilized in the making of gas by applying the two processes in succession.

Gary Believes We Cannot Be Isolated Nation

At a luncheon at the Hotel Vanderbilt, New York, July 30, given by Marcel Knecht in honor of four French journalists who recently arrived in this country and two other Frenchmen who will depart next week, Judge E. H. Gary, chairman of the United States Steel Corp., emphatically stated his belief that this country cannot remain independent on questions affecting the destinies of the world.

In beginning his address Judge Gary said he was a member of the Republican party. "I say that," he added, "not in way of apology but because some of those present, after they hear the few words I may utter, might suppose I was like the ordinary Democrat who is bound to approve everything and anything that the President says or does.

"I believe the American people, taken all in all, are about as affectionate in feelings of friendship toward France as the French people themselves. The friendship between these two countries has been so long continued and of such firmness that there is no fear of any interruption or limitation in regard to it.

"I was very much delighted by the letter which our President wrote to congress in transmitting the alliance or agreement, or anything that you may call it, which was signed before he left France. I know I am contrary to the supposed opinions of George Washington, Thomas Jefferson, and other statesmen of many years ago, but I think the doctrine of bewaring entangling alliances with foreign countries has ceased to be fashionable. Whether we like it or not we are entangled with foreign countries. The fact is that Germany tangled us up with France and England against our will and there was no alternative for us at the time.

"I doubt if the time will ever come again when this country can, or ought, to stand absolutely alone, acting independently of all foreign countries on questions affecting the destines of the world.

"There is a biblical quotation which says: 'No man liveth unto himself alone.' That will hereafter be applied to nations and read: 'No nation liveth unto itself alone.'

"This country might be independent in some respects, but in matters concerning world importance it cannot ever stand alone. And I am very glad to say that a very large majority of the people of this country are in favor of the league of nations and believe in the fact that President Wilson signed with France, in which America will forever lend its support to that country."

Much Steel Offered

Bids will be received by the Detroit district ordnance office up to 11 a. m. Aug. 8 on 21,986 tons of 155 millimeter shell forgings. Bids are to be accepted on lots of 300 tons or all. This material is at the plant of the Detroit Shell Co., Detroit.

The surplus property division of the office of purchase and storage division of the war department, will take sealed bids Aug. 14 on about 550 tons of horseshoes and 447 tons of mule shoes now in storage in various government warehouses. Bids will be taken at the office of the chief of the surplus property division, Munitions building, Washington.

Consolidate

Interests of Foundry Equipment Manufacturing Concerns

Elmer A. Rich Jr., president and principal stockholder of the Rich Foundry Equipment Co., Chicago, and V. E. Minich of the American Foundry Equipment Co., 52 Vanderbilt avenue, New York, have consolidated their interests with the result that Mr. Minich becomes president and Mr. Rich vice president of the latter concern. The American Foundry Equipment Co. operates a plant at Cleveland and has controlled the Sand Mixing Machine Co. for some years. These three corporations are now consolidated under the name of the American Foundry Equipment Co. Manufacturing headquarters will be continued in Cleveland, with general offices at 52 Vanderbilt avenue, New York City. The Rich Foundry Equipment Co. manufactures sand blast apparatus. Hammer core machines, charging trucks for malleable foundries and other types of foundry equipment. The Sand Mixing Machine Co. and the AmericanFoundryEquipment Co. manufacture sand cutting machines, sand blast apparatus of various types, and other devices. The Chicago plant of the Rich company will be moved to Cleveland and sites for a large new plant are now being examined. V. E. Minich of New York, has been in charge of the interests of the Sand Mixing Machine Co. and the American Foundry Equipment Co. for a number of years. He is also a director of the American Foundrymen's association and president of the Foundry Equipment Manufacturers' association. Mr. Rich is a director of the latter organization. He has been prominently identified with the manufacture of foundry equipment for many years. The officers of the American Foundry Equipment Co. as reorganized are as follows: President, V. E. Minich, New York; vice president, Elmer A. Rich Jr., Cleveland; secretary, R. A. Kelley; treasurer, O. A. Pfaff.

Additional warehouse space was recently leased on Small street, Pittsburgh, by the Hanlon-Gregory Galvanizing Co., Twenty-fourth street and the Allegheny Valley railroad, that city.

Shopmen's Strike Affects Mills

Inadequate Supply of Cars and Motive Power Forces Banking of Blast Furnaces at Chicago—Treadwell Engineering Co. Adopts Business Creed — Employment Service Advocates Continue Fight—General Labor News

CHICAGO, Aug. 4.—An acute condition has been created among steel mills in the Chicago industrial district by the strike of railroad shopmen, which went into effect Aug. 1. This interferes greatly with the supply of cars and motive power and inasmuch as steel mills are unable to produce unless they can also load on cars and ship immediately, it has been found necessary to curtail plant operations severely. As a result the Illinois Steel Co. has banked all but four of its blast furnaces at the Gary plant and the same number at the South Chicago plant. Unless the strike is settled and railroads are able to furnish cars and locomotives, these plants must be shut down entirely by the end of the week. The Indiana Harbor plant of the Inland Steel Co. has not been affected to an equal degree at this time, but preparations are being made to meet a similar emergency within a few days.

While both these interests have been operating close to 70 per cent of ingot capacity, the present situation makes their schedule of operation uncertain but the decline is entirely unrelated to market conditions. As a result of the steel plant curtailment, other steel concerns producing sheets, fabricated structural material and wire will be affected equally.

Plant Shut Down

Chicago, Aug. 4.—Following a strike by machinists and roll turners the plant of the Calumet Steel Co., Chicago, has been shut down for two weeks, and the plant will be gone over and necessary repairs made while the strike situation is being resolved.

Engineering Company Has Business Creed

An annual code of business ethics is embodied in the so-called "creed" of the Treadwell Engineering Co., Easton, Pa. The creed is as follows:

To respect my work, my associates and myself. To be honest and fair with them as I expect them to be honest and fair with me. To be a man whose word carries weight. To be a booster, not a knocker; a pusher, not a kicker; a motor, not a clog.

To base my expectations of reward on a solid foundation of service rendered; to be willing to pay the price of success in honest effort. To look upon my work as opportunity, to be seized with joy and made the most of and not as painful drudgery to be reluctantly endured.

To remember that success lies within myself; in my own brain, my own ambition, my own courage and determination. To expect difficulties and to force my way through them, to turn hard experience into capital for future struggles.

To interest myself, heart and soul in my work, and aspire to the highest efficiency in the achievement of results. To be patiently receptive of just criticism and profit by its teaching. To treat equals and superiors with respect, and subordinates with kindly encouragement.

To make a study of my business duties; to know my work from the ground up; to mix brains with my efforts and use system and method in all I undertake. To find time to do everything needful by never letting time find me or my subordinates doing nothing. To hoard days as a miser does dollars; to make every hour bring me dividends in specific results accomplished. To steer clear of dissipation and guard my health of body and peace of mind as my most precious stock of trade.

Finally, to take a good grip on the joy of life; to play the game like a gentleman; to fight against nothing so hard as my own weakness, and endeavor to grow in business capacity, and as a man, with the passage of every day of time.

Job Bureau's Union Allies File More Charges

Washington, Aug. 5.—Efforts of advocates of the continuation on a permanent basis of the United States employment service last week included filing with the joint committee of the house and senate considering the Nolan-Kenyon bill of letters from the heads of the international association of machinists and the union of boilermakers and shipbuilders charging the National Association of Manufacturers and the National Metal Trades association with not seeking the public good in their opposition to the bill. In the letters it was stated the associations are opposed to the federal employment service because it would hamper the success of their "black lists," "conducted in the guise of employment agencies."

William H. Johnston, president of the machinists, and Charles McGowan, representing the boilermakers, sent the letters to John M. C. Smith, of Michigan, chairman of the house committee on labor and also of the joint committee. They bear out substantially the expression of Peter F. Colon, an officer of the machinists' union, who, in testifying before the committee, said that if the federal service is taken away, "the blacklisting by the metal trades employment bureaus will be more effective."

4000 Shipbuilders Strike

Approximately one-half of the 8500 employes of the Sun Shipbuilding Co., Chester, Pa., went on strike July 31, for recognition of the union and for free access to the yard by labor representatives. President Pew received a committee of the men and it was decided to hold the question under advisement for a decision in a few days.

LABOR NOTES

A number of manufacturing plants in and near Scranton, Pa., are idle temporarily by reason of the strike of employes of the Scranton Electric Co., resulting in cutting off the supply of electric current.

Representatives of laborers at the Steelton plant of the Bethlehem Steel Co., on July 21, presented to Frank A. Robbins Jr., general manager, a request for a further increase in the wage scale. The men received a reply saying that it was impossible to grant their demands.

Molders at the plant of the McDonough Mfg. Co., Eau Claire, Wis., have returned to work after a strike of 10 weeks' duration to enforce a demand for 80 cents an hour. The men came back when the company offered to pay 67 cents. The former rate was 62½ cents.

The Dominion Sheet Metal Corp., Hamilton, Ont., has inaugurated a profit sharing plan. Eight per cent preferred stock will be offered to employes at par, although the stock has been selling at from 110 to 112. The employes are to pay at the rate of 2 per cent per month and will be credited with the 8 per cent dividend at the rate of 2 per cent each quarter.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE Lunkenheimer Co., Cincinnati, manufacturer of valves and engineering appliances, at a cost of $2,000,000 will greatly increase and improve its manufacturing facilities by building a complete new plant. The site selected for the undertaking, comprises about 70 acres in Carthage, a suburb of Cincinnati, on the Toledo division of the Baltimore & Ohio Southwestern railroad. Plans for the new buildings are being prepared and it is expected that work on the new structures will be started within the next few months. The new plant will have triple the floor space of the present works at North Fairmount, Cincinnati. The buildings will be of the 1, 2, and 3-story types, of steel and concrete construction, and there will be provided all modern devices for the manufacture, handling, and transportation of raw materials, part finished and finished products. The welfare of the employes will be given special consideration. About eight acres, opposite the main plant site, has been reserved as a recreation center, upon which will be erected an assembly hall, club rooms, base ball grounds, tennis courts, swimming pool, etc. Upon this site will also be erected a dining room capable of accommodating 1000 employes at one time.

The Lunkenheimer Co. moved to its present location in 1900. Its plant then comprised two manufacturing buildings. Many additional buildings have been erected since that time.

* * *

THE Metal Hose & Tubing Co., Raymond and Tillary streets, Brooklyn, N. Y., will build a 3-story, $75,000 building as a result of increasing its capital. It will install about $50,000 worth of equipment, none of which has yet been placed. A new power house will require two 150 horsepower return tubular boilers, feed water heaters, etc. New equipment will be installed in the machine shop, brass shop and brass foundry.

* * *

CONSTRUCTION has been started on a new 12-ton open-hearth furnace, two core ovens and a double annealing furnace for the Pittsburgh Rolls Corp., Forty-first street and the Allegheny Valley railroad, Pittsburgh. Foundations for the new units have been laid. The open hearth and the double annealing furnace are being built by the S. R. Smythe Co., Inc., Pittsburgh, while the Pittsburgh Rolls Corp. is building its own core ovens.

* * *

THE Norton Co., Worcester, Mass., is nearly ready to ship to the Buffalo plant of the Aluminum Co. of America the fifth roll grinding machine of its class, the largest in the world. It weighs more than 62 tons and will take rolls 54 inches in diameter and 21 feet long that weigh 50,000 pounds.

* * *

AN electric furnace for melting and refining aluminum has just been shipped to the Dayton Engineering Laboratories, Dayton, O., by the Electric Furnace Co., Alliance, O. This furnace has a hearth capacity of 500 pounds and a melting rate of 200 pounds of aluminum per hour. It is equipped with a double charging door in the front and rear.

* * *

THE foundry operated by Lord, Stone & Co., Otter River, Mass., and recently purchased by W. L. Shaughnessy and J. P. Carney, of the William L. Shaughnessy Co., Gardner, Mass., manufacturer of casket hardware, will be incorporated with a capital stock of $50,000 and known as the Otter River Foundry Co. The new company will continue the manufacture of stoves which the foundry has produced for years.

* * *

FABRICATED structural steel will be produced by the Ohio Structural Steel Co., recently incorporated in Ohio with a capital of $75,000 by J. M. Heltzel and others of Warren, O. The company will double the capacity of a plant recently purchased at Newton Falls, O. Mr. Heltzel and others connected with the enterprise are officers of the Heltzel Form & Iron Co., of Warren, manufacturers of steel concrete forms for construction purposes.

* * *

THE Kissel Motor Car Co., Hartford, Wis., has started the retooling of the original body shop, which was abandoned several years ago with the completion of a new factory as an addition to the main works. Since then the body shop was used as a storehouse. A force of 150 to 200 men will be added at once. The additional space will be used largely for making sheet metal bodies for the speedster types of passenger cars and cabs for motor trucks.

* * *

INCORPORATION of the Lumen Bearing Co., Youngstown, O., with a capital stock of $250,000 by H. P. Parrock and others has been announced. A short time ago Mr. Parrock purchased a manufacturing site of several acres in Youngstown and it is understood that construction of a plant will be begun at an early date. Mr. Parrock formerly resided in Youngstown but went to Buffalo where he engaged in the manufacture of bronze bearings used in steel mills.

* * *

THE Smith Gas Engineering Co., Dayton, O., has received a duplicate order for a gas producer for the Kellogg Toasted Corn Flake Co., Battle Creek, Mich. The plant when completed will replace 450,000 cubic feet of city gas per day.

* * *

CONTRACTS have just been awarded to B. Floersheim & Co., Farmers bank building, Pittsburgh, for all piping materials and its construction for the new steel plant being erected by the Weirton Steel Co., Weirton, W. Va. Included are high and low pressure steam, water, air, oil, gas and hydraulic systems for boiler and power houses, seven 100-ton open-hearth furnaces, blooming and bar mills as well as seven waste heat boiler installations. This company has just completed all piping contracts for the Weirton company's blast furnace installations which now are in operation. A similar contract recently was awarded the Floersheim company by the Crucible Steel Co. of America, for piping contracts for its Midland, Pa., plant. It recently completed a sizable contract from the McKeesport Tin Plate Co., McKeesport, Pa.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE American Ore Reclamation Co., 71 Broadway, New York City, which controls the Dwight & Lloyd process for the treatment of iron bearing materials, has issued a license to the Marting Iron & Steel Co., Ironton, O. Work already is under way on a sintering plant for the treatment of blast furnace flue dust, pyrites cinder and roll scale. The plant will consist of one standard Dwight & Lloyd machine. Throughout it will be of the latest type and will be constructed of steel. Practically all of the important units will be at or near ground level. The plant will have a capacity of 150 tons of sinter daily when treating flue dust alone, and a considerably larger capacity when pyrites cinder or roll scale is mixed with the flue dust. The American Steel & Wire Co. has placed in operation the Dwight & Lloyd sintering plant, which has just been completed, at its Donora, Pa., works. The installation throughout is of steel construction and contains one Dwight & Lloyd double-length sintering machine, the capacity of which is 300 tons of sinter daily from blast furnace flue dust. The Carnegie Steel Co. at its Farrell, Pa., works is constructing a Dwight & Lloyd plant of similar design and capacity.

* * *

WITHIN the past month the McLain-Carter Furnace Co., Milwaukee, has installed 5-ton oil-fired open-hearth furnaces in the plants of the Lima Steel Casting Co., Lima, O., and the McDougall-Duluth Co., Lima, Minn.

* * *

BRICK for relining its furnaces at Cumberland Furnace, Tenn., has been ordered from the Ashland Fire Brick Co., Ashland, Ky., by the Warner Iron Co., Nashville, Tenn. The Ashland company will soon ship a complete blast furnace lining to the Illinois Steel Co.'s plant at Joliet, Ill.

* * *

THE Montreal representatives of H. Boker & Co., New York, which were operating under the name of H. Boker & Co., have changed their name to the Pilot Steel & Tool Co., Ltd. The company is now a Canadian corporation, although continuing to represent H. Boker & Co. It also will act as Canadian agents for Jonas & Colver, Ltd., Sheffield, Eng., makers of high-speed steel and steel products.

* * *

THE A. M. Machine Works, 721 West Washington boulevard, Chicago, has been formed and has established a plant for cylinder grinding and general machine shop work. The plant has been equipped with new machines and is up-to-date.

* * *

IMPROVEMENT in new business booked by the Western Malleables Co., Beaver Dam, Wis., has made it desirable to reopen the South street foundry, which has been idle several months. During that time, though, the Elm street foundry was worked at full capacity, a sufficient overflow of orders has developed to make possible the resumption of the South street plant at approximately normal output.

* * *

THE Detroit Reamer Salvage Co., Detroit, has changed its name to the Grinding Process Tool Co. The business of this company when it was organized six years ago was to remake wornout reamers, but the business has since expanded until it now deals with all kinds of precision metal-cutting tools. Old tools are remade into smaller new ones. The capital of the company has been increased substantially. Officers of the company are: S. A. Cogsdill, president; W. W. Blakely, secretary-treasurer, and R. G. Lambe, sales manager.

* * *

P. H. JOYCE, president of the Illinois Car & Equipment Co., Chicago, and also interested in the Steel Car Co., of Cleveland, the Liberty Car Co., of Chicago Heights, the Illinois Nut & Bolt Co. and the Southern Wheel Co., of St. Louis, is bringing about a consolidation of all these interests, probably under the name of the Liberty Car Wheel Co., of Indiana. A site has been purchased at Hammond, Ind., on which a large plant is to be built. Associated with Mr. Joyce in this consolidation are John E. Fitzgerald, vice president of the First National bank of Hammond; Peter W. Meyn, president of the Lake County Savings & Trust bank, Hammond; Bryan Tighe, vice president of the Englewood State bank, and John W. O'Leary, former president of the Chicago Association of Commerce. An issue of securities to float the new company is now being negotiated.

* * *

THE stockholders of the Moline Iron Works, Moline, Ill., until recently known as the H. W. Cooper Saddlery Hardware Mfg. Co., have decided to double the present capacity and to erect suitable factory buildings. The first unit will be a 2-furnace malleable foundry and work upon the extension will start at once. Capital stock of the company is to be increased to $500,000 to take care of the rapidly growing business. H. W. and C. J. Cooper have retired from the active management of the company. Officers chosen for the coming year are as follows: President, L. E. Nutt; vice president, J. J. Creedon; treasurer, J. T. Miles; and secretary, L. E. Dorman.

* * *

TWO 105-kilowatt electric furnaces of the tilting type with hearth capacities of 1500 pounds each recently were installed at the plant of the Capital Brass Works, Detroit, by the Electric Furnace Co., Alliance, O. The Buick Motor Co., Flint, Mich., has just purchased an electric furnace of the same type for melting phosphor bronze. The Electric Furnace Co. also has installed a 50-kilowatt rectangular tilting type electric furnace in the jobbing foundry of the Akron Bronze & Aluminum Co., Akron, O. This furnace, which has a hearth capacity of from 300 to 500 pounds, will be used to melt gunmetal, phosphor bronze and red and yellow brass. A furnace has just been shipped to the Dayton Engineering Laboratories, Dayton, O., to be used for melting and refining aluminum.

Wall Street Feels Money Demand

Federal Reserve Board Will Not Take Action to Check Call Loans if Latter Do Not Threaten Essential Needs — Glass Outlines Financial Program — High Living Cost Agitates — General Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

DENIAL by the federal reserve board of the report that it was to take drastic action to curb the call money market did not suffice last week to reassure Wall street with respect to the available supply of money for speculation. As a matter of fact the tremendous drains upon capital funds and banking credit predicted some months ago are beginning to be felt, with the result that time money in the New York center is getting scarce and call money rates are leaping to high levels, reaching 20 per cent on one day.

The money for stock market purposes has been coming from the surplus reserves of interior banks. But now with the rising tide of demands for credit to move the crops, to finance business to meet maturing and new foreign loans, and to provide the government with operating funds, interior banks are calling their money back home, with the result that the stock market is threatened with something of a money stringency. Naturally the high prevailing call money rates will attract funds to Wall street, but banks would hesitate to desert the legitimate needs of business and industry to cater to the wants of the stock market. It is only in the event that the call loan market shows a tendency to absorb more than its rightful share of credit, that the federal reserve board probably will take direct action to frustrate it, thereby following up its already openly expressed disapproval.

Outlines Federal Disbursements

In connection with the treasury's requirements Secretary Carter Glass has sent out a statement showing that disbursements for the fiscal year of 1920 should not exceed $6,500,000,000 which according to his present estimates will be entirely covered by revenues from various sources.

Many are inclined to doubt if business will yield such a huge amount of taxation in view of the passing conditions and reduced earnings in many lines. An encouraging feature of Mr. Glass' report is that indicating the reduction in government expenditures, which reached a maximum $2,060,000,000 in December, 1918, and fell in June to $809,000,000 and in July to a still lower level.

The total public debt on June 30, he predicts, when the whole cost of the war presumably will have been financed, will be $26,516,506,160. About $10,000,000,000 of this represents loans to the allies, leaving a net debt of more than $16,000,000,000.

For the rest of the calendar year the treasury at intervals will issue a total of $3,500,000,000 certificates of indebtedness. During this same period there will mature and be paid loan and tax certificates to the amount of $2,997,540, making the net increase but $502,459,000. If revenues fail to cover these certificate issues, a short time note offering to banks will be made.

High Cost of Living Problem

Agitation over the high cost of living was crystallized last week by the appearance of a committee of railroad brotherhood heads before President Wilson with a warning that unless steps were taken to reduce the cost of living a further wage increase would be asked by the railroad employes. The railroad employes received an increase of $900,000,000 last year over their 1917 wages. One of the chiefs later issued a statement in which he denounced "profiteering" and declared the country is nearer war now than when the "kaiser threw down the gauntlet," and that workmen are ready to follow the "red flag or anything else."

To the credit of the brotherhood chiefs they openly recognize the futility of continuing the vicious cycle of wage increases followed by cost of living boosts and then more wage increases. They complain of the depreciated purchasing power of the dollar, $5 being worth now, they say, just 215 cents. Oct. 1 is fixed as the date by which wages must be increased or the cost of living lowered.

Will the President or his administration aids be able to lift the dollar to its old value? It is doubtful. High costs have been created by deep fundamental economic causes which will not vanish at the waive of a magic wand. Only the operation of long corrective processes will suffice to bring results. Many economists contend we are on a high price level, which will be lowered only gradually. Cases of profiteering by food distributors or otherwise when discovered of course, should be corrected by law, but generally speaking the same economic causes are behind all high prices. The government itself by maintaining the price of wheat at $2.26 is doing more than any other agency to keep food prices high, assuming that with a free market for wheat the world market price would be less than the United States guaranteed price, an assumption not accepted by all authorities.

Facts Underlying High Prices

What are the causes for the present high prices? During the war the prices soared because government and the public competing against each other bid up goods and labor which both wanted. This sent up the cost of living and labor demanded and received more wages, which put a prop under producing costs. Since the war wages have remained high, while the world with a tremendous shortage of goods has either entered the American markets or is expected to do so soon. This worldwide "scarcity demand" is largely responsible for continuation of high levels. Would American labor be willing to pay for cheaper living the price of checked exports and all this might mean in business distress and unemployment? Would not this remedy be disastrous both at home and abroad? That is the big question which underlies the whole problem.

Prices in America, it is true, are near the peak for all times, but in England, Italy, France, Germany and many other nations of the world they are even higher. An exhaustive study by experts of the war industries board has established this fact. So long as prices remain high in the rest of the world they can not easily fall here. Not until normal conditions are restored, and the world's stock of goods is replenished can prices drop materially. Labor can help in this task by increasing its efficiency and speeding up production and avoiding wasteful, uneconomic strikes, and capital can aid by employing every means at its command through scientific man-

agement and improved machinery toward the same end. Deflation of the excessively expanded currency and economy by government and the individual also will prove powerful aids.

Allis-Chalmers Net Less

Slight falling off in earnings is reported by the Allis-Chalmers Mfg. Co., Milwaukee, for the quarter ended June 30. Profits after federal taxes were $926,945 compared with the net profits of $996,024 for the preceding quarter, and net profits of $1,883,755 for the June quarter 1918. The company had unfilled orders on hand June 30 totaling $14,756,197 against $17,921,117 on March 31 and $28,962,096 on June 30 last year. The statement for the quarter ended June 30 and for the half year ended the same date compares with corresponding periods of 1918 as follows:

	1919	1918
Sales billed	$7,734,025	$9,238,079
Net profits for quarter	*926,945	†1,883,755
	1919	1918
Sales billed	$16,336,917	$15,827,906
Net profits for half year	*1,922,969	†3,279,993

*After federal taxes.
†Before federal taxes.

Savage Arms Gains

Although the second quarter report of the Savage Arms Corp. shows a decline in total earnings of $2,300,786, the surplus for the period as compared with the corresponding quarter of 1918 discloses a gain of $133. This is because the item for tax reserves was tremendously reduced while dividends also were less. The income account for the three months follows:

	1919	1918
Total earnings	$793,883	$3,094,669
Interest		7,253
Taxes, etc.	350,272	2,621,801
Net	$443,611	$465,615
First preferred	175	8,750
Second preferred	3,910	6,262
Balance	$439,526	$450,603
Common dividend	116,222	127,432
Surplus	$323,304	$323,171

Taxes Are Less

The General Chemical Co. reported a surplus of $1,780,432 after charges and federal taxes for the six months ended June 30. This compared with the $3,262,468 for the corresponding period one year ago. Dividends were maintained but the insurance fund reserve dropped $130,000 and the depreciation and tax reserve was less by $800,000 than the first half of 1918.

Buys Plant Site

The Verona Steel Casting Co., a branch of the Standard Steel Car Co., has purchased a tract of nine acres near Verona, Pa., and it is reported the company will build an additional plant.

Brazilian Trade Gains

The United States during the last five years has become the chief factor in Brazil's import trade, according to the National Bank of Commerce, New York. In 1918, when Brazil's total imports aggregated $247,000,000, the United States supplied commodities valued at $89,000,000. British shipments to Brazil amounted to $50,000,000; Argentine, $47,000,000, and French, $12,000,000. In 1913 the United Kingdom led in exports to Brazil, supplying her with goods valued at $80,000,000 out of total imports of $326,000,000. Germany sent goods amounting to $57,000,000; the United States, $51,000,000; France, $32,000,000, and Argentina, $24,000,000.

Financial Crop Ends

The Bull Tractor Madison Motors Corp., Anderson, Ind., has increased its capitalization from $1,000,000 to $3,000,000.

* * *

Increases of capital stock and debt have been filed at Harrisburg, Pa., by the following companies: Christiana Machine Co., Christiana, stock $40,000 to $125,000; Lancaster Iron Works, Lancaster, stock, $300,000 to $500,000, and Susquehanna Collieries Co., Philadelphia, debt, $8,300,000 to $11,900,000.

* * *

The business of the Howlett Construction Co., Moline, Ill., builder of Williams, White & Co. coaling stations, has been bought by the Bay City Foundry & Machine Co., Bay City, Mich. W. E. Howlett, manager and engineer of the Howlett company, will be manager of the railroad coaling station department of the new company.

* * *

Douglas Bros. Foundry, pioneer industrial plant at Aberdeen, Wash., has been sold to a combination of local and outside capitalists represented by H. P. Hoonan Jr. and S. P. Knight, who will manage the plant. The consideration was $100,000. The company established in 1897, does a large foundry business for logging camps and mills.

* * *

Sale of the Robert Lanyon Zinc & Acid Co. to the Eagle-Picher Lead Co. has been announced in St. Louis. The consideration was $360,000. The deal was made between William Lanyon, of St. Louis, president and sole owner of the company, and G. S. Picher, of Chicago, president of the Eagle-Picher Lead Co. The Lanyon company operates a plant at Hillsboro, Ill.

Buying Starts

In Sulphate of Ammonia by Fertilizer Interests—Await Phenol Offering

New York, Aug. 2.—After remaining out of the market for a number of weeks, fertilizer manufacturers are again taking interest in their sulphate of ammonia requirements. No large orders have been placed, but inquiries are more numerous. With somewhat of an improvement in activity, prices are better defined now around $3.25 to $3.40 on contract business, and $3.40 to $3.65 on spot, on 100 pound lots at producers' plants. Buying for shipment to Java and Japan has tended to keep prices at the Pacific coast firmer than those for export business along the Atlantic seaboard. Sulphate of ammonia in double bags at the Pacific is holding around $4.60, a comparatively slight decline, as against $4 at the Atlantic seaboard, where shipments until of late went around $4.60 to $4.75. Export business in the East at no time this year has been active and sellers state that European buying in this country at present is exceptionally small.

Delay continues in the marketing of government phenol, and while it is pretty generally conceded that this material will be sold through one or two producers, no official announcement has been made to this effect. For the time being, trading in phenol has virtually been suspended, and the market is purely nominal.

A fairly good amount of trading in naphthalin continues, with the market unchanged at 6½ to 7½ cents for flakes, and 8½ to 9½ cents for balls. The situation in benzol, toluol and solvent naphtha is largely unchanged, with demand good and supplies scarce.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	0.08½ to .09½

Per 100 Pounds at Producers' Plants

Sulphate of ammonia	3.40 to 3.65

Contract

Pure benzol	$0.24 to .28
Toluol	.25 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plant

Phenol	nominal

Per 100 Pounds Producers' Plants

Sulphate of ammonia	3.25 to 3.40

Obituaries

BENJAMIN F. BARNES, inventor of machine tools and especially drilling machines, and president of the Barnes Drill Co., Rockford, Ill., died suddenly July 29, while on a train at Eau Claire, Wis., on his way home from a vacation. Mr. Barnes was born in Mount Morris, N. Y., March 5, 1853, and for about 25 years prior to 1899, he was superintendent of the W. F. & John Barnes Co., Rockport. He then organized the B. F. Barnes Co., and was president from 1899 until 1907, when he organized the Barnes Drill Co., of which he was president from the start. Mr. Barnes was noted for having four hobbies, one for each season of the year. In the spring he hunted mushrooms; in the summer, his chief diversions were automobiling and fishing; in the fall, he spent much time hunting and in the winter, cabinet making received much of his attention.

William Segar Phillips, of Phillips, Doup & Co., Brooklyn, N. Y., manufacturers of steel barrows, died of heart disease, July 29, at his home in that city.

Michael P. Berglas, president of the M. P. Berglas Mfg. Co., Brooklyn, N. Y., makers of plumbers' supplies, died July 31, at his home in that city, aged 50.

Maj. John Aldrich, for many years superintendent of the Wardwell Needle Co., Laconia, N. H., and at one time an owner of the Cole Mfg. Co. of that city, died at his home in Lakeport, N. H., July 29, aged 95 years.

Henry B. B. Yergason, formerly advertising manager for Rogers, Brown & Co., Cincinnati, died on July 29, in New York City. For some time he has been sales manager for the Kerner Incinerator Co., Cincinnati. He was 43 years old.

Janes Nelson Raymond, founder and retired president of the Raymond Lead Co., Chicago, shot and killed himself at his home Aug. 1. He was 72 years of age, born in New York, and in 1880 organized the Raymond Lead Co. About 10 years ago he sold the company to the United Lead Co., of which he had been a director since.

Edward Doud, one of the pioneer ironmasters of the South, died at the home of his son, R. B. Doud, Allen's Creek, Tenn., July 21, at the age of 84. He was born in Newhaven, Vt., Nov. 8, 1834, and was graduated from the Middlebury academy in civil engineering. In 1854 he went to the Minnesota frontier where he made a number of the original surveys in the southeastern part of the state. Later in 1873 he moved to Chattanooga, Tenn., to become associated with the old Chattanooga Iron Co., operating the second coke furnace to be built

BENJAMIN FRANKLIN BARNES

in the South. He afterward built the Sewanee furnace at Cowan, Tenn., and Citico furnace at Chattanooga, which were among the first coke furnaces in the South. He also built and operated plants at Sheffield, Ala., Poughkeepsie, N. Y., Hamilton, and Midland, Canada, retiring from active blast furnace work in 1900.

Henry H. Roberts, Philadelphia business manager of *The Iron Age*, and prominent in the field of trade paper advertising, died July 26, at Atlantic City. Misfortunes having overtaken his family in his childhood, Mr. Roberts was educated in an orphange in Philadelphia, his native city. As a young man he became connected with the Philadelphia office of *The Iron Age*, where he displayed marked ability as an advertising man. Subsequently he was placed in charge of the St. Louis district for that publication. His jurisdiction later was extended to cover the Chicago territory. In 1897 he was given the title of Chicago manager. Returning to the Philadelphia district in 1905, he severed his connection with *The Iron Age* after one year and later became advertising manager of *The Hardware Reporter*, St. Louis. When that publication was consolidated with *The Hardware Age*, in 1913, he was again placed in charge of the Philadelphia office of *The Iron Age*. Mr. Roberts enjoyed a wide acquaintance and a position of standing in his chosen field.

Adopts Democracy Plan

A plan for industrial democracy has been inaugurated by the Doehler Die-Casting Co., Brooklyn, N. Y. At a recent meeting of the Executive club, composed of executives of the company, H. H. Doehler, president of the company, outlined the company's policy with reference to the plan. "Financial success alone brought about by denying others health, happiness and justice is like tainted money and is not the kind of success I care for," he said, emphasizing the point that employes are to be given a square deal. The plan is carried out through an employes' association, and in addition to representation it provides for sick and death benefits. To further assist in its success the company has begun publication of *Doehler Topics*, a monthly paper with items relating to the association and its members.

Between 350 and 400 employes of the Power & Mining Machinery Co., Cudahy, Wis., are out on strike because of the refusal of the company to grant an increase of 10 cents an hour to all employes. The company, which is a branch of the Worthington Pump & Machinery Corp., expressed a willingness to bring the entire payroll up to the level of the prevailing rates for each class of work in Milwaukee shops.

The Westinghouse Electric & Mfg. Co., East Pittsburgh, recently purchased a tract of about 110 acres, situated in Wilkins township, not far from its research laboratory, on which it proposes to construct houses to accommodate 50 families. The houses are to be sold on easy terms to employes.

July Shatters Tool Precedents

Usual Dull Period Supplanted This Year by Miscellaneous Buying Which Rolls up Sizable Aggregate—Purchases Made by Varied Industries—General Motor Corp. Files Large Orders—Many Cranes Sold

SHATTERED precedents followed each other in quick succession in the machine tool industry during the recent world war. It would seem that some precedents are being broken in peacetime. Unlike other July periods which notably have been dull, the past month has rolled up large totals in machine tool and equipment sales. The forepart of the month lagged somewhat but lately trading took a decided spurt and in many districts exceeded that of June. It is stated by one prominent tool dealer in the Middle West that a curve or chart of June sales as compared with former years would show a decided upward turn.

Small orders have predominated and these mostly have been for light machinery for rounding out machine shop and toolroom equipment. Throughout the month there appeared to be a marked hesitancy to close on the part of large buyers. No explanation is offered for this disinclination to buy although it has been stated that a real start by the railroads would encourage other large buyers. Advancing prices from 5 to 20 per cent on different types of machinery seem to refute the judgment of various tool users that prices are to come down.

Many Industries Make Purchases

FROM diversified industries rather than from one particular line, came the machine tool orders in July. Steel manufacturers occupied a prominent place. The Bethlehem Steel Corp. bought 10 machines for a plate shop. The Truscon Steel Co., Youngstown, O., purchased several tools. The Hydraulic Pressed Steel Co., Cleveland, issued a list of 12 machines. The Standard Steel Corp., Milwaukee, wanted a complete list of metalworking equipment. Many other industries came into the market as is indicated by the following names: The Ohio Oil Co., Findlay, O., bought pipe machines; the Marion Steam Shovel Co., Marion, O., purchased considerable equipment in Cleveland; the A. B. See Elevator Co., Jersey City, N. J., bought $70,000 worth of machines in the East; the Chelsea Screw Co., Chelsea, Mich.; the American Can Co., Newark, N. J.; the Singer Mfg. Co., Elizabeth, N. J.; and the Morris Fertilizer Co, Atlanta, Ga., all issued fair sized lists. The General Electric Co., Schenectady, N. Y., bought turret lathes, grinders, etc., while the Victor Mfg. & Gasket Co., Chicago, doubled its original request for 10 punch presses.

Automobile and Accessory Manufacturers Buy

AUTOMOTIVE industries which have occupied first place among tool buyers for many months, continue to take large numbers of tools. Confirming orders in large numbers came to Cleveland from the General Motors Corp., Detroit, on its huge purchase made in June. The Studebaker Corp., South Bend, Ind., made some purchases but is understood to be still in need of 65 or 70 turret lathes. The Paige-Detroit Motor Car Co., Detroit, installed equipment to double its output. The Allen Motor Co., Columbus, O., purchased $50,000 worth of machines and announced its intention of buying $50,000 worth more. The Chandler Motor Car Co., Cleveland, the Buick Motor Co., Flint, Mich., and the Ford Motor Co., Detroit, all made sizable purchases. The Midwest Engine Co., Indianapolis, bought turret lathes and inquired for automatic screw machines and multiple spindle drilling machines. The Wright Roller Bearing Co., Philadelphia, bought 32 grinders, several lathes and other new and used equipment.

Many Cranes Bought in July

MOST of the heavy equipment sold in July consisted of cranes. Steel manufacturers in the Pittsburgh and other districts, however, who are expanding extensively, bought much mill equipment. Perhaps the largest purchase of this kind was made by the Eastern Rolling Mills Co., Baltimore, which purchased $700,000 worth of mill and crane equipment. The Weirton Steel Co., Weirton, W. Va., also made a large purchase. The largest crane award of the month was made by the Charlestown, W. Va., ordnance plant. It is understood this amounted to $2,000,000. The Bethlehem Steel Co. issued several crane inquiries during the month and has awarded 19 for its various plants. Crane builders look for an announcement of large crane needs for Staten Island docks, since New York City announced an appropriation of $15,000,000 to erect cargo-handling piers.

Tool Exporters Have Good Month

EXPORTING of machine tools is on the increase. Frequent orders come from England and France. A few orders reached Cincinnati from Spain and South America. Norway and Sweden also are asking for American-made machinery. The Wern Machinery & Engineering Co., New York, sought 10 overhead bridge cranes for the Swedish Royal railways. The Standard Oil Co., New York, revived its list of 40 tools for Roumania after much revising. The Framerican Industrial Corp., New York City, distributed a list of 28 large tools for a steam turbine plant in France. Anthony Gibbs, 61 Broadway, New York, closed bids on five cranes for France and Viehle, Blackwell & Buck, 49 Wall street, New York, issued a list of mine cranes for South Africa. The Southern Sales Corp., New York, wanted three large tools for Cuba, and Armour & Co., Chicago, bought several for export to Brazil. Cleveland, Chicago and Detroit dealers were asked to bid on a list of 16 tools for Japan.

Scattered Buying by Railroads and Shipbuilders

RAILROAD buying has not been much of a factor for some time, while the shipbuilding industry has seen a little revival. The Pennsylvania railroad ordered a few turret lathes for Logansport, Ind., but it is understood not to have closed on its eight cranes for Stark, O. The New York Central issued a small list of tools in the East, as did the Chicago, Burlington & Quincy, the Santa Fe and Atchison, Topeka & San Francisco in the West. The Newport News Shipbuilding & Dry Dock Co., Newport News, Va., issued a list of 24 machines for Richmond, Va. The Charleston Dry Dock & Machine Co., Charleston, S. C., was incorporated at $2,225,000 and is expected to issue a list soon. The Mare Island, Cal., navy yard bought seven bridge and 20 wall cranes.

Big Tool List Out in Cleveland

Sellers Hope Other Manufacturers Will Follow The Lead of White Motor Co.—300 Machines Are Wanted—Miscellaneous Demand Keeps Lively in all Market Centers—Lathe Prices are Again Advanced

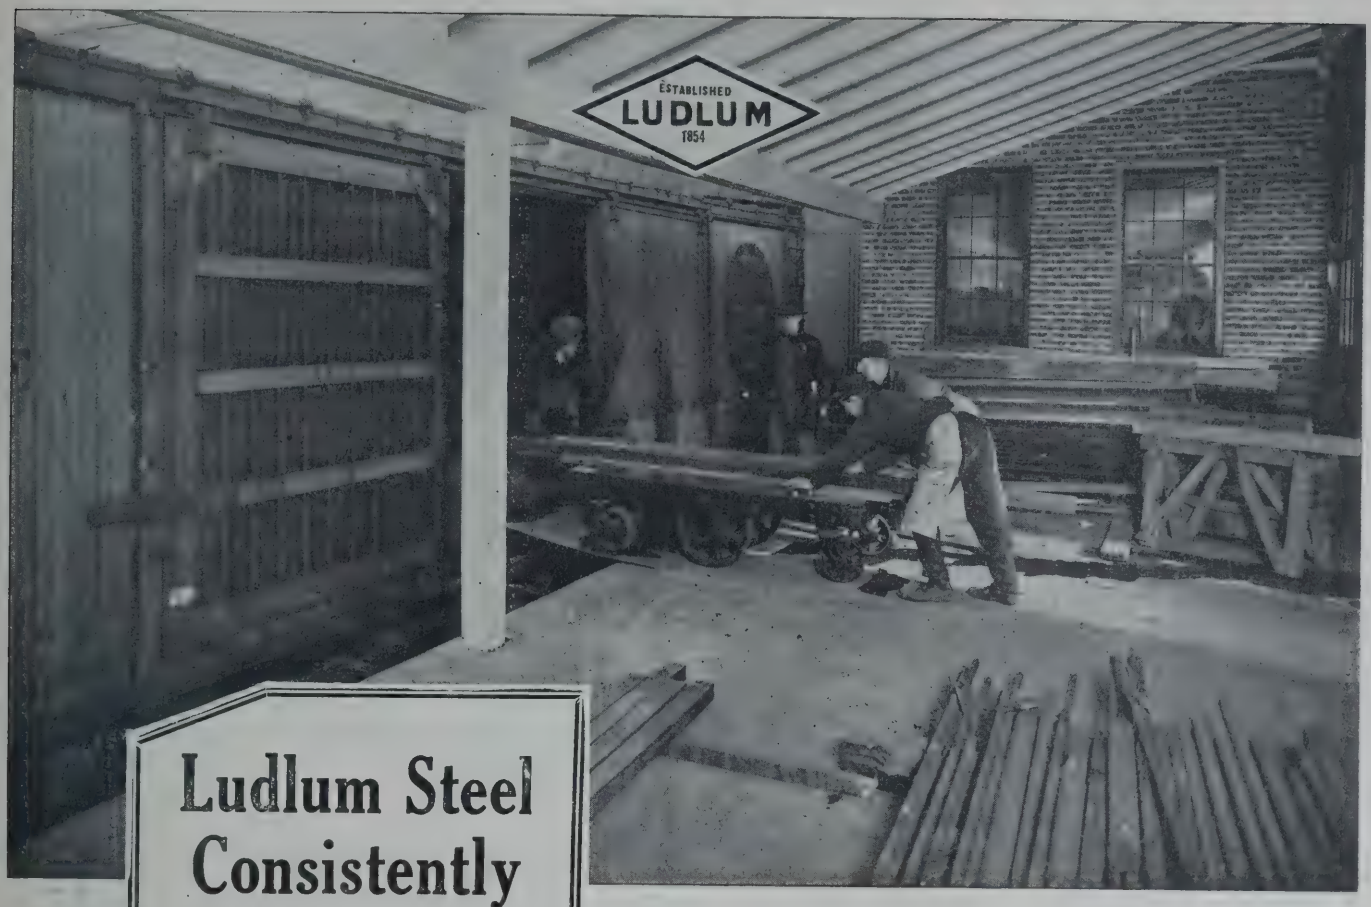
ISSUANCE by the White Motor Co., Cleveland, of a list of 250 to 300 tools constitutes the biggest development of the past week's machinery market. Sellers are interested in seeing if the action by this large interest will lead into the market a number of other important buyers who apparently have been waiting for somebody to make a start. Other automobile and tractor manufacturers are in the market or soon will be.

While the demand in all tool-selling centers continues merely for lighter equipment a bettered movement of heavier types is noted, especially in Chicago. Trading in all districts comprises miscellaneous orders from varied industries and in the east good sales of fabricating equipment have been made to such companies as the Winnisimmet Shipyard Co., the Gould Construction Co., and Fraser, Brace & Co., as well as a number of smaller plants in the vicinity of New York City. Of great interest to the machinery trade in general is the announcement carried elsewhere in this issue of the plan for arriving at selling prices on the machine tools owned by the government. This supplements the plan for inventorying this equipment announced exclusively in the IRON TRADE REVIEW of June 12.

Out of Washington comes the report of a sale by the British government of 632 tools in war munition plants, 307 of which originally were made in this country. This is indicative of the extent the tool builders of the United States contributed aid to England during the first years of the war. The American Multigraph Co., Cleveland, is offering a large list of war plant tools for sale. It is understood the Winton Co., that city, desires to dispose of a large number of machines made idle with the coming of peace.

Advancing prices continue to be noted. Lathes have gone up again between 10 and 15 per cent and a reason given in Pittsburgh is an advance in wages to machinists. This is coupled with a notice of a possible strike by the machinists for higher wages at Cincinnati. This lathe increase has resulted in some buyers closing on their requirements. An advance of 20 to 25 per cent on fabricating equipment is expected soon.

The crane market continues to manifest considerable life. The Mare island navy yard is reported to have contracted for 27 bridge and wall cranes. The largest crane inquiry current has been issued by the American Locomotive Co., which wants 15 overhead cranes. Steel manufacturers bought a number of cranes the past week in Pittsburgh, Cleveland and elsewhere.



Much Fabricating Equipment Sold in the East

A BETTER undertone continues in evidence in the eastern machine tool market, despite an almost total lack of large lists. Some dealers report that the past week has been the most active in several months. As intimated, however, trading has been comprised almost entirely of small, miscellaneous orders. A feature at the present time is an improved buying of fabricating equipment. Among the larger buyers of this equipment are the Winnisimmet Shipyard Co., Chelsea, Mass., which closed on eight machines; the Gould Construction Co., Long Island City, which bought five machines; and Fraser, Brace & Co., 1328 Broadway, New York, which also closed on five. Another buyer is the American Smelting & Refining Co., which bought some light equipment for a boiler shop in Alaska. Several other orders, involving one and two tools, have been placed of late. Some of these, sellers state, have been pending for a number of weeks. A number of small fabricating shops established in the vicinity of New York within the past few months, it is said, are contributing to the present activity. Prices on fabricating equipment are tending strongly upward, and it is considered likely that an advance of 20 to 25 per cent will be put into effect by some manufacturers within the near future.

Quotations on other lines of machinery are also moving upward. Lathes now are being advanced from 10 to 15 per cent, and a leading line of presses has just been increased 10 per cent. This latter advance followed a similar advance in June. In the heavier equipment, such as cranes, it appears to be generally conceded that the minimum for this year has been passed.

It has just been announced that the plant of the Standard Aircraft Corp., at Elizabeth, N. J., has been purchased by Simmons Bed Co., whose principal plant is at Kenosha, Wis. The sale price has not been made public, but it is understood that the figure is around $1,500,000. The sale of about 150 tools at the Elizabeth plant recently aroused considerable interest, owing to the high bids which were offered.

Considerable activity continues in evidence in the crane market, and the award of a large contract is again a feature. The Cleveland Crane & Engineering Co. was the recipient, being awarded a number of cranes for the Mare island navy yard. Provided the order was in accordance with the original specifications, the Cleveland company booked one 80-ton, two 5-ton, and four 15-ton bridge cranes, and six 3-ton and fourteen 5-ton wall cranes. Other awards included a 5-ton overhead crane, with a 40-foot span, for James Shewan & Sons, Brooklyn. It is understood this business went to the Columbia Hoist

Loading a Car with LUDLUM STEEL

The transportation facilities from our mill have been very effectively laid out. A double track enters our yard, and from this, branch lines lead to every mill building.

The Shipping Department transportation is by means of a sunken track passing under the rolling mill floor and in front of the shipping platform. The steel is loaded in 4 freight cars at same time and drawn out to the main line which is adjacent to the mill.

We can make shipment by three different railroad systems, or by the Erie Barge Canal or Hudson River.

Over night shipments to New York made by boat.

Prompt Shipments from our warehouse stock at Watervliet, N. Y., Detroit, Mich., Chicago, Ill., or Cambridge, Mass., handled through our District Offices.

LUDLUM STEEL COMPANY, General Offices and Works: WATERVLIET, N. Y.

Branch Offices: New York City Philadelphia Chicago Detroit
Cleveland Pittsburgh Cambridge, Mass. Cincinnati Buffalo

& Machine Co., Hunters Point, L. I. The Darling-Slade Construction Co., New York City, through a subcontract, placed a 15-ton overhead crane with the Niles-Bement-Pond Co., for a government project at Newport, L. I. The Universal Winding Co., Providence, R. I., recently reported as having placed a 5-ton crane, awarded this order to the Whiting Foundry & Equipment Co. The Blaw-Knox Co., Pittsburgh, placed a 5-ton crane, with a 56-foot span, with the Champion Engineering Co. The Mansfield Foundry & Machine Co., Mansfield, Mass., awarded a 10-ton bridge crane to Pawling & Harnischfeger. The Treadwell Engineering Co., Easton, Pa., bought a 35-ton crane from the Thaw Electric Crane Co.

The largest inquiry of the past week is that of the American Locomotive Works, calling for 15 overhead cranes. Specifications follow: One 10-ton, with 61-foot span; one 10-ton, with 45-foot, 3-inch span; and one 20-ton, double trolley, with 72-foot span, all for Montreal; one 10-ton, with 72-foot span; one 30-ton, with 67-foot span; and one 15-ton, 47-foot span, all for Schenectady; two 30-ton, 71-foot span; three 10-ton, with 71-foot, 8-inch span; two 10-ton, 54-foot, 10-inch span; one 20-ton, 54-foot, 10-inch span, and one 10-ton, with 67-foot span, all for Chester, Pa. These cranes are in addition to the two 50-ton cranes reported last week as having been awarded to the Champion Engineering Co. Westinghouse, Church, Kerr & Co. have withdrawn their inquiry for a 10-ton electric crane for the Franklin, Pa., shops of the Chicago Pneumatic Tool Co., and are now inquiring for a 5-ton handpower crane with 36-foot, 6-inch span. Barr, Thaw & Frazer, Hoboken, N. J., will probably not act upon their inquiry for a 5-ton crane for several weeks.

Locomotive crane awards include 30-ton Ohio for the Lehigh Electric Navigation Co., Allentown, Pa.

Of interest to crane builders is the announcement of plans for a $6,000,000 water front improvement at Baltimore by Frank A. Furst, New York City, and others. Specifications by F. W. Kesselbaum, engineer of the Baltimore Dry Dock & Shipbuilding Co., call for an initial installation of about $150,000 worth of cranes and special pier equipment.

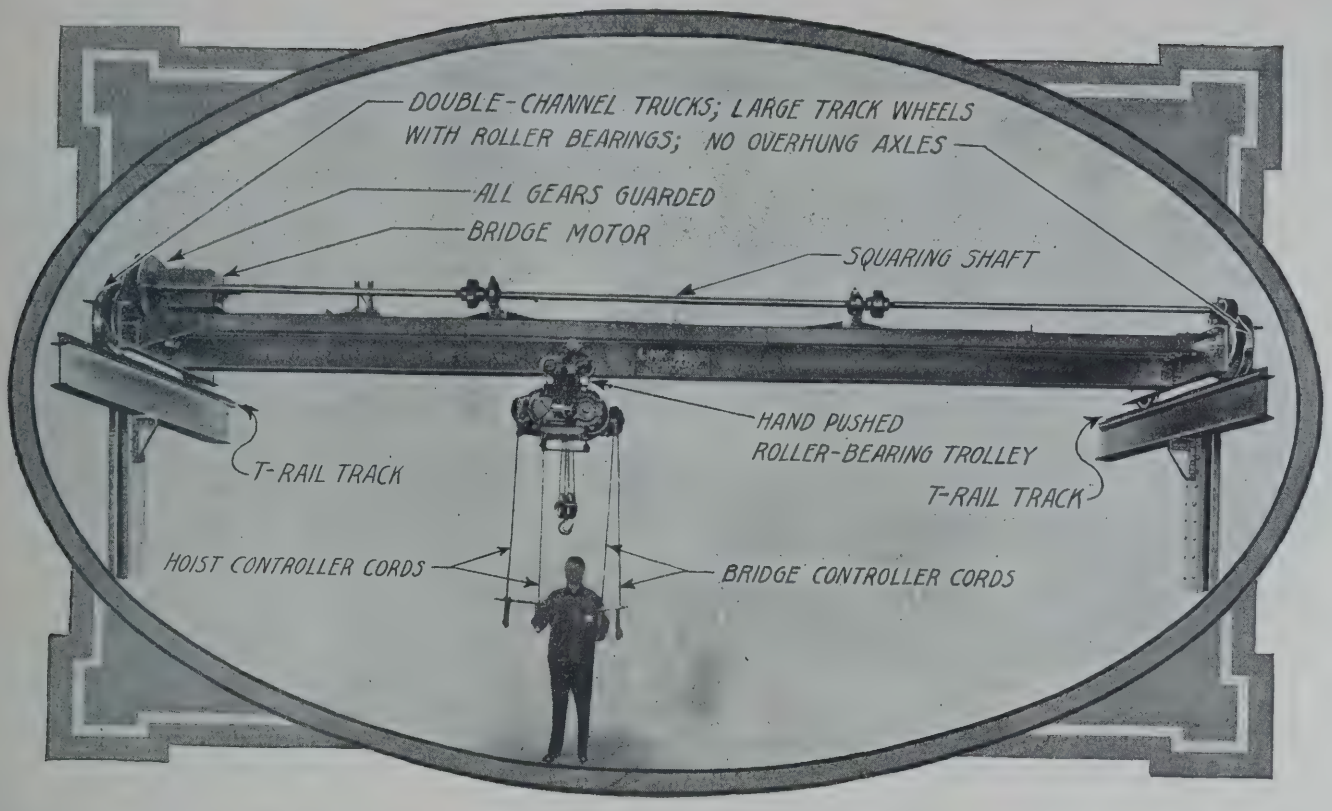
Chicago Maintains Splendid Buying Rate

SELLERS of machine tools in the Chicago district find the volume of sales continues high, although records made during 1918 are not being broken and some believe they never will be. However, totals for July class with those attained in the best months of war selling. The peculiar feature of this business is that it is impossible to determine just the source from which the demand is coming, as there is no large buying, and most transactions are comparatively small. Heavy tools, which have been rather slow, seem to be moving better at the moment, and one concern moved a 9-foot boring mill, two large planers and a heavy press within a few days. Demand continues to be largely for lighter tools, a recent sale including 12 hand millers. Demand for planers is excellent.

Strikes in various machine shops are having the effect of limiting production and slowing up the tendency of manufacturers to buy further equipment until the situation becomes more settled. A general advance in the price of lathes amounting to between 10 and 15 per cent has been made and this has resulted in hurrying some buying which promised to be more leisurely. Giddings & Lewis, Fond du Lac, Wis., are buying additional equipment for the manufacture of tractor transmissions.

Keen Demand Exists for All Types

BRISK business is being done in the Pittsburgh district machinery market, for both light and heavy equipment and inquiries are numerous. Users evidently no longer entertain the idea that prices will be reduced, but on the contrary have concrete evidence that the tendency is in the other direction. This has developed through the announced increase of 15 per cent in the prices for high grade lathes, an advance that has been a source of some disturbance to dealers who had hoped it would not take place, at least for the present. According to reports the increase was made because of higher wages granted machinists, but despite this it is reported that machinists in the Cincinnati district are talking of going on strike for still higher wages. The increased prices on high grade lathes now brings the level within 7 per cent of the high war prices, these prices having been reduced 22 per cent since the armistice was signed.



Demand for machinery and machine tools is marked in almost all lines, including lathes, radial drills, regular upright drills, planers, pipe machines, cranes and general rolling mill equipment. Shipments already are being extended and it is not improbable that deliveries will continue to grow less satisfactory. Large pipe machines for oil well work on 8, 10 and 12-inch pipe have been added to the list of equipment on which delivery has been deferred and are being shipped in two to three

Great Britain Selling Many American-Made Machines

WASHINGTON, Aug. 5.—The monthly report of Robert P. Skinner, consul general at London, to the bureau of foreign and domestic commerce, contains a list of the surplus machine tools offered for sale by the British government beginning June 17 last. The list is accompanied by an introductory statement by the consul general in which he comments on the "definite indication of the enormous importance of American contribution to the munitions manufacturing industry in this country (England) during the first years of the war.

"It will be noted that almost all of the automatic milling machines are of American manufacture," commented Mr. Skinner, "and that a number of the more important lathes and grinding machines are likewise of American manufacture." Of 126 milling machines, 112 are of American make and of 106 automatic machines offered, 45 are American. The following list gives the number of additional machines in the list and designates the number of those made in America:

Lathes, 59; 15 American.
Turret lathes, 28; 16 American.
Capstan lathes, 104; 59 American.
Grinding machines, 61; 22 American.
Drilling and tapping machines, 49; 26 American.
Shaping machines, 11; three American.
Slotting machines, 13.
Planing machines, two.
Gear cutting machines, six.
Woodworking machines, 11; one American.
Miscellaneous machines, 56; eight American.

Here's The Ideal Crane for Side Bays

IT'S just the thing for machine shops, foundries, structural shops, mills, etc. The time it will save in a machine shop by quickly and economically serving machine tools with castings, etc., will soon pay for the crane. After that, the saving is "pure velvet".

Important Advantages

1. Crane always ready for service. Any shop hand can operate it. No need for keeping an operator up in a cage.
2. Pull a cord to operate hoist or crane; let go, and it stops. Simple as A, B, C.
3. All operating cords handy, both controllers mounted on hoist—right where the load is being handled.
4. Load is handled with greater precision and safety, than when operator is carried in a cage near ceiling and must depend on signals.
5. Like our mono-rail electric hoist and other Link-Belt products, this crane embodies Quality, Reliability, Accessibility, and High-Efficiency.

Built in 1, 2 and 3 Ton Capacities. Write for data blank. Let us figure on your requirements.

months. Deliveries on cranes, which have been bought in large numbers during the past week by steel manufacturers and other users, also are becoming more extended. Makers of rolling mill equipment report that they are taking heavy bookings and some are exercising more caution about taking new business.

White Motor Wants 300 Machines

AUGUST starts out well in the Cleveland machinery market. One of the largest machine tool lists issued in recent months is now before dealers and comprises approximately $400,000 worth of equipment. It is issued by the White Motor Co., Cleveland, which wants between 250 and 300 machines, taking in everything from vertical boring mills to hand milling machines. It is understood that the White company has closed on about $30,000 worth of lathes as well as other machines on this list. Since this company had been quietly making purchases from time to time, it was thought that it was well equipped and the issuance of this list came somewhat as a surprise. The hope is expressed that other large prospective tool buyers now will come out and follow the White company's lead.

Other automobile companies are either in the market or are expected shortly to enter it. The General Motors Corp., Detroit, continues to file its confirming orders on the contract made in June. The Ford Motor Co., Detroit, and the Buick Motor Co., Flint, Mich, also are purchasing from time to time. The Cleveland Automobile Co., Cleveland, has not yet closed on all of its requirements, and the Grant Motor Car Co., that city, is expected to issue a list shortly for additional needs in machine tools for a new addition, 62 x 262 feet, it is building at a cost of $60,000. It is reported that the Winton Co. is to manufacture a lighter car and if it goes into production, more tools will be required, including some special machines. At present, however, it is desirous of disposing of a number of its tools made idle with the cessation of its war work.

Following the war, many announcements appeared concerning entrances into the tractor-building industry. Several of these have turned out to be merely flashes in the pan. Several companies however are well established and continue to expand, because of demands made for their output. These expansions necessitate tool purchases. It is understood that the Cleveland Tractor Co., Cleveland, is going in for quantity production and is in the market for additional equipment. The Star Tractor Co., Findlay, O., recently increased its capital from $100,000 to $135,000 to provide funds for an addition. Its list is expected at an early date.

Most of the demand at present continues to come from varied lines of industrial activity and this is taken as a hopeful sign by sellers of machinery. Practically all dealers are optimistic regarding the month's prospective business. The Chisholm & Moore Mfg. Co., Cleveland, recently purchased two 36-inch Fellows gear shapers. The Geometric Tool Co., Cleveland, is in the market for a 90,000-pound press and the Byrne Mfg. Co., Cleveland, wants additional punch presses. The Allegheny Forging Co., Pittsburgh, is circulating a list of about a dozen tools. D. Lowenstein, the Arcade building, Cleveland, is in the market for a line of metal-working machinery, including two 16-inch lathes and three buffing and polishing lathes. The Columbia Axle Co., Cleveland, recently purchased a grinder and is negotiating for additional equipment. The MacDonald Ticket & Ticket Box Co., 5015 Wellesley avenue, Cleveland, is in the market for a lathe. The Firestone Tire & Rubber Co., Akron, O., announces that it is going to build a $1,000,000 steel rim factory and will probably issue its list of press equipment, etc., at an early date. At present it is endeavoring to locate a special machine for painting 2-inch white lines on factory floors. R. S. Scobell, business manager of the board of education, Erie, Pa., recently took bids on woodworking machinery for the Wayne school, that city.

An item of interest to Cleveland dealers is the list of machines offered for sale by the American Multigraph Co., that city. The list comprises from 50 to 75 different machines, which were rendered idle after the company's war contract expired.

Building projects continue to interest sellers of equipment. Some of those announced recently include a large building for the Hoover Suction Sweeper Co., North Canton, O. This unit will care for the company's increasing business and will be larger than any present unit in the plant. Two machine shops, 90 x 176 and 52 x 88 feet, respectively, are to be erected by George B. Lambert & Co., East Chicago, Ind., who are expected to announce their machinery requirements soon. The Fulton Foundry & Machine Co., Cleveland, will probably need a few tools for the $35,000 factory it is about to erect. The Erie Foundry Co., Erie, Pa., manufacturer of trip hammers is to double its output by erecting an addition 80 x 200 feet. Equipment for it has not yet been placed, so far as can be learned.

Construction and Equipment

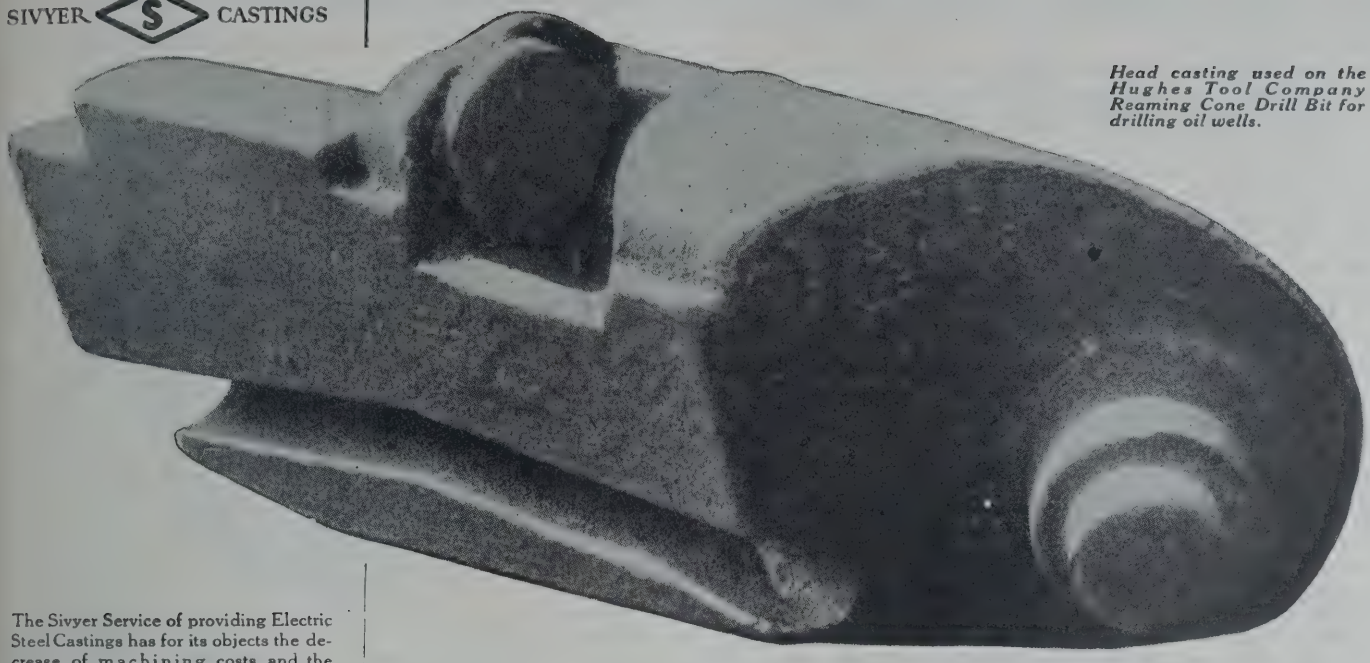
Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

AUGUSTA, ME.—The Ingram Motor Co. has been incorporated to build engines, motors, machinery, etc., with $4,000,000 capital by I. S. Kearney and E. Maynard Thompson.

PORTLAND, ME.—The Consolidated Manganese Co., Inc., has been incorporated with $1,000,000 capital by Griffith H. Riddle and Leonard A. Pierce.

PORTLAND, ME.—The Lewis Rim Co. has been incorporated to build motor vehicles with $200,000 capital by Gerry L. Brooks and H. P. Sweetser.



PORTLAND, ME.—A 4-story, 220 x 240-foot factory building and a 3-story, 42 x 112-foot service building will be constructed by the American Can Co., 120 Broadway, New York City, at Deering Junction. The total cost will be $300,000.

BENNINGTON, VT.—The Martin-Wasp Co., recently organized with a capital of $100,000, will establish a plant here for the manufacture of a 4-cylinder automobile.

AMESBURY, MASS.—The Bryant Body Co. has been incorporated to build automobile bodies with $50,000 capital by James H. Walker, Frank A. Bryant and James Miller.

BOSTON.—The Atlantic Radio Co. has been in-

SIVYER S CASTINGS

Head casting used on the Hughes Tool Company Reaming Cone Drill Bit for drilling oil wells.

The Sivyer Service of providing Electric Steel Castings has for its objects the decrease of machining costs and the increase of wearing-quality and life. Both are attained by methods which result from long experience and begin with the design of the casting itself. When we find that a casting we are asked to furnish is of a design not consistent with good foundry practice, we study its function in the completed unit and offer the necessary suggestions to make it a really practicable casting job without affecting in any way its function and efficiency.

Secondly, Sivyer Service analyzes the functions of the casting and specifies the proper composition steel for the job; long experience with carbon and alloy steels has enabled us to reduce costs and increase quality remarkably for many different industries.

Thirdly, Sivyer Service makes a careful study of the pattern and molding problems involved, for improper gating and insufficient risers are often the greatest wasters of machining labor and metal.

Fourthly, Sivyer Service analyzes carefully the proper annealing methods to be used and controls their proper application through unfailingly efficient equipment and men. In short, the Sivyer Service supervises every step necessary to secure unusually and unfailingly good castings of electric steel. It never relies on one factor alone, relies very little on the natural freedom of electric steel from occluded gases and on its commonly recognized merit in resisting crystallization. It also depends but little on the inherent scientific accuracy of the electric furnace process. From casting-design to sand-blasting and tumbling, the fundamental superiority of Sivyer Steel is due to its men and metal. Their value is best proved by the fact that, although the production of steel castings is generally looked upon as a local one, the Sivyer market is national.

THE special Sivyer service of determining and producing the proper composition for heavy duty castings has produced for the Hughes Tool Company the unusual results with which so many others have long been familiar. The head casting shown above is of a special nickel alloy of Sivyer Electric Steel. The function of the casting is to hold the cutters which cut the rock in oil-well drilling. The whole bit operates at the bottom of the well, often thousands of feet deep. Breakage under such circumstances would cause heavy losses. But the special Sivyer nickel alloy is so much tougher and stronger than common steels that it is giving results long thought unattainable. The Sivyer service in providing proper alloys is only one of the features that have won for Sivyer Castings their national market.

SIVYER STEEL

SIVYER STEEL CASTING COMPANY, MILWAUKEE

corporated to make electrical apparatus with $25,000 capital by Frank Wigglesworth, Everett P. Gordon and Stafford Wentworth.

BOSTON.—The Automotive Products Corp. has been incorporated to make parts of automobiles with $15,000 capital by Herman A. Mintz, Ira A. Stone and H. W. Sexton.

BOSTON.—The International Abrasive Corp. has been incorporated with $3,000,000 capital by Arthur W. Leavitt, Everett, Mass., Raymond D. Smith, Waltham, Mass., and M. B. Wilson.

BOSTON, MASS.—The Nelson Corp. has been incorporated to operate a foundry and machine shop with $50,000 capital by Albert H. Nelson, Mason H. Stone, Newton, Mass., and A. C. Bartlett. It will build a plant in Cambridge, Mass., for the making of tractors.

BROCKTON, MASS.—Kimball Bros. & Sprague, Inc., has been incorporated to build machinery with $40,000 capital by George W. Sprague, Harold W. Sprague and Michael H. Lyons.

BROCKTON, MASS.—The Killian & Yancey Co., Inc., has been incorporated to make wire appliances with $5000 capital by James H. Yancey, George A. Barrett and W. E. Killian.

CAMBRIDGE, MASS.—Flynn Roofing & Metal Co., Inc., has been incorporated with $5000 capital by Edmund T. Flynn, Caleb Faden and E. M. Butt.

CHELSEA, MASS.—Bids will close Aug. 2 for a brick, 3-story, 99 x 62-foot mill and machine shop for the Everlastic Co., Inc.

FARNUMSVILLE, MASS.—A 4-story machine shop, 36 x 52 feet and costing $20,000, is being planned by the Wuskanut Mills.

GREENFIELD, MASS.—The American Tap & Die Co. has let the contract for a brick, 2-story, 44 x 65-foot factory addition.

LYNN, MASS.—The Davis Lynn Storage Battery Mfg. Co. has let the contract for a 1-story, 75 x 100-foot plant addition.

LYNN, MASS.—Joseph E. Knox & Co., Inc., has been incorporated to make dies with $20,000 capital by James V. Knox, Joseph E. Knox and Roy M. Knox.

LYNN, MASS.—The S. W. Mfg. Co. has been incorporated to make mechanical devices and machinery with $5000 capital by S. G. Warner, Robert F. Smith and M. A. Smith.

LYNN, MASS.—W. H. Kay, Inc., has been incorporated to make metal products with $25,000 capital by W. Herbert Kay, Swampscott, Mass., H. G. Mills and Charles A. Babcock.

OTTER RIVER, MASS.—The foundry operated by Lord, Stone & Co., and recently purchased by W. L. Shaughnessy and J. P. Carney of the William L. Shaughnessy Co., Gardner, Mass., manufacturer of casket hardware, will be incorporated with a capital stock of $50,000 and will be known as the Otter River Foundry Co. The new company will continue the manufacture of stoves.

SOUTH SALEM, MASS.—Peter Leonard is having built for his own use a concrete, 1½-story, 56 x 103-foot iron foundry.

SPRINGFIELD, MASS.—Contracts for two additions, 1-story, 100 x 100 feet and 40 x 50 feet, have been awarded by the Springfield Foundry Co.

SPRINGFIELD, MASS.—Russell & Gray, Inc., has been incorporated to make automobiles with $5000 capital by M. J. Russell, Alfred J. Burke and H. C. Wisenburn.

SPRINGFIELD, MASS.—The E. S. Stacy Supply Co. has been incorporated to deal in machines and supplies with $250,000 capital by Harry W. Stacy, Alfred H. Chapin, Frank D. Fuller, John M. Williams, the Moore Drop Forging Co. and John M. Collins, West Springfield, Mass.

WORCESTER, MASS.—Storage capacity for iron and coke at the foundry of the Crompton & Knowles Loom works will be increased at a cost of $50,000.

WORCESTER, MASS.—The contract for a 2-story, 60 x 212-foot addition to the factory of James Smith & Son, 99 Hope avenue, has been awarded to the E. J. Cross Co., 82 Foster street. The cost will be about $38,000. A boiler house is also to be built.

WORCESTER, MASS.—The Ciampa Press Co. has been incorporated to make presses with $10,000 capital by Agostino Ciampa, Sabatini Ricci and Patsey Lombardi.

AUBURN, R. I.—The Kenney Mfg. Co. has let the contract for a 1-story factory, garage and boiler plant.

AUBURN, R. I.—The United Wire & Supply Co. has let the contract for a brick, 2-story, 40 x 250-foot factory addition to cost $100,000.

EAST GREENWICH, R. I.—Plans have been drawn for a brick, 1-story, 36 x 36-foot and 20 x 20-foot office addition for the Boston Wire Stitcher Co.

PROVIDENCE, R. I.—The Victory Mfg. Co. has been incorporated to build machinery with $90,000 capital by J. Warren Lander, Warwick, R. I., Benjamin F. Tefft Jr., and Eugene Fuller.

PROVIDENCE, R. I.—The Peerless Wrench Co. has been incorporated with $50,000 capital by Anthony M. Cunha, F. E. Allen and William D. Whipple.

VALLEY FALLS, R. I.—The repair shops of the New York, New Haven & Hartford railroad were destroyed by fire July 26, with $500,000 loss.

BRIDGEPORT, CONN.—The Bridgeport Brass Co. will build a brick and steel foundry extension to cost $100 000.

BRIDGEPORT, CONN.—The Efficiency Machine Tool Products Co. has been incorporated with $25,000 capital by Frank B. Carlson, Elmer O. Goordman and A. Emil Josefson.

BRIDGEPORT, CONN.—The Efficiency Machine Tool Products Co. has been incorporated with a capital stock of $25,000. The organizers are Frank B. Carlson, Elmer O. Goordman and A. Emil Josefson.

GROTON, CONN.—The shipbuilding plant of the Groton Iron Works, valued at $1,600,000, will be taken over by the government.

HARTFORD, CONN.—The Trotter-Patterson Corp. has been incorporated to deal in iron and steel with $50,000 capital by H. R. Trotter, West Hartford, Conn., W. J. A. London, Springfield, Mass., and R. P. Butler.

MIDDLETOWN, CONN.—The Russell Mfg. Co. will build a reinforced concrete, 3-story factory and power house to cost $60,000 at its Rockfall plant.

NEW HAVEN, CONN. — The Interlock Hardware Co. has been incorporated with $150,000 capital by Henry G. Voight, Edward W. Sibley and Louis B. Zacher, Bridgeport, Conn.

PORTLAND, CONN.—The Lindquist Engineering Works, Inc., is receiving bids for a new factory.

SOUND BEACH, CONN.—Several acres of land have been purchased by the Dalton Mfg. Corp., 1915 Park avenue, New York, and the contract awarded for the construction of four factory buildings and a power house. A number of individual motor drives will be installed for the large machines and group drives for the smaller ones.

WATERBURY, CONN.—A 2-story plant, 40 x 165 feet and costing $30,000, is planned by the Simonsville Mfg. Co., manufacturer of metal products.

North Atlantic States

BROOKLYN, N. Y.—The Twinomatic Machine & Tool Co., Inc., has been incorporated with a capital of $150,000 to manufacture machinery.

BROOKLYN, N. Y.—The Eismann Magneto Corp. has been incorporated with $1,650,000 active capital, by S. C. Worthen, C. F. Bailey and W. S. Sawyer, 111 Broadway.

BROOKLYN, N. Y.—The Peerless Metal Bed Co. has been incorporated with $5000 capital, by D. Neustadt, S. Danenberg and N. Wexler, 741 Stone avenue.

BUFFALO.—The Buffalo Forge Co. will erect a factory addition.

BUFFALO.—The Buffalo Weaving & Belting Co. is building a 1-story addition, 42 x 150 feet. The extension will cost $15,000.

BUFFALO.—Work has been started on the machine shop of the new plant of the Donner-Union Coke Co., at Abby street and the Lackawanna railroad.

MANHATTEN, N. Y.—The Ampyr Mfg. Co., Inc., has been incorporated with a capitalization of $25,000 to manufacture machinery.

NEW YORK.—The Continental Steel Corp. has been incorporated with $10,000 capital, by M. Seinfeld, A. Dreier and S. A. Cohen, 299 Broadway.

NEW YORK.—The Atlantic Chain Corp., 168 Madison street, has been incorporated for $60,000 to manufacture chains. The incorporators are H. Grill, M Birnkrant and J. Stitch.

NEW YORK.—The Press Machine Corp., 1451 Broadway, has been incorporated with a capital stock of $30,000 to manufacture machinery. Incorporators are A. F. Lafrentz and A. E. Sheridan.

NEW YORK.—The Universal Condenser Corp. has been incorporated with a capital stock of $100,000 to manufacture condensers. Incorporators are P. G. Chichester, E. Nolan and D. T. Howell.

NEW YORK.—The Reed Iron Works, Inc., 52 Hamilton Terrace, has incorporated with a capitalization of $25,000. The incorporators are J. A. Netzel, R. Adams and A. F. Mulvihill.

NEW YORK.—The Gourland Typewriter Mfg. Co. recently was incorporated with $250,000 capital, by P. Kardon, A. A. Greenhoot and M. J. Gourland, 120 Broadway.

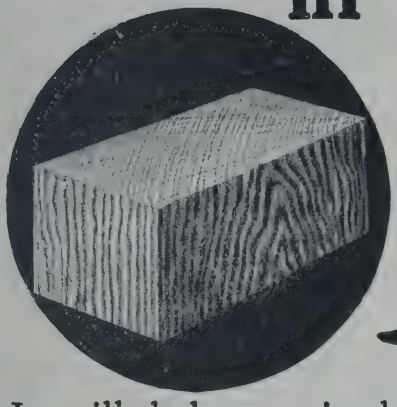
NEW YORK.—The Reed Iron Works has been incorporated with $25,000 capital, by R. Adams, 126 South Oxford street, A. F. Mulvihill, 53 Hamilton terrace, and J. A. Netzel.

NEW YORK.—The Thoro-Electric Products Co. recently was incorporated with $100,000 capital, by L. C. Ochs, A. A. Wadsworth and H. A. Mackie, 59 West Sixty-fifth street.

NEW YORK.—The Sunshine Steam Iron System, pressing devices, recently was incorporated with $10,000 capital, by N. Rubenstein, T. G. Jasper and M. Sunshine, 59 East Eighth street.

NEW YORK.—The Inter-Ocean Metal Corp., 138 Fifth avenue, has been incorporated with a capitalization of $20,000. The incorporators are M. M. Corcoran, G. Cohen and A. Heymsfelt. The company will manufacture metal specialties.

NEW YORK.—Incorporation is announced of the Crump & Lungren, Inc., 160 Broadway, with a capital of $20,000 to manufacture metal products. The incorporators are B. E. Crump, H. T. Lungren and H. B. Weil.



OGDENSBUAG, N. Y.—The Continental building, recently acquired by the Massey Automobile Co., will be altered and remodeled to manufacture steam automobile trucks. The improvements will cost $50,000.

SYRACUSE, N. Y.—The H. H. Franklin Mfg. Co. has called in a $600,000 issue of preferred stock for the purpose of making a substantial plant expansion.

SYRACUSE, N. Y.—Announcement has been made of the sale of the property of the Van Wie Pump Co., consisting of a foundry, to the United States-Hoffman Co., pressing machine manufacturer.

SYRACUSE, N. Y.—The Van Wie Pump Co., which

The most rigid specifications in the world, fit

Kreodone EVERLASTING Wood Floor Blocks

It will help you in deciding upon the wood blocks you will use for your floors if you know a wood floor block that meets the most rigid official and industrial specifications.

The following specification is standard with the Navy Department of the U. S. Government:

"The blocks shall be of the best commercial quality, long-leaf yellow pine, and shall be treated with preservative of such a kind and amount that decay will be prevented, *'bleeding' of the blocks prevented*, and be in all respects suitable for the floor of a machine shop."

A great Pittsburgh industrial corporation guards against tar adulteration and consequent bleeding thus:

"Wood blocks shall be manufactured from selected, well-seasoned, long-leaf yellow pine, free from bark, loose or rotten knots, or other serious defects. All blocks shall be treated with a preservative composed of a pure grade of creosote oil. *The surface of the blocks after treatment shall be free from deposits of objectionable substances.*"

Kreodone Interior Floor Blocks not only meet these rigid specifications but go still farther. For they are preserved with Kreodone Oil—a pure creosote oil that is far superior to any other creosote oil in permanency.

Kreodone Blocks are always made from long-leaf yellow pine. And they can never bleed tar or show objectionable deposits on the surface of the blocks, for they contain no trace of tar.

We made the first wood block floor. And we have developed and perfected wood floor blocks until today we challenge the world to show a wood floor block that can equal Kreodone quality in any particular.

Put your floor problems up to our engineers, without obligation or expense. Send us your blue prints for an estimate. Write now for our new illustrated catalog and standard specifications.

Republic Creosoting Company

Indianapolis, Indiana

Branch Offices at: Cleveland Minneapolis Detroit Chicago Buffalo Norfolk Seattle Mobile Toronto

sold its plant to the United States-Hoffman Co., will erect a new foundry and machine shop as soon as a site can be located.

TONAWANDA, N. Y.—A 1-story addition to the rolling mill, 80 x 170 feet, and a 1-story extension to the tumbling department, 40 x 340 feet, will be made to the plant of the Buffalo Bolt Co.

UNION, N. Y.—The Universal Instrument & Metal Co. has been incorporated with $75,000 capital, by J. Sloan, E. Nehlich and D. S. Mersereau.

UTICA, N. Y.—Plans have been prepared for a 1-story, 76 x 140-foot addition to the plant of the Brunner Mfg. Co., manufacturer of air compressors. The cost will be about $15,000.

AMBRIDGE, PA.—The Cold Drawn Steel Co. has started work on a plant here.

BANGOR, PA.—A 2-story, 46 x 104-foot addition costing $12,000 is being built to the plant of the F. H. Reichard Mfg. Co., manufacturer of farming implements. Wire-forming machines and much other equipment will be needed.

ERIE, PA.—The Erie Foundry Co. recently let a contract for an addition, 80 x 200 feet, to cost $75,000.

GROVE CITY, Pa.—This city will vote Sept. 16 on a bond issue of $45,000 for a steam turbine, boiler and engine power plant.

HARRISBURG, PA.—The Capital City Iron & Steel Co. has been incorporated with $60,000 capital, by Wolf Freedman and others.

INDIANA, PA.—The Indiana Foundry Co. has been incorporated with $150,000 capital, by Thomas, John W. and R. S. Sutton.

JOHNSTOWN, PA.—The Johnstown Slag Co. recently was incorporated with $150,000 capital, by Fred W. Sheesley, C. F. Englehart and A. Lloyd Adams.

MACUNGIE, PA.—An addition is being made to the foundry of the East Penn Foundry Co., and plans for a second addition are being prepared. More equipment will be provided.

PHILADELPHIA.—A. Schoenhut & Co. closed bids Aug. 6 on a factory building and boiler house.

PHILADELPHIA.—The bureau of yards and docks, navy department, Washington, has awarded the contract for a pattern shop to be erected here.

PHILADELPHIA.—Connery & Coine have the general contract for a 1-story assembling shop addition, 75 x 90 feet, for J. F. Eberle & Sons.

PHILADELPHIA.—Bids are being taken for a 2-story, 60 x 70-foot addition to the plant of the L. H. Gilmer & Co., manufacturer of belting.

PHILADELPHIA.—The Wright Roller Bearing Co., Twentieth street and Indiana avenue, is planning a 1-story addition, 26 x 80-feet, to its plant.

PITTSBURGH.—The United Fuel & Iron Co. has been incorporated with $50,000 capital, by Lawrence Snapp, Beaver, Pa., Charles Yon, Corapolis, Pa., and Robert M. Steffler.

PHILADELPHIA.—The Camden Motor Corp. has awarded the contract for a 1-story shop, 301 x 751 feet, to cost $100,000. It will be built on the Whitehorse pike along the Pennsylvania railroad.

PHILADELPHIA.—Bids are being taken for a 1-story, 40 x 88-foot, and a 2-story, 36 x 54-foot additions to the factory of the Wright Mfg. Co., 131 Master street, manufacturer of metal goods.

PHILADELPHIA.—S. W. Mather & Sons have been awarded the contract for a machine shop 70 x 300 feet with 25-foot balconies for the John E. Thropp's Sons Co., Trenton, N. J., manufacturer of tire-making molds and special machinery. A foundry with a capacity of 40 tons per day will be built later.

PUNXSUTAWNEY, PA.—Work has been started on the new factory building for the Kauffman Metal Parts Co. here.

READING, PA.—Contracts for a 1-story, 50 x 50-foot power house for the Philadelphia & Reading railway have been awarded to Robert E. Lamb & Co.

SCOTTDALE, PA.—This town is planning an aluminum plant.

SHARON, PA.—The Pennsylvania railroad plans improvements to its buildings at Wheatland.

TAMAQUA, PA.—This borough will vote shortly on a bond issue of $100,000 for a waterworks extension.

WASHINGTON, PA.—The Duncan-Miller Glass Co. has started work on a $60,000 gas producer plant here.

YORK, PA.—Plans are being prepared for a new industrial plant which will consist of a machine shop, foundry, iron working and erection shop and offices to be erected by Harry Read.

Central States Activity

BEAVER DAM, WIS.—The Malleable Iron Range Co. is preparing to build an annealing shop, 50 x 115 feet, costing $30,000.

CUDAHY, WIS.—The board of education has commissioned Architects Rosman & Wierdsma, Milwaukee, to prepare plans for a high school and vocational training institute.

DE PERE, WIS.—W. E. Ule, Stevens Point, Wis., has the general contract to build a machine shop, paper mill and power plant costing $120,000, for the George Diamond Economy Process, Milwaukee.

GREEN BAY, WIS.—The Northern Paper Mills Co. will build a 3-story beater room, 80 x 106 feet; 3 3-story paper machine building, 80 x 250 feet, and a 2-story mill and warehouse addition, 80 x 138 feet. Perry S. Wagner is general manager.

GREEN BAY, WIS.—The Heigeson Foundry Co. has been organized to manufacture gray iron and steel castings. A plant costing $100,000 will be built and equipped. Organizers of the company are Andred Heigeson, A. L. Cannard, William Hoberg and Charles H. Greilling. A. W. Gregg, formerly with the Bucyrus Co., Milwaukee, will have charge of the metallurgical work.

JANESVILLE, WIS.—A large foundry 322 x 500 feet is being constructed by the General Motors Co., and will be completed before Jan. 1. The foundry will manufacture all parts for the Model M Sampson tractor and is designed to permit future extensions.

JANESVILLE, WIS.—A $25,000 corporation is being formed by George H. Hawks, Charles A. Enslow and Will T. Axon to manufacture steel traffic direction posts, tobacco splitters and other special metal devices.

JANESVILLE, WIS.—In addition to the tract of 125 acres of land purchased here two years ago by the General Motors Corp. for its Samson tractor plant, now half completed, two adjacent tracts, embracing 63 acres, have been acquired for future extensions. A foundry will be erected.

KENOSHA, WIS.—The Arneson Foundry Co., O. Arneson, president, 319 Exchange street, will build a 1-story foundry, 70 x 200 feet to cost $30,000.

LUXEMBURG, WIS.—The Liebl & Retzlaff Machine Shop has been purchased by Edward Srnka. The shop will now be known as the Luxemburg Garage & Iron Works.

MADISON, WIS.—The Madison Tool & Stamping Works has been incorporated with a capital stock of $10,000. The incorporators are T. Rosten, G. A. Lyman, G. Wheeler and R. S. Witte.

MILWAUKEE.—The Harley-Davidson Motor Co. has a permit to build a 2-story fireproof oil house, 48 x 80 feet, costing $20,000.

MILWAUKEE.—A 1-story addition is being built to the fabricating and erecting shop of the Wisconsin Bridge & Iron Co.

MILWAUKEE.—The Motor Casting Co., Fifty-sixth and Greenfield avenues will build a 110 x 180-foot foundry costing $40,000. The company manufactures cylinder castings.

MILWAUKEE.—Redner & Essen, machinists and automobile repairmen, 938 Robinson avenue, started work Aug. 3 on a new shop building, 1-story, 40 x 60 feet.

MILWAUKEE.—The Clum Mfg. Co. has purchased a 4-story building, 100 x 152 feet, and will make alterations and equip it for the manufacture of electric controlling devices.

MILWAUKEE.—The Standard Steel Corp. broke ground Aug. 1 for its new plant. The first building will be a general machine and assembling shop, 1-story, 120 x 150 feet, and will cost $30,000.

MILWAUKEE.—Architect Stanley F. Kadow, 451 Mitchell street, is preparing plans for a garage and machine shop, 70 x 110 feet. The name of the owner is withheld.

MILWAUKEE.—The Surf Mfg. Co., organized with $100,000 capital to make electric washing machines, has leased 15,000 square feet of space at 109-113 Clinton street and will equip a factory. O. F. Fischedick is president.

MILWAUKEE. The Fulton Co., 1910 St. Paul avenue, manufacturing automobile accessories, garage equipment, etc., will build a new plant in West Allis, to be 60 x 160 feet, part two stories, and cost about $45,000.

MILWAUKEE.—The Milwaukee Mfg. Co. has been incorporated with a capital of $200,000 by Edwin W. Strauss, Louis J. Schneider and Max J. Leutermann to manufacture water heaters, etc. Arrangements are being made for a plant.

MILWAUKEE.—The plant of Smith-Parry Co., Thirty-seventh and Lincoln avenues, damaged $200,000 by explosion and fire in May, will be rebuilt by the Burrell Engineering & Construction Co., 327 South LaSalle street, Chicago. Much of the equipment will have to be replaced.

MILWAUKEE.—The Great Lakes Malleable Co. has awarded contracts for remodeling work and additions to its plant at 710-716 Reed street, formerly owned and occupied by the Maynard Steel Foundry Co. New work includes a 1-story building, 60 x 65 feet, to be used as an annealing shop.

MILWAUKEE.—Articles of incorporation have been filed by the Triumph Stove & Heater Co., to manufacture and deal in stoves, ranges, furnaces, etc. The capital stock is $120,000. The organizers are represented by Schmitz, Wild & Gross, attorneys, First Wisconsin National bank building.

MILWAUKEE.—The Milwaukee Stamping Co., Sixty-fourth and Pullen avenues, West Allis, Milwaukee county, has let a contract to William F. Tubesing, Wauwatosa, for a three-story brick and concrete factory addition, 80 x 142 feet, to cost about $80,000. The company manufactures metal stampings, hardware specialties, etc. A. J. Petrie is president.

MILWAUKEE.—Improvements costing in excess of $125,000 and providing facilities for the manufacture of metal coffins as well as metal parts for wooden caskets, will be made this year by the Northern Casket Co., Fond du Lac, Wis. Plans are being prepared for a 3-story factory addition, 100 x 200 feet, of brick and reinforced concrete; an engine, boiler and power house, 80 x 80 feet, and a private garage and machine shop, 45 x 75 feet. William Mauthe is president and general manager.

ORFORDVILLE, WIS.—The establishment of a high school, provided with vocational training facilities, has been approved by the electors.

FOND DU LAC, WIS.—The Galloway-West Co. will build a 2-story building, 85 x 200 feet, combining a steam generating plant and boiler house with a dairy products plant, the whole to cost about $100,000.

RACINE, WIS.—A new light, power and heating

— Rolling Mills
— Blast Furnaces
— Iron Foundries { Gray and Malleable

New Trade Publications

TOOL STEEL.—A booklet entitled "Tool Steel Efficiency" has just been issued by the Century Steel Company of America, Poughkeepsie, N. Y. The evolution of tool steel is traced from its earliest beginning to its present highly developed state. The various brands of steel manufactured by the Century company are described and type analyses of most of the brands are given.

DRILLS.—A booklet of 32 pages is being circulated by the Sullivan Machinery Co., Chicago, in which it describes and illustrates a number of drills for rock excavation in mines, quarries, etc. The various drills are fully described and illustrated and specifications are given. A number of air compressors, manufactured by the company and which produce the power with which the drills are operated, are also illustrated.

METAL HOSE.—The Breeze Mfg. Co., Newark, N. J., has published an interesting 36-page booklet dealing in detail with flexible metal hose. This, according to the company, is the only booklet ever published in this country on the subject. The descriptive matter covers metal hose in detail for every type and method of winding, showing how it is applied, etc., and the trades and industries which use it are given. The booklet is replete with information which should prove not only interesting but valuable.

CABLEWAYS.—A new 16-page bulletin issued by the Blaw-Knox Co., Pittsburgh, describes an automatic single rope cableway manufactured by that company to eliminate the necessity for three cables as used previously. By this arrangement a clamshell bucket requires only a standard single drum nonreversible hoist and a single hoisting rope, both for operating the bucket and for conveying it along the cable. Stops may be placed on either or both ends of the cable. When the carriage comes in contact with a stop, it is securely held steady while the bucket is released and the load dumped. For dumping loads at intermediate positions on the cable a tripping stop is provided. This stop which is a small carriage may be run along the cable to any desired position where it is clamped to the cable by means of pulling a small tag line attached. As the carriage approaches, a "swivel bar" comes in contact with the bucket to trip it. By means of this arrangement even distribution of dumping can be maintained.

ROLLING MILL EQUIPMENT.—The Mesta Machine Co., Pittsburgh, has issued a 127-page booklet giving a brief description and containing illustrations of its plant and products. Printed on glossed paper, the descriptive material is painstakingly presented, while the illustrations are unusually clear in detail. The introduction sets forth the location of the company's plant and the domestic and world markets which the firm supplies. Then follow concise descriptions of the various departments and the process of work in each. The book gives a list of the principal products manufactured as well as a careful description of the different kinds of equipment made. Products thus dealt with include gas blowing engines, steam blowing engines, automatic plate valves, gas power engines, uniflow engines, corliss engines, reversing engines, air compressors, barometric condensers and vacuum pumps, blooming mills, slabbing mills, plate mills, merchant bar and structural mills, wheel mills, tire mills, jobbing mills, sheet mills, tin plate mills, cold mills, pickling mills, gear drives, double helical cut tooth mill pinions, double helical cut tooth gears, straight cut tooth gears, machine molded rolling mill pinions, rope drives, flywheels, steam-hydraulic forging presses, steam-hydraulic shears, plate shears, bloom shears, vertical bar shears, lever shears, double shears for tin plate, squaring shears for tin plate, squaring shears for sheets, saws roll turning lathes and rolls. The book not only is well arranged and illustrated, but contains information of value to engineers and others for reference. The booklet is printed in English and French.

FORGINGS.—Walter Somers & Co., Ltd., operating the Haywood Forge, Halesowen, near Birmingham, England, have issued a handsomely illustrated catalog which contains not only views of this well equipped plant, but of the miscellaneous product manufactured. This plant is equipped to produce steel and iron forgings up to 100 tons in weight and during the period of the war it was engaged almost exclusively in the production of 15-inch shells. The plant was founded in 1866 by the late Walter Somers and in 1895 it was converted into a private limited company, Walter Somers having occupied the position of chairman until his death in 1917. The works cover an area of 15 acres and consist of forges and machine shops. The forges are equipped with 12 steam hammers, ranging from 10 cwt. to 12 tons, and 7 hydraulic presses, ranging in capacity from 600 to 3600 tons. This equipment permits of the production of forgings up to 100 tons in weight. The machine shops are modernly equipped throughout and the tools have sufficient capacity to handle shafts of over 120 feet in length. Among the forgings produced and illustrated in this catalog are steel stern frames of very large size, marine-type built up crank shafts, three-throw crank shafts for reversing mill engine, hydraulically-pressed steel crank shaft, a steel screw 84 feet 7 inches long, 11½ inches in diameter, with a 2-inch pitch forged from one ingot for 150-ton sheerlegs at the Chatham dockyard. A steel built-up two-throw crank shaft having 2 foot 6 inch centers, for driving large reversing rolling mills with a finished weight of 38 tons 14 cwt. also is illustrated. Hydraulically-pressed steel rol's with a forged weight of 22 tons each, also are shown as well as housing pins and boxes for rolling mills, large rotary wheels, forged steel gear wheel disks and rims, forged propeller brackets, rudder frames, etc.

Opportunities Abroad

Requests for information should be forwarded to district or co-operative office in your district, of the Bureau of Foreign and Domestic Commerce. Each request should be on a separate sheet and be accompanied by the opportunity number

CO-OPERATIVE OFFICES

Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Philadelphia, Chamber of Commerce; Portland, Oreg. Chamber of Commerce; Dayton, Ohio, Chamber of Commerce; Pittsburgh, Chamber of Commerce

A firm in Spain desires to purchase all kinds of hardware, cutlery, tableware, flatware, hollow ware and house furnishing goods of all sorts suitable to the hardware trade. Quotations should be given f.o.b. New York. Correspondence should be in Spanish. Opportunity No. 30091.

Quotations are desired immediately c.i.f. port in Ireland, on best quality bituminous coal and earliest date of delivery of 10,000 tons. Opportunity No. 30092.

An American firm which is sending a representative to establish agencies in Argentina, Paraguay, Uraguay and Brazil desires to secure the representation of manufacturers of contracting machinery, farm machinery, hardware and automobiles and accessories. Opportunity No. 30094.

A party from Gibraltar who is in this country for a short time desires to secure an agency for the sale of motor cars and trucks, hardware and tools. Opportunity No. 30072.

The purchase or agency for the sale of rolled steel and iron, sheet iron and tin is desired by a firm in Belgium. Quotations should be given c.i.f. Antwerp. Opportunity 30081.

The representative of an English firm is in this country and wishes to purchase and secure the agency for the sale of electrical goods, leather goods, rubber goods, hardware and agricultural machinery in Siberia. Opportunity No. 30042.

An Italian company wishes to form a combination with an American concern manufacturing controllers, steel wheels and entire electrical trucks minus the batteries. Correspondence should be in French or Italian. Opportunity No. 30043.

A company in Argentina wishes to represent American firms dealing in machinery in general, electrical and construction materials, automobiles and trucks. Correspondence should be in Spanish. Opportunity No. 30057.

Catalogs and price lists of pastural equipment, including wire fencing, are desired by a party in Australia. Opportunity No. 30046.

A company in England wishes to purchase or to secure the agency for the sale of all kinds of machinery. Opportunity No. 30048.

A party in Switzerland would like to secure a general agency for France, Italy, Spain and Switzerland. Opportunity No. 30049.

The agency on a commission basis for all of Italy, of wrought iron pipe, malleable iron pipe fittings, steam and water cocks and valves, machinists tools, electrical supplies and mechanical lines in general, is desired by a firm in that country. Opportunity No. 30058.

A firm in Switzerland wishes to secure the agency for the sale of stationary motors and engines driven by gasolene, kerosene and electricity (horizontal 20 to 120 horsepower), compressors, cranes, rigs and mining machinery. Opportunity No. 30060.

The representative of a firm in Sweden, who is at present in this country, desires to secure an agency for the sale in Scandinavia of boring, milling and drilling machinery, shipyard machinery, locomotive building machinery and tools of all kinds. Opportunity No. 30063.

The agency is desired by a man in France for the sale of electrical, sanitary and plumbing material. Correspondence should be in French. Opportunity No. 30064.

A mechanical engineer of the State railways of Finland is in this country and desires to purchase car and locomotive repairing machinery and tools, working clothes and railway equipment and supplies. Opportunity No. 30065.

Mills Hard Pressed to Fill Orders

Makers of Finished Products Unable to Take Prompt Business—July Output of Ingots and Unfilled Tonnage of Corporation Reflect Trade Growth —Labor Situation Affects Ore Shipments

EVIDENCE of trade growth introduced last week by the announced increase in pig iron production is further emphasized by the encouraging gains in the output of steel ingots and unfilled tonnages of the United States Steel Corp. The July production of ingots surpassed that of June by 288,957 tons, exceeding the gain of June over May. Unfilled orders of the Corporation on July 31 amounted to 5,578,661 tons, an increase of 685,806 over the total for June 30, appreciably topping the June advance over the last day figures for May. In view of these gratifying reports, the accelerated improvement which began with the notable recovery of business in June, bids fair to continue unless the influence of labor unrest, which now menaces certain districts, is more generally felt by the industry. President Wilson's stern rebuke to the striking shopmen has checked, temporarily at least, what promised to be an alarming development.

Specifications against contracts in many lines of semifinished and finished products are rapidly cutting down the opportunity for mills to accept orders for prompt delivery. New business, although far from being sensational, is of moderate volume and is featured by inquiries for export material.

Mills Are Sold Up

Valley sheet mills have sufficient orders to warrant steady operation into the fourth quarter. The failure of the leading Pittsburgh steelmaker to deviate from March 21 quotations is delaying a general upward move in prices. Orders are being booked in Pittsburgh at the rate of 25,000 tons daily. Although the leading bar manufacturer in Pittsburgh is quoting steel bars at 2.35c base, talk of higher prices is heard. A Buffalo barmaker is reported to have advanced the price to a base of 2.40c, Pittsburgh. Structural awards show gains in all districts except Pittsburgh, where specifications are slow. In New York, inquiries are reported for 4000 tons for the proposed Hotel Linnard and 20,000 tons for the Tata Iron & Steel Co., India. Pipe and wire makers are well supplied with orders, the latter being virtually out of the market. It is reported that the railroad administration contemplates placing an order for 100,000 tons of standard rails.

Iron Prices Tend Upward

Brisk buying of pig iron is reported in various markets. From 5000 to 10,000 tons of foundry iron was purchased by the Central Foundry Co. for delivery over the remainder of this year and the first half of 1920. Important inquiries include 2000 tons for 1920 for the Essex Foundry Co., 7000 tons for the Worthington Pump & Machinery Corp., and amounts estimated from 50,000 to 200,000 tons for export, including 10,000 tons for Italy. About 40,000 tons of foundry and malleable iron were booked by two Buffalo interests during the week. Sales aggregating about 7500 tons are reported by New England dealers, and Philadelphia reports sales of 2000 tons. In the Alabama district the Republic, Sloss-Sheffield and Woodward companies each are planning to blow in an additional furnace this month. The price advances in Buffalo, reported last week, have become general. No. 2X is quoted at $28 to $29; malleable, $27.25 to $29; basic, $26.75 and No. 2 plain, $26.75 to $28.

Good Sales For Export

Export business for the first week of August equalled that for the last week of July. Agents of the Chilean government are negotiating for $50,000,000 of railway supplies, contracts for some of which have been signed contingent upon a satisfactory credit arrangement.

During the past week strikes by railroad shopmen impaired freight service in Chicago and northwestern points, and in New England. The activities of shippers and consumers in these districts were seriously hampered. Labor difficulties which curtailed production and had a sentimental effect on local sales were reported in Cincinnati, Cleveland and other cities. The most far-reaching manifestation of unrest appeared at the ore docks of Minnesota, where a strike of 17,000 railroad and dock workers tied up 200 bulk freighters. Unless this situation is remedied within a few days, many furnaces and steel works depending on lake ore will be embarrassed next spring.

Production is the Cure

FRANK A. VANDERLIP'S epigram, "this is a country of economic illiterates," was made several years ago, but the force of his remarks is being brought home more and more forcibly every day. A course in elementary economics should be a part of every public school curriculum. Every newspaper and editorial writer, every school teacher, every preacher and every other person whose duty it is to lead or teach others, should be compelled to pass an examination on this subject. In this country of equal political suffrage, where ignorance votes shoulder to shoulder with intelligence on matters of common importance, it is imperative that the public have a deeper understanding of economic causes and effects.

Recently the country viewed the spectacle of an organization of labor unions passing an ultimatum upon the government of the United States. The railroad brotherhoods want either more money or more commodities for their money, although they are already the highest paid class of labor. So the government is about to undertake an investigation. Legislators are railing against an impersonal, mysterious group of "profiteers" called "big business" by some, "Wall Street" by others. The fact of the matter is that the real malefactor is not a person, or a corporation but a condition—inflation. The government printed a lot of money to pay its war expenses. Europe sent a lot of money over here for goods. There is about twice as much money in circulation now as before the war, but only the same amount of commodities is being produced, while we continue to feed a large part of Europe. The amount of money one draws per week or per month is comparative. It is the amount of commodities one can buy with that money that is important.

The railroad brotherhoods hinted at the truth when they asked for a reduction in the living cost as an alternative to increased wages. It is production that counts. Now is the time when the country should be straining every nerve to produce all the goods possible to rehabilitate the world and to bring prices down. Meanwhile, the railroad shopmen have gone on strike and the brotherhoods have set dates when they also will walk out and starve the public into submission if their demands are not granted. Some day the public will wake up.

Give Hard Work Its Reward

FOUNDRIES, machine shops, toolmakers, in fact users of iron and steel all over the country have been effected by labor unrest. Strikes have and still are costing both workers and owners enormous sums and yet no general corrective movement is being made. Each owner or plant manager as the problem comes to his door handles his own case as best he can.

As one manager said recently, "It is not the exorbitant price which I have to pay my men, nor the short hours demanded, which is my worst trouble; it is the fact that a man will no longer work faithfully under any conditions." The danger is not so much in the cost of an hour's work as it is in the attitude of the worker during that hour. Arrogance and laziness are creeping over the country. All stable prosperity—all healthy and normal business—in the last analysis, is founded on hard work. If we are going to work half as effectively as we used to and at the same time are going to demand twice our former comforts, then sooner or later we must starve, for regardless of money, food and comfort cost hard work.

What then is the solution? Many reforms are continually being suggested but these are nearly all theoretical and contain little of practical value. The labor unions are powerful organizations and if rightly directed could correct the very faults they have brought about. Why not ask organized labor to adopt a system which will reward, instead of discourage, hard work? Could any faction afford to overlook such a request if it were intelligently presented?

New Lines for Export

IF President Wilson's plan to curtail the exportation of foodstuffs is carried out an important change is likely to result in the foreign trade of the United States. Such a move will not be without its benefits to the iron and steel industry, inasmuch as metal products have been crowded off the outgoing ships by the heavy demand in Europe for food. The domestic economic crisis may contain some things which are of grave concern to our own citizens, but whatever drastic measures are adopted to meet that situation will not be without their compensation even in our foreign trade.

European credits have been strained as evidenced by the decline in exchange rates. Such a decline has been brought about by the constant and predominant exports from the United States to Europe during the past five years. These exports have been primarily munitions and food during the period of belligerency and foodstuffs alone since the signing of the armistice. Sales of essential machinery to enable the peoples of the devastated regions to produce have been hampered by the dollar selling at a premium. Any check placed upon the exportation of foods undoubtedly will broaden the opportunity to sell Europe machinery and the iron and steel products so greatly needed.

Promoting the Thrift Habit

PROMOTION of thrift among the masses is classified by the United States government as one of the important steps in the rebirth of Europe. In a booklet issued by the council of national defense outlining various measures proposed or in effect for reconstruction it is pointed out that one large firm in England has adopted a "new" method of paying its workers so as to encourage the habit of saving. Instead of paying the workers by means of checks, cash or currency, the firm has the amounts of their wages placed to their credit at a conveniently situated bank. The wage-earners are urged to draw out only sufficient money to pay their living expenses and to leave a certain amount of their wages in the bank. As a further incentive, the firm deposits a certain amount to the workers' credit in addition to regular wages, the amount being governed by the sum which they leave on deposit for a definite period.

Experiences gained during the war caused many employers to revise their opinions regarding the value of thrift among workers. Years ago it was believed that the man who had no money could be depended upon to work hard to earn a living and that just as soon as he acquired a bank account his independence tended to unfit him for his work. Now it is perceived that the man who economizes and saves is the man on whom the most reliance can be placed; the man who can and does not save is careless in his habits and is likely to be a careless worker. The sale of Liberty bonds and thrift stamps did a great deal to encourage the instinct to lay aside a little for a rainy day, and employers have given considerable thought to fostering the habit.

Now a movement has been started to "nationalize" the thrift habit, to systematize it and put it on a firm basis to increase the individual wealth of the nation as the "baby bond" system increased the wealth of the French. A corporation has been formed with bankers, lawyers and financiers, as sponsors to sell "baby bonds." This corporation is to deal with employers and provide a method whereby the employers may extend the offer to employes. Employes would authorize employers to withhold from their pay envelopes certain amounts and credit them to their accounts. When $10 are saved a bond for that amount would be issued, and when 10 bonds are accumulated a bond for $100 would be issued, all bearing interest. The method was explained recently to employes at one of the plants of the General Electric Co., and they, through their works council, decided to adopt it. This is an indication of the attitude employes may be expected to take with regard to constructive plans for the encouragement of thrift in view of the injunction of thoughtful bankers that the only way to overcome present high cost conditions is to save and produce more, the movement is highly important and timely.

Crane Business Makes the Turn

JULY in all likelihood will stand out in the annals of the electric crane industry as the turning point to more normal conditions following the end of the world war. During the past month trading was more active by far than at any time this year, and the volume of business transacted compared most favorably with some of the more active months during the war. In three orders alone, more than 60 cranes were awarded, ranging in capacity from 3 to 250 tons, and the volume of smaller and miscellaneous business placed, it is believed, will run well over that total.

A significant feature of the business placed last month is the fact that two of the larger orders awarded were for government account. This does not throw much light upon the disposition of standard cranes already in the possession of the government. Nevertheless, it does lend strength to the belief that no serious hardship will be worked upon the industry by the cranes thus held. At the same time, there was sufficient business for private account to indicate most strongly that industry is beginning to take a new lease on life.

Iron and Steel Prices

Corrected to Wednesday Noon

SCRAP, WAREHOUSE, ORE AND OTHER PRICES ON PAGES 474 AND 476

Pig Iron

Bessemer, valley	$27.95
Bessemer, Pittsburgh	29.35
Basic, valley	25.75

Iron Prices Follow Upward Trend

Recent Advances Are Firmly Established and Prices Stiffen in All Selling Centers —Markets Gaining Strength in Mid-West and East While Prices in South Are Hazy

New York, Aug. 11.—Brisk buying of pig iron has featured the past week in this district. Although less spectacular than in previous weeks, the single tonnages closed comprised a large total. The most important transaction involved 5000 to 10,000 tons of foundry purchased by the Central Foundry Co., for delivery over the remainder of this year and the first half of 1920. Because of the deferred delivery of this iron not many furnaces quoted. Among current inquiries is one for 2000 tons for first half of 1920 shipment to the Essex Foundry, Newark, N. J. The Worthington Pump & Machinery Corp. has purchased most of the 7000 tons for this year and first half for which it recently inquired, but still wants some miscellaneous lots. In addition to domestic business in foundry there is a fair amount of foreign business. Sales of foundry to the United Kingdom during the past week involved several thousand tons. Live inquiries from Italy aggregate 10,000 tons of which 1000 tons are on the point of being closed. Current export inquiries involve a good many indefinite tonnages, and it is estimated that all the way from 50,000 to 200,000 tons are involved but no one has any idea how much of this inquiry will be closed. Prices show a materially strengthening tone. One eastern Pennsylvania interest advanced its prices by $1 last Friday night and since then has sold several thousand tons of foundry at its new figures, $30, furnace, for 2.25 to 2.75 per cent silicon and $29, furnace, for 1.75 to 2.25 silicon. Several eastern Pennsylvania makers are holding to approximately the same level. It continues possible, however, to obtain eastern Pennsylvania foundry iron at as low as $27.25, furnace, for 1.75 to 2.25 silicon and $28.25, for 2.25 to 2.75 per cent silicon on attractive business. However, it does not seem possible to shade these figures. In addition to the action noted a week ago by one large Buffalo maker in advancing, a second Buffalo furnace has advanced its prices and now has a minimum figure of $28, Buffalo, on 1.75 to 2.25 silicon foundry. Virginia iron continues to be had at $26.75, furnace, on 1.75 to 2.25 silicon foundry, with the usual differentials. A number of Virginia furnaces are handicapped in making shipments by reason of the embargo on the Chesapeake & Ohio railroad. Incidentally, all furnaces are unable to ship into New England at this time owing to the embargo due to the strike of shopmen on New England roads. On central Pennsylvania foundry, the minimum now appears to be $28 furnace on 1.75 to 2.25 silicon foundry. A southern furnace has increased its prices to $27.50, Birmingham, on 1.75 to 2.25 silicon, $28.60 on 2.25 to 2.75 silicon, $29.75 on 2.75 to 3.25 silicon and $30.80 on 3.25 to 3.75 silicon. A western Pennsylvania maker has sold a few thousand tons of foundry in the east during the past week at $28 furnace for 2.25 to 2.75 silicon, and since has advanced his price $1. A western Pennsylvania maker has sold malleable in the east at $28, furnace. A Virginia maker which recently withdrew from the market after considerable selling again has some tonnage to sell for the next 30 to 60 days, but is not offering generally; its price now is $29, furnace, for 2.25 to 2.75 per cent silicon. New York state, copper free, low phosphorus pig iron now is being held at $35 to $38, furnace, depending on the quality. A Tennessee maker of this grade has sold some tonnage in the neighborhood of $40 at the furnace. Some of the copper free, low phosphorus iron at Burnham, Pa., which recently was sold by the ordnance department has been offered at resale at $33 delivered to a western Pennsylvania point. Business of the past week in this district included a sale of several thousand tons of basic by a Buffalo maker at higher than $25.75, Buffalo.

Price Tendency is Upward

Boston, Aug. 11.—Pig iron prices for New England delivery continue to advance and although some furnaces are selling at the old prices, by far the larger proportion have established definite schedules above the $28 Buffalo basis for No. 2X Eastern (2.25 to 2.75 silicon) iron. Some of the larger Buffalo furnaces have advanced to $29 for the balance of the year. The Donner Steel Co. has established a price of $29.50 for the 2.25 to 2.75 silicon iron and $30.50 for the 2.75 to 3.25 silicon iron. Birmingham and Virginia furnaces are still reluctant to come into the market except for immediate delivery and for special analysis iron. One southern furnace is understood to be entertaining a proposition to store a considerable tonnage for a New England consumer, payment to be made on basis of present prices with additional charge for storage. The Bethlehem Steel Corp. and the Brooke Iron Co. have each had representatives canvassing the New England consumers. They have been offering No. 2X Eastern (2.25 to 2.75 silicon) for delivery for balance of the year and first quarter of next year at $28 furnace. Both of these furnaces have a $2.90 freight rate to points in this territory and their delivered price of $30.90 is lower

than has been reported for any other furnaces with the exception perhaps of the Crane Co. order in Connecticut. Although many dealers report quiet conditions there has been evidence in the orders placed during the past week of the start of a new year buying movement. A Massachusetts machine manufacturer bought 3000 tons of 2.75 to 3.25 silicon iron at $29.75 for the balance of the year and for first quarter 1920 delivery. A Boston consumer bought 500 tons of No. 2X Virginia (2.25 to 2.75 silicon) at $29 at the furnace which, with the $4.70 freight rate, means $33.70 delivered. This was for next 60-day delivery. A central Massachusetts consumer bought 4000 tons of northern iron during the week, which is understood to have been placed with several furnaces. The same consumer is contemplating the purchase of some southern iron for mixture purposes. In spite of the decrease in the usual run of small tonnage business many inquiries for balance of the year and first quarter of next year are out. A Rhode Island consumer is asking for 1000 to 1500 tons of malleable and a Boston consumer wants 400 tons of malleable. A St. John's, N. B., foundry has requested quotations on 300 tons of foundry iron. Other consumers in Rhode Island and Massachusetts are asking for from 1000 to 2000-ton quotations for the first half of 1920. A local foundry received seven replies in answer to an inquiry covering 1000 tons for first half of 1920 delivery and the prices quoted showed a spread of over $2 a ton. The estimated total of pig iron sales handled during the past week by New England dealers is 7500 tons.

Consumers Fear Higher Prices

Pittsburgh, Aug. 12.—Considerable uneasiness appears to exist among consumers of foundry iron as to the future course of prices, for while the market as a whole must be said to be rather dull, some business is being done every day in foundry iron and inquiries, not a few of which are for first half of 1920 delivery, are fairly numerous. Some foundry interests actually have come to believe that a price of $35 is possible and at least one case is known where it was necessary to assure an insistent buyer that his requirement would be entered as soon as the producer had opened his books for the period. Makers of foundry iron serving this territory are well booked over the remainder of this year and since considerable uncertainty exists with regard to labor, and fuel and oil supplies, not to mention the possibility of railroad rate advances and of transportation difficulties during the winter, they are discouraging 1920 business. A Pittsburgh district maker recently took 10,000 tons of iron for last quarter delivery. A small part of this purchase was malleable, but the bulk of it was foundry grade. the business being taken at full prices. The Standard Sanitary Mfg. Co. has closed for 4000 tons of foundry for last quarter shipment for its Allegheny and New Brighton, Pa., plants, paying the full market base of $26.75 furnace for No. 2 foundry. This company also bought a small tonnage for its Louisville, Ky., plant, paying $26.75 Birmingham, for regular No. 2 grade. Several producers are reported to be well sold up on foundry iron and to have strong price ideas. A small sale of No. 2X foundry (2.25 to 2.75 silicon) is reported to a western Pennsylvania melter at $28.50, a premium of 50 cents a ton over the regular base. A sale of 3000 tons of No. 2 foundry is reported for last quarter shipment at $26.25 and a smaller lot of the same grade, delivery of which runs into 1920, brought a premium of about 75 cents a ton. A small lot of malleable for early 1920 delivery recently changed hands at $1 a ton above the regular market on this grade, or $28.25 furnace. Outside of a sale of 1500 tons of standard bessemer for last quarter delivery, no important sales of the steelmaking grades have been made. It is said that concessions from $25.75 furnace were made on some of the recent big bookings of basic iron. Only two of the Shenango valley merchant furnaces now are idle, the Claire and Ella, operated by E. W. Mudge & Co., Pittsburgh, and they will be lighted early next month. The Carnegie Steel Co. still has 46 of its 59 stacks in blast but expects to blow in four more in the course of the next two months.

Chicago Demand Holds

Chicago, Aug. 12.—Although northern producers of pig iron are practically sold to the extent of production for the remainder of 1919, inquiry continues and selling is being done as far as circumstances will permit. Some instances have occurred indicating that regular customers are being given preference and that selling is being done judiciously with respect to possibilities of delivery. Although the strike of railroad shopmen is interfering with shipments, it has been possible to keep foundries supplied with both pig iron and coke so that up to this time no curtailment of melt has taken place from this cause. Inquiry now current is not heavy, largely due to the fact that selling is done mostly without inquiries being considered more than a day or two. This makes a rapid market. Of iron now on contract by far the greater part is gray iron and malleable, with basic in fairly light tonnage. Most southern makers are now quoting $1 higher on last half delivery, $27.75, Birmingham. The American Radiator Co. recently closed for 4000 tons of southern iron for its Birmingham plant. Some sellers have found a better demand for spot iron, possibly dictated by the possibility of the railroad situation limiting shipments on older contracts. Lake Superior charcoal makers have advanced 1920 deliveries $2 and are also quoting $1 over the former schedule for 1919 delivery. Comparatively little iron is available for this year's shipment and only occasional lots are being booked.

Buffalo Advance Now General

Buffalo, Aug. 12.—Advances in the prices of pig iron have left the March 21 schedule far behind, and Buffalo furnaces now quote the following: Basic, $26.75; No. 2 plain, $26.75 to $28; gray forge, $26.75 to $27.50; malleable, $27.25 to $29; No. 2X, $28 to $29. Buffalo furnaces have booked during the past week not less than 40,000 tons of iron, and possibly 50,000. Delivery will be made in the last half except for five small tonnages which were booked for 1920. One furnace booked 20,000 tons, most of which is foundry and the remainder malleable, while another furnace booked 20,000 tons. Advance in prices does not seem to affect buying. Orders are being placed at a faster rate than producers can handle.

Marks Time in Cincinnati

Cincinnati, Aug. 11.—The southern price situation is somewhat hazy. There is practically no prompt iron to be had in the Birmingham district, and for that reason sales are now confined to some odd lots of off iron that the furnaces wish to get off their hands. Most of the iron sold has been above the schedule all the way from 50c to $1 a ton. One southern interest has advanced to $27.50, Birmingham basis (silicon 1.75 to 2.25), and has sold a little iron for nearby shipment at this figure. Another furnace has established $28 as its minimum, and even higher figures are asked for last quarter business. Northern foundry iron is very quiet but no formal advance has been made by all producers in southern Ohio. A little northern iron has been disposed of for first quarter shipment at the old price of $26.75, Ironton, but it is understood that all quotations for that delivery have now been withdrawn.

The silvery iron situation is becoming more acute. The Jackson county, Ohio, furnaces are not able either to repair their idle furnaces or to load out much iron that they have piled and which is due on old contracts. No indications are in sight as to any early settlement of the labor difficulties now existing in that district. It is stated that the St. Louis inquiries for basic are still unclosed. Malleable is very quiet and no inquiries are out for any delivery. The market all the way through may be characterized as a waiting one. Virginia furnaces have advanced prices to a point that makes it temporarily impossible for them to get any business around here.

Book More Orders for First Quarter

St. Louis, Aug. 11.—The past week has not developed any great increase in buying in the St. Louis territory, so far as pig iron is concerned, but sales have been satisfactory. A number of small orders have been placed by foundries who two or three months ago estimated they had enough iron under contract to take care of their needs during the third quarter, all of which indicates an increase in business. There is some buying being done for the last quarter and first quarter of next year. The market seems to be holding firm on a basis $26.75 for 1.75 to 2.25 silicon, differentials being maintained on higher grades.

Southern Market Gains Strength

Birmingham, Ala., Aug. 12.—The southern pig iron market is showing strength, and an advance in prices has not interfered with spot selling. The aggregate of the business is good. With a basis of $27.75 for No. 2 foundry (1.75 to 2.25 per cent silicon) all quotations are firm. Iron of special analysis has been sold at

higher prices. Furnace companies are making no effort to sell through the fourth quarter, although one company has made a tentative offer to take on a little tonnage at $28.75. Inquiries for iron for 1920 delivery are still unheeded. Furnace operations are being increased, 23 furnaces now making iron in Alabama. The Republic, Sloss-Sheffield and Woodward companies are each planning to blow in another furnace this month.

Market Strong in Philadelphia

Philadelphia, Aug. 12.—The pig iron market here continues to reflect a strengthening tone. Furnaces generally are asking higher prices than before while $27.25 eastern Pennsylvania furnace on No. 2 plain and $28.25 on No. 2X are the minimum. These figures are exceptional and a large part of current business is going at higher prices. The leading cast iron pipe maker continues in the market. A Delaware river shipbuilder bought 1600 tons and several other nearby consumers bought around 1000 tons each. While business of the week reached a fair total it was much less than in preceding weeks. Several eastern Pennsylvania makers now are practically out of the market. Sales of the week included about 2000 tons. Virginia foundry iron is quoted mainly at $28 furnace for No. 2 plain and $29 for No. 2X but Virginia iron continues to be held at $26.75 furnace for No. 2 plain by an interest which sells mainly high manganese in this district. Prices on central Pennsylvania iron, considering freight rates, now are considerably higher delivered in east than eastern Pennsylvania iron.

Several thousand tons of copper free low phosphorus iron sold at $35 eastern furnace to average up with tonnage due on high priced contracts but regular quotations on this grade now are $36 to $38 furnace, depending on analysis. Copper bearing low phosphorus iron continues at $35 eastern furnace and this price has been quoted on western inquiries for about 2500 tons but without getting the business.

Ore Sales Light

All New Business Being Taken Subject to Delay Through Strike

Cleveland, Aug. 11.—Current sales or ore are much less than during the preceding week, when 250,000 tons were sold. One company has recevied several orders aggregating about 75,000 tons, while another reports having received orders for about 60,000. Most of the business done was for rounding out tonnages previously placed. All new orders are being taken subject to possible delays caused by the strike of railroad shopmen and dock workers at the upper lake ports. An account of the strike will be found on page 446 of this issue of THE IRON TRADE REVIEW.

Up to Aug. 1, Lake Erie docks handled 18,496,231 tons of ore, compared with 21,896,414 tons up to the same period in 1918. On Aug. 1, 1919, the docks were holding 7,069,893 tons, and on the same day in 1918, 7,228,721 tons. Receipts in July amounted to 7,090,666, as compared with 8,311, 629 in the same month last year.

Foundry Coke Marked Up

Price Range of $5.25 to $6 Now $1.50 Above Furnace Grade —Market For Latter Fuel Shows Strength

Pittsburgh, Aug. 12.—An unusually wide spread now exists between the prices of foundry and furnace grades of coke. At one time this year the difference between the two grades was but 75 cents per ton, and during the period of government control the premium was limited to $1 a ton. Now it is at least $1.50, and it is claimed that spot sales of selected 72-hour fuel have been made as high as $6, ovens, or $2 a ton above the present spot price of furnace coke. Several conditions contribute to the situation. Unsettled labor conditions have created fear of a shortage among consumers and they have been buying for stock. Most producers of foundry coke are well sold for the remainder of the year and are quoting extreme prices for the purpose of discouraging buying. It is claimed, also, that producing costs warrant a larger premium than formerly, as fuel suitable for foundries cannot be handled by machinery and hand labor is scarce and costly. A range of $5.25 to $6 ovens will cover the present market in foundry coke, but both prices are extreme and $5.50 to $5.75 are the bases of most business. The contract market on this grade is nominal in the lack of new business, the range being on contracts in effect. The market for furnace coke has strengthened, $4 being a general base of spot sales. Efforts have been made to get the price up to $4.25, but no direct business to speak of between producers and consumers has been done at better than $4. The accumulation of loaded cars still is large in the Connellsville region, but the larger operators have been able to reduce their stocks by applying some of them against contracts and shipping coal, which is in strong demand. Sales of third quarter gas and coking coal are reported as high as $3.25 and $3.50, while for mine-run grades $2.50 and even higher has been obtained. Figuring that it takes about 1½ tons of coal to produce a ton of coke, these prices make coal shipments extremely attractive. Production of coke in the Connellsville region for the week ended Aug. 2 is estimated by the *Connellsville Courier* to have been 209,100 tons, compared with 190,025 tons in the previous week.

Consider Flat Rate

Boston, Aug. 11.—Foundry coke is now at $10.40 delivered to New England points for all new business covering balance of the year. This advance in price follows similar action on the part of by-product producers in the Middle West. The first of August the local producer announced a price of $9.90 governing August delivery on existing sliding scale contracts. This price still continues but no new contracts will be taken at anything below the $10.40 price. The sliding scale contracts have been subject to much criticism on the part of consumers and it is doubtful if this form of contract will be continued after those now in effect have expired. Eastern by-product producers met in New York last week for the purpose of discussing the policies and interests of the by-product industry. It is understood that the question of a flat price to govern the entire year of 1920 was considered and that there is a possibility of booking all by-product business on such a basis, independent of Connellsville market fluctuations.

Sell Coke for Export

New York, Aug. 11.—An unusual feature of the coke market is the sale of fair tonnages of by-product coke for export. One cargo of 1150 tons of by-product foundry coke left Baltimore during the past week for Italy and another of 1500 tons left for South America. This coke was sold by the northern New Jersey maker. There is a likelihood that considerable inquiry now pending will be closed. The northern New Jersey maker has advanced its price on by-product foundry coke to $6, Connellsville, which is equivalent to $9.10, delivered at Newark and other northern New Jersey points.

The principal interest in the coke market at present from a domestic standpoint is the desire of consumers to obtain deliveries on contracts. Consumers in New England, particularly, are worried by reason of the general embargo on the New England roads. A sale of 3000 tons of beehive furnace coke was reported here during the past week. Among new inquiries is one for 3000 tons of foundry coke for Mexico.

Good Demand for Coke

Cincinnati, Aug. 12.—Prices of coke are stiffening. Both furnace and foundry coke is in good demand but the supply of labor is short and production costs are said to be advancing. The growing scarcity of cars is giving concern. Where the fuel can be loaded promptly it generally brings a premium, as for instance a little spot shipment Connellsville furnace coke brought $4.50 per ton at oven last week. Foundry grades range from $6 to $6.50. Wise county foundry coke is also scarce and is held at $7.50. New River foundry coke readily brings $8, when any of the fuel is to be had.

St. Louis Market Gains Strength

St. Louis, Aug. 11.—The coke market is stronger, one of the largest producers of the merchant foundry grade in the Connellsville district having withdrawn. This does not mean that this interest is sold up, but indicates that when it opens its books for an additional tonnage it will be at an advanced price, not less than 50c per ton over previous quotations. Better grades of Connellsville foundry are being quoted at $6 per net ton, f.o.b. ovens, prompt and future shipment.

Scrap Market is Unsettled

Business Good in East But Mid West Markets Show Weakness—Labor and Rail Troubles Affect Sales

FOR COMPLETE SCRAP PRICES SEE PAGE 476

Boston, Aug. 11.—The Pittsburgh steelmakers made their debut in the local scrap market during the past week and although reports in other districts indicate a slight weakening in heavy melting steel all sales for Pittsburgh delivery were made at good prices. One dealer sold 3000 tons of heavy melting steel at $22 delivered Pittsburgh, and other sales ranged from $21 to $22.50 for the same delivery point. The total of sales to steelmakers during the week is thought to have passed the 6000-ton mark in this territory. Conditions among local foundries are decidedly cheerful. The Worcester foundries are now all on an operating basis and orders from these for scrap have been prominent among the week's sales for local consumption. No. 1 machinery has been particularly active and is quotable for spot delivery at $27 with $28 being paid in several instances for future use. Almost all grades of scrap are tightening up and many dealers report orders which they are unable to cover. Rerolling rails have advanced to $23 delivered to consumers and slight advances are reported for other grades. Heavy melting steel is selling to dealers as low as $15 but higher prices are reported in some instances. A report reaches this market of shading in heavy melting in the eastern Pennsylvania district; some steelmakers being known to have bought at a $1 concession on the usual price.

Tie-up Weakens Market

Philadelphia, Aug. 12.—The labor situation and especially the tie-up on some railroads has somewhat weakened the scrap market, especially steel. There have been some transactions in steel between dealers at around $1 less than prices dealers were quoting a week ago. However, several buyers are reported as ready to place tonnages of steel at the old level of $20. The greatest activity during the week has been in cupola scrap which now is bringing from $25 to $26 for No. 1 cupola cast. At least two interests bought heavily of stove plate and grate bars, the former now bringing from $20 to $21 and the latter from $18.50 to $19.50.

Business Good in East

New York, Aug. 11.—Although consumers in the Pittsburgh district have withdrawn from the local market for heavy melting steel, a good demand for this material continues to come out from eastern Pennsylvania. The heaviest buyer in this latter territory is the Bethlehem Steel Co., which is purchasing heavy melting steel at around $15.35, f.o.b., New York. Good tonnages are also going to Coatesville, Pa., with the result that the local market on heavy melting steel may be quoted around $15.35 to $16.50, f.o.b., New York, according to the mill requiring shipment. A fair volume of buying of clean cast borings also is in evidence, and during the past few days, quotations have advanced to $11.50 and $12, f.o.b., New York. No. 1 railroad wrought, as a result of an improved amount of buying, has moved upward to $22 and $22.50, a gain of about 50c. While the labor situation is thought to have been the cause for the temporary withdrawal of the Pittsburgh consumers from the local market, this factor has not greatly lessened activities of easterners. There is however, a tendency among buyers to move more slowly.

Dullness Weakens Prices

Pittsburgh, Aug. 12.—Declines of $1 a ton, and in some cases more, have occurred in prices of scrap iron and steel. Steel mills not only have fairly liberal supplies, but also are inclined to stay out of the market until the labor situation clears up. Heavy melting steel, which recently sold at $22 to $22.50, delivered Pittsburgh, and even slightly higher on some purchases made in the East now is not quotable at higher than $21.50. No sales have been made lately. Dealers did not sell that which came into their hands recently, and since some of them have to move it they probably would not refuse $21. Bundled and compressed sheets will not bring within a dollar a ton of the prices at which they recently sold, and dealers also have modified their price ideas on other kinds of steel-mill material. Low phosphorus scrap is scarce, but neither this fact nor the high prices which have been obtained recently on government holdings of shell steel has been sufficient to sustain prices. A Pittsburgh steel company recently took a good-sized tonnage of shell steel, for which it paid $24.50, delivered Pittsburgh. Rerolling rails are lower for want of demand, users being well protected against their immediate requirements and now out of the market.

Strike Talk Affects Market

Buffalo, Aug. 12.—Railroad strike talk has resulted in depressing the scrap market. Dealers feel present conditions are but temporary, although speculators received a shock. Shipments are being made in good volume against previous orders, and there has been no break in prices. Dealers believe that renewed demand for heavy melting steel will be experienced soon.

Cleveland Market Weaker

Cleveland, Aug. 12.—For the first time in months scrap iron and steel prices here have been reduced. The market is decidedly weaker, but apparently not dangerously so for dealers. Continued refusal of the larger consumers to buy, high-cost agitation and the expected slowing up following the long rise are blamed for the reaction. Dealers, however, see the slump one of only a few weeks' duration. Pig iron and steel are moving fast and demand is heavy, so scrap will reflect the continued prosperity of the entire industry as soon as it recovers its footing, they claim. One of the largest users of heavy melting steel is reported having bought a tonnage of heavy melting steel, believed to be in the neighborhood of 50,000 tons, from a large yard interest. The price is said to have been graduated from $23 to $19. This yard interest now is offering $21 for steel. Melting steel, short steel rails, No. 1 and No. 2 busheling, turnings, borings, car wheels and No. 1 and heavy cast are the grades that have been scaled down.

Chicago Market Waiting

Chicago, Aug. 12.—Always sensitive to business conditions, the iron and steel scrap market is waiting until uncertainties now present in the industrial world have somewhat cleared. After an uninterrupted advance from the low figures of last spring, a halt took place a few days ago and quotations have receded somewhat from the highest mark. These quotations however, apply to spot business for immediate shipments and are lower than those prevailing a fortnight ago because consumers are not taking on new contracts for this raw material. On scrap held in yards former quotations may be said to apply, because dealers are unwilling to sell this material at prevailing quotations, and it is undoubtedly true that any resumption of buying would carry prices back at least to the former level. An inquiry for 40,000 tons of low phosphorus shell scrap is current in Canada and dealers in this district have been sounded in the effort to make up this tonnage. Railroad lists are somewhat more numerous this week than usual, but the total tonnage offered is not large. The Northern Pacific offers 1400 tons, the Wabash 700 tons, the Chicago, Milwaukee & St. Paul 450 tons, the Chicago, St. Paul, Minneapolis & Omaha 200 tons and the Burlington 75 tons of punchings.

Buyers Holding Back

Cincinnati, Aug. 12.—Somewhat unsettled labor conditions, including the railroad shopmen's strike, has caused buyers to hold back. Dealers are also somewhat lukewarm about piling up any large stocks, and are slow in buying up outside iron that may be held up in being delivered to their yards. Cars are scarce and for that reason outside shipments are moving more slowly. All prices are unchanged but are not near as firm as they were at this time last week. A little better demand has developed for old locomotive tires, but the railroads are not offering any at the present time. Stove plate is holding its own fairly well.

Southern Prices Holding Firm

Birmingham, Ala., Aug. 11.—Quotations of scrap iron and steel in the Birmingham district show strength, although buying is not heavy. Heavy

melting steel is quoted from $3 to $5 per ton above what one of the largest consumers in this district wants to pay for it.

Sheet Bars

Given Preference Over Billets in Mills—Rods for Export

Pittsburgh, Aug. 12.—Although the Carnegie Steel Co. is running close to 95 per cent of ingot capacity it is having some difficulty in keeping abreast of the demands upon it for sheet bars and is only slightly better situated with regard to billets and slabs. Production of the latter is being curtailed for the benefit of sheet bars and billets, on which this company now is sold well into the last quarter of the year. Independent manufacturers also are well booked ahead and specifications are such that they have little or no tonnage for disposal on the open market. Open market activities in semifinished steel for some time have been extremely limited as nonintegrated manufacturers, having established direct connections with producers of steel during a portion of the war period, are inclined to follow this plan instead of dealing through middlemen. While no special change is noted in prices, some consumers of sheet bars would gladly pay a premium if that would insure early shipments. A valley maker of sheets and tin plate, ordinarily self-contained on steel supplies, has been in the market lately for 18,000 tons of sheet bars. A better supply of finishing mill labor has increased consumption of wire rods, and offerings are somewhat smaller than they have been, though by no means scant. Export inquiries for rods are numerous, one being for 500 tons for shipment to Melbourne, Australia. Quotations against export inquiries for semifinished steel are not so heavy as recently as licenses still have to be secured for shipments to some countries and credits not infrequently expire before permits can be obtained.

Semifinished Market Slow

Philadelphia, Aug. 12.—The demand here for semifinished steel continues poor because of the poor business of consumers. The demand for billets is mostly in carload lots, one consumer inquiring for 1000 tons for forging as a speculation against future requirements. Some billet business has been turned away because present prices were considered unprofitable. A conconsumer inquiring for sheet bars recently has had difficulty getting mills to quote. An eastern plate mill has bought some slabs.

Good Steady Demand Noted

Pittsburgh, Aug. 12.—Demands for strip steel are of sufficient size to keep the mills in this district running about 80 per cent full. Orders, however, still are rather poorly distributed, those for hot rolled being much better than those for cold rolled, although a pretty steady increase is noted in the demand for the latter. Concessions from the March 21 prices are much fewer than they were a few weeks ago.

Alloy Market is Inactive

European Sellers Offering Their Products in United States —Japan is Buying

New York, Aug. 11.—Sales of English 80 per cent ferromanganese at less than $105 c.i.f. Atlantic ports featured the ferroalloys market during the past week. These sales were made as a result of firm bids of lower prices by domestic consumers and they involved large tonnages. Altogether several thousand tons of English metal changed hands during the past week at less than $105. The sellers however, have not changed their quotation and continue to name $105, c.i.f. on new inquiries and they will consent to consider lower prices only where they are named in a firm bid on an attractive tonnage, in which case these bids will be cabled to the principals in England. Round lots of domestic ferromanganese also have been sold during the past week at lower than the prevailing market of $110, delivered, but this business was also done on firm bids and producers have not lowered their quotations.

Competition continues keen in 50 per cent ferrosilicon, but prices below $80 a ton, delivered, have disappeared. Little resale alloy now appears available. Several small transactions for middle western delivery have been done lately at $80, or about the general market level. The premium on such deliveries apparently has been eliminated, whereas previously because of the higher freight rates to those points they had commanded a premium.

The attention of makers and consumers of ferroalloys used in special steels has been called of late to foreign offerings of these alloys. British sellers have offered both ferrochrome and ferrotungsten in this market at concessions from the domestic prices but so far as known American consumers have not bought these foreign alloys to any extent. On the inquiry for 500 tons of ferrochrome for a Pittsburgh consumer a bid of 25c was submitted on English material, as compared with the published domestic quotation of 32c per pound contained for alloy of 4 to 6 per cent carbon. Some English ferrotungsten has been offered $1 a pound contained New York and this price might have been done delivered Pittsburgh. This compares with prices ranging from $1.10 to $1.20 quoted by domestic makers. A French offering of ferrovanadium, said to be carbon free and analyze 35 to 40 per cent vanadium was made here recently. American makers have sold a further lot of ferrovanadium to Japan. The ferro- Both Italy and Belgium have bought some spiegeleisen, the tonnage involved reported as amounting to 1500 to 2000 tons. Some makers now are quoting $37.50 on higher grades of spiegeleisen, as compared with the general market of $33 to $35 on 18 to 22 per cent.

Sells Ferromanganese

Philadelphia, Aug. 12.—It has been reported here that a large tonnage of ferromanganese has been sold by a domestic producer at less than $110, delivered. This report cannot be confirmed. A current ferromanganese inquiry includes 2000 tons for Italy.

Prompt Ferrosilicon Wanted

Pittsburgh, Aug. 12.—Fifty per cent ferrosilicon is being inquired for quite freely here, but demands in all cases are for small tonnages for prompt shipment. While some makers of this alloy are quoting as high as $100, furnace, freight allowed, the more general basis is around $85 and some manufacturers need orders too badly to insist on that price. No business has been reported here lately at higher than $85, while it is known that less than that figure has been accepted on some orders. Only a moderate turnover of the lower grades of ferrosilicon are noted, but this cannot be ascribed to lack of demand, which actually is good, but rather to the lack of production, due to suspension of the Jackson, O., furnaces on account of labor troubles. Inability of consumers to secure ferrosilicon of the lower content in adequate quantity finds reflection in a brisk demand for silveries. Among inquiries is one for 200 tons from the Youngstown Sheet & Tube Co. The market remains inactive on ferromanganese and while $110, delivered, on 80 per cent material still is generally quoted, it is not believed that makers are so well off in the matter of bookings as to be indifferent about firm bids somewhat below that figure. On 76 to 78 per cent material domestic producers are matching the price of English producers, of $105 in the East, and $109, Pittsburgh.

Wire Makers

Largely Out of Market—Labor Trouble Hampers Cleveland Plant

Pittsburgh, Aug. 12.—Manufacturers of wire and wire products are for the most part out of the market. One large independent now is not taking new business even from its regular customers and those having tonnage available for their regular trade are cutting the orders. The leading interest is hampered through labor troubles at its Cleveland plants, but is having no difficulties at its Pittsburgh district plants. Independents here are better off in the matter of mill labor and have been able to increase production slightly.

Take New Orders Carefully

New York, Aug. 11.—Wiremakers are proceeding with great care in adding new business to their order books. Due to the embargoes prevailing on various railroads they are not assured that they will be able to maintain present plant operations and as a result do not know to what extent they will be able to meet schedules.

Bar Demand Still Heavy

Prices Reflect Upward Tendency—Activities Not Greatly Affected by Labor and Car Situation—Bolts Up

Chicago, Aug. 12.—Although business conditions are far from satisfactory as a result of the labor situation, business of steel mills is not adversely affected to the extent most sellers would expect. As a rule, selling organizations find that the demand has not fallen off as much as such a situation usually would cause. Mill operations about Chicago are unchanged from last week, when the leading interest was able to keep about 50 per cent of production active. The leading independent has not been affected to the same degree and has been able to keep up its activities without much interference. Smaller mills have felt the effect of car shortage in various ways but their activities have not been greatly interfered with. Buyers of soft steel bars continue to be in the market and specifications against contracts already booked have not fallen off materially, although occasional instances are found where the general situation has caused a curtailment of consumption.

About 2000 tons of reinforcing bars for the Drake hotel, Chicago, has been placed with the Inland Steel Co. and the American System of Reinforcing.

Hard steel bars, which were advanced $2 per ton a few days ago, now being quoted at 2.55c, Chicago, are being specified in large tonnages and demand is excellent, although the restricted supply of old rails limits the new business which can be booked with safety. Present supply of rails is considerably less than the tonnage necessary for continuous operation of mills. Bar iron is being inquired for at unchanged rate and new business is being booked about on a par with production. Strike conditions have interfered with shipments and with buying, but as soon as that matter is settled, demand is expected to increase considerably.

Early Estimates Proved Small

New York, Aug. 11.—Much of the new demand for steel bars which is being entered daily is comprised of requirements of consumers who previously had placed contracts for good sized tonnages, but who now are finding that their earlier estimates proved too small to meet their actual needs. In some cases, consumers are placing new tonnages which are two and three times as large as the entire third quarter tonnage for which they had contracted. Export orders for bars have been good lately, particularly for shipment to Japan. Numerous inquiries have come from Norway and Sweden lately but show no haste about being converted into orders.

Mills Are Well Sold Up

Cleveland, Aug. 12.—Specifications against contracts for steel bars are progressing in such volume as to cause certain sellers to predict an acute shortage of this product if the present demand continues over a period of several weeks. Mills are well sold up on most sizes, deliveries in very few cases being promised for earlier than the last quarter.

Eastern Market is Strong

Philadelphia, Aug. 12.—Steel bars continue to be the strongest of steel products from a market standpoint. Numerous consumers now are finding their requirements larger than first anticipated, and are increasing the tonnage due on contracts. It has been learned that a large maker has booked considerable contract tonnage for first half delivery at the current price. Several mills now are taking business only from regular customers because of filled schedules and are careful about making delivery promises because of the bad railroad situation.

It is understood that nut prices are to be advanced from 3.10 to 2.70 off list for blank nuts and from 2.85 to 2.45 off list for tapped nuts.

Larger Sizes Rather Slow

Pittsburgh, Aug. 12.—Steel bars running 3 inches and larger are in rather moderate demand, but an excellent business is doing in the smaller sizes and mill capacity in this direction is heavily taxed. Much talk is heard of higher prices and the leading interest is inclined to regard the March 21 figure as having been made to remain in effect until the end of the year and is accepting business at 2.35c, Pittsburgh. This company's attitude is holding other producers in check. It is reported that the Donner Steel Co., Buffalo, has advanced its price to a base of 2.40c, Pittsburgh, but this report cannot be verified. Pretty constant demands are coming out for concrete reinforcing bars, and while sales are small individually, it bulks fairly large. New steel bars of this class take the same base as mild steel bars, while sales are small individually, it bulks fairly large. New steel bars of this class take the same base as mild steel bars, while rerolled bars are quoted at 2.33c, mill, and some business is reported to have been taken at that figure. Pittsburgh makers of common iron bars are quoting them at 2.75c, Pittsburgh, and refined bars at 3c. Demand for iron bars is not heavy, but is larger than it has been.

Sales Hit by Embargo

New York, Aug. 11.—While a number of bar iron mills are quoting on a basis of 2.50c, Pittsburgh, material still is said to be easily available at 2.35c. In the instance of some mills, however, it is asserted that only the older customers are being favored with the lower figure. It appears that most all export business is being booked at a figure not under 2.50c.

Western Bolts Are Up

Chicago, Aug. 12.—Following an advance of about 10 per cent in quotations on nuts and bolts in the Cleveland district, makers in the West have begun quoting on the same basis. This advance follows shortly after a previous advance of 5 per cent. Despite this advance the market is holding strongly. Specifications show no falling off, and a reasonable quantity of new business is being booked. Most mills find themselves with as much business as they care to have at present.

Fair Business in Cleveland

Cleveland, Aug. 12.—Operation of nut, bolt and rivet plants at normal capacity is being maintained in this district. Fair-sized inquiries and orders continue to be received. New business is coming from diversified industries, changing the aspect of the trading which prevailed for several weeks. For a long time the automobile and truck industries took the product of these mills, but now other consumers are forging to the front and taking their quota as well. Most of the rivet business is coming from shipbuilders. The advanced scale of prices is being obtained without difficulty although considerable business now on the books was written up before the increase. Some scattered buying is being done by railroads, but it is understood they still are limited in their purchasing power despite large known needs.

Mills Are Fairly Busy

Pittsburgh, Aug. 12.—Hoop and band mills are fairly busy, but the load is unevenly distributed, with band steel doing much better than the narrower widths. Cooperage interests are making only moderate demands compared with makers of accessories and automobile parts. Prices hold steady, with most manufacturers quoting both hoops and bands at 3.05c, base, Pittsburgh. One company is quoting bands at a higher price, but this company is well filled up with bar business and not eager for band purchases. Specifications for cotton ties are fairly good, but all requirements probably will be easily met as the latest government report suggests a crop of less than 12,000,000 bales, while tiemakers calculated production on a crop of between 12,500,000 and 13,000,000 bales.

Rail Order

For 100,000 Tons Rumored—Car Buying Continues to Lag

Washington, Aug. 12.—The railroad administration again is in the market for rails, this time for 100,000 tons, either of bessemer or open-hearth steel. Bids are asked to be submitted by Aug. 16. This tonnage, with the 200,000 tons ordered about two months ago at prices previously rejected as having been "fixed" too high by the now-defunct industrial board, makes a total of 300,000 to be bought this year and the only tonnages for rails placed by the administration.

According to estimates made two months ago, if the bids on the 100,000 tons are accepted, and the tonnage allocated, the administration will have

to order only 200,000 tons more in order to have the railroads in as good repair when turned back to private ownership as when they were taken over.

Denmark Wants Rails

New York, Aug. 11.—Among current inquiries for rails is one from the Danish government for a good tonnage. It is not known when this business will be closed.

New Rail Order Rumored

Pittsburgh, Aug. 12.—Washington advices suggest the possibility of another railroad administration order for 100,000 tons of standard rails, but no inquiry has reached this market. Aside from export orders and demands in connection with repair work, rail makers have little business before them and much rail mill capacity is being used to roll sheet bars. A fair demand is coming out for light sections in connection with coal mining development. The West Virginia-Pittsburgh Coal Co. is planning to construct about 2 miles of track at its La Belle mine near Wellsburg, W. Va. Heavy demands recently for small spikes have filled up makers' books for the remainder of this year, but standard spikes are moving only as needed. With generous stocks on hand, makers guarantee prompt shipment. Fair demands are coming out for track bolts in connection with track repairs, with makers quoting an advance of $3 per ton over the recent base, putting the price to 4.50c, Pittsburgh in carload lots.

Car Buying is Slow

Chicago, Aug. 12.—Although inquiries are before the market for cars to go to Chili and Poland, the Havana Central railroad in Cuba and the Atlantic Coast line in this country, nothing definite has resulted from these negotiations and the entire business is still pending. No important new inquiry has come out in this department recently. The only activity in cars is confined to tank cars, the General American Tank Car Corp., Chicago, having taken an order for 1400 cars from the Island Refining Co., and 500 cars from the Texas Oil Co. Half the latter order will be furnished by the Pennsylvania Tank Car Co., Sharon, Pa. The Texas & Pacific railroad has been in the market for 110 tank cars. The H. C. Frick Coke Co., Pittsburgh, is inquiring for 1260 mine cars. The American Car & Foundry Co. will build 20 tank cars for the Lubrite Refining Co., St. Louis, and two tank cars for the Kendall Refining Co., Bradford, Pa.

Charles M. Schwab, of the Bethlehem Steel Co., will be a speaker at the banquet of the American Institute of Mining and Metallurgical Engineers during the institute sessions in Chicago, Sept. 22 to 26. About 150 papers will be presented during the sessions and arrangements are made for trips to zinc smelting districts near by, the steel works at Gary and oil refineries at Whiting and East Chicago. The fifth annual exposition of chemical industries will be held in Chicago at the same time.

Sheet Orders Swamp Mills

Valley Makers Booked Ahead and Are Slow to Take Prompt Business —March 21 Prices Not Generally Exceeded

Youngstown, O., Aug. 11.—Enough business is booked by sheetmakers in this district to warrant steady mill operation into the fourth quarter. Black and galvanized are in strong demand. Some sales of these grades were made recently at 2 and 4 cents respectively above the market price. Where this was the case the customer was willing to pay a premium in order to obtain an early shipping date. A few makers in this territory, which, shortly after the armistice was signed booked some business at lower than market quotations, now have closed enough premium business to equalize whatever losses were suffered at that time. Inquiries are light. Many buyers are on their vacations, they having taken care of their needs before going. Practically no spot business is coming out. Buyers are fairly well acquainted with the sold up conditions of the mills here and hence realize the uselessness of trying to obtain any tonnages for shore-time delivery. Several good-sized orders for highly-finished sheets sent out by automobile and desk manufacturers were closed with mills in this district during the past three weeks. Mills catering to this class of the trade are well booked over the next two months. The assembly of the mill motor at the DeForest plant, Niles, O., of the Republic Iron & Steel Co. is progressing and it is expected this plant will be in operation in about three weeks. A stock list sent out recently by a dealer in this district includes 164 tons of black wasters, 7 to 30 gages, assorted, $3.25, Pittsburgh 770 tons of galvanized wasters, 20 to 29 gages, assorted, 24 x 60 inches and larger, $3.75, Pittsburgh; 100 tons of regular pickled wasters, 10 to 26 gages, 20 x 60 inches and larger, $3.60, Pittsburgh; 250 tons auto body seconds, oiled, open-hearth stock, 18 to 20 gages, $4.65, Pittsburgh; 10 tons of cut downs, 14 to 28 gages, unassorted, $3.50, Youngstown, and several tons of one-pass coated long terne sheets, blue annealed single pickled, blue annealed primes and cold-rolled pickled and annealed.

Prices Still Being Shaded

Pittsburgh, Aug. 12.—Although some makers of sheets have advanced their prices, failure of the leading interest to deviate from the prices of March 21 has prevented a general movement in that direction, and also has made it difficult to sell any considerable tonnage at higher quotations. As a matter of fact, while a tremendous volume of business is coming to manufacturers, comparatively little of it is at prices higher than those of March 21. Concessions from $2 to $5 per ton are being made by some makers, among them being those who are talking most about advances. Orders are coming along at the rate of close to 25,000 tons a day. Since this is almost double theoretical productive capacity, all manufacturers are accumulating a backlog of business. The American Sheet & Tin Plate Co. is practically sold up for the remainder of the year and has quite a little business in automobile sheets for shipment over the first half of 1920. The independents also are booked practically to the end of the year on the present rate of operations, which though below theoretical capacity, are practically full when rated by the average attained by the mills. The leading interest is running better than 90 per cent of capacity. Its schedules call for a higher rate, but sheet bars are not in adequate supply.

Hard to Make Deliveries

Philadelphia, Aug. 12.—The demand for sheets although somewhat curtailed by reason of the present labor situation is sufficient to keep eastern makers engaged nearly to capacity. Due to the brisk demand mills are having difficulty in making deliveries with the result that they are being asked by customers to attend to their urgent needs. Several mills have requests for 1920 contracts but will not sell so far ahead.

Tin Plate Mills

Entertain Heavy Demands—Canmakers Buy—Export Business Increases

Pittsburgh, Aug. 12.—Demands on tin plate manufacturers still are heavy, and while the bulk of them are specifications against old orders, new business, especially for export, is of substantial proportions. Requirements for perishable food containers for Pacific coast crops have been only partially met. Packers underestimated the size of the crops in that section. Although large shipments of cans have been made to the coast to meet the emergency, this is expensive practice to the canmakers and they are buying tin plate wherever available. Preserving crops generally are yielding heavier than expected, and it is believed that the can companies will close the year's business with almost no carry-over, either of tin plate or cans. Present bookings of most of the tin plate manufacturers are sufficient to carry them at full capacity well into October. The leading producer is sold even further ahead. Meanwhile, export demands steadily are increasing, with Japan and China free buyers, good-sized shipments being made to South America and some business coming from Europe. An export inquiry for 100,000 boxes recently came out, but it is not yet in definite shape, since the time of shipment has not been specified. Heavy drafts are being made upon stock plate and with the depletion of supplies, concessions from the regular base of $7 per base box, Pittsburgh, are not as heavy as they were a few weeks ago.

Shape Market More Active

Good Structural Tonnages Let in New York—20,000 Tons Involved in Inquiry From India

New York, Aug. 11.—Trading in the local structural market has been somewhat more active during the past week. A better volume of tonnage has been coming out, and several sizeable contracts have been placed. The largest new inquiry to be issued is one involving 4000 tons for the proposed Hotel Linnard, Fifty-first street and Park avenue, New York City. Another inquiry calls for 1000 tons for a government warehouse in Philadelphia, the bureau of yards and docks being in charge of this project. In the export market, the inquiry of the Tata Iron & Steel Co., India, involving about 20,000 tons for plant additions, is absorbing the most interest. The Roumanian commissioners, with headquarters at the Cumberland hotel, New York City, are negotiating, but have not as yet accomplished anything, due, it is said, to lack of credit. Their most important project is a bridge over the Danube river. No action has yet been taken on the 7000 tons for the dirigible hangar at Lakehurst, N. J., and it is considered likely in some quarters that all bids will be rejected. The government, it is said, expected to be able to go through with the project at a cost of not more than $2,000,000. The lowest bid was $2,747,000, submitted by Irwin & Leighton, Philadelphia. Of the 14 bidders on this work, all but four were over $3,000,000. A source of some trouble to fabricators at this time is the embargo now in effect on various railroads.

Embargo Delays New England Work

Boston, Aug. 12.—A freight embargo is delaying construction work in this district. Thousands of tons of fabricated steel are tied up on the road to New England. Aside from the railroad situation, construction companies believe local conditions are improving. A contract for an automobile building at Brighton, Mass., calling for 75 tons of structural shapes was let to the Berensen Construction Co. Another contract for an addition to a large paper mill at Mettinique, Mass., was awarded to Daniel O'Connell & Sons. The New England Structural Co. obtained about 400 tons of new steel work during the week. This company reports considerable tonnage now being figured.

Structural Awards Decrease

Pittsburgh, Aug. 12.—Shapes still constitute one of the quiet spots in the present steel situation, for while a good deal of business has been booked by the fabricating interests, specifications are slower than usual in reaching the shape mills. This may be accounted for in part by the fact that the end of the war found the fabricating shops well stocked with plain material as a result of the cancellation of much government work. The only important award announced by structural interests here during the past week was a new power house for the Detroit Edison Co. at Conners Creek, Mich., involving 1400 tons.

Let Many Small Jobs

Philadelphia, Aug. 12.—Numerous structural jobs have been let in this district during the past week, but tonnages in all cases have been small. Several good sized contracts are expected to be closed here shortly.

Lettings at Cleveland Increase

Cleveland, Aug. 12.—Structural lettings in the Cleveland district show some increase in volume, and new business in sight is encouragingly large. One of the largest general contractors in this district who specializes in office and industrial buildings reports he has a larger amount of business pending at present calling for structural steel bids than at any time since the war. The Canton Bridge Co. was awarded the contract for 900 tons for the buildings to be erected by the Timken Roller Bearing Co., at Columbus, O. The Berger Iron Co. took 600 tons for the Goodyear Tire & Rubber Co., Akron, O. Bids are being taken on 900 tons for a factory for the Firestone Steel Products Co., Akron. The Lakewood Crane Co., Lakewood, O., is understood to have received a contract for several cranes for government use at Charleston, W. Va.

West Takes More Tonnage

Chicago, Aug. 12.—After the lull of the past few weeks, buying of structural material has come to the front again and an unusual number of projects have been closed recently. Practically all these are for structures outside the Chicago district where the lockout and strike of building trades is preventing any activity. The largest tonnage closed recently is 1168 tons for the United Verde Copper Co., at Jerome, Ariz., which will be fabricated by the Kansas City Structural Steel Co. The Decatur Bridge Co. has taken 1106 tons for the Stix Baer & Fuller Co., at St. Louis.

CONTRACTS AWARDED

Machine shop addition for Gisholt Machine Co., Madison, Wis., 250 tons; to Worden-Allen Co., Milwaukee.

Extension of open-hearth building and 600-foot craneway for Interstate Iron & Steel Co., Chicago, 500 tons; to Worden-Allen Co., Milwaukee.

Apartment hotel for Oscar Brachman, Milwaukee, 400 tons; to Northwestern Bridge & Iron Co., Milwaukee.

School for Hazelton, Pa., 300 tons; to Kellogg Structural Steel Co., Buffalo.

Plant for Star Worsted Mill, Pittsburgh, Mass., 120 tons; to New England Structural Co.

Gray-iron foundry addition for A. E. Martin Foundry Co., Milwaukee, 150 tons; to A. F. Wagner Iron Works, Milwaukee.

Power house for the Detroit Edison Co., Conners Creek, Mich., 1400 tons; to the American Bridge Co.

Roaster building and power house for the United Verde Copper Co., Jerome, Ariz., 1168 tons, to Kansas City Structural Steel Co.

Addition to building for Stix, Baer & Fuller Co., St. Louis, 1106 tons, to Decatur Bridge Co.

Steel bins and conveyor bridge for the Standard Oil Co., Schoper, Ill., 750 tons, to Decatur Bridge Co.

One 111-foot riveted truss span and four 36-foot deck girder spans for the Missouri Pacific railroad, 310 tons, to American Bridge Co.

Manufacturing building for the Hill Pump Valve Co., Chicago, 251 tons, to Hansell-Elcock Co.

Store building for the L. F. Beach & Co., Joliet, Ill., 290 tons, to Joliet Bridge & Iron Co.

Highway bridges over Canon Diablo and Little Colorado river for the United States government, 200 tons, to Omaha Structural Steel Co.

Warehouse for the California-Hawaiian Sugar Co., San Francisco, 500 tons, to California Steel Co., San Francisco.

Mill building for Columbia Steel Co., San Francisco, at Pittsburgh, Cal., 500 tons, to Dyer Bros., San Francisco.

Addition to plant of Hershey Chocolate Co., Hershey, Pa., 550 tons; to L. F. Shoemaker-Satterthwait Bridge Co.

Transfer bridges for Lehigh Valley railroad, 750 tons; to American Bridge Co.

Crane bridges for Niles-Bement-Pond, 250 tons; to American Bridge Co.

Addition to Brighton Mills, near Passiac, N. J., 300 tons; to Fagan Iron Works.

Bridge for Norfolk & Southern railroad, 300 tons; to American Bridge Co.

Building for Schmidt bakery, Allentown, Pa., 130 tons; to Bethlehem Construction Co.

Building for Philadelphia & Reading Coal & Iron Co., Pottsville, Pa., 130 tons; to Bethlehem Construction Co.

Building for Goodyear Tire & Rubber Co., Akron, O., 600 tons; to Berger Iron Co.

Buildings for Timken Roller Bearing Co., Columbus, O., 900 tons; to Canton Bridge Co.

Plant for Adirondack Steel Foundry Co., Watervliet, N. Y., 1050 tons; to Ferguson Steel & Iron Co.

Foundry for Dunham Co., Berea, O., 60 tons; to Fort Pitt Bridge Works.

Machine shop for S. A. Wood Machine Co., South Boston, Mass., 100 tons; to New England Structural Co.

Theater, Springfield, Mass., 135 tons; to Eastern Bridge & Structural Co., Worcester, Mass.

Weave mill, Watertown, Mass., 125 tons; to American Bridge Co.

CONTRACTS PENDING

Boat storage, Philadelphia navy yard, 1000 tons, bids to be taken Aug. 15.

High school for Bethlehem, Pa., 300 tons, general contract to Cramp & Co.

Butterwick building, New York, 3000 to 4000 tons, Ballinger & Perrit, Philadelphia, taking bids.

Loft building, Twenty-first and Broadway, New York, 1700 tons, bids being taken.

Repairs to furnace building, charging floor, etc., of Worth Steel Co., Claymont, Del., 500 tons, bids being taken.

Garage for Buffalo street department, 150 tons; C. F. Ernst & Sons, Buffalo, low bidders.

Warehouse for bureau of yards and docks, Philadelphia, 1000 tons, bids being asked.

Power house for Eclipse Gas Stove Co., Rockford, Ill., 600 tons, bids pending.

Foundry for Pettibone, Mulligan & Co., Chicago, 400 tons, bids asked.

Hotel Linnard, Fifty-first steet and Park avenue, New York City, 4000 tons, bids pending.

Factory for Firestone Steel Products Co., Akron, O., 900 tons, bids being taken.

Addition to government military prison, Ft. Leavenworth, Kans., 300 tons. Bids being taken.

Building for Kerr Steamship Co., 1000 tons; contract pending.

Office building, Twenty-ninth street and Broadway, 1500 tons, bids being taken.

Building for Butterwick Publishing Co., Spring street, 3500 tons; likely to be awarded within a week.

Three bridges for the state of New Hampshire at Concord, N. H., 100 tons; bids being taken.

Warehouse Prices

In East Rise as Dealers Adopt New Methods

Philadelphia, Aug. 12.—Demand for iron and steel out of warehouses since the signing of the armistice has been only about 50 per cent of normal and hence the cost of conducting store business has been comparatively high. Reports from warehouse interests generally throughout the country show that almost without exception, they have done business with little, if any, profit since Jan. 1. In order to improve the situation, many of the warehouses have been forced to restore the spread of $1 per 100 pounds which was operative during the war period.

Philadelphia and Baltimore warehouses apparently are quoting on the basis of the $1 spread. The new prices in Philadelphia are 3.60c on iron and steel bars, 3.90c on plates, and 3.70c on shapes. In Baltimore the new level is 3.58c on iron and steel bars, 3.88c on plates, and 3.68c on shapes. These prices are obtained by adding $1 plus the freight rate from Pittsburgh, to the mill base at Pittsburgh. In the case of Philadelphia, however, 25 cents per 100 pounds is employed as the rate from Pittsburgh, in order to avoid the inconvenience of computing prices from the actual rate which is 24½ cents per 100 pounds.

About a month ago many Eastern warehouses began to observe on out-of-town shipments, an equalizing system similar to that prevailing in the West. By this system, Philadelphia, New York, Baltimore, Boston, and other large cities were regarded as major basing points and on out-of-town shipments the prices quoted by warehouses at these basing points were equalized to the extent of the difference between the freight rate from one major basing point to the destination and the freight rate between another nearby basing point and the same destination.

Another plan for arriving at a delivered price at consumers destinations on out-of-town business has been proposed. The warehouses which already have adopted it are said to be adding to the Pittsburgh mill price the warehouse spread of $1, plus the actual freight from Pittsburgh to the consuming destination. In quoting this delivered price, the dealers are allowing the actual freight from the warehouse to the destination. As the new system is applied, therefore, a consumer in Trenton, Newark, Wilmington, or any other smaller center, will be called upon to pay a price for bars, for instance, obtained by adding to the mill price of 2.35c base Pittsburgh, the warehouse spread of 1 cent per pound, plus the actual freight rate from Pittsburgh. For carload shipments, the carload freight rate will be used, while where the shipments are less than carload, which is characteristic of the majority of purchases, the less than carload freight rate from Pittsburgh will be applied.

Stick to Old Lists

New York, Aug. 11.—Several of the larger warehouse interests continue to adhere to the old schedule of prices, which was in effect generally until the first of this month. In one or two instances they assert that no upward revision in prices will be made in the near future unless a higher schedule goes into effect at the mills. At the present time, the bulk of trading is being confined principally to bars and sheets.

Plate Market

Shows Some Improvement — 21,000 Tons Needed for Battleships

Philadelphia, Pa., Aug. 12.—It is reported that portion of 8000 tons of plates, recently bought by the Pennsylvania railroad, was obtained at $2.50, Pittsburgh. However, this price has since been withdrawn, and another eastern railroad which now is in market is unable to get quotations less than the equivalent of $2.65 Pittsburgh. While one large interest reports better plate business from the entire country, eastern mills still find demand quiet. Nothing has materialized on inquiries for steel for merchant vessels on which various yards were figuring. The largest inquiry in the market is for 21,000 tons of plates for battleships to be built at Brooklyn. Bids for this tonnage will be opened Friday. The Bethlehem Shipbuilding Corp. is reported to have taken a contract for one battleship, and the Newport News Shipbuilding Co., one. The American Locomotive Co. has placed some tonnage for the railroad administration locomotives, while a round tonnage of plates has been placed for export to England.

Slow to Catch the Stride

Pittsburgh, Aug. 12.—Plate-mill activities are greater than they were a few weeks ago but demands outside of those from the makers of tanks and in connection with oil-land developments, leave much room for improvement. Neither car nor ship builders are in the market for big tonnages and locomotive manufacturers have insufficient business to be free buyers. Some business probably is ahead for the Carnegie Steel Co., in connection with the contracts recently awarded by the United States Steel Corp. for several 10,000-ton boats. Figuring each boat to take between 3000 and 3500 tons of steel, requirements will be between 30,000 and 35,000 tons, about 65 per cent of which will be plates.

Cars and Ships Help

Chicago, Aug. 12.—Although demand for steel plates for general manufacturing purposes has been excellent, considerable tonnage has been taken for car repair work by car building companies. The Ryan Car Co., Chicago, has increased its recent purchase of this material by 3000 tons additional and has an inquiry out for 2000 tons more. The Liberty and Illinois Steel Car companies are inquiring for 5000 tons each. Shipbuilding on the Pacific coast calls for considerable tonnage, mostly plates, an order being placed with the leading interest recently for 1200 tons for a tanker to be built on the Pacific coast. The same maker has received an order from a Pacific coast shipbuilder for about 2800 tons of ship material, mostly plates.

Pipe Makers

Are Heavily Committed on Lapweld Sizes—Prices Are Firm

Chicago, Aug. 12.—Although inquiries on the part of cities for cast iron pipe are not large, the number and tonnage at present being figured is somewhat above the average for this summer. The preponderance of small sizes and lack of larger pipe continues to interfere with efficient shop operation. The United States Cast Iron Pipe & Foundry Co., has been given 212 tons at Clarinda, Iowa. Bids will be opened Aug. 11 at Edgeley, N. Dak., on 350 tons; Aug. 14 at Dover, O., on 80 tons; Aug. 18 at Fairmont, N. Dak., on 200 tons, and Aug. 20 at Chicago on 1700 tons.

Quotations have been advanced $2 per ton, making four-inch now quoted at $58.80, delivered Chicago, and six-inch to 16-inch inclusive, $55.80, delivered Chicago.

Expect Higher Prices

New York, Aug. 11.—The city of Fulton, N. Y., which recently received bids on 1200 tons of cast iron pipe, has postponed action indefinitely. Few other municipal tonnages are noted, and those which are up involve only small lots. Private demand, however, holds up well, and the market, all things considered, appears stronger than in many weeks, despite the seriousness of the labor situation. Talk of higher prices is becoming more widespread, and an advance of at least $2 is expected by some sellers within the near future.

Still Heavily Committed

Pittsburgh, Aug. 12.—Makers of pipe, both steel and wrought iron, still are heavily committed on lapweld sizes. On oil country goods makers of steel pipe are sold ahead over the end of the year, while wrought iron pipe interests say that current bookings will keep them busy until next February or March. Few manufacturers of either line are taking new orders for early delivery save possibly from regular customers and some have not the available tonnage even for such demands. Business in buttweld pipe steadily is expanding with practically all makers now reporting shipments to be running ahead of production. Mill order books are beginning to fill up. The Riverside plant of the National Tube Co., Benwood, W. Va., at which small pipe is the chief product, is about ready to start up.

Pipe Business Improving

Birmingham, Ala., Aug. 12.—Cast iron pipe business in the south is improving rapidly, despite the recent advance in prices and announcement that another would be made soon. Machinists and other workers at the plant of the United States Cast Iron Pipe & Foundry Co., at Bessemer, near here, went on strike while officials of the corporation were here, and the demands of the men were promptly met, only three days being lost. This company, together with the American Cast Iron Pipe Co., the National Cast Iron Pipe Co., and several soil pipe makers are melting more pig iron now than for many months.

Great Activity in Export Trade

With Proper Credits Chileans Prepare to Spend $50,000,000 for Railway Equipment— France Joins England in Placing Orders in United States— Foreign Demand is Broadening

NEW YORK, Aug. 11.—Export business during the first week of August will equal the business done during the last week of July, according to opinions expressed by sales agents. This is further tangible proof that the slump in exports during the first two weeks of July was but temporary. The exchange situation, however, continues bad and inasmuch as the dollar sells for a premium in Europe, England is offering to sell us metals. Ferromanganese, ferrochrome, ferrovanadium, ferrotungsten are being quoted by British sellers at prices slightly below our domestic prices and it is most likely that an important movement will be developed.

A heavier import movement, not necessarily of metal products, undoubtedly will contribute to the correction of the exchange. The larger steel export agents are giving serious consideration to the credit situation. They are inclined to extend greater financial aid to purchasers. Some sales upon long credits have been made, and this practice is likely to extend.

Oriental business has continued prosperous and South Americans, although individual orders are small, are buying without experiencing any trouble with the exchange situation. The most notable development of the market during the past week was probably the return of the agents of the Chilean government to purchase railway supplies and equipment. Following the example set in the case of the Poland purchases of railway equipment, the manufacturers are said to be contemplating making sales to the Chilean government under a similar plan. The Chileans say they are ready to spend $50,000,000 for their projects, and, contingent on a credit arrangement, they have already signed contracts for some of this material.

Smaller export houses have been complaining recently of their inability to get business in competition with the United States Steel Products Co., and the Consolidated Steel Corp. They say larger export agents have been able to quote a lower c.i.f. price. But it was discovered that the larger agents were getting specially attractive ocean rates. The conference steamship lines immediately agreed to cut the rates to $12 on pig iron to United Kingdom ports, to $13 on bars, plates and sheets, and to $14 on wire and similar finished goods. It is expected that the lower rates will stimulate English business.

France Selling Iron to England

Heretofore independent sales to England have been chiefly specialties, although the British have purchased quantities of bars and sheets. The new ocean rates, it is hoped, will stimulate business in heavy goods, semifinished and raw materials. Scotland has been inquiring for low carbon billets, one inquiry being for 5000 tons, and England, it is believed, still desires a large tonnage of pig iron. On the other hand, the French are producing iron in a quantity in excess of their domestic needs. The French are storing this iron and are selling some to England. England has been buying from us wire rods, bars, screw stock and pig iron.

Among British inquiries noted recently was one for 500 tons of light rails. The English requirements for pig iron have been estimated anywhere from 50,000 to 200,000 tons, which is a tonnage that the French probably could not fill in its entirety, and even though the French selling price in England is lower than our c.i.f. price, some of that business should come here. A recent inquiry from England for 25,000 tons of pig iron was refused because the British wished to get too low a price on it to satisfy the American producer.

Prospects for sales to France are not so bright as might be wished, although American producers are being told that they can sell some machinery for the restoration of the French plants. Representatives of the French plants at Homecourt and Hautmont have been sounding out the American producers and have conducted preliminary negotiations with the sales agents in New York. So far as can be learned these representatives are anxious to purchase the machinery for complete plant equipment. They have the promise of the French government to permit the importation of such goods into the country, despite the fact that imports of finished products are practically prohibited.

French inquiries for wire rods now in the market would probably total 5000 tons or more. An order for 1000 tons of wire rods has been signed by French purchasers. France also is in the market for a few thousand tons of black sheets, and a lot of 1200 tons of ship plates. A number of inquiries for plates, shapes and bars have recently come from Norway and Sweden, and Denmark has inquired for a little more than 10,000 tons of rails. Holland has sent in an inquiry for 10,000 tons of ship plates.

South American orders have consisted chiefly of wire, sheets, pipe and bars. Demand for steel pipe and other oil country goods comes principally from Brazil and Argentine.

India has been a consistent buyer of American iron and steel. That country now is inquiring for 20,000 tons of structural steel. Among the recent sales made to India were 500 tons of bars and 300 tons of nails.

The United States Steel Products Co. has taken an order from the Japanese for 6000 tons of 30-gage sheets in one lot. The Japanese also have bought 500 tons of plates and 500 tons of sheets. They have been sending in new inquiries for iron bars, steel bars and billets.

A sale of 1000 tons of wire rods to Japan has been reported, and it is learned the Japanese have sent in a new inquiry for 3000 tons of rails. One agency is handling Japanese orders for 4500 kegs of nails, 3000 cases of tin plate, and 100 tons of zinc sheets. Japan also has placed orders for 4500 tons of plates, and 400 tons of shapes.

Heavy orders have been taken for the Dutch East Indies, consisting of plates, shapes, sheets and similar goods. These orders have ranged in size from 20 to 2000 tons each.

Prices on iron products have advanced. Iron bars which have sold for $2.35 are now bringing $2.50 and $2.60. Iron shapes have advanced from $2.45 to $2.65. The price on bolts and nuts has been advanced 15 per cent. New quotations on malleable fittings show an advance of 30 per cent, and on cast iron fittings 20 per cent.

Pacific rates are reported weak. One of the large steel producers, it is understood, is able to ship out of San Francisco to Japan for $11.

Prepare for German Competition

British Buying Raw Materials in United States to Enable Them to Retain Markets Against Teutons—Gas Strip, Slabs and Billets In Demand—Strikes Tie Up Industries in England

Bureau of THE IRON TRADE REVIEW,
Prince's Chambers, Corporation St.,
Birmingham, Eng., July 25.

MORE is being heard of American successes in overseas markets, and attention at present is centered on the international tube situation. British tube makers, who have been very successful in this class of competition, are not disposed to stand idly by while America appropriates this trade. At present there is no specified export price for British tubes. It is well known that American gas strip and slabs for making tube are being bought extensively at favorable prices, and by means of this the Staffordshire tube makers hope to make a good fight for the retention of their foreign markets.

It is fully recognized that Germany may soon have to be reckoned with in this department, as before the war Germany engaged successfully in international tube competition.

The increase in the price of coal already is responsible for keener foreign competition. Prior to the increase, Welsh billets could be sold at works for £13 10s ($64.80), a price which did not give much opening for American competition, but steelmakers have had to put their prices up to £14 10s ($69.60). American billets, delivered at Liverpool, at £13 5s ($63.60) c.i.f. now offer a decided advantage to the British buyers, who have placed orders for large tonnages. The stoppage of the Ebbew Vale works will compel Midland buyers to get their material from America, as nearly all the British-made billets come from the South Wales district.

America is reported to be shipping tin plates to Liverpool 2s (48c) per box cheaper than the Welsh tin plate makers, while in several steel lines, British material is being undersold.

Americans Underselling British

In this district there is hardly one product which is not being substantially undersold by America. Several large firms believe that in regard to some large foreign contracts lost to this country Germany is the successful competitor. An order has been placed from Birmingham with a Belgian exporter for steel to be delivered here, but there is a strong suspicion that this material really comes from Germany.

Steel wire of 24 gage made in America is being offered here at £35 ($168) per ton, compared with £45 ($216) for the British material. British makers, however, do not specialize on very small gages and they claim to be holding the market for wire of 8 to 10 gage, standard sizes, for which there is a great demand.

Reports from the Manchester market show that America is getting a firm hold of business there in steel and finished iron, although local makers have as much work as they can cope with. The total make of foundry iron does not increase to any extent.

Strikes Handicap British Works

Business is in suspense owing to a combination of labor difficulties. About 300,000 miners are on strike in a district which is the center of the pig iron industry. Lloyd George has made the men an offer which they may accept, but if they do not, and the strike extends, there is not much doubt that every blast furnace in the kingdom will be either damped down or blown out.

At present there is neither selling nor buying of pig iron. The addition of 6s ($1.44) per ton to the price of coal has put a damper on all new business. In the North of England a strike of railwaymen has stopped deliveries. In the same district there is a strike of furnacemen. But despite these difficulties shipments of pig iron generally have improved. Exports are still controlled and few licenses are issued. It is expected, however, that in view of the great increase in shipping accommodation, exports will soon return to their normal volume, provided the furnaces resume operations.

West Coast hematite producers have raised the price of all grades of pig iron 12s ($2.88) per ton on account of the increase in the price of coal. In the North ordinary forge material has been advanced 15s ($3.60) per ton, while Staffordshire pig iron has been advanced £1 ($4.80) per ton.

The moderation of the makers of hematite is attributed to their anxiety over foreign competition, now felt keenly by all branches of the steel trade. It is significant that Northamptonshire and Derbyshire smelters have not thought it worth while to change their quotations. This is partly due to an idea that the recent increase of ½s ($1.44) may not be confirmed, while they consider themselves protected by the agreement whereby customers are required to pay whatever may be added to the cost of production. At the Birmingham meeting there was scarcely a transaction in pig iron, nearly all the selling agents stating that they had received instructions to decline business for the present.

The coal strike has found steelmakers also unprepared.

The Birmingham district, which is the center of the wrought iron industry, is not directly affected by the coal strike, as the colliers in this district are remaining at work. But a strike talk is common, and anything may happen. Two days ago a gang of youths managed by threats to stop all the North Staffordshire collieries, the men being brought up from the pits. The officials on the surface were greatly outnumbered, but preferred to bring up the men rather than run the risk of damage to life or property. Some stoppages have taken place at Cannock, the great coal district a dozen miles outside Birmingham, but the trouble is insufficient to shut down the works. The result, however, is the same, as the district gets the great bulk of its pig iron from Northamptonshire and Derbyshire, where nearly all the collieries have been stopped.

Talk Strike in Birmingham District

The great steel district of Sheffield is largely reduced to idleness, such great works as Hadfields, Cammell, Laird & Co., and Vickers, Ltd., not having more than a few days' supply.

A drastic step was taken at Ebbew Vale where a wage dispute was in progress. Two days ago the general manager made the men an offer for a settlement, with the warning that if it was rejected the furnaces would be blown out, causing a suspension of work in the steel plant for at least three months. It is reported the men rejected the offer and that 6000 will be idle.

Unfilled Orders

Of Steel Corporation, Make Gain in July of 685,806 Tons

Unfilled bookings of the United States Steel Corp. made a decided gain in July, according to the regular monthly statement recently issued. The unfilled orders on July 31 amounted to 5,578,661 tons, or an increase of 685,806 tons. This increase came as a surprise to the trade, which looked for a substantial gain, but not one so large. The showing last month is taken as an indication that the turn in steel market has been made, and that confidence among buyers is rapidly becoming restored. Following is a comparative statement:

Date	Total	Change, tonnage	Change, per cent
July 31, 1919....	5,578,661	685,806+	14.00+
June 30, 1919....	4,892,855	610,545+	10.70+

Steel Corporation Building 20 Ships for Exports

New York, Aug. 12.—The United States Steel Corp. is building 20 10,000-ton cargo boats, of transverse construction type, suitable for long voyages. Ten are being built at the Federal shipyard of the corporation at Kearney, N. J., and 10 at the corporation's shipyard at Mobile, Ala They will be employed in the foreign trade of the corporation.

Will Not Affect Steel

Washington, Aug. 12.—The government's fight against the cost of living will not extend to iron and steel, it is believed, because known activities so far are being confined to foods, fuel, clothing and shoes, the more intimate personal necessaries. Steel prices, due to voluntary reductions by producers on Jan. 1 and later under the sanction of the short-lived industrial board, are said to be not in particular disfavor with the administration.

The Huddleston bill, which would regulate steel, coal, lumber and other basic industries for a period of five years after the proclamation of peace, so far has remained in committee without action.

Carnegie Funeral to be Held Aug. 14

Lenox, Mass., Aug. 12.—In conformity with a wish oft-expressed by Andrew Carnegie, the world-famed ironmaster will be laid to rest with the simplest of funeral services at 10:30 o'clock Thursday, Aug. 14. Only about 20 of his most intimate friends, including Charles M. Schwab, will attend. Others who sent condolences were acquainted with Mr. Carnegie's wish. A special train will convey the body to Tarrytown, N. Y., and it will be interred in a plot in Sleepy Hollow cemetery, the plot having been selected by Mr. Carnegie several years ago. The following epitath, written by Mr. Carnegie, will be inscribed on his tombstone:

"Here lies a man who knew how to enlist in his services better men than himself."

Launch 47 Ships in Year

The following statistics representing the accomplishments of the Hog Island shipyards from Aug. 5, 1918, the date of the yard's first launching, to Aug. 5, 1919, were recently given out by the shipping board:

Ships launched, 47; deadweight tonnage, 367,775. Ships delivered, 36; deadweight tonnage, 281,700. Keels laid, 47 "A" type; 12 "B" type.

The Nonferrous Metals

	Copper	Future Straits N. Y.*	†Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
Aug. 6	23.50	54.50	6.00	7.40	33.00	9.25
Aug. 7	23.50	54.50	6.00	7.35	33.00	9.125
Aug. 8	23.50	54.25	6.00	7.30	33.00	9.125
Aug. 11	23.50	53.25	6.00	7.25	33.00	9.00

*July shipment from Singapore, c.i.f. New York.
†American Smelting & Refining Co.'s price.

NEW YORK, Aug. 12.—The nonferrous metal markets were further unsettled and disturbed the past week by the general indications of widespread labor unrest and specifically by the ultimatum of the railroad brotherhoods to the government. Speculators and dealers became more anxious to realize on holdings of metals which they had accumulated in the recent bull market in metals and offered supplies at greater concessions. This condition widened the gap between the "outside" or dealers' market and the producers' or major market. The producers, confident in the statistical position of their industries, stood pat and refused to meet the outside market, but they booked little business.

Thus, in copper, the producers continued to quote 23.50c for electrolytic copper for spot, August and September deliveries, and 24c for October. But second hands gradually marked down their prices until as low as 21.25c was quoted for spot electrolytic. Casting was marked down to 21c and lake to 22c in the outside market. A considerable tonnage, in the aggregate, was turned over in the outside market, more copper being in second hands than was generally realized. However, sales of copper the past three months have far exceedd production, while it is believed consumption now also has passed production. Stocks of refined copper are steadily being diminished. The recent sale of 1000 tons of copper to Germany is regarded as the first taste of a large amount of such business.

Germany has been selling zinc in England, which has reduced the level there far below parity with our market and removed an immediate prospect for resumption of zinc exports from here to Europe. The zinc market has been in the hands of speculators here and has been fluctuating widely. After dropping from 8c, East St. Louis, for early shipment, to 7.35c, the market recovered to 7.60c, then back to 7.25c at the close of last week, this price still existing Monday and Tuesday. Producers have not been meeting the outside prices as a rule. Grasselli Chemical Co. smelters have just been reopened after labor troubles, while the Anaconda electrolytic zinc works at Great Falls, Mont., remains closed. High grade zinc prices are unchanged at 9c, New York.

The lead market is unchanged. Producers have booked little business lately, while producers have cut prices greatly in their efforts to realize. The leading producer continues to quote 6c, New York, 5.75c, St. Louis, but some outside offerings as low as 5.65c, New York, are reported, and the market is 5.70c to 5.75c. The government stocks of pig lead as of Aug. 1 were about 300 0tons, a reduction of 27,000 tons since Jan. 1. Stocks of refined lead in the hands of smelters were estimated at 14,000 tons as of Aug. 1.

The tin market has declined, due to strike troubles the world over and the uneasy view taken by foreign traders in the economic condition of our own country. Ninety-nine per cent tin broke 12 cents yesterday and today on account of English importations. Premiums have been commanded on high grade tin for shipment from England and Canada with the lifting of the embargo on such shipments Aug. 15, as high as 57.25c having been paid for tin for shipment from Canada. Straits tin shipped in July from Singapore and now afloat is quoted about 53.50c, while August sihpment is quoted 53.25c. Spot high grade tin is quoted 60c and spot 99 per cent tin 53.75c to 54c.

The antimony market is slightly easier, at 9c to 9.12½c duty paid New York, for spot metal. Demand has fallen off.

Third Stack Now in Operation

Three of Five Furnaces Planned by Bethlehem Steel Co. Completed at Steelton—Storing Facilities Designed for Cuban Ore Now Serving for Lake Ore—Cast House Floor is Elevated

COMPLETION of the new "A" blast furnace at the Steelton plant of the Bethlehem Steel Co. marks the realization of 60 per cent of the plan which some years ago was adopted for modernizing the Steelton blast-furnace department. This plan called for the erection of five modern furnaces to replace the old hand-filled stacks. The first of these modern furnaces, "E", was completed in 1916 and "B" in 1917. Therefore, only two furnaces out of the five specified in the general plan still remain to be built. Erection of these two stacks was held up by the war. While no decision has been reached as to when their construction will be undertaken, it is considered likely that such action will be taken as soon as market conditions justify. In the meantime, the four hand-filled stacks which still are a part of the Steelton blast-furnace plant will be maintained, although two of them ultimately will be dismantled in order to make room for the two proposed new units.

Much more than the erection of new furnaces is embodied in the work under execution at Steelton. When the reconstruction plan originally was drafted, all factors entering into the production of pig iron were considered carefully in order to effect a maximum reduction in operating expenses. Proper location and arrangement of the furnaces with respect to each other, as well as with respect to all other parts of the plant, were recognized as essential, and the question of transportation, which has a larger bearing upon pig-iron costs than any other single item, received prime attention. It confidently is expected that when the reconstruction plan has been entirely carried out at Steelton, the cost of pig-iron production there will compare favorably with production costs at any other blast-furnace group in the country.

Arrangement of Plant

As provided in the general reconstruction plan, the blast-furnace plant at Steelton is arranged in parallel lines to insure continuous and efficient operations. The first of these lines, nearest to the Susquehanna river, comprises the gas-blowing engine department, a gas-electric plant, and a Theisen, secondary gas-washer department. These units now are housed in separate structures, but ultimately they are to occupy sections of a long continuous building. The second line comprises two railroad tracks located on the pouring side of the blast-furnace group. These tracks are continuous and one serves as auxiliary to the other. The old dead-end tracks have been replaced by switches connecting at both ends, so that the cars may be pushed on the switch at one end and pushed back on the main track at the other. This eliminates much unnecessary switching of cars and greatly reduces the cost of transportation.

In addition, the elimination of dead-end sidings has resulted in a great reduction in maintenance costs, since cars no longer are damaged by being pushed off the tracks, against brick walls, etc. When the entire reconstruction program has been carried out, there will be no dead-end tracks in any part of the plant. The switches at each furnace connect with the nearer of the two through tracks, the second-through track serving to a large extent as a through track, and as an auxiliary to the first. The rolling stock on these tracks is comprised of ladle cars which transport the hot iron from the furnaces to the hot-

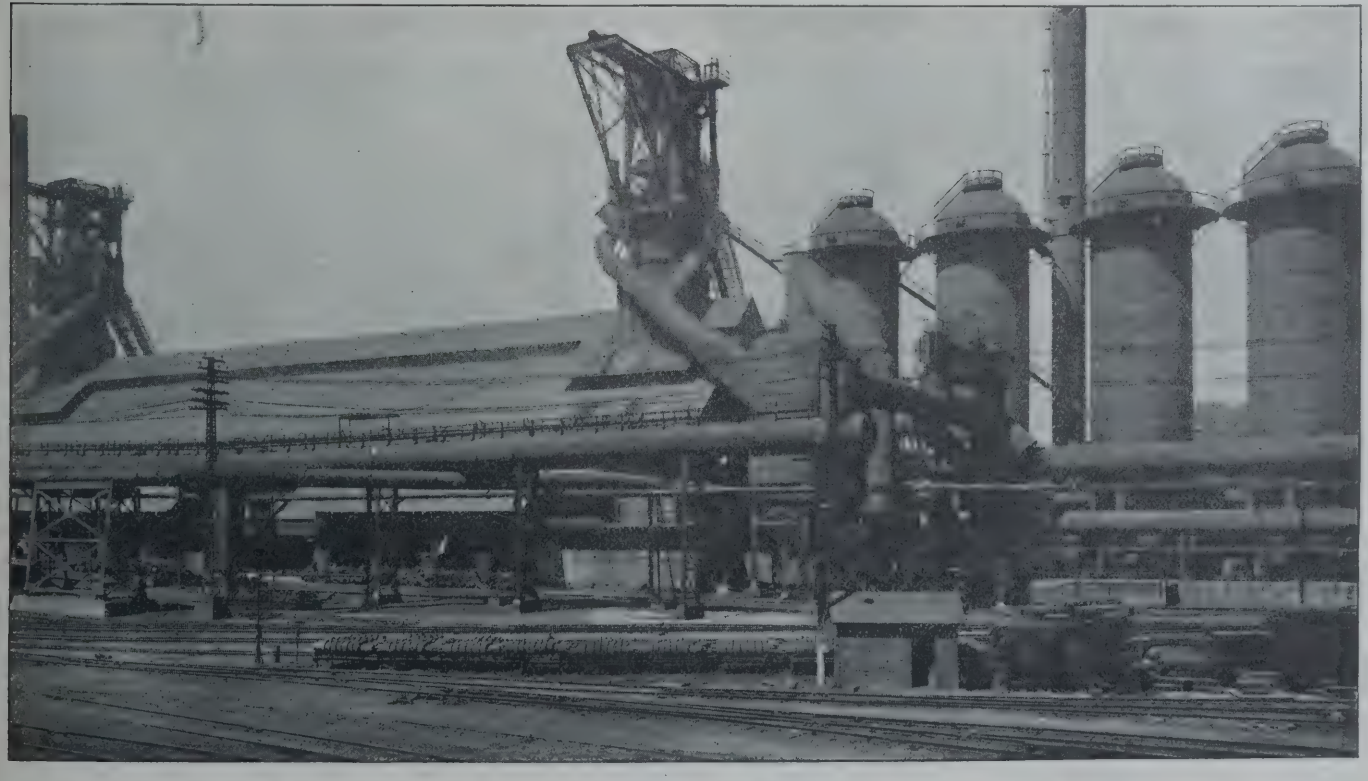

FIG. 1—GENERAL VIEW OF FURNACE AND STOVES SHOWING HOT-METAL LADLES IN POSITION. TOP OF STACK IS EQUIPPED WITH A MONORAIL WHICH IS USED IN TIME OF REPAIRS

metal mixers in the steel plant, or, when the supply of hot metal is greater than the mixers can accommodate, to the pig-casting machine where it is cast into pigs and then stored in the stock yard.

Adjacent to the hot-metal tracks are the blast furnaces and on the cinder side are two through tracks, one for transporting cinder and slag to a dump, 1½ miles from the blast furnace group, while the other track serves for the handling of coke breeze and for auxiliary purposes. Next come the ore and coke bins, the ore yard, 187 x 1620 feet, and then the ore classification yard. The ore bins and trestle are built of concrete and are surmounted by four through tracks; two of these are for the discharge of ore and limestone from railroad cars into the bins; the third, which is nearest the ore yard, is equipped with two electrically-driven transfer cars which are employed for bringing ore to the bins from any part of the stockpile, in order to obtain the desired mixture; and the fourth track commands the ore pile and is employed for unloading ore from railroad cars into stock. Bins and ore piles are commanded by two ore bridges, each equipped with a 7½-ton bucket and having a span of 187 feet. When the reconstruction plan was developed, it was based on the expectation that the furnaces at Steelton would operate almost entirely with Cuban ores.

Practice With Foreign Ores

With Cuban ores it is necessary to carry only enough ore to last approximately 60 days, since the ocean-navigation season never closes and it is possible to maintain a steady movement of this ore from the receiving port at Sparrows Point. For this reason the ore yard was made narrow. Furthermore, no car dumper was installed owing to the fact that Cuban ore is dry and granular and flows easily from the cars which are positioned on the unloading track on the trestle. Since the original plan was drafted, however, this plant has become a large user of lake ore. In fact, at present, it is operating 100 per cent on these ores and for some years to come is likely to use 50 to 60 per cent in the furnace mixtures. Lake ore is fine and moist and does not flow readily so that considerable hand labor is required. In using lake ore, it is necessary to carry nearly seven months' supply, or more than three times as much ore as the yard originally was designed to store. Until the company reverts to its original plan of using Cuban ore, therefore, the ore yard at this plant necessarily will continue to be congested.

To each furnace are allotted one large coke bin and 10 ore bins, which were designed to accommodate sufficient stock for a turn of 12 hours. Each coke bin is about 94 feet long and 35 feet wide and holds approximately 400 tons. In the stockhouse underneath the bins is a continuous track on which scale cars of the single-hopper type are operated, two to each furnace. These cars are filled by gravity through hand-operated gates in the bottoms of the bins. The ore is weighed on the scale cars before going into the skips; the coke is charged by volume over a screen directly into the skip, the breeze being removed by a pneumatic elevator. The operation of the latter recently was perfected at this plant. The stockhouse, which runs the length of the entire group of furnaces, is of concrete construction and due to the fact that the sides adjacent to the furnaces are open, it is exceptionally well illuminated by natural light.

The new furnaces originally were laid out for operation in couples and this arrangement, as realized in the location of the "A" and "B" furnaces, has resulted successfully in reducing overhead expenses. By this arrangement it is possible to provide the "A" and "B" cast houses jointly with one overhead crane and with an open-pit space between the two cast floors for storing the heavy castings needed for replacements in both furnaces. In this way, considerable duplication of equipment is done away with. Where the cast floors of the old hand-filled furnaces are solid, the cast floors for the new stacks are elevated, so that the space underneath them may be used for the storage of firebrick linings and other accessories, thus resulting in economy of ground space.

Furnace is Spray Cooled

Furnace "A", which was blown in Nov. 7, 1918, is similar in construction to furnaces "B" and "E" which were described in the Jan. 6, 1916 issue of THE IRON TRADE REVIEW. However, "A" furnace has slightly larger dimensions. The hearth is 17½ feet diameter, the bosh 22 feet diameter, the stockline 16 feet diameter and the height 88 feet. The top is equipped with an automatic revolving distributor of the McKee type, and the operation of the skips and other equipment of the furnace is auto-

FIG. 4—GENERAL VIEW OF FURNACE AND STOVES FROM THE TRESTLE

matically controlled. The furnace is semithin lined, the lining being 27 inches thick. It is cooled by spraying the shell and by four rows of cooling plates above the mantle. The capacity of the furnace is 500-600 tons per day on lake ore mixtures.

Dirty gas from all of the furnaces at the Steelton plant is fed into a general system which in turn feeds a gas washer located at "B" furnace. The excess gas goes either dirty to the boilers, or to another primary washing plant through which it passes on its way to the Theisen rotary gas washer. From the Theisen washer the cleaned gas goes to the gas engines. Gas for the "A" furnace stoves is supplied from the washer at "B" furnace. "A" furnace is equipped with four 25-foot stoves, 100 feet high. These are of the side-combustion type and have 4½-inch checkers as compared with 6½-inch checkers in the "E" furnace stoves.

Cools Drinking Water for Mill Workers

THE new drinking water system in use at the main plant of the Youngstown Sheet & Tube Co., Youngstown, O., is designed to supply pure water, cooled to a proper temperature, and in sufficient quantity to each department independently of all other departments. Each department has its own circulating system, with one, two or three cooling stations along the line.

The water is obtained from wells located in such a way that a 3-inch belt supply line, running completely around the plant, passes each well and receives the water produced from the well. If the pressure in the line at the well is 40 pounds, a pressure-operated electrical controller shuts down the well pump, which automatically starts when the pressure in the line falls to 20 pounds. The water from the wells is subjected to a bacteriological analysis daily and any well showing any evidence of pollution is immediately cut out of the line. Each well is enclosed by a brick building, into which none except those having duties therein may enter.

Circulation System

The cooling stations are small brick buildings, about 13 x 20 feet and are each equipped with cooling machine and circulating pump. The cooling machines are connected by belt to 7½-horsepower motors. Each machine has a capacity of 36,400 British thermal units per hour with condensing water at 77 degrees Fahr. at the overflow. Assuming 95 degrees as the maximum temperature through which the line will pass, 50 degrees as the temperature of the drinking water when leaving the machine and 65 degrees as the temperature of the supply from the wells, this machine will cool 2 gallons of water per man for 750 men in 12 hours, through a line 2000 feet long. This will utilize the capacity of the machine for 20½ hours per day. This allows the capacity for 3½ hours for emergency duty or for any period when it may be necessary to have the machine shut down. If a less number of men are to be supplied, a longer line can be installed, or *vice-versa*.

The water is taken from the machine by a 3 x 3-inch pump and discharged into the circulating line, which is a 1½-inch galvanized steel pipe, insulated with hair felt 1½ inches thick. The circulation of the water carries it directly past every fountain, the line forming a loop down to the fountain and up again to the line. There are no dead ends at any place in the system. This circulating line discharges back into the machine, a float in the cooling tank operating a valve to admit water from the supply line from the wells to make up for the water which

has been used since leaving the machine.

Where more than one machine is required for a department this circulating line discharges into the second machine and after passing through the second machine the water is pumped through the next section of the system and the water discharged into a third machine from which it is pumped and returned to the first machine.

Any number of machines may thus be connected up in series, of which any number may be inactive during cool weather, the water either being by-passed around the machine into the discharge line without passing through the machine, or by discharging into the tank of the inactive machine and being pumped from the tank into the next section of the system.

Temperature Kept at 50 *Degrees*

It was intended to allow a 5 degree rise in the temperature of the water in the length of the lines, the temperature being 50 degrees when leaving the machine and 55 degrees when returning to the machine or discharging into the next machine. This variation has been maintained, even in extreme hot weather. By a thermostatic control the water can be discharged at any temperature desired, but as the range of temperatures, 50 to 55 degrees, has been generally accepted as the most desirable from a pathological standpoint, the machines were set to deliver at this primary temperature of 50 degrees, and the length of the lines and thickness of the insulation designed to prevent a higher temperature than 55 degrees. The results have been evident in all departments, especially those where employes were obliged to work under severe heat, by the marked decrease, amounting almost to complete elimination, of exhaustion from cramps.

The fountains are of the sanitary, bubbling type, with spring closing valves. Where the employes are distributed evenly through a department, the fountains have been located about 250 feet apart.

350,000 *Gallons Pumped in Day*

The system is in charge of one man, who, with a helper, is employed by the safety department. The electrical equipment is looked after by the electrical department, and the pumps and other mechanical equipment by the mechanical department, both of which departments have one man on each turn, to attend to the equipment. In each building is a printed form, upon which each inspector makes a record of the time and the condition of the machinery at the time of each visit.

The use of thermostats and pressure regulators makes the equipment so nearly automatic in its operation that the constant attendance of anyone to operate it is unnecessary. The visits of the inspectors are arranged in such a way that each building is visited about every hour of the day and night. The identity of each cooling station and well house is established by numbers.

The following table gives data for the various departments:

Department	No. of Men	No. of Machines	No. of Fountains	Length of Pipe in Feet
Sheet mill and shops	1000	2	35	4575
Skelp mills	750	2	24	4525
Tube mills	3600	3	36	7000
Blast furnaces	750	2	15	4100
Blooming mills	600	2	18	4000
Puddle mills	600	1	18	2950
Open hearth	800	2	24	4880
Plate mill	400	1	9	2400
Locomotive repair shops	500	1	12	3000
Totals	9000	16	191	37,430

Allowing for waste, it requires about 2 gallons of water per man so that nearly 18,000 gallons of water are required per day for drinking. The amount of water pumped through the drinking water lines in one day is approximately 350,000 gallons. The total consumption of water which includes that for condensing purposes will vary from 75,000 gallons in 24 hours in cool weather to 150,000 gallons in 24 hours in extremely hot weather.

Labor a Factor in Manganese Industry

THE economic pressure of competition must either depress wages or else the manganese industry must be abandoned," is one of the significant statements contained in a report on the cost of producing ferro-grade manganese ores issued by the bureau of mines. On the subject of wages in relation to cost, the report which was prepared by C. M. Weld and W. R. Crane, continues: "If it be assumed that wages will drop, to fall in line with the cost of living and that the latter will not decrease, then the drop in wages will be equivalent to 25 per cent of the war wage.

"In line with this assumption it will be further assumed that the cost of supplies will decrease in like proportion; whereas better practice will offset much of the inefficiency of labor which has unfortunately developed under war conditions. The net result is an estimated future reduction in cost of manganese ore on board railroad cars of 25 per cent."

The following summarizes the investigations on the average cost of domestic ores in 1918:

Ore	Carbonate	Oxide	Average
Estimated production	63,000	231,500	294,500
Estimated cost on cars	$5.00	$19.00	$16.00
Railway freight	$11.35	$10.70	$10.85
Total cost delivered	$16.35	$29.70	$26.80
Manganese, per cent	36.5	41.0	40.0
Unit cost, cents	45.0	70.7	65.0

While the cost per long ton of domestic carbonates in 1918 was $16.35, delivered, and that of oxides, $29.70, the cost of Cuban ore delivered in this country was $23.50 and that of Brazilian ore, $30. The domestic ores contained 36.5 and 41 per cent of manganese, respectively, while Cuban ore contained 38 per cent and Brazilian ore 45 per cent.

"This comparison indicates that the oxide ores were at a disadvantage in competition with foreign ores even when protected by high ocean freights," the report continues. "Had foreign ores moved freely and been sold at strictly competitive prices the domestic manganese industry could not have developed except, perhaps, in certain more favored districts in the southern states, and as to carbonate ores of the Butte district. The comparison further shows that when ocean freight rates return to more nearly their normal level even the most favored oxide ores, as well as the carbonate ores, will have hard going in a competitive field."

It is estimated that in the near future the average of domestic carbonates, averaging a manganese content of 36.5 per cent, will be $14.75, delivered. As to domestic oxides, it is estimated the cost of ore containing 41 per cent will be $24.65, delivered. Cuban ore containing 41 per cent of manganese will cost $16.50, delivered, and Brazilian ore, containing 46 per cent of manganese, $18.50. Therefore, unit costs will be as follows: Domestic carbonates, 40.4 cents; domestic oxides, 60 cents; Cuban, 40 cents; Brazilian, 40 cents.

"It must be remembered that at the same price per unit the higher grade ore will always have preference," the report concludes. "Domestic ores are generally of lower grade than foreign ores and for that reason command a lower price."

Preventable Defects in Fire Brick

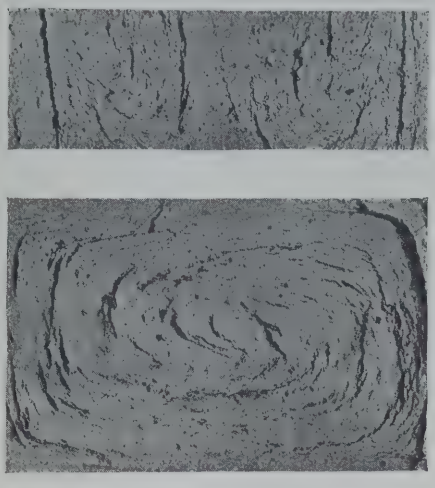
Lack of Uniformity of Product Has Much to do With Lining Failures—Irregularities in Bricks May be Detected by a Careful Visual Inspection and by Other Means

BY C. E. NESBITT AND M. L. BELL

REFRACTORIES are essential to the metallurgical industries because the output of iron, steel and kindred products is largely dependent on the life of the furnaces and ovens. Under stress of great demand the refractory manufacturers during the past few years were called upon to produce rapidly great quantities of brick under conditions which seriously interferred with the quality of the product. This was immediately reflected in decreased life of furnaces and loss of tonnage in various industries.

The life of the furnace, which may be expressed in terms of tons of material produced, number of heats, or weeks or years of service, is determined largely by the ability of the refractory used to resist numerous destructive agencies, such as temperature, slag, load and abrasion. In blast furnaces the refractory comes in direct contact with the charge and is destroyed largely from abrasion, slagging and softening. In open-hearth furnaces the silica refractory does not come in direct contact with the charge, but the roof, side walls and ports are destroyed chiefly by variations in temperature, slagging and abrasion due to particles of iron and lime carried by the moving gases. The slagging action due to material carried by gases is also a serious factor in the destruction of clay bricks used in soaking pits, reheating furnaces and air furnaces. The effects of abrasion and partial fusion of walls are shown in the illustrations of the walls of a soaking pit and a blast furnace, Figs. 4 and 5.

From a paper presented by C. E. Nesbitt and M. L. Bell at the Philadelphia meeting of the American Society for Testing Materials, June 24-27, 1919.



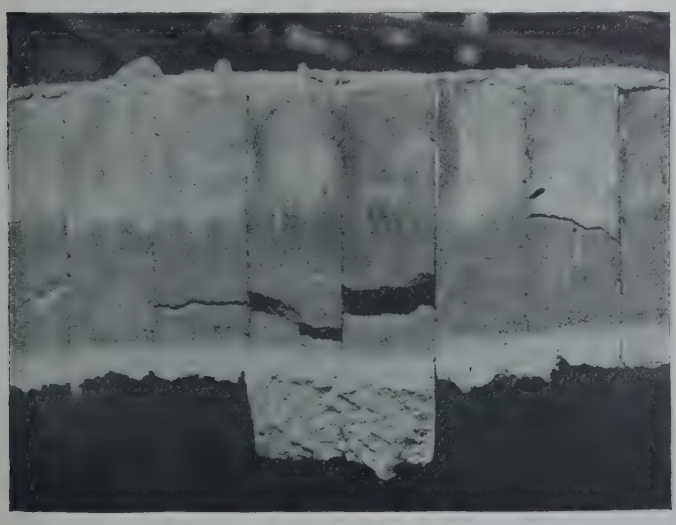


FIG. 2—LAMINATIONS IN AUGER-MADE CLAY BRICK

Bricks Are Weakened by Slag

The corrosive action of slag on refractories is recognized by all, but the fact that the strength of a brick is greatly reduced by penetration of slag is not generally known. In order to illustrate the point, four silica bricks were heated to 1350 degrees Cent. and a quantity of heating-furnace slag approximately analyzing silica 35 per cent, alumina 6 per cent and ferrous oxide 56 per cent, was placed on the surface. At intervals the bricks were turned and the slag placed on other surfaces until it had penetrated all portions of the brick. These bricks, together with four others similiarly heated but not treated with slag, were crushed on end separately while hot and the number of pounds necessary to fracture determined. The results obtained on the slag-free bricks averaged 1451 pounds per square inch, while the slag-penetrated bricks averaged 775 pounds per square inch or a reduction in strength of 46 per cent. The appearance of the treated bricks when removed from the crushing machine was in no way different from that of the original bricks, except for discoloration, so that the decrease in strength can be accounted for only by the action of the slag which had attacked and weakened the original bond.

In order to overcome this difficulty, a dense brick is advocated. It has been suggested that by proper sizing of the ground quartz, and by pressing instead of hand molding, a more dense brick can be secured, which is more resistant to slag penetration. Tests made for slag resistance on experimental power-pressed silica brick show approximately 25 per cent less penetration by heating furnace-

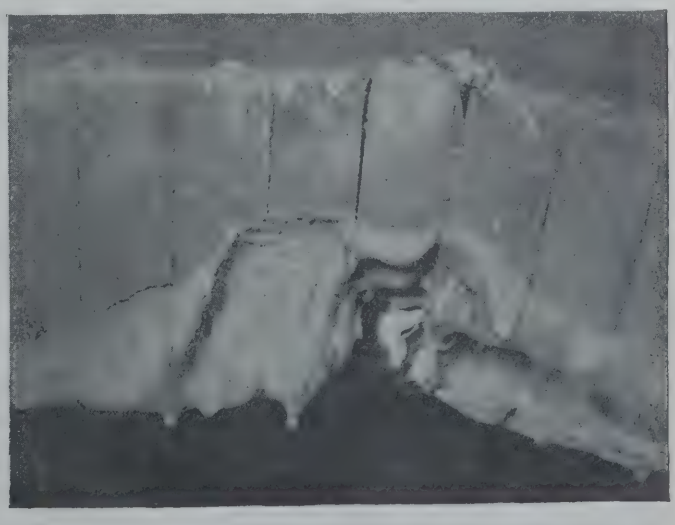

FIG. 1—ROOF FAILURES DUE TO SPALLING IN AN OPEN-HEARTH ROOF. FIG. 3—A MORE ADVANCED STAGE OF UNIT BRICK FAILURE CAUSED BY SPONGY OR CRACKED BRICK

FIG. 4—INTERIOR OF SOAKING PIT FURNACE SHOWING DETERIORATION OF WALLS BY ABRASION AND PARTIAL FUSION

slag than hand-molded brick. Silica brick shows a marked falling off of from 50 to 60 per cent in crushing strength when heated to 1350 degrees Cent. Hence, defects in molding, setting and burning become serious factors, as they lower the mechanical strength of the product which in itself becomes weaker by heat alone. Defects of this nature are illustrated in Fig. 7. In open-hearth furnace roofs, where the bricks must withstand considerable pressure due to the weight of the bricks in the long arch and expansion due to heat, a careful selection of bricks is necessary. A few defective bricks in a roof are liable to cause premature failure. Although actual crushing of the unit brick may not result, spalling or cracking will occur, so that a hole or pocket is formed and the adjoining bricks are thus more completely exposed to destructive agencies. Figs. 1 and 3 illustrate roof failures caused by spalling or cracked bricks.

Defects Caught by the Eye

Fully 80 per cent of the defective bricks received by the consumer can be detected by a careful visual examination. A group of 85 standard 9-inch silica bricks was subjected to visual inspection. Of this number 16 were judged to be of low strength because of visual defects, 18 were considered to be of medium strength, and the remainder were passed as being good. These bricks were then subjected to a hot crushing test. All bricks were crushed at 1350 degrees Cent., with the result that the average strength of the 16 defective bricks was 677 pounds per square inch, of the medium 861 pounds, and of the good bricks, 991 pounds.

The presence of fire or kiln cracks in roof bricks, however minute, is a real menace, especially if the crack

FIG. 5—WEAR AT TOP OF UPPER INWALL OF BLAST FURNACE DUE TO IMPACT AND ABRASION. FIG. 6—VARIATION IN RESISTANCE TO THERMAL CHANGE AS SHOWN BY SPALLING TEST OF SILICA BRICK RECEIVED IN SAME CAR. PERCENTAGE LOSS IS MARKED ON EACH BRICK. FIG. 7—DEFECTIVE SILICA SHAPES DUE TO IMPERFECT MOLDING, SETTING AND FIRE CRACKS

occurs near the center of the brick. Examples of failure of this nature can be found in nearly any open-hearth furnace roof of the present day. While this sort of defect is more common in silica brick, it may also occur in clay brick and cause the failure of arches as is shown in Fig. 8. It has been suggested that true specific gravity and porosity may be used to determine the quality of silica brick, but these tests only indicate the degree of burning. They are useful in determining the uniformity of burn of various shipments, but tell nothing regarding the actual mechanical strength of the bricks, particularly as regards the crushing strength at high temperatures. It is easy to prove that bricks which have the same true specific gravity do not have the same crushing strength or spalling value.

The importance of uniformity in refractories is not generally recognized. In a car of silica brick recently received, it was found that the quality of the roof bricks and the 9-inch straights were widely different. The roof bricks showed a true specific gravity of 2.39 with an average spalling loss of 17 per cent, but the individual losses varied from 9 to 24 per cent. The average hot crushing strength was 863 pounds per square inch. The 9-inch bricks showed a true specific gravity of 2.53 with an average spalling loss of 29 per cent, the individual results varying from 26 to 30 per cent. The hot crushing strength was 1268 pounds per square inch.

Bricks Are Not Uniform

In the case of some roof bricks received during one shipment, it was found that the straights had a hot crushing strength of 665 pounds per square inch, while the No. 1 wedge bricks failed at 1044 pounds per square inch. It is recognized that these two sizes might not have been made at the same time, but they were presumably of the same quality. In another case it was necessary to use bricks from two different makers in an open-hearth furnace roof. The tests showed the spalling loss was 30 per cent for one make as against 10 per cent for the other, though the hot crushing strengths for the two makes were about equal. Such differences in bricks made in the same district, of the same raw material and by approximately the same methods, should not exist. The nonuniformity in resistance of brick from the same shipment is illustrated in Fig. 6.

Roofs of 90-ton open-hearth furnaces, working under normal conditions with producer gas, should last for at least 200 heats. Tests for resistance to spalling made on bricks taken from such a furnace after 261 heats have shown an average spalling loss of 20 per cent. Another roof which made 221 heats showed a loss of 23 per cent. In a similiar roof, the average spalling loss was 47 per cent. Of two silica bricks found side by side in an arch leading to the regenerator chamber of a furnace, one was badly spalled, apparently due to thermal changes or crushing, and the other showed no trace of spalling or crushing. Both were of the same make and presumably made at approximately the same time. Subjected to a spalling test, the poorer of the two bricks showed a loss of 42 per cent against 27 per cent for the other brick.

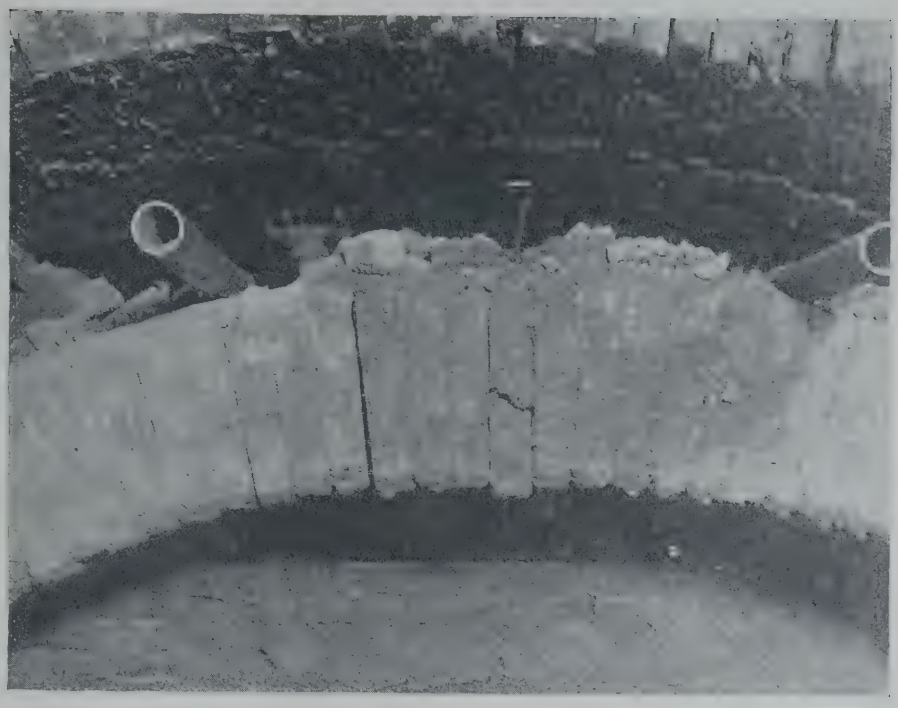

FIG. 8—SPALLING OF CLAY BRICK IN SOAKING PIT ARCH SHOWING UNIT BRICK FAILURE

In shipments of clay checker brick great variation in degree of burning was observed. Spalling tests were made on those of average burn which showed a loss of 14 per cent, while the hard blocks showed 60 per cent loss. Examples of nonuniform products are shown in Figs. 2 and 9.

Among users of refractories there is a growing demand for a product of uniform quality, especially with regard to defects which are preventable if the material is properly handled.

FIG. 9—VARIATION IN CLAY BRICK AS SHOWN BY SPALLING IN AIR FURNACE ROOF

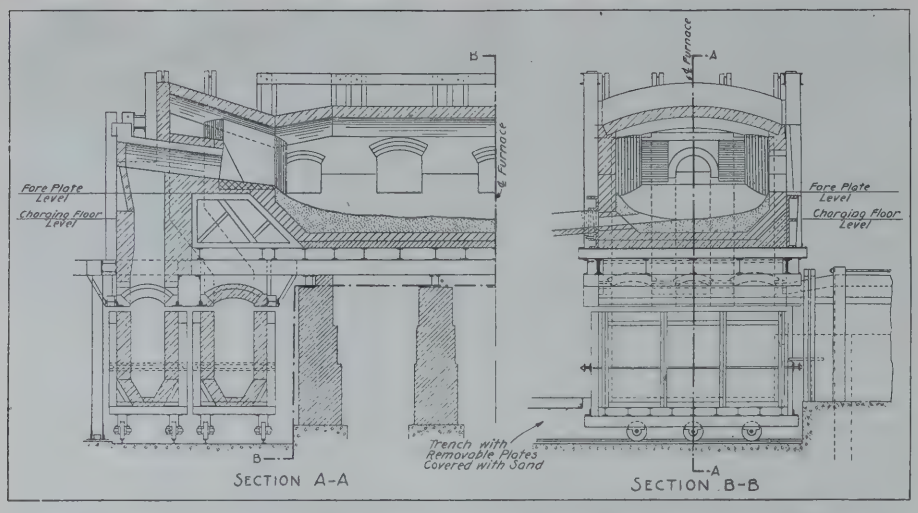

FIG. 1—INDESTRUCTIBLE PORT AND REMOVABLE SLAG POCKET FOR OPEN-HEARTH FURNACE

More attention to visual inspection will help remedy the situation. Users of bricks are quick to recognize that certain firms invariably deliver goods which on the whole are uniform in quality.

The buying of bricks on specifications has not been universally followed, and it is partly through the ignorance of the consumer in not understanding what he wants and why he should ask for certain qualities, that the quality of refractories is not always maintained at a higher level. In using refractories, the consumer assumes that the bricks he purchases will be of the same average quality as those he has formerly received. That this assumption is not always correct is unfortunate. The material from which bricks are made largely determines the heat-resisting qualities, but it is the method and care in manufacture which determines the uniformity and reliability of the finished product.

Japan is determined to become independent in its steel supply, and among the concerns already engaged in this industry, the Oriental Steel Co., which is incorporated for $25,000,000, began turning out its products in April. The works, which cover an area of 260 acres, are located at Tobata, one of the principal industrial centers of Japan, on the northern coast of Kyushu.

Valve and Port Minimize Operation Loss

To minimize the time lost in operation while making repairs and to make the furnace capable of greater continuous operation, the Blair Engineering Co., New York, has devised a combination of valve, port and slag pocket so designed that they may be easily inspected and repaired.

The Blair valve operates as a switch in the flue, similar to the switch in a railway track. To replace the old brick port, which is distorted rapidly from the effect of heat causing deterioration of the furnace structure and waste of fuel, a self-contained port, claimed to be relatively indestructible, has been introduced. A slag pocket entirely separate from the main furnace structure and independently supported, which may be quickly removed and readily replaced, it is said, during the burning out of the flues without causing loss of time in furnace operation, also has been designed.

With this installation, front and back walls are replaced without material delay and the roof, it is said, can be replaced in six hours while the flues are being burned out on Sunday. The ports require no repairs except shaping up the blocks with chrome ore. The slag pockets may be changed in a few hours on Sunday. Air chambers in the checkers ordinarily clog sooner than the gas chambers, therefore, when shutting down for burning out, the air slag pockets are removed and the bulkheads in both ends of the air chambers are knocked out. The checkers may then be replaced, entailing the loss of less than a day beyond the Sunday shutdown. The gas chambers may be repaired the same way during another week end.

By application of this port, which has been in use a decade, it is claimed that the furnace can be operated at greater speed due to the mixing chamber producing a higher temperature. Furthermore, it is claimed that this temperature may be increased to a point where the ordinary port of silica brick, whether water-cooled or not, would be destroyed. Since the port is longer lived than the furnace walls, the latter are used to their limit. The roof and side walls are replaced independently as the necessity arises.

The construction of the valve as shown in Fig. 2 makes impossible a leak of gas or air to the stack or between the gas and air. All parts are cool, exposed and always accessible, making it possible, to repair or replace parts without shutting off the gas. Reversing is accomplished so quickly that gas is back on the furnace without waste into the stack.

A single tube, of area equal to the combined area of the gas and air tubes, diverts the products of combustion to boiler or stack, when waste-heat boilers are used and provides a continuous, brick-lined flue from the furnace to the boiler with no exposure to water or a possibility for leakage. A tube 30 inches in diameter is used for burning out flues. It is operated by a hand winch and does away with the sand damper or inclosed valve commonly used. The slag pocket, as shown in Fig. 1, is a separate structure from the main furnace.

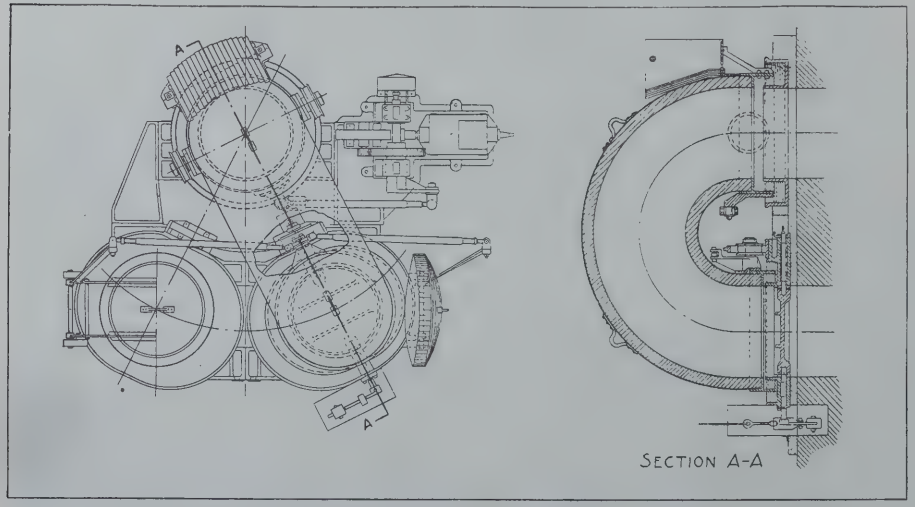

FIG. 2—GENERAL ARRANGEMENT OF THE OPEN-HEARTH REVERSING VALVE

Using Pyrometers in Steel Works

Modern Methods of Determining Temperatures in Forging and Heat-Treating Furnaces Give Results Superior to Those Obtained by Estimation—Pyrometers Are of Doubtful Value in Assisting Experienced Melters

BY A. H. MILLER

TEMPERATURE considerations are of prime importance in the manufacture of steel products from the time the metal is produced in the melting furnace, where the chemical reactions have a direct dependence on the temperatures of the bath, to the final machining of work on which the expansion due to the rise in temperature of the forgings during machining must be allowed for.

In the regulation of steel melting temperatures, open-hearth furnaces will be taken as presenting typical difficulties in temperature determination. If accurate methods of temperature determination can be evolved for use in the open-hearth furnace, the same methods will be as successful in the crucible or electric furnace process. Temperatures may be determined by means of optical pyrometers, thermocouples, or by arbitrary standards which possibly may employ either of the other two methods as an auxiliary.

Trials Are Made on Samples

Lack of black-body conditions is responsible for considerable inaccuracy in taking measurements by means of optical pyrometers, although this source of error may not be great enough to condemn the method. The fact that the steel itself cannot be observed is, however, of prime importance. Such data as has been obtained indicates that the slag covering of the bath may differ in temperature from the steel by as much as 200 degrees Fahr., and that the walls or roof of the furnace may show even a greater variation. Temperature determinations, by means of the optical pyrometer, may be made on small samples of the steel lifted from the furnace and poured with the optical pyrometer sighted on the stream. Having measured the elapsed time between taking metal from the bath and sighting the optical pyrometer, the tempertaure of the bath may be deduced by extrapolation. A series of such measurements should be taken in order to arrive at a close approximation of the temperature of the bath.

From a paper to be presented at the annual meeting of the American Institute of Mining and Metallurgical Engineers to be held at Chicago, Sept. 22-27, 1919.

Another method of obtaining similar measurements is to lift a spoon of metal from the bath and pour it immediately into a small test mold, readings being taken on the surface of the metal in this test mold at definite intervals of time until the surface of the metal freezes. Having taken time intervals with a stop watch simultaneously with the optical-pyrometer-readings a curve can be drawn which, extrapolated back to the time when the metal was removed from the bath, will give an approximation of the bath temperature. It is probable that these two methods arrive at as close an approximation to an accurate bath temperature as we may at present obtain.

Using Thermocouples

The use of the thermocouple in determining open-hearth furnace temperatures is attended by the difficulty of inserting the thermocouple to the point at which the temperature is desired. The best use for the thermocouple seems to be the secondary one of obtaining temperatures elsewhere than in the bath itself, and deducing temperatures of the bath from these. The method of placing the thermocouple in the slag pocket and at various points in the checkers and at the base of the stack has been tried, but because of variations in the furnace operation it is not believed that bath temperatures can be accurately deduced from data at these points, although useful knowledge as to the furnace working may be obtained.

The use of arbitrary standards has been widely employed. Metal may be poured from a test spoon into certain standard molds and the temperature of the bath deducted from the observing of this metal. This may be done by measuring the rise of temperature of a protected thermocouple inserted in the molten metal, by sighting an optical pyrometer on the surface of the metal in the test ingot or on the stream from the spoon while pouring, by measuring the length of time required for the surface of the metal in the test ingot to freeze, etc. All of these methods present numerous inaccuracies.

It is fortunate that in the melting and pouring of open-hearth steel certain natural phenomena give temperatures with great accuracy, that are a very close approximation to the desired temperatures. During the first part of the melting, while the first elimination of impurities is in progress, it is well to have the temperature as high as possible, with safety to the furnace. The melting point of the firebrick employed in the furnace roof is therefore a very close measure of the temperature to be attained. A skilled operator can, by observation, determine the point where the firebrick will glaze slightly but will not actually melt, and will run his furnace to this heat. In teeming a heat, on the other hand, correct temperatures of pouring may be accurately regulated by the appearance of the film or crust that forms on the surface of the metal rising in its molds. The appearance of this film is quite characteristic and, with practice, the temperature, or rather, the fact that the metal is at, above, or below the correct temperature, may be very accurately stated. It may also be regulated at this point, to a certain extent, by varying the rapidity of pouring, according to the appearance of the metal rising in the mold. By careful observation of such natural phenomena, temperature differences may be estimated to within 10 to 20 degrees Fahr.

Determining Forging Temperatures

In the determination of forging temperatures, optical pyrometers or thermocouples are used. If the thermocouple is used, either a platinum-rhodium or a nickel-chrome alloy couple is valuable. It is quite difficult to regulate accurately the temperature of the pieces to be forged, because the hot gases and flame in the furnace affect the couple much more rapidly than they do the piece. For reasons of economy and because of the size of ingots in heavy work, this difference is of much greater importance than it is in heat-treatment work. Iron-constantan couples have been successfully used, but the life of this couple at forging temperatures is very short and the accuracy of the couple is lower than at temperatures to which it is better fitted.

The optical pyrometer seems to be a good type for measuring forging

temperatures. With some of the later improved types, temperatures can be determined with a very fair degree of accuracy, probably within 25 degrees Fahr., in ordinary works practice. To reach this accuracy, the operator must have had a certain amount of experience (2 weeks is ample for a man of average intelligence) and must sight his instrument on parts of the forging that will give an approach to black-body conditions. He must avoid the influences that cause inaccuracies in his readings; such as a flame playing so that it is reflected directly from the piece to his instrument or the presence of smoke in the furnace. This is not difficult in a good forge furnace.

Pyrometers for Heat Treatment

The forging temperatures of various grades of steel differ quite widely. A skilled heater can, by observation, regulate his forging temperatures fairly well. He cannot, however, reach the uniformity and accuracy that may be attained by the use of the optical pyrometer.

The temperatures involved in the heat treatment of steel objects must be very accurately determined and uniformly followed. This temperature is within the range that is difficult to estimate by the eye and at the same time it must be most accurately followed. Most of the higher grades of steel require treatments that involve a quench; most of the alloy steels require a preliminary treatment before the final quench is given and also require a drawing treatment after the quench. With the preliminary treatment, which is ordinarily at a temperature in the neighborhood of 1550 to 1650 degrees Fahr., the limits of accuracy are not so close as they must be in the final quench, which for the purpose of obtaining the best possible grain refinement must be above the critical temperature but as close to it as is possible. The temperature of the draw, also, must be quite accurately approximated, especially if the results desired are to obtain the maximum degree of softness. The general tendency has been to rely entirely on the thermocouples for this work, at least for temperatures above 90 degrees Fahr. For lower temperatures, if the pieces are small enough to be treated in a bath of oil or melted salts, a direct reading gas or vapor expansion thermometer is simple, accurate, and gives but little trouble.

The true optical pyrometer is adapted to works use because imperfection of black-body condition or smoky conditions do not affect its readings seriously. The Morse or Wanner types of optical pyrometers are reliable, and particular care must be exercised to select an instrument of the simplest and most rugged construction possible.

In steel works practice, where the work is generally large, almost all the couples are at least 4 feet long and the majority are from 5 to 7 feet, in some they are as long as 17 feet. The practice with platinum-platinum-rhodium couples therefore involves the recalibration of the couple after each failure of the silica or porcelain tube; and couples over 5 feet long must be recalibrated after every heat. Although this recalibration became a quite simple matter, the work is considerable and the contamination of the couples and consequent breakage made their operation very expensive. The calibration is performed by taking a check temperature at the gold melting point, using a small electric furnace and the wire method.

Use of Base-Metal Couples

With the advent of base-metal couples, of which the iron-constantan couple or the nickel-chrome type seem to be the most popular, the use of long platinum couples is eliminated. In using base-metal couples, however, certain precautions must be taken. All couples, and particularly base-metal couples, are subject to errors due to parasite currents induced by heterogeneity in the wire of which the couple is made. This lack of uniformity is almost invariably set up at a point between the hot and cold junctions of the couple somewhere in the furnace wall, due to the conditions of strain set up at this point. Once established this condition is almost impossible to eliminate. However, while these parasite currents exist in practically all couples that have seen long service, the error involved is small enough to be negligible if the position of this strained portion is unchanged or if it is continually advanced from a lower to a higher temperature. In practice, this means that the accuracy of the couple is unchanged as long as the couple remains immersed to the same depth in its furnace, or as long as it is advanced deeper and deeper into its furnace. Errors, however, are often caused if the couple is partly withdrawn from its furnace. Because of this fact, if couples are removed from their working position and checked in a laboratory, the checking often shows an error whereas the couple in its working position was actually giving accurate readings. If careful attention is given to these provisions and to the electrical insulation of the couple, an iron-constantan couple will give constant readings to the approximation of 10 degrees Fahr. until it is completely worn out by oxidation or other causes.

For any approach to accuracy on the part of any type of thermocouple, cold-junction temperatures must be allowed for and corrected, or controlled. Control may be by means of an ice bath or other method of keeping the cold junction at a uniform temperature. One of the more simple and widely used methods is to place the cold junction underground to a depth at which the temperature is assumed to be uniform. This method is quite desirable, but for the highest degree of accuracy is inadequate. Temperatures even 5 feet underground may vary considerably with the season of the year and with the previous working of the furnace. An excellent method of taking care of this cold-junction correction is to employ lead wires of the same composition as the couple wires, which virtually lengthens the couple to the combined length of couple and leads, bringing the resulting cold junction to the measuring instrument.

The measuring instrument is likely to be at a point where temperatures are more nearly uniform and where the cold junction can be more readily measured and cared for. There is the added advantage that, where a number of couples are being read on one instrument, the correction for these couples will be identical. A number of measuring instruments at present on the market take care of this correction, either automatically or by means of a simple adjustment on the instrument, with highly satisfactory results.

Calibration and Checking

All temperature-measuring apparatus must be frequently checked for accuracy in works practice. In a large installation, it is well to have a primary temperature standard that is used only under the best laboratory conditions to check one or more secondary standards. This primary standard may consist of a platinum-platinum-rhodium thermocouple with an ice-bath regulation of the cold junction, the electromotive force being measured by an accurate potentiometer. This primary standard should have its calibration made by reference to well-determined fixed points. The melting point of gold and the freezing point of lead are convenient and well-determined points. The secondary standards may be either platinum-platinum-rhodium or base-metal thermocouples and may be carried from point to point of the installation to check the actual working couples under working conditions.

Optical pyrometers should be checked from time to time using a standard couple preferably in an electric furnace

Wood Patterns Made in a Factory

How a Shop Was Organized for the Quantity Production of Wood Patterns for a National Market—Labor Difficulties are Reduced and Production Costs Are Favorable

THE tendency in industry during the past decade has been decidedly toward the specialization of individual parts and processes. Large factories have been built to produce but one definite article on the theory that specialization increases quality and decreases manufacturing expense. Diversified plants have in many cases been forced to reduce the scope of their production for they have found they could buy certain auxiliary parts required in the construction of their apparatus more cheaply than they could make them in their own works.

One line of auxiliary equipment, however, has proved a marked exception to this tendency toward specialization. The making of wood patterns for metal castings has seemed so intimately a part of the foundry business that even today the thought of a wood pattern factory operating on a large scale and doing business over a wide area is decidedly unusual.

But the Johnston Pattern Co., Canton, O., has established such a factory and because of its unique field and its method of shipping patterns by express to nearly all parts of the country, it is interesting to examine this plant in some detail. H. P. Johnston—the originator of the plan—is a practical foundryman and patternmaker. For many years he watched the making of patterns in more or less indifferently equipped corners of foundries until one day a few years ago it occurred to him that patterns might be made satisfactorily and cheaply in a factory designed explicity for that purpose. On top of this idea came the question of where a market for such patterns could be found. Now patterns are light and easily shipped, so to Mr. Johnstons' inquiring mind the whole nation loomed up as the possible market for his proposed pattern factory.

Definite Cost Estimates

Faith in this national market brought the Canton factory into being. The original establishment, started only a few years ago, has undergone many changes and is today representative of factories producing more standard articles. The plant consists of two large rooms and an office. The office itself is modern and suggests business and system. All orders for patterns together with the blueprints and other data pertaining to each order are filed where they are accessible at all times so that in case of a repeat order only the pattern number is required. The data available in this file are also of decided advantage in estimating on new work, for the estimator has in mind in a general way the work which has gone through the factory and when a new job comes up for a quotation he refers to the file for some work of a similar nature which has already been done. From the records of that work he gets the actual cost of its production as a check on his new estimate.

One of the two main rooms is used for the pattern shop proper—here are located the woodworking machines, the work benches, cabinets of tools, shelves of screws, nails and special fittings and all other supplies necessary for patternmaking, except the lumber and the shellac materials. This shop is well lighted and the arrangement of machines and benches has been given a good deal of study. The routing of the work has been kept in mind and the machines have been placed as far as possible so that successive operations are accomplished on consecutive tools.

Departing from the practice in many pattern shops, this room is kept scrupulously clean. The lathes, band saws and other motor-driven tools are all painted a light, clean color and shavings are not allowed to accumulate anywhere. Running hot and cold water is convenient for the employes and a time clock at the entrance adds a note of efficiency to the place. "The big feature about all this neatness is that it pays," said Mr. Johnston. "Men do not waste time going around

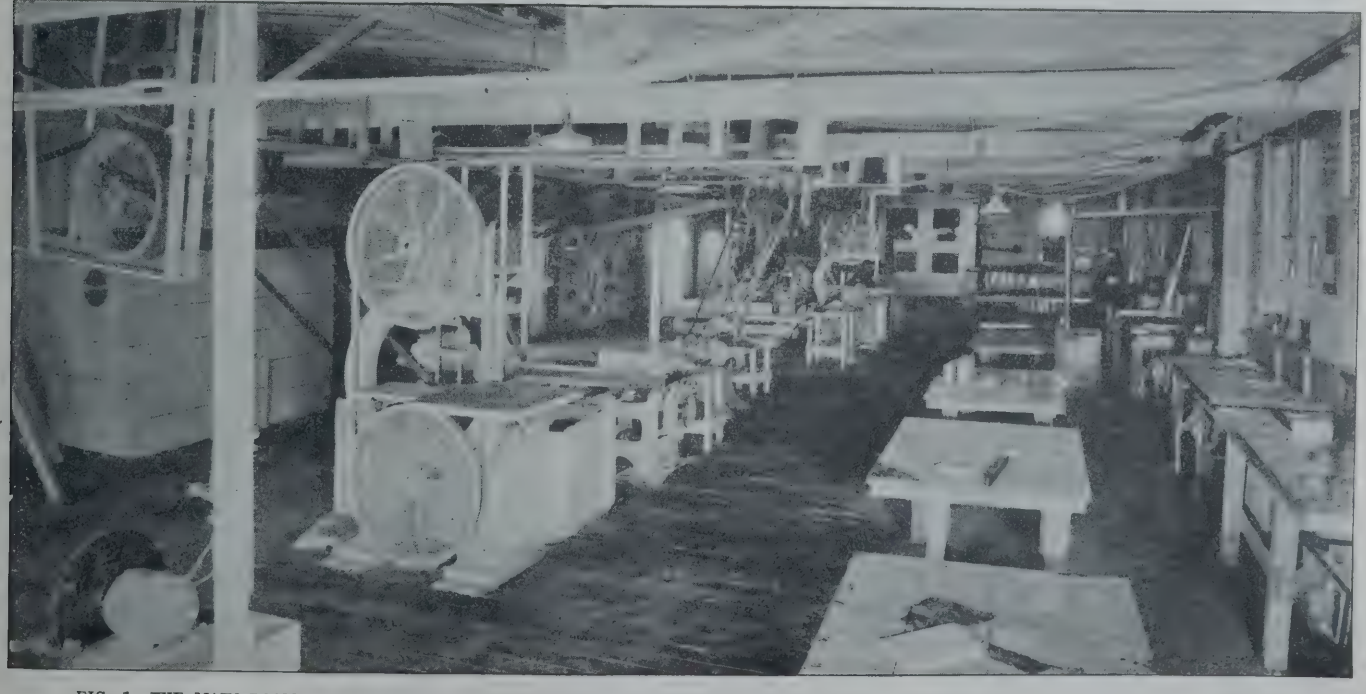

FIG. 1—THE MAIN ROOM. THE WOODWORKING MACHINES ARE ARRANGED IN TWO SIMILAR GROUPS TO AID IN ROUTING THE WORK

things which should not be in the way and the neat atmosphere induces neat work."

The other main room is used for lumber storage, for the shellacing and painting departments and for the shipping department. The lumber or wood stock is of two kinds—white pine and mahogany. It is very important in building patterns to exact sizes to use perfectly dry stock, for even a slight warping may make a casting useless.

Working to Close Dimensions

The Johnston factory claims to work to a sixty-fourth of an inch quite frequently, but it is not practical to attempt anything beyond that with wood patterns on account of the limitations of the wood itself. For all close work mahogany is used and often it is necessary to use small sections glued together with the grains of alternate sections at right angles, in order to still further reduce the tendency to warp.

It is easy to follow the progress of a pattern through the plant from the receipt of the order to the attaching of the shipping tag. The orders are received at the office where they are recorded. A work order is then made out and fastened to the blue print with whatever other information is necessary and this is then given to the foreman. The foreman must be familiar with foundry work and with the molder's trade for it is up to him to decide just how the casting is to be made and to design his pattern accordingly. The customer's wishes and recommendations in this connection are of course always borne in mind.

FIG. 3 — BAND SAWS ARE INVALUABLE FOR CURVED-LINE WORK. THEIR USE IN ROUGHING-OUT OPERATIONS OFTEN SAVES TIME AT THE LATHES

To one not familiar with pattern-making it is surprising to learn how much designing is necessary after the outside dimensions of the completed casting are all laid out. First there is the shrinkage during casting to consider and allow for, then comes the question of how the mold is to be divided between the cope and the drag. If at all possible patterns must have a straight draft. This determines the position the pattern takes in the mold and determines also whether it is to be split or solid. The next thing to consider is "Will it work?"—that is will the metal flow to all parts—will the shrinkage during casting cause the metal to crack, etc.? Difficulties of this nature are usually up to the foundryman but modifications of design are sometimes necessary in the pattern factory in order to make the casting possible. The last thing the foreman does is to design the pattern itself, that is, to determine what wood is to be used, how, in general, the pieces are to go together, and, if it is a large piece, what interior bracing is necessary.

Subdivision of Labor

The foreman after indicating his directions on the blueprint turns the matter over to a patternmaker, using some judgment as to the selection of different men for the different classes of work. The patternmaker lays out in full size scale, the work which comes to him, using a special rule which automatically corrects for shrinkage—he uses one scale for cast steel, another for brass, etc.—and then he submits his drawings to a lower priced man who gets the wood and roughs it out into the approximate sizes required. These roughed-out pieces are then finished and built into the desired pattern by a patternmaker (usually the same one who laid out the full sized drawings).

All work possible is done on machines, for which purpose there are motor-driven lathes, planers, circular and band saws, sanders, etc. But there is always hand work necessary and in the last analysis each job is an

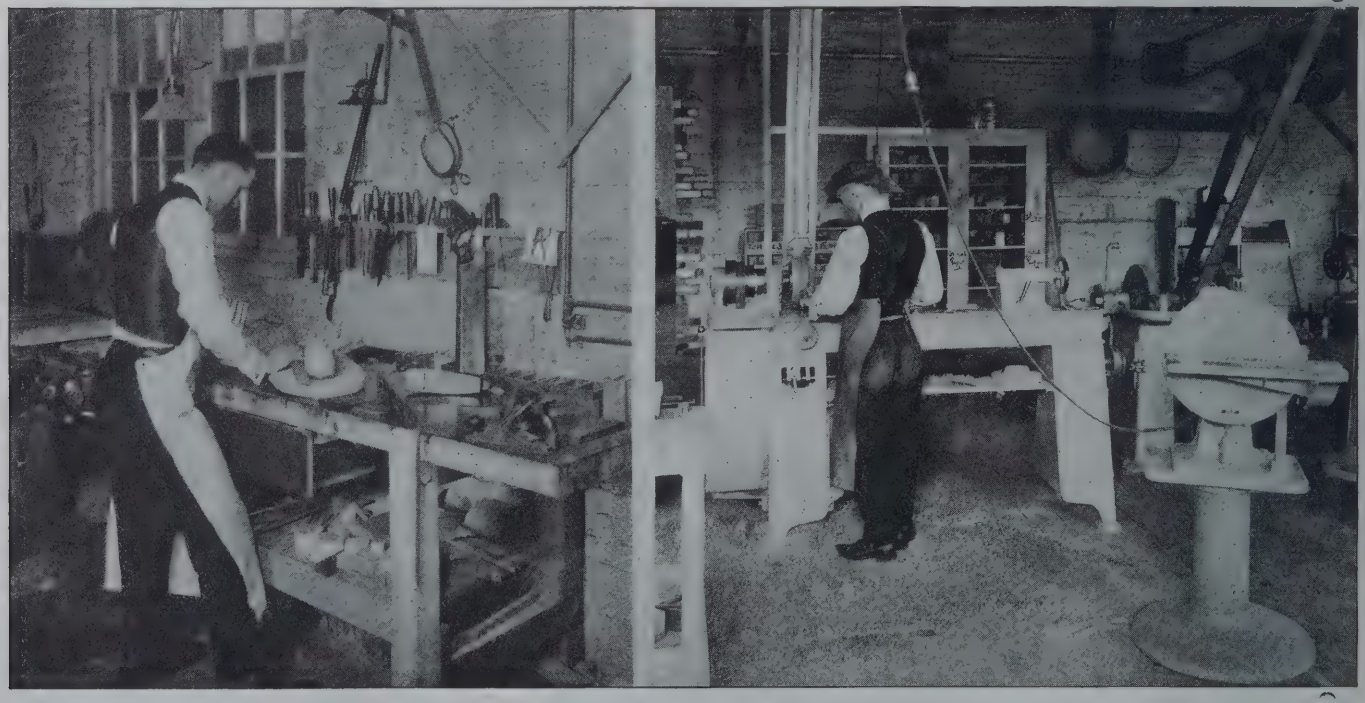

FIG. 2—DIMENSIONS OF SMALL PATTERNS ARE CHECKED AT THE WORK BENCHES. FIG. 4—MUCH OF THE PATTERN WORK IS DONE ON THE LATHES, FOR WHICH PURPOSE MODERN MOTOR-DRIVEN TOOLS ARE PROVIDED. A PORTABLE SANDING MACHINE IS SHOWN AT THE RIGHT

individual one and requires individual attention.

It is the aim to take all routine work away from the patternmakers and thus to increase their productive labor. After the pieces have been glued and constructed according to the drawings they pass to a man whose business it is to round the corners, and place fillets and dowel pins and in some cases iron rapping plates, and then to pass the retouched patterns on to the shellac department.

After receiving the first coat of shellac the pieces are dried and then sandpapered and again shellaced. This gives a hard, moisture proof surface which is important in a good pattern. The cored parts are painted black. Raised metal letters and numbers are fastened to each pattern to give the description necessary for identification. This usually includes the date of completion and the shop order number.

Everything is Checked Up

After each pattern has been completed and before it is crated for shipping it is given a final inspection. The dimensions are checked, the general rigidity is tested and the name of the consignee is verified. The preparation for shipping consists usually of simply furnishing good sturdy crating, but often in the case of small pieces, boxes or kegs are used with shavings stuffed around the patterns for protection.

All the way through the shop process, each pattern carries its individual work-order number to which all time and material in connection with its production are charged. Where the work has been accepted on a time-material basis, the charge is determined in this way and where the work is on a fixed sum agreement these charges furnish invaluable records for future estimating.

In a specialized plant of this sort, the labor problems are greatly simplified. The men are all engaged on the same class of work and any possibility of friction between different crafts is avoided.

Alloy Steel Process

A new process for making alloy steel was recently patented by Alan Kissock, Tucson, Ariz. The inventor points out that in the manufacture of alloy steel the usual practice is to add the alloying element, such as tungsten, chromium, molybdenum, vanadium, etc., to the steel while it is in a fused state. This material, which is added in an elemental form, or in the form of a high-grade alloy, usually consists of some ferrous alloy.

Attention is drawn to the fact that this procedure involves a preliminary step. In order to obtain the alloying material, reduction of the ores or salts of these elements to the metallic form is usually carried out in an electric or other suitable furnace.

The oxides of certain elements, which are members of the fifth and sixth groups of the periodic system such as molybdenum, tungsten, chromium and vanadium, each combine with the oxides of certain other elements, of which calcium oxide is an example, to form a salt of the general type known as molybdate, tungstate, vanadate, etc., of calcium or other such elements. In the case of the particular elements just enumerated, these salts would be of the general forms $CaOMoO_3$, $CaOWO_3$ and $CaOV_2O_5$.

In the process under consideration, the inventor employs the salts of calcium of the respective metals, either molybdenum, vanadium or tungsten, as the constituent element of the salt which reduces to produce the alloying material for the steel. It is pointed out that these salts of calcium can be produced from the ores of these elements without the use of a furnace and that often the salts are produced in the ore-reduction process. The inventor states that the ferro state of these elements may be obtained by furnace reduction of their calcium salts which have, in turn, been produced from the ores.

The inventor sets forth that his process obviates the preliminary reduction of the ores or salts of the desired alloying elements to the metallic state and provides for introducing the alloying material directly from the salt of the metal into the steel. Thus, instead of reducing the ores of the elements to the metallic state in an outside furnace and then introducing the alloying element into the molten steel, the calcium salt is added directly into the steel melting furnace.

The carbon content of the steel and its bath reduces the calcium salt of the alloying element, the element so reduced alloying directly with the steel. If desired, other carbon may be added to, or substituted for, the carbon content of the steel and its bath. The calcium oxide which is a constituent of the salt fixes the metallic alloy element and prevents its volatilization which avoids loss and presents the element capable of alloying directly with the steel in the melting process. It is stated that some other reducing agent aside from carbon, such as silicon, which may also be a previous alloy of the steel, may be employed in the melting furnace.

The inventor claims that the process does away with the outside reduction of the ores or salts of the elements, thereby saving time and labor cost, and also that substantial furnace losses of these comparatively expensive elements are likewise avoided.

Production is Growing

The National Federation of Iron and Steel Manufacturers, which came into existence during the war, is closely observing the relative positions of the principal steelmaking countries. A memorandum has just been published on "The World's Output of Iron and Steel in 1918," and this also gives the output of iron and steel in the United Kingdom during the first four months of 1919.

The general survey from 1900 to 1918 shows how poorly the United Kingdom compares with other steel-producing countries. British pig-iron production advanced from 8,960,000 tons in 1900 to 9,066,000 in 1918. During that period the output exceeded 10,000,000 on but four occasions. In the United States, in the same period, pig-iron production increased from 13,789,000 to 39,052,000 tons, while in Germany the 1900 production of 8,521,000 metric tons increased to 19,292,000 tons in 1913, dropping to 13,000,000 tons in 1917. In France the 1900 output of 2,714,000 steadily increased to 5,207,000 tons in 1913, but has averaged only 1,500,000 during the past three years.

Steel production has increased in even larger proportions. The figures for the United Kingdom, United States, Germany and France in 1900 were 4,901,000 tons, 10,188,000, 6,646,000 and 1,565,000, respectively, increasing to 7,664,000 tons, 31,301,000, 18,959,000, and 4,687,000 respectively in 1913. Production increased in the United Kingdom to 9,591,000, and to 4,073,000 in the United States in 1918, while in Germany and France the 1913 yields were decreased to 14,874,000 and 1,912,000 tons, respectively, in 1918.

The weekly output of pig iron in the United Kingdom during March, 1919, amounted to 156,000 tons, while in the United States it amounted to 3,068,000 tons.

are purchased with a calibration from the manufacturer, it is well to check this calibration to see that it corresponds to the works standard. If the base-metal couples are purchased or manufactured as wire, and are to be calibrated, the following method of procedure is simple and accurate. A sample should be cut from each end of each coil of wire as received, one of these samples selected at random, and each of the other samples of similar wire joined in turn to it and the electromotive force generated at approximately 1600 degrees noted. This electromotive force will be zero if the wire is uniform. Having checked the wire for uniformity, several sample thermocouples should be made up and are carefully calibrated, using one of the secondary standards in this calibration. A calibration curve may be drawn from the data thus obtained. One or more of these calibrated base-metal couples, properly protected, should be inserted in a pot of molten lead and all sample couples made from the coils to be calibrated inserted in the same pot and checked direct against the calibrated couples. It will be found that certain of the coils vary from the calibration curve already made. An arbitrary allowable variation from this curve may be selected, and all samples that vary from the standard by more than this arbitrary amount are discarded. In making such a calibration for a lot of base-metal couples, it is well to have this lot as large as possible, as it is an extremely difficult matter to reproduce results with any great degree of satisfaction.

The instruments used in determining the electromotive force of the working thermocouples should be frequently checked, even though they may be well cared for and of the most accurate type, not only because even the best of instruments are liable to go wrong but because of the moral effect such checking has on the workmen. This frequent checking of instrument and couples may seem to be troublesome and in some cases superfluous. In a large installation it will, however, pay well to have one or more men whose sole duty it is to perform such checks, and the accuracy of the resulting work and the confidence inspired by such careful checking will repay all the effort involved.

Keeping Coke, Iron and Steel Records

BY CLIFFORD E. LYNN

COAL which is charged into coke ovens is carried from the oven-storage bins by a larry to the ovens. In some instances a scale is attached to the larry and the operator weighs and records the charge before it is dumped. In others, a weigher is stationed on the floor leading to the coal chute, and the coal, placed on the floor scales at intervals, is weighed and recorded by him. After the coke is screened, it is loaded into cars and weighed and recorded by the general-track or yard-scale weigher, who usually bills it to destination. All stock inventories are kept by the production clerk, who computes production, orders switching of cars, and keeps a record of repairs, construction and time, for the superintendent.

When ore, coke, limestone, refractories or any other raw stock is received at a blast furnace a record showing the amount, kind and invoiced weight is made by the production clerk. Before the charge enters on the skip it is weighed and recorded by the larryman and posted on a daily production sheet by the production clerk, who also secures a record of furnace operations, analysis, repairs, etc., from the foreman, and a report showing the number of ladles to a cast, weight, analysis, skimmings, slag, etc., from the hot-metal weigher. If the iron is cast into pigs the casting-machine foreman will report the quantity and weight and description of that produced daily.

The production clerk issues orders for switching cars to the blast furnaces and usually makes out a report as to the number of cubic feet of air blown and other information for the superintendent. He deducts the amount of charges from amount of stock received to show the balance on hand and deducts shipment figures from production figures to show the amount of finished stock on hand. The hot-metal weigher makes out a report of hot metal shipped. If ore is shipped to any other plant he attends to the billing out.

The clerical organization of an open-hearth department consists of the senior and junior clerk, two furnace and floor recorders, two stock weighers, two ingot weighers and two steel chasers or ingot shippers who work alternately on day and night shifts, usually spending 24 hours in service each alternate Sunday when shifts are changed.

Duties of the Senior Clerk

It is the duty of the senior clerk to handle all repair records; chase spares; make out daily reports of raw stock received and used, ingots produced and shipped, showing amount of stock on hand daily; also to handle open-hearth orders, foreign shipments of ingots, correspondence, analyses and any other records of interest to the superintendent. He has charge of all weighers and recorders aand audits their daily production reports. He is assisted by the junior clerk who serves as an extra weigher and recorder, orders switching of cars, takes stock, etc.

The stock weigher secures from the melting foreman a schedule of heats to be tapped and the amount of scrap, limestone and ore to charged into each furnace. He passes this information to the stockhouse foreman who loads the scrap in charging pans or boxes and places them on trucks which are numbered. As these trucks pass over the scales they are weighed. Truck number, description of contents and weight are then written on a charging report. In some systems the weigher accompanies his charge to the furnace floor and directs the charging-machine operator to charge the scrap into the right furnace. He then weighs the buggies empty, or estimates the amount of scrap left, returns the pans to the stock yard after the charge has been made and deducts the same from the heat.

Copies of all charging reports are sent to the floor recorder, melter and first helper of the furnaces receiving the charges.

The ingot weigher weighs all ingots and makes a report showing the amount, size, description, analysis and weight of each heat. He also reports stickers, butts, ingots banked, ingot and mold numbers, and attends to the ordering and painting of heat numbers on the molds.

The steel chaser or ingot shipper records the number of molds poured, pouring conditions and ladle test of each heat poured. He also prepares from the weigher's production report a report of ingots shipped, which he gives to the blooming-mill pit recorder as each heat arrives at the blooming mill. The floor recorder orders all hot metal for heats and keeps a record showing the time of charging,

tapping, melting and pouring, and additional charges made in the furnace or ladle. He obtains this data from the melters and first helpers. He secures a record of pit scrap and loss report from the pit foreman, keeps the stocker and stock weigher posted relative to furnace charges, computes production, yield, loss and gain, and makes up a daily production report from weighers' and foremen's reports. In some instances the stock weigher fills the duties of floor recorder in addition to his usual work, and the ingot weigher handles the duties of steel chaser. The latter system is adaptable to a plant of nine furnaces or less, as it reduces labor costs and keeps the weigher busy.

Local Committees

For Foundry Convention at Philadelphia—Special Entertainment

The convention and exhibition of the American Foundrymen's association at Philadelphia will easily exceed in size and importance any previous affair in the history of the association. A glance at exhibition figures of previous meetings shows that in 1916 at Cleveland 38,000 square feet of space were occupied by the exhibits, in 1917 at Boston, 44,000 square feet and in 1918 at Milwaukee, 42,000 square feet. As early as Aug. 10, 1919 the huge total of 60,000 square feet had already been reserved by exhibitors for this year's big show at Philadelphia.

Special entertainment features also are being arranged by the local committees with the aim of making the social features of the convention unusually attractive. Thomas Devlin, the veteran president of the Philadelphia Foundrymen's association, is chairman, *ex officio* of all committees, and Howard Evans of the J. W. Paxson Co., Philadelphia, is general secretary.

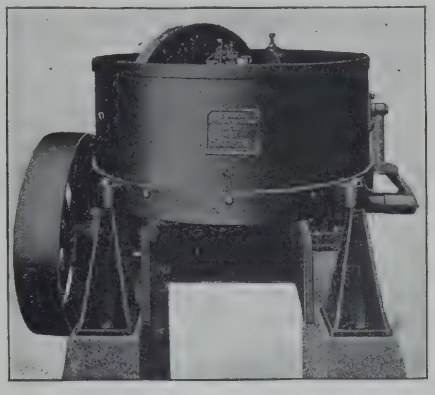
The members of the various local committees are as follows:

Clearing House Committee

Howard M. Bougher, Chairman, J. W. Paxson Co.
Charles W. Asbury, Enterprise Mfg. Co.
H. J. Bannister, George Oldham & Son.
G. H. Clamer, Ajax Metal Co.
Stanley G. Flagg III, Stanley G. Flagg & Co.
D. P. Hopkins, U. S. Cast Iron Pipe & Foundry Co.
W. J. Johnson, Baldwin Locomotive Works.
George C. Matlack, William Cramp & Sons Ship & Engine Bldg. Co.
Staunton B. Peck, Link Belt Co.
Charles Suess, Westinghouse Elec. & Mfg. Co.
Walter Wood, R. D. Wood & Co.
Thomas Kaveny, Herman Pneumatic Machine Co.
Frank Hodson, Elec. Furnace Construction Co.
Silas M. Tomlinson, Frank Samuel.

The chairman of each of the following committees is also a member of this committee.
Howard M. Bougher, chairman, J. W. Paxson Co.

Information Committee



George F. Pettinos, chairman.
Cyrus Borgner, Cyrus Borgner Vo.
W. T. Dunning, Chester Steel Casting Co.
H. A. Ross, Ross-Tacony Crucible Steel Co.
Joseph E. Stutz, Thomas Devlin Mfg. Co.
R. C. Thum, Tetna Foundry Co.
W. G. Summers, Phoenix Iron Co.
W. J. Coane, Ajax Metal Co.
J. C. Childs, Austin Co.
J. H. Schwacke, William Sellers & Co.
T. C. Voorhees, Hickman, Williams & Co.

Reception and Hotel Committee

Hon. W. C. Sproul, governor state of Pennsylvania, honorary chairman.
Hon. Charles M. Schwab, vice chairman, Bethlehem Steel Co.
H. W. Brown, acting chairman, Tabor Mfg. Co.
G. H. Clamer, Ajax Metal Co.
George C. Davis, Chemist.
E. S. Dailey, William Adams Foundry Co.
Edwin Elliot, Midvale Steel & Ordnance Co.
J. S. Hibbs, J. W. Paxson Co.
W. S. Quigley, Quigley Furnace Specialty Co.
W. H. Ridgway, C. Ridgway & Sons Co.
W. J. Shennan, Foundry Dept. Bethlehem Steel Co
E. M. Taggert, J. W. Paxson Co.
C. H. Wollaston, Lobdell Car Wheel Co.

Visitation of Plants

George C. Davies, chairman, Pilling & Crane Co.
S. J. Croswell, S. J. Croswell Iron Works Co.
H. E. Mandell, W. W. Lindsay & Co.
S. W. Mitchell, Philadelphia Roll & Machine Co.
Walter T. MacDonald, Fletcher Works, Inc.
C. H. Newcomb, Crocker Brothers.

SAND MIXER WITH 3-FOOT SPAN

F. J. Ryan, American Metallurgical Co.
George Somermalder, Westinghouse Elec. & Mfg. Co
H. B. Taylor, George F. Pettinos.
S. R. Vandebeck, Whiting Foundry Equipment Co.
E. J. Decker, Paul S. Reeves & Son.
Thomas Holt, Camden Foundry Co.
George Fox, Philadelphia Sash Weight Works.
F. E. Schwarze, Cleveland Pneumatic Tool Co.
A. G. Hauck, Philadelphia Fire Brick Co.
A. F. Kempe, W. J. Rainey, Coal and Coke.

Publicity Committee

C. R. Spare, Chairman, American Manganese Bronze Co.
H. A. Bomberger, Verilite Metals Co.
T. Harold Brown, E. E. Brown & Co.
J. W. Graham, Kilton Co.
Charles E. Pettinos, 802 Abbott building.
A. G. Warren, J. W. Paxson Co.
E. Arthur Bernstein, Bernstein Mfg. Co.
Charles E. McEvoy, H. A. May Foundry Co.
George M. Benkert, Fairmount Foundry Co.
H. W. Gledhill, Shepard Elec. Crane & Hoist Co.
H. L. Henszey, Carborundum Co.
H. J. Winters, T. P. Kelley & Co.
H. L. Haldeman, Pulaski Iron Works
W. E. Wallace, Matlack Coal & Iron Corp.
M. R. Taggart, J. W. Paxson Co.

Finance Committee

C. P. Pond, chairman, David Lupton Sons Co.
C. T. Bird, Pangborn Corp.
Thomas M. Eynon, Eynon-Evans Co.
J. H. Golding, Autocar Co.
W. W. Hearne, Mathew-Addy Co.
W. S. Hollowell, Harrison Safety Boiler Works.
Charles E. Muend, Haines, Jones & Cadbury Co.
J. Harry Mull, William Cramp & Sons Ship & Engine Bldg. Co.
J. T. King, Harbison & Walker Refract. Corp.
E. H. Redmond, Fairmount Foundry Co.
James S. Stirling, Hilles Jones Co.
George R. Sullivan, Rogers, Brown & Co.
Josiah Thompson, J. Thompson & Co.
C. K. West, General Electric Co.
W. J. Davis, McHatton Foundry Co.
S. E. Hadley, W. W. Sly Mfg. Co.

Entertainment Committee

Frank Krug, chairman, White & Brother.
R. R. Belleville, Dixon Crucible Co.
C. D. Matthews, Camden Iron Works.
A. J. Myer, Abram Cox Stove Co.
F. J. Ryan, American Metallurgical Corp.
J. H. Sheeler, Sheeler-Hemsher Co.
C. M. Trivett, P. Isham.
Frank Overn, Federal Steel Foundry Co.
S. J. Beck, Supt. Foundry, Pusey & Jones Co.

Golf Committee

Otto W. Schaum, chairman, Fletcher Works.
Howard Evans, J. W. Paxson Co.
J. R. Neilson, Ajax Metal Co.
L. U. Park, Park & Williams.
C. B. White, White & Bro.
H. F. Rebmann, American Engineering Co.

Loan of Automobiles

Herbert J. Bougher, chairman

C. M. Benkert	H. W. Brown
C. F. P. Buckwalter	C. P. Pond
Wilfred Lewis	C. B. White
Charles E. McEvoy	J. W. Paxson Co.
Wesley Caskey	J. D. Johnson Jr.
Capt. J. L. Crawford	J. H. Sheeler
W. F. Sauter	H. M. Bougher
H. A. White	H. F. Rebmann
Howard Evans	Thomas Devlin
C. M. Trivett	R. C. Thum
G. H. Clamer	Frank Hodson
Otto W. Schaum	F. B. Patt
F. L. Webb	W. H. Ridgway
George F. Pettinos	J. H. Golding
M. L. Kirn	A. G. Warren

Manufactures Small Sand Mixing Machine

A foundry sand mixer, having a 3-foot diameter pan, has just been developed by the National Engineering Co., Chicago, which has been manufacturing mixers of a similar type in 4 and 6-foot diameter sizes for many years. The mixing machine is of the Muller type, having an automatic discharge, and mixes the sand by a combination of mullers and plows. The company is manufacturing the smaller size mixer because of the demand by smaller foundries in which mixers of greater capacity are not required. It is stated that this 3-foot mixer is also adapted to larger foundries where it is desired to use more than one machine. The mixing machine may be used in preparing various kinds of sand mixtures in foundries producing grey iron, steel, malleable, aluminum and brass castings.

Propose Rate Changes

Hearings for proposed changes in freight rates will be heard in the Chamber of Commerce building, Pittsburgh, Aug. 20, 1919.

On the Detroit, Toledo & Ironton railroad from the points of Wellston, O., to Superior, O., it is proposed to change the present rate of coke breeze in carload lots from 9½ cents per 100 pounds to 80 cents per net ton and to change the rate on the same product between Napoleon, O. and Cincinnati from 15½ cents per 100 pounds to $2.10 per net ton.

From Struthers, O. to Hubbard, O., on the Pittsburgh & Lake Erie railroad it is desired to reduce the rate of coke breeze from $1.60 per ton to 80 cents per ton in order to enable this line to compete with the Erie railroad which has an existing rate of 80 cents.

Belgian Industrial Tide Rising

Increasing Numbers of Workers Return to Task of Rebuilding Cities, Furnaces and Mills—Germans Giving Back Hundreds of Stolen Machines—Two Great Metallurgical Combinations Formed

BY FRANCIS MILTOUN
Paris Correspondent of The Iron Trade Review

BELGIUM is bilingual. Belgium is industrious. She is a mixture of Flemish, French and Walloon. The combination offers untold possibilities, the characteristics that proved so rugged and resourceful before and during the war now serving to strengthen the determination of her people.

Belgium is the most densely populated and, proportionately, the richest country in natural resources in Europe. Its railway system is the most complete of all in Europe, and its inland waterways in extent and utility are second only to those of Holland. Its highway system is excellent and remarkably close-woven; all of which features lend themselves admirably to the successful conduct of industrial life.

Belgium's earnest, hard-working and frugal population is asserting itself toward industrial and economic revival. Despite ravages of war, cities and towns are becoming peopled again. Brussel's population now is nearly normal, with 700,000 persons. At Antwerp the situation is different. The greatest of continental seaports, after Hamburg, it has lost some of its prewar population by the elimination of 50,000 of its former German residents, and today has a population of but 250,000.

The metal, coal and allied industries in Belgium lie in three distinctly grouped districts, Liege and the valley of the Meuse, Charleroi and Marchienne-au-Pont, and Mons and the Borinage. Iron, coke and shipbuilding industries also are grouped in oriental Flanders, comprising the districts of Bruges, Hoboken and Antwerp. New coal fields are being developed in the Campine.

Lack Raw Materials and Machinery

The present industrial situation in Belgium is aggravated by lack of raw materials at plants, and machinery. Power equipment, from engines and boilers to driving belts, was carried off with raw materials. Machine equipment at coal mines, which were operated to some extent by the Germans, is more nearly intact, but wear and tear were abnormal, and little effort was made to replace used parts. Hoisting cables, above all, require immediate replacement.

Steel plants in the Charleroi district, with the exception of two worked by the Germans, were dismantled, entailing a long period of idleness. Others elsewhere, which may have been spared, can only expect for the present to produce limited quantities of certain specialized lines.

In the Liege district there has been a partial return to activity, but production is far from adequate. Equipment in the zinc industry has suffered but small depreciation, but machine shops and metal-working industries are in the same condition as the steel plants. The loss pertains to locomotives and carpet tacks alike, and all that lies between. There was not a machine shop, however small, that did not suffer from German rapacity. Morlanwelz, Charleroi, Nivelles, Manage, Roeulx, Louvain, Buysinhen and scores of other busy industrial towns show deplorable depredation.

Belgian manufacturers look to the outside world to supply them the necessities with which to begin work, but a considerable number believe that Belgium should work out her own destiny, should it be proven that she is financially and economically able. But since Belgium has opened its doors to foreign trade, its policy is not the drastic one of isolation, under which France has suffered since the armistice.

Steel Producers Organize

The chief event of recent developments with respect to production and distribution is the founding of what is destined to be a Belgian steel "trust." A dozen of the greatest of Belgian companies will practically control production and trade in raw material and semimanufactured steel and iron products. The members of this combination are those organizations whose plants were laid waste by the Germans. They believe consolidation and specialization will enable them to recover more speedily from the blow. Chief among the companies are: Societe Cockerill, Societe Ougree-Marihaye, Societe de Thy-le-Chateau, Societe de Sambre et Moselle, Societe d'Angleur, Societe d'Esperence-Longdoz, Societe d'Athus-

Getting a "Close Up" of Belgium's Needs

WE in America have heard the details of the destruction of iron and steel works in Belgium; how the Germans sought to exterminate an industry that was the life of a nation, either demolishing on the spot its furnaces and mills, or dismembering them and carrying away its most valuable parts and equipment. Now what of the new day, the reconstruction, the efforts of that nation to re-establish itself, to overcome obstacles and achieve its ambition to become a great industrial power? To what extent will Belgium need the help of Americans, for funds, material or machinery? To what degree is she progressing in her great task? America's interest in her proceeds not only out of a possible opportunity to sell her millions of dollars worth of equipment, but in observing her ingeniousness and her capacity for effort. America has been surfeited with generalties about Belgium's rehabilitation; manufacturers and exporters have been confused by a tangled mass of information in regard to her needs. To get at the facts and to present them in such a way that they will be of real interest and genuine value to Americans who may be doing business with Belgians or contemplating offering their products in Belgian markets, THE IRON TRADE REVIEW *sent its Paris correspondent, Francis Miltoun, on a journey of investigation through that country. His position and connections in Paris have insured him access to industrial records in Belgium, and have placed him in touch with some of the leading iron and steel masters and manufacturers. This, his first article, is in the nature of a preamble, outlining the general situation. In subsequent articles he will give the regional resources and prospective developments of various organizations and plants.*

Grivegnee, Societe des Usines Metallurgiques de Hainaut, Societe de Montceau Saint Fiacre, Societe des Forges de Clabecq, Societe de la Providence, Societe des Usines de Chatelineau, Societe des Usines Boel (La Louviere).

The author of the project is Monsieur Trasenster, director-general of Ougree-Marihaye, on the Meuse below Liege, the neighbor of the great Cockerill plant, to which it is a close second in magnitude. The argument of Monsieur Trasenster is, in his own words:

"Great advantages will accrue to Belgain industry if each specializes in the product for which it is most favorably situated and equipped. The system will permit of a notable diminution in production and overhead costs, thus arriving at a lower sale price without invalidating prospective or actual profits."

The capital is to be 300,000,000 francs ($60,000,000), the participation of each establishment to be on the basis of specific value of assets contributed.

Representatives of the Ougree and Providence companies which have large mine interests demanded participation on the basis of the value of future mine output rather than on mere book value of concessions and investment. The point was conceded by the others, and a committee was appointed to estimate the prospective value of reserves.

New Consortium Organizing

A second Belgian trust, or, rather a consortium, just organizing is the Bourse Industrielle de Belgique. The various associated concerns were formerly linked, in 1874, under the name of the Metal and Coal exchange, and previous to that as the Brussels Industrial exchange. Evolution now gives the former organization and its scope a nation-wide application. In abandoning the name of Brussels it extends its activities to a field encompassed by the Bourse Industrielle de Charleroi and the Bourse Industrielle de Liege, without whose co-operation, which is expected to be forthcoming, no combination on national lines could hope to succeed.

The new organization is divided into four groups: Mining, metallurgy, construction, glass products, ceramics, cement, etc.

The resources of Belgium are such that her future position is assured beyond peradventure, in the opinon of all who know the history of the country's industries and who realize the Belgian's skill and capacity for labor.

Labor and labor conditions at present are in a more or less liquid state, but this is due to the disorganized condition of industry as a result of the war. Difficulties are being smoothed out daily and the strong efforts which have been brought to bear in the past few weeks by the willing labor of the returned population is surely bringing about desired results.

The Belgian restitution service, which has its headquarters at Wiesbaden, reports that the work of recovering stolen machines and material from Germany is proceeding so rapidly that 3000 tons per week are being shipped into Belgium. The machines are returned so far as possible to their original owners by those German concerns who had set them up in their own factories and were using them while saving their own machines against the possibility of such an outcome. One hundred and twenty-five machines of all types per day has been the average number returned during the past two weeks, the total tonnage returned up to July 1, being nearly 20,000. Certain difficulties were encountered in getting complete lists of the stocks of raw material which were taken. Belgian records were destroyed by the Germans. It now only remains for an adequate establishment of the physical inventories of the various Belgian plants to get them into production again. An authority writing in the *Basler Nochrichten* says:

"Belgium has reason, in spite of the present hard times, through which it is passing, to have confidence in the future. The country is very rich in products of the soil and subsoil, in capable men and in children. It will be years before the present generation has forgotten the horrors of the German invasion and occupation, above all what industry has suffered; but there are other generations coming forward to take the place of the present and bring Belgium again into the front rank of producing countries."

Belgium may yet be classed as a first class power, and this despite the lack of numbers of its population and the smallness of its area.

As this article is being written in Brussels at the time of the first great *Fete Nationale* which Belgium has celebrated in five years, France announces that her diplomatic representative at the court has been raised to the rank of ambassador; reciprocally, Belgium has appointed an ambassador at Paris.

The United Engineering & Foundry Co, Pittsburgh, recently received a contract for a reversing cross compound engine for the blooming mill of the new steel plant of the Wierton Steel Co., Wierton, W. Va.

New Jersey Foundries Increase Operations

New York, Aug. 12.—Material improvement is reflected in the gray iron castings industry in the northern New Jersey district. About a month ago Newark foundries were operating on the average at 50 to 60 per cent of capacity, but as a result of improved demand they are now operating at approximately 75 per cent. The price situation is unchanged, but it is said that owing to the pronounced tendency of all foundry costs to advance it will not be long before higher prices will be asked in the district of which Newark is the center. In the meantime, the market on ordinary heavy machinery castings averages 5 to 7 cents per pound, although occasional instances still are noted where some melters are cutting this range.

The situation in the metropolitan district is less favorable. Numerous foundries in Brooklyn and Long Island City are unable to find enough business in their regular lines to keep them occupied, and this is particularly true of those engaged in the production of castings for structural purposes. A number of the latter are taking such business at less than it costs them to produce.

Mexico Contracting for Electric Railroads

Monterey, Mexico, Aug. 9.—The department of communications and public works of the Mexican government has made a contract with the Mexican Tramways Co., Ltd., for the resumption of construction of the interurban electric line line between the City of Mexico and Pueblo, about 130 miles. The construction of this line was started about 12 years ago.

The government also has granted a concession to the National Norwegian Co. for the construction of an interurban electric railway between Tampico and Tuxpam, about 120 miles, with branch lines to smaller towns in the oil-producing territory.

The war department has established an office in the Chamber of Commerce building, Pittsburgh, in charge of Lieut. Basil Dolphin, which will be a sort of bureau for the placing of discharged officers and enlisted men, who by reason of professional or technical training, cannot be placed readily. Col. Arthur Woods, assistant to the secretary of war, is in charge of this work.

Business Men Offer Rail Plan

Corporate Ownership, Limited Number of Strong Competing Systems and Federal Regulation of Capital Expenditures and Rates, to be Urged in Place of Nationalization by Chamber of Commerce of United States

WASHINGTON, Aug. 11.—The railroad plan adopted by referendum vote by the business men of the country will be presented to the house committee on interstate commerce by George A. Post, of New York, chairman of the railroad committee of the United States chamber of commerce, who has arrived in Washington. With him is Dr. Emory R. Johnson, professor of transportation and commerce, University of Pennsylvania, also a member of the railroad committee. They will be heard as soon as the railroad brotherhoods finish their case.

"Our plan has been given careful consideration, section by section, and discussed in local communities by thousands of business men in 48 states, who had opportunity to study it 45 days before voting on it," said Mr. Post. "The section declaring against government ownership received 99 per cent of the vote cast.

"Appearing before the interstate commerce committees of congress, we shall bear a message from the business men of the country intended to be helpful to those entrusted with the important duty of making the laws. Representing the business interests as a whole, vitally dependent upon adequate transportation facilities, the dominant thought of the chamber, as shown in the votes of its organization members, is fairness to all with special favor to none. Our object is to draw to our plan calm and thoughtful attention. In our presentation there will be no tone of command, no boasting of numerical strength, no threats of political reprisals, no appeals to class prejudices, but an earnest appeal to all interests to counsel together with patience and good will for the common welfare.

"Our program calls for corporate ownership, with the return of the roads to their owners as soon as remedial legislation can be enacted. We urge consolidation of roads in a limited number of strong, competing systems. We want the big railroads of the future to be subject to the United States, with federal regulation of capital expenditures and security issues. We favor leaving rate-making in the hands of the interstate commerce commission under a statutory rule designed to bring in sufficient revenue to keep the industry going. We ask for the creation of a federal transportation board to execute in a constructive manner the new legislation to be adopted for railroad and other transportation facilities.

"I do not believe the people of the United States are ready to take even the first step toward the nationalization of industry. The experiments along this line in unfortunate Russia have been brought home too closely to the American people. I for one am confident tha there is enough economic common sense in the country to prevail over any plan of any one interest."

Lower Rates on Steel to British Ports

Washington, Aug. 12.—The peace time organization of the shipping board became effective Aug. 7 when John Barton Payne, Henry M. Robinson and Thomas A. Scott took office. Mr. Robinson was elected chairman. About the same time announcement was made by J. E. Cushing, acting director of operations, of reduced ocean freight rates on steel and other products, effective as of Aug. 1, shipped from North Atlantic ports to Liverpool, London, Manchester, Hull, Leith, Belfast and other ports of the United Kingdom. The new rates follow:

Boiler tubes, loose car wheels, iron pipe fittings, pipe up to 4 inches, outside measurement, scrap iron and structurals, $13 per gross ton; bolts and nuts, screws, steel hoops in coils, and wire in coils, $14 per gross ton; tin, $15 per gross ton.

Special rates now are quoted on application, on forgings, pig iron, plates, rails, rods, black bars, sheets, skelp, billets, and cold rolled steel in boxes. The rates compare with the following ones they supersede:

Pig iron, scrap and loose car wheels, $16; boiler tubes, black bars, rails, rods, billets, cold rolled steel, pipe up to 4 inches, steel hoops, wire and forgings, $17; tin, $18; bolts, nuts and screws, $20; iron pipe fittings, structurals, plates, sheets and skelp, $1 per 100 pounds.

Similar reductions were announced on nonferrous metals and their products.

Announcement was made that deliveries of completed ships to the shipping board had, on Aug. 1, reached a total of 1182 vessels, a combined deadweight tonnage of 6,513,372. Five hundred and one of these ships are of contract steel, aggregating 3,063,941 deadweight tons, and 338 are requisitioned steel, of 2,256,731 tons.

Navy Opens Bids on Steel Hangar for Dirigibles

Washington, Aug. 12.—The bureau of yards and docks, navy department, last week opened bids for the construction of a hangar for dirigibles at Lakehurst, N. J. Between 6000 and 7000 tons of steel, mostly structurals and bars, will be required for this work, it is estimated. The bids varied between $4,620,000 and $2,854,000 and the time for completing the job between 300 and 500 days. The bidders are Underpinning & Foundation Co.; Nugent Construction Co.; Post & McCord; McClintock-Marshall Co.; Snare & Triest Co.; John W. Cowper Co.; C. H. & R. C. Peckwith; George F. Pawling Co.; Pascher Bros.; John Gill & Sons; Bethlehem Steel Bridge Corp; Warren Moore & Co.; Irwin & Leighton, and D. L. Taylor & Co.

The foregoing bids include mechanical equipment. Firms which bid only on the mechanical equipment are Harry Alexander; Lord Construction Co.; M. A. Dame & Son; Thompson Bros.; Riggs, Distler & Stringer; Baker, Smith & Co.; Almirall & Co.; Austin Heating Corp., and Raisler Heating Co.

Federal Aid Proposed for Home Builders

Washington, Aug. 12.—Home building in the United States, already behind urgent requirements by $4,000,000,000, would go forward immediately despite an increase of 110 per cent in the cost of building materials and an advance of 39 per cent in the cost of labor over the respective averages in 1915 if it were possible to secure financial encouragement, according to Senator William E. Calder, New York. Senator Calder has two bills pending in congress, one creating a home loan banking system somewhat like the farm loan system, and the other exempting from federal taxation the income from mortgages held by individuals.

The need in this country today is for 1,000,000 homes, the senator de-

clared. Annually the American building bill is approximately $3,000,000,000 of which $2,000,000,000 goes into houses and the remainder into buildings for industrial and amusement purposes. Just now, he said, building requirements are doubled, but money being unavailable because of taxation, the absence of liquid funds, etc., the incentive to build is lacking. Before going to congress Senator Calder was head of the building department of New York City and has considerable data to back his arguments.

German Potash May Now be Imported

Washington, Aug. 11.—All wartime restrictions on the importation of potash directly or indirectly from Germany have been removed by the war trade board, effective Aug. 7. Potash may now be imported freely from every source except Hungary and those parts of Russia under control of bolshevik authorities. In amending the import regulations, the board points out that dyes, and dyestuffs, including bases, crudes and intermediates and all drugs and chemicals are still subject to the former restrictions.

Miners to Demonstrate Rescue Work

Washington, Aug. 12.—The largest gathering of coal and metal miners ever assembled is expected by the bureau of mines in Pittsburgh, Sept. 30 and Oct. 1, for the national first-aid and mine-rescue meeting to be held in connection with the dedication of the bureau's new laboratories, formal ceremonies for which will begin Sept. 29. Teams will compete for prizes offered by the National Safety council, the American Red Cross and others. Among the teams entered so far are those from the Oliver Snyder Steel Co., the Colorado Fuel & Iron Co., the Republic Iron & Steel Co., the Cambria Steel Co., the Alabama Fuel & Iron Co., Pickands, Mather & Co., the H. C. Frick Coke Co., the Raritan Copper Works, and the New Jersey Zinc Co.

Price Fixing Forbidden

Washington, Aug. 12.—The federal trade commission, by agreement with the Ruud Mfg. Co. and the Pittsburgh Water Heater Co., both of Pittsburgh, has issued an order requiring them to discontinue any practice whereby dealers were compelled to maintain standard fixed reselling prices for the public. The companies manufacture gas water heaters, and according to the commission their combined output is more than half of the total of the country.

Steel Lots Offered

Bids are to be received up to 2 o'clock, Aug. 20, by the Philadelphia district ordnance office on 1434 tons of forgings for 75-millimeter shells at the plant of the Worthington Pump & Machinery Corp., Hazleton, Pa., and on Aug. 26 on 1636 tons of 9.2-inch high explosive shells at the plant of Wm. Wharton Jr., & Co., Easton, Pa.

Bids will be taken by the Philadelphia district ordnance office until Aug. 18 on 1787 tons of 155 millimeter shrapnel forgings, located at the plant of Wm. Wharton Jr., & Co., Easton, Pa.

Bids will be accepted until Aug. 25 on 4500 tons of 9.2 high explosive shell forgings, located at the plant of Wm. Wharton Jr. & Co., Easton, Pa., and until Aug. 26 on 755 tons of 75 millimeter shell forgings at the Hazleton, Pa., plant of the Worthington Pump & Machinery Corp.

The Detroit ordnance office will take bids up to 11 a. m., Aug. 15 on 9266 gross tons of 155 millimeter high explosive forgings at the plant of the Jackson Munitions Corp., Jackson, Mich.

Government Sells Wire

Sealed bids will be opened on Sept. 3 at the office of the chief of the surplus property division, Munitions building, Washington, on 1930.2 tons of black painted barbed wire and 1464.5 tons of galvanized barbed wire. The minimum quantity on which bids will be accepted is 2 tons. This wire, purchased by the government for barbed wire entanglements, is stored in government warehouses at Columbus, O., where it may be inspected prior to the sale.

Erects Sheet Mill

The Falcon Steel Co. is erecting a new sheet mill at Niles, O., with eight stands of electrically driven rolls, which is to be of the most modern type. Powdered coal will be applied to the sheet and pair furnaces as well as a slabbing furnace, two double box double chamber annealing furnaces, three galvanizing kettles and power plant boilers. A blue annealing furnace will be included in the furnace equipment.

The initial installation of coal preparing apparatus will consist of a complete 5-ton coal pulverizing plant including the necessary coal crusher, elevators, crushed coal bin, dryer and mill, together with the powdered coal hoppers, for storing powdered coal at the furnaces, powdered coal feeders, burners, etc. The pulzerized coal will be transported from the milling plant through standard 4-inch wrought pipes to storage bins in the power house and throughout the mill by compressed air. Contract for the complete fuel equipment has been awarded the Quigley Furnace Specialties Co., New York. It is anticipated that this mill will be in operation by the first of January.

Developing Coal Deposits in Kentucky

Iron and steel manufacturers are looking toward a number of large new development factors in eastern Kentucky for their future supply of coal. The largest of these is the U. S. Coal & Coke Co., a subsidiary of the United States Steel Corp., which is completing one of the largest mining plants in the south at the Lynch mines near the Letcher-Harlan border on the Cumberland river. Within the next 60 days it is expected the mine will be producing 10,000 tons of coal a day. The coal in its raw state will be shipped to three subsidiary plants, at South Chicago, Joliet, Ill., and Gary, Ind., where it will be turned into coke.

The Wisconsin Steel Co., a subsidiary of the International Harvester Co., is extending operations in its plant at Benham, and within the next 30 to 60 days, the output of the mines will be doubled. Chicago and Cleveland interests are soon to develop new properties in the field. New territory further back in Big Black mountain district will be developed.

In the Wolf Pit Creek section of Pike county, the McKinney Steel Co., Cleveland, announces several extensions effective at once. The company has also acquired additional holdings on the Big Sandy river. It is also extending its transmission lines to adjacent mines and opening up a large power plant, and before the first of the year, it is expected the company will have doubled its output.

Yale and Towne Co. Wins Income Tax Suit

The new personal income tax law of New York state is unconstitutional insofar as it discriminates against nonresidents, according to a ruling handed down by Federal Judge John C. Knox, the result of action instituted by the Yale & Towne Mfg. Co.,

Stamford, Conn., to enjoin the state comptroller from compelling the company to deduct the amount of taxes from the salaries of employes working in New York state. The provisions of the law would have deprived nonresidents of several exemptions allowed residents. In its contention the company alleged unconstitutionality of that part of the law, objected to being made the state's collecting agent, and complained that if it withheld such money it would be subject to suit by employes for restitution. Prior to the decision several companies doing an interstate business, with offices or executive headquarters in New York, had stated their intention of moving their offices from New York if the law was enforced.

Improvements now being carried out to the Belfont furnace of the Belfont Iron Works Co., Ironton, O., will completely modernize that plant. Two new stoves, a gas washer, a downcomer, engine and boilers are being installed. The old trestle is being extended, steel bins are being constructed and the stack is being equipped with skip hoist. Machinery and equipment required for the steel trestle, steel bins and steel hoists now are being figured upon.

Would Bar American Steel

Australia Prepares to Pass Tariff Law—Parliament Aroused by Reports of "Dumping"—Manganese Production Revived

NEWCASTLE, N. S. W., Australia, July 8.—It is reported that America intends using Australia as a dumping ground for steel, and parliament is preparing to pass a tariff law and so encourage local production. Australia has one large steel works at Newcastle and another works at Lithgow, where a small amount of pig iron and steel is produced.

The Newcastle Steel Works is seeking to capture the Pacific steel trade but is severely hampered by freight charges. It costs as much to carry steel from Newcastle to New Zealand as it does to carry it there from America, but New Zealand is anxious to trade with Australia. A large quantity of steel has gone to Java, and the company has 25,000 tons more awaiting shipment.

A meeting of steel consumers has been called in Melbourne to discuss the advisability of adopting standard specifications for sections. It will be many years before Australian steel works can make all the sections engineers specify. In the meantime it is hoped to have engineers arrange their requirements to conform to contain standard sections that can be profitably rolled by various firms in this country.

The output of the Newcastle Steel Works for four weeks ending May 29 was as follows: Coke ovens, 13,890 tons of coke, 136,723 gallons of tar, and 232 tons of sulphate of ammonia; No. 2 blast furnace, 11,934 tons of pig iron (foundry furnace), 453 tons of spiegel and 30 tons of ferromanganese; open hearth, 25,004 tons; blooming mill, 17,204 tons; rail and finishing mill, 11,242 tons of 60 and 80-pound rails; and merchant mill, 4962 tons.

Neither the state nor federal government will take an interest in financing copper mining, and many plants are shutting down. This is considered a calamity for the Australian industry. No copper has been sold for many months and tons of copper ingots are stored here. Widespread unemployment in New South Wales has been caused by the shutting down of the plants of the Mount Morgan Mining Co., in Queensland and Port Kembla, affecting about 20,000 workers. The two districts produce large amounts of copper. The plants had to be shut down because of a shipping strike. Although the company has on hand copper which costs nearly $2,000,000 to produce, it is not saleable at anywhere near that figure at present.

There has been considerable activity in mining for manganese at Uralla, New South Wales. Two reefs were worked and 450 tons of manganese were raised. A state minister for mines, on the recommendation of the prospecting board, has decided to ask for a greatly increased appropriation for prospecting. As there are many valuable deposits not yet discovered in Australia, parties are to be equipped and supported by the state in their search for minerals.

Operations for the supply of raw material to the new cement works at Burswood island, Perth, have commenced on the properties of the West Australian Portland Cement Co., and a railroad is being constructed by the government from Waroona to Lake Clifton. A complete cement-making plant capable of producing 30,000 tons of cement per year has been purchased.

Panama Canal Workers Given a "Raise"

Announcement has been made by Chester Harding, governor of the Panama canal, that he has increased the wages of those employes working by the hour from 1 to 2 cents an hour, and has added $5 a month to those paid $40 a month, and $2.50 a month to those who receive from $42.50 to $57.50. A long list classifying government workers in the Canal zone and specifying the rates of pay affords an interesting basis of comparison with wages paid by private industrial establishments in the United States. Blacksmiths, boilermakers, car repairers, ironworkers, machinists, molders, pipefitters and riveters are classed as artisans, and of this class there are three grades. Those of the first grade are paid 22 cents an hour; second grade, 24 cents, and third grade, 27 cents. Laborers are similarly graded, and receive respectively 19, 20 and 22 cents an hour. Boys of the first grade receive 9 cents an hour and those of the second grade 11 cents an hour, there being but two grades.

Monthly rates for subsisted employes are established at $5 less than the monthly nonsubsisted rates. Subsisted rates are provided to take care of employes who are required for the good of the service to take their meals at their work.

The rates of pay as fixed in the governor's announcement are considerably below those of workers in similar lines in the United States.

Ore Firm to Retire

Announcement is made that the firm of Ennis & Co., Philadelphia, dealers in foreign ores, will retire and terminate their business existence Sept. 1. Ennis & Co. were the pioneers in the trade in foreign iron ore with eastern blast furnaces which was developed over a period of years until it reached a heavy total annually. Its representation included ore properties in Africa, Cuba, Spain, Greece, Brazil and other countries. Major E. J. Ennis, the head of the firm, has been prominent for many years in eastern iron and steel circles and is widely known as an expert on foreign iron ores.

J. H. Jackson, formerly production engineer for the Sharples Separator Co., West Chester, Pa., recently was discharged after 18 month' service as lieutenant in the army. He has been made sales manager of the Pittsburgh Gear & Machine Co., Pittsburgh, succeeding W. H. Thompson.

Price Level Won't Decline Much

President Wilson's Address to Congress on Cost of Living no Cause for Apprehension on Part of Legitimate Business—Labor Radicalism Hit—Says Force Will Defeat Self—General Financial News

PRESIDENT WILSON'S address offering his program for reducing prices, the outstanding development of the week as affecting business and industry, offered relatively little that should make capital apprehensive and much that should operate to prove groundless most of the fears born of the railroad brotherhoods' ultimatum and the consequent crystalizing of demand for a lower cost level. He proposed, in effect, nothing more radical than chastisement of profiteers. Legitimate business and industry will heartily second him there, for elimination of unfair profit makes for greater purchasing power on the part of the general consumer.

By far the most reassuring element to be discovered in the President's words is the firmness with which he sought to lower the rising hand of labor radicalism, a resoluteness all the more satisfying because not wholly expected. Proponents of the Plumb plan for operation of the railroads will hardly gain encouragement from the statement that "we cannot hastily and overnight revolutionize all the processes of our economic life; we shall not attempt to do so." And incipient bolshevism will secure not even a modicum of nourishment upon digestion of such words as these: "There must be no threats; let there be only intelligent counsel, and let the best reasons win, not the strongest brute force." To the brotherhoods he says: "Threats and undue insistence upon the interest of a single class make settlement impossible"; and to labor in general that "strikes undertaken at this critical time are certain to make matters worse, not better—worse for them and worse for everybody else."

True Reasons Apparent

Analysis of the address discovers the true causes of the present level of prices. That this level is not to fall appreciably at once is as much as admitted, and that the eventual trend will not be precipitately downward may be deduced from the President's own statement's, notwithstanding the verbiage heaped upon "profiteers" as a prominent factor in attainment to the present plane on which commodities of all sorts rest.

To the people he says the prices they are paying in order to live are not justified by a shortage in supply, either present or prospective, and are in many cases "artificially and deliberately created by vicious practices." To business and industry he says the "world must pay for the appalling destruction wrought by the great war and we must pay our share; not until there are the usual crops and the usual production of manufactured goods on the other side of the Atlantic can Europe return to the former conditions."

He points out that it was on these former conditions that our economic relations were built up, relations that did not contemplate such drains as Europe has for the past five years been making on the productive capacity of this nation. And if, as he says in his address, "we must keep Europe going or thousands of our shops and scores of our mines must close," can prices be expected to do otherwise than to obey the law of supply and demand while "keeping Europe going." On the one hand, closed factories have but one meaning for labor; on the other President Wilson says there is "no such thing as letting Europe go to ruin without ourselves sharing in the disaster." The deduction is irrefutable. The President himself recognizes the omnipotence of the law of supply and demand, although he expresses the opinion that at present it is being stretched by profiteers when he says that "no legislative or executive action can force processes of supply and demand into full and natural operation until there is peace." But he says nothing about going beyond that law to lower prices.

That these are critical times for industry and business cannot safely be denied, in view of social and labor unrest, and the persistent movement of the "vicious cycle" of wage advances and price increases. But reassuring signs are not lacking. Encouragement that the administration, notwithstanding the President's talk of federal control of corporations doing interstate business, does not hope to accomplish anything in bringing prices down that would prove so radical in regulation or control as to harm industry and business is furnished in his own statement that "to have brought it all into the open will accomplish the greater part of the result we seek." And none should realize better than the present congress that inflation cannot be reduced, war debts liquidated nor current revenues produced unless production be maintained to the maximum and capital be protected in its legitimate operations.

The railroad brotherhoods, precipitators of the present acute situation, will have to look further than the President's address to discover encouragement for their radical Plumb proposal, nothing more nor less than craft socialism in the making. There is little hope of anything like a 25 per cent decrease. It remains to be seen, therefore, what the brotherhoods may be able to force in the way of wage increases. Unquestionably the Plumb plan can be nothing more than a club, uncovered at the psychological moment, to be swung over the head of the federal government to enforce class demands which, if granted, can mean only another turn of the vicious cycle. They might well heed the President when he says: "All that is arbitrary and coercive is in the discard; those who seek to employ it only prepare their own destruction."

Midvale Steel's Quarter Earnings Decrease

The quarterly report of the Midvale Steel & Ordnance Co., Philadelphia, for the period ending June 30 shows a surplus after charges and war taxes amounting to $946,267, compared with net profits of $2,750,197 for the preceding quarter, the equivalent respectively of 47 cents a share compared with $1.37 a share on the $100,000,000 capital stock, par value $50. Net profits of $8,545,443 or $4.27 a share were earned in the corresponding quarter a year ago. The comparative account follows:

	1919	1918
Net earnings	*$3,138,650	$12,108,753
Interest	787,979	784,825
Depreciation, etc.	1,404,404	2,778,485
Net profits	$946,267	$8,545,443

*After provision for all taxes.

For the six months ended June 30, Midvale shows a surplus, after charges and taxes, of $3,696,464 or $1.84 a share on the stock as compared with $16,345,784 or $8.17 a share in the cor-

responding period of 1918. The comparative earnings for this period follow:

	1919	1918
Net earnings	*$7,840,184	$21,883,797
Interest	1,580,701	1,578,208
Depreciation, etc.	2,563,019	3,959,805
Net profits	$3,696,464	$16,345,784

*After provision for all taxes.

Asks More Federal Aid on Foreign Credits

New York, Aug. 11.—With the question of credits holding up considerable export business in the railroad equipment market, the recent confirmation of the report that the Baldwin Locomotive Works had arranged to accept an order for $7,000,000 worth of locomotives from the Polish government by extending credit over a period of 10 years has aroused much interest, and more or less speculation is rife as to what extent the Baldwin company will carry out this policy. It is generally believed, however, that the company will not attempt to extend credit even in part to all countries trying to place orders in the United States. The risk involved is thought to be too great, and the aggregate amount too vast to be handled by any one equipment company in this country.

Charles M. Muchnic, vice president of the American Locomotive Works, prepared a statement in which he referred to the vast amount of business now being held up by inadequate credit facilities, and suggested an amendment of the War Finance corporation act. Mr. Muchnic's statement, in part, follows:

"European government railways have been recently making inquiries for large numbers of locomotives and cars which are required for prompt delivery. The total value of these inquiries, if financial arrangements could be made to permit their purchase, would probably aggregate $200,000,000.

"Section 21 of the War Finance corporation act provides for the granting of a credit of $1,000,000,000 for financing the export of American manufacturers' products to Europe, but the limitation of this credit lies in the fact that the American manufacturer before he could avail himself of any financial assistance under this act, must furnish ample security for the loan and assume complete risk of the transaction. For the present American manufacturers would not be justified in accepting long term securities offered by these governments in large amounts.

"If section 21 of the act were amended whereby the corporation would be permitted to purchase either from manufacturers or form the European government railways their bonds or equipment notes to the extent above indicated, it would then be possible, and only then, to gratify the demand of foreign countries."

Pneumatic Tool Net Up

The Chicago Pneumatic Tool Co. for the six months ended June 30 earned a surplus of $299,190 after charges and taxes, the equivalent of $9.20 a share per annum on the $6,448,800 of capital stock, par value $100. Figures are not available to compare the first half of 1918, but earnings for the 12 months of last year aggregated $535,833, or at the rate of $8.32 per share per annum. Earnings in 1917 for the 12 months totaled $1,169,390, or at the yearly rate of $18.03 a share. Following is the income account for the first six months of 1919:

Manufacturing profits	$1,819,226
Expenses	976,314
Balance	$842,912
Other income	10,283
Total income	$853,195
Interest and taxes	284,853
Depreciation, renewals and sinking fund	269,152
Surplus	$299,190

Has Good Year

While net profits of the Ontario Steel Products Co., Gananoque, Ont., for the year ended June 30 were smaller than in the previous year, there was available for distribution to share holders a substantial sum in addition to the 7 per cent preferred dividend, and a portion of this was used to reduce liabilities. Here a payment of 2½ per cent reduced the cumulative liability to 3¼ per cent, while at a rceent meeting a further payment of 1¼ per cent was decided upon, reducing the net preferred liability to 2 per cent. Net profits amounted to $198,770 as compared with $208,107 in 1918 and $182,296 in 1917. The preferred dividend required $73,125, bond interest, $36,000, and the sinking fund was increased by $12,000, the balance of $77,645 being carried forward and increasing the available surplus to $359,374. The balance sheet shows assets of $2,698,366 as compared with $2,565,397 in the previous year. Current liabilities have been increased from $83,852 to $152,040, but include a provision for war tax of $34,234, and a preferred dividend of $22,500 payable in August.

Plan Power Plant

Pittsburgh, Aug. 12.—Work on a new power plant for the Duquesne Light Co., originally projected last year under government assistance for the purpose of increasing the supply of power for the plants in Pittsburgh engaged on war work, but suspended as a result of the ending of the war, will be started soon. Contract for the plant, which is to be located at Cheswick, Pa., and which with the distribution lines and substations will mean an outlay of approximately $15,000,000, has been awarded the Dwight P. Robinson Co., contracting and consulting engineers, 61 Broadway, New York. This company has opened Pittsburgh offices in the Home Trust building.

An initial capacity of 60,000 kilowatts is planned, but provision is made for increasing the output to 120,000 kilowatts in the original construction and ultimately a plant with a capacity of 300,000 kilowatts is probable. The site is on the bank of the Allegheny river and is about two miles from a large coal operation owned by interests allied with the Duquesne company. It is planned to drop the coal from this mine directly into the bunkers of the power plant, thus eliminating any possibility of plant interruptions from delayed coal shipments such as might occur if the coal had to come either by water or rail.

While complete plans have not yet become public, it is said that they call for the construction of a by-product plant.

Financial Crop Ends

The White Motor Co., Cleveland, plans to increase its capital from $20,000,000 to $30,000,000 to take care of its constantly expanding business, it is reported. The company recently increased its stock from $16,000,000 to $20,000,000.

* * *

The Southworth Machine Co., Portland, Me., has sold its plant at 79 Preble street in that city to the Miles B. Bank Motor Car Co., and purchased the plant formerly occupied by the Braun Co., in Deering Junction, Me.

* * *

The Cambria Steel Co. has filed a claim with the public service commission at Harrisburg, Pa., for the return to it of $132,673.41 alleged to be due from the Pennsylvania and Baltimore & Ohio railroads, through a system of charges for picking up cars at interchange points at its plant at Johnstown.

* * *

Judge Charles P. Orr of the United States district court, Pittsburgh, has named Aug. 12, as the date of a hearing on a petition by F. E. Markell having a claim against the J. V. Thompson estate. On Aug. 18 the court will hear a petition of the Thompson trustees asking that H. G. Rockwell, one of the debtors of the estate, be ordered to pay them $4566.67, the balance due on account of property bought by Rockwell. Markell has a mortgage, which he claims is due.

Foreign Tool Markets Smaller

France to Protect Tool Builders—Engaging More Extensively in Equipment Manufacture—England to Have 10 or 15 Per Cent Protective Tariff—Manufacturers Investigating Possibilities of Manufacturing Automatics

BY A. C. COOK

PROTECTION for the machine tool industry of France seems to be a possibility if the action now contemplated by the French government is carried out. As compared with American production the output of French shops is not large, but such protection is absolutely necessary in the minds of many makers. The concensus of opinion is that France and Switzerland will build practically all of the small lathes, shapers, planers and upright drill presses required in the French market and but few of these machines will be imported in the future. The Oerlikon Machine Tool Co., Oerlikon, Switzerland, recently built six large milling machines of the Ingersoll type. A few small screw machines also have been built in Switzerland and a few in France, but it appears that their manufacture will be discontinued.

Importation of machine tools by France during the war was only possible under a government license and at a regulated profit of 15 per cent over the price at New York City. While the price control has been removed the import restrictions still are in effect. When the latter first were enforced, several of the native French importers requested the government to form a bureau to take control of the situation. This resulted in the creation of the Comptoir d'Achat des Machines Ouitls. While French importers were well represented, "foreign" dealers were omitted and they formed an association of their own similar to the one organized by French importers before the Comptoir d'Achat des Machines Utiles became operative. The latter was discontinued after the armistice was signed but the other two organizations work together in harmony.

French Tool Imports Allocated

These two associations were asked by the ministry of reconstruction to ascertain the value of the machine tools their members would desire to import during 1919. The government reduced the figures submitted approximately 50 per cent so that the aggregate value of machine tools, agricultural machines and general engineering machinery to be imported during 1919 is $46,800,000. This means that $27,200,000 worth will be permitted to enter France from America; $12,000,000 worth from England and $7,600,000 from Switzerland. In addition certain large firms are permitted to order and import direct. When a government department places an order direct with an importer, the amount is not deducted from the importer's total permit. These permits for 1919 are allocated as follows:

Direct "foreign" importers, Allied Machinery Co., Herbert, etc.—		
From America	$6,800,000	
From England	1,440,000	
		$8,240,000
French importers, Fenwick, Chouanard, etc.—		
From America	$10,800,000	
From England	3,600,000	
		14,400,000
Agricultural and miscellaneous machines by the agricultural syndicate—		
From America	$2,400,000	
From England	800,000	
		3,200,000
Other syndicates and manufacturers importing direct —		
From America	$ 600,000	
From England	1,680,000	
		2,280,000
Reserved for manufacturers and other users importing direct instead of through dealers		18,680,000
Total		$46,800,000

Note—None of the syndicates asked for an importation from Switzerland but the government allotted a sum for this, which evidently is included in the total reserved for manufacturers who import direct.

Manufacturers located in the invaded districts, who desire to purchase equipment on extended terms, make their arrangements with the ministry of reconstruction, which arranges credit terms with the importer.

Reclaim Few Stolen Machines

Allied commissions, which have searched occupied territory in Germany, estimate that of the material and machines stolen from France and Belgium, only 10 per cent can be removed in good condition, 15 per cent is useless and the remainder has been totally destroyed. Approximately 50,000 machine tools were stolen or destroyed in the invaded district of France alone. A plan is being considered whereby machines owned by the American government in France, numbering between 5000 and 6000 will be turned over to the French government for the restoration of plants in the invaded territory. Many companies removed from this district to the southern part of France and it is questionable whether they will move north again, for while the government will reimburse them for their losses in the war, the amounts thus received

Made Exhaustive Study

INTERESTING sidelights on conditions in Europe after reconstruction work was well under way, are given in the accompanying article by A. C. Cook. When the Warner & Swasey Co., Cleveland, maker of turret lathes, screw machines, etc., desired to obtain first hand information regarding the situation abroad, particularly as relating to the machine tool industry, it sent one of the men in its organization best fitted by his experience in both the domestic and export trade, to make an exhaustive study. His findings in connection with the equipment market are particularly valuable because of his standing in the trade. For about 15 years he has been affiliated with the Warner & Swasey Co., and during the past 10 years of that period, he has held the position of general sales manager. Some idea of the extent of his duties can be gained from the fact that his company maintains branch offices in New York, Boston, Buffalo and Detroit and an office and show room in Chicago. It also has foreign agents in London, Birmingham, Manchester, Newcastle-on-Tyne and Glasgow; Paris, Turin, Barcelona, Zurich and Brussels; Rotterdam, Copenhagen, Gotenburg and Stockholm; Tokio; Sydney and Melbourne; Toronto, St. John, Winnipeg, Vancouver and Montreal. Its tool sales aggregate many millions of dollars annually. While this article does not include Mr. Cook's entire report, which was exceedingly extensive, it is a liberal extract of it and explains why not so many orders for American-made machines are being received from England and France as were expected.

will not, it is thought, justify them in moving again. It is estimated that machinery to the value of between $40,000,000 and $50,000,000 can be released from American and French shops and arsenals, for disposal to French manufacturers. Up to the time of our visit to France, no sales of this equipment had been made.

M. Loucheur, the minister of reconstruction has estimated that the restoration of invaded sections will cost $15,000,000,000, while pensions, etc., will require an additional $8,000,000,000. This estimate is considered by many to be low. These believe that the cost of the war to France will aggregate $63,000,000,000.

Great Britain's machine tool industry saw great expansion during the war. In 1914, the British machine tool output was valued at $20,000,000, while in 1917 on the same basis of figures, the annual production had reached a value of $32,500,000. To March 1, 1919, prices had increased 55 per cent on the average. Most of the advance took place prior to the time the government relinquished control of the industry. Some tool prices were advanced further subsequent to that action. During the war, by government order, machine tools had to be painted red, giving them their "war finish." Makers were not permitted to fill the castings but were allowed to clean them of the sand. During 1916, 1917 and 1918, no machine tools were exported from England.

Wages Greatly Increased

Wages in machine tool shops have increased greatly. In 1914, the day rate of the machinists' union, known as the Amalgamated Society of Engineers, was $9.12 for a 55-hour week, plus a bonus. Since almost all shops operated with the union, that rate was practically the standard for the entire trade. Slight variations prevailed in different localities depending upon the cost of living. After conferences, the Employers' Federation and the Amalgamated Society of Engineers agreed upon a day rate of $11.04, together with a bonus figure on the old rate of 9.12. During the war, the government induced the employers to reduce the working hours to 47 per week, and at the same time, the day rate was raised to $16.08 per week, the bonus averaging 30 per cent, based on the $9.12 rate, was retained, and an additional bonus of 7½ per cent on the total of the day rate and bonus was granted. This made the machinists' hour rate 43 cents with a total of $20.21 for a 47-hour week. Toolmakers received a slightly higher rate of pay but the same bonus. Overtime on the basis of time and one-quarter was limited to eight hours per week. At present in most shops the men will not work overtime.

Wage increases usually were made 1½ per cent at a time and for each five increases, totaling 7½ per cent, the manufacturers were allowed 4 per cent increase in prices. Originally manufacturers were permitted to make the same percentage of profits as in either 1912 or 1913, if such profit was reasonable. Experts were sent to some shops to examine costs and prices and manufacturers were allowed to make increases in addition to the 4 per cent noted, if the case warranted it.

Prices probably cannot be reduced in any machine tool line. If the 7½ per cent bonus added by the government is removed, the day rate will have to be increased to make up the deficiency.

Protective Tariff Desired

Much favorable sentiment exists among machine tool manufacturers for a protective tariff on imported machines and it seems probable that a duty of 10 or 15 per cent will be established within a year. Newspaper sentiment is divided, some favor free trade, while others want the tariff. The manufacturers who favor the tariff, believe that British tools are equal in quality to American tools and that on an equal basis, they can easily compete with them, but they resent the fact that America has a tariff against them.

It practically has been decided to hold a machine tool exhibition at Olympia, London, in 1920. While the details have not been decided upon, it will be similar to the exhibition held in 1912.

Prior to 1914 England exported approximately $40,000,000 worth of textile machinery each year. Formerly the Lancashire textile machinery manufacturers exported to every nation in the world, including America, in spite of a 45 per cent duty on their product. Because during the war these manufacturers devoted their entire effort to the production of war munitions they lost out to a certain extent in foreign markets. At the present time American manufacturers are quoting within 2 or 3 per cent of the English prices in Italian, French, Belgian and other markets.

British manufacturers are giving serious thought to the regaining and expanding of their foreign markets. Several associations have been formed including the British Manufacturers' Corp., and the Federation of British Industries. These have combined their effort to collect information about foreign trade and establish commissions of high commercial standing in foreign markets. The British Manufacturers' corporation has a membership of 300 firms and the Federation includes over 800 companies and 170 trade associations. The Anglo-Chinese Engineers' association also has been formed by 42 noncompeting firms of British engineers to work in China. Another organization which has for its members, some of the leading English manufacturers and shipbuilders is known as Representation for British Manufacturers, Ltd. It will operate in China and eastern Siberia. In addition, many trades and industries have formed and are forming export associations to secure for their members data regarding the different export fields. These for the most part are noncompeting and take up sales work in an active way for their members.

For two years the importation of motor cars was prohibited but until Sept. 1, 1919, foreign makers are allowed to send in each month at 33 1-3 per cent duty, a number equal to 50 per cent of their imports for the corresponding month of 1913.

To Go After Foreign Trade

On the other hand, British automobile makers realize that home demand cannot take up the present possible production from their factories and they are endeavoring to develop the foreign markets. Previously they have never made any real effort to obtain foreign business of this nature. Before the war about 3000 automobiles were produced annually and all well established firms are greatly increasing their outputs for 1919.

The principal new company to build motor cars is Cubitts, Ltd. Before the war it erected steel and concrete buildings. During the war, it produced large quantities of fuses and before hostilities ceased, it decided to enter the automobile industry. Sir Wm. Angus, Sanderson & Co., Newcastle, are putting on the market England's first good assembled car, with units built to their specifications. Production for 1919 is expected to reach 6000 and it sells for $2250. Austin Co., which made shells, forgings and fuse parts as well as armored cars during the war has returned to the manufacture of a medium-priced car to sell at $2425, and will endeavor to produce 30,000 during the present year. It claims to have orders for 20,000.

The Research Association of British Motor & Allied Manufacturers was formed recently to conduct research

work for its members. It comprises many of the larger automobile builders and will receive $25,000 annually from the government, which is half of the estimated expenses of its effort.

Machine tool buying by automobile makers is limited to machines to round up their present equipment. Cubitts, Ltd., sold its war equipment and bought some large presses for radiator shells, etc. Parts for assembled cars are purchased from makers who have practically all the necessary equipment.

Shell Plants Sell Machinery

During the war the British government established a number of National shell, fuse and ordnance factories, building some and leasing others. These together with warehouses, etc., cost $325,000,000. Last February a disposal board was created to sell these buildings, except those which were leased, together with equipment. These are being disposed of by auction and number of shops and equipments have been sold. Some of the machine tools have been purchased by users and some by used machinery dealers. The character of the equipment ranges all the way from good to bad.

England is awakening to the advantage of automatic machinery in many ways. Steel for wire formerly was imported from Germany and Belgium, but now automatic drawing mills produce 1500 tons of wire per week with the same staff formerly required for 35 tons weekly.

Production of war material has taught manufacturers not to fear quantity production and plants are being operated on this basis wherever possible. One manufacturer of gasoline motors advertises 12,000 automobile engines, all alike, to be produced in a certain time at a fixed price regardless of changing conditions in that period. Before the war such a quantity was not heard of and it means that production methods are changing. Work is being taken from hand machines and produced by automatics and from engine lathes to be turned out by screw machines and turret lathes. Practically every manufacturer is investigating the possibilities of automatics.

The control over raw materials exercised by the government until May 1, militated against the manufacturers speeding up reconstruction work. Uncertainty regarding labor and material cost also delayed this effort as did the uncertainty regarding the excess profits taxes. With the removal of government control over raw materials May 1, the prices on iron and steel advanced. Labor's attitude still is uncertain and prices of finished products are set sufficiently high to compensate manufacturers for such increases as they have to grant.

With some companies, particularly iron and steel manufacturers, reconstruction does not mean a change of product or equipment. Their problem is to find business to keep their equipment busy. Former munition shops now are manufacturing automobile parts and accessories, while some produce complete cars. Armament manufacturers naturally fear the result of armament reduction under the league of nations. In Sheffield alone are located four companies of this class, 50 per cent of whose peacetime products were for war. Sir W. G. Armstrong, Whitworth & Co., and Vickers, Ltd., also are in this class. Both are placing some of their funds in outside shops in various lines. Vickers, Ltd., either owns outright or controls the following: British Westinghouse Co.; Sir Wm. Beardmore & Co.; Electric & Ordnance Accessories Co.; Petters, Ltd.; Metropolitan Carriage & Wagon Co.; Arrol Johnston Co., and several others. It also recently took some stock in a new matchmaking combine and will build its machinery. Its peace program includes the manufacture of pianos, sewing machines, toys, locomotives, trucks, ships and machine tools. A plant has been erected with a weekly output of 12 tons of files. It also has commenced the manufacture of vehicle springs and drawn steel tubes.

Armament Makers Branch Out

Armstrong, Whitworth & Co. are engaging in a wide range of commercial engineering; they are building locomotives at the rate of 300 or 400 annually; they manufacture and machine brass and steel castings, rough and finished forgings; they produce pneumatic and general machine tools as well as marine engines. They expect to do much reconstruction work in Belgium. They control John Brown & Co., who have built a large number of Cunard boards and also control Cammell, Laird & Co., steel manufacturers and shipbuilders. They were negotiating for control of the Sideley-Deasy Co., builder of motor cars, airplanes and airplane engines, a short time ago.

Hadfields of Sheffield, England, completed a new heat treating, machine and forge shop at a cost of $2,000,000. This company was the successful bidder for United States navy projectiles several years ago. It now is prepared to take on rough and finished forging work up to 12 or 14 tons.

Evidence of a new era in British manufacturing is seen in the combinations now being formed in various lines, similar to those formed in America a number of years ago. Thus, the United Steel Companies, Ltd., formed from five separate companies, owns and operates coal mines, iron mines, blast furnaces and rolling mills. Some other combinations have been formed in iron and steel, though not so far reaching as the United. Several of the large agricultural implement firms have bought control or amalgamated with firms in similar lines. The English Electric Co., Ltd., includes the Coventry Ordnance works, whose principal product now is small motors; Dick, Kerr & Co., contractors for large electrical installations; the Phoenix Dynamo Works, large motors and dynamos; United Electric Car Co., electrical street cars, and Williams & Robbins, large direct connected engines and turbines. All these organizations are looking toward better manufacturing facilities and reduced costs.

Produce New Ferroalloy

Chicago, Aug. 8.—Production of a new ferroalloy containing silicon and aluminum has been achieved by the Shawinigan Electro Products Co., Baltimore. It is being handled by the Canada Carbide Sales Co., 30 Church street, New York, exclusive sales agents for the former concern.

A characteristic analysis of the new alloy shows silicon 47.70, aluminum 43.63, and iron 28.67. The process of manufacture, which is by the electric furnace, allows the relative proportions of silicon and aluminum to be varied to any extent desirable, as long as the silicon content remains somewhere near 50 per cent.

The alloy is intended for use in steelmaking as a deoxidizing agent and this combination provides silicon and aluminum at a lower price than they can be obtained separately.

Experiments now are being carried on by a number of steelmakers, both for rolling and casting, and the Canada Carbide Sales Co. offers to supply sufficient material to any inquirer to provide a test.

One matter which it is desired to have cleared up in establishing the usefulness of this alloy is whether foundry and mill practice is sufficiently uniform in the use of aluminum relative to silicon to make possible the production of a uniform alloy which will be useful to practically all users.

The compound is stable and shows no tendency to disintegrate after being cooled.

Strike Ties Up Ore Docks

Suspension of Shipments May Leave Some Furnaces Without Supplies Next Spring—Other Labor News

WITH all operations on the docks of the upper lakes districts suspended by the strike of dock workers and railroad shopmen, shipments of at least 2,000,000 tons of ore have been held up. Supplies on hand at lower lake ports and at furnaces are sufficient to meet all requirements for several months, but ore companies and furnace interests are apprehensive of difficulty next spring. They say that if the strike is protracted it may be impossible to bring down a sufficient amount of ore during the balance of the season to supply all furnaces and keep them in operation until next season's shipments begin. The United States Steel Corp. and several other interests have brought down their usual amount of reserves, but others delayed purchasing, not anticipating delays due to labor troubles.

About 17,000 men are on strike. Striking dock workers number but 2000, most of the others being railroad shopmen. The dock workers were the first to walk out at the largest ports a week ago, demanding wage increases amounting to 33 1-3 per cent. Then following the lead of the shopmen in the Chicago territory, the railroad men went out.

The first indication of a break came Monday, Aug. 11, when it was reported that some of the shopmen of the Duluth & Iron Range railroad, Duluth, Messabe & Northern railroad, and the Great Northern railroad were preparing to return to work, and that a few of them actually had applied for their jobs. Despite the plea of President Wilson that striking railroad men return as the first step toward consideration of their demands, the shopmen in the upper lakes district as well as those in Chicago and at other points remained out. Their leaders branded their strike as "illegal" and joined with the president in appealing to them to call it off, but more than a week later the shopmen announced they would meet in Chicago, Aug. 14 to deliberate on the advise of the President and their organization's officials. The shopmen at the head of the lakes are voting on the question of sending delegates to the conference.

A large proportion of the dock workers are foreign-born, foreign-speaking men, poorly organized, but encouraged by the actions of the shopmen. It is believed that if the latter decide to return to work pending an adjustment of their wage demands, the dock workers will quickly do the same.

Two ore vessels were loaded at one dock with crews brought from a lower lake port, and while no trouble was experienced the company decided not to continue, fearing an outbreak of violence. About 200 bulk freighters are tied up as a result of the strike, and one vessel company estimated that if the strike continues four more days, or until Aug. 15, practically the whole lake fleet will be laid up.

The Lake Superior Iron Ore association met Aug. 11, but no action was taken in regard to the strike, it being considered a matter between the railroad administration and its employes.

Strike of 200,000 Ties Up Italy's Metal Industry

Italy's metal industries are paralyzed by a strike of 200,000 employes demanding the same wages they received during the war. After two months of controversy and attempts at arbitration the workers walked out, forcing the suspension of operations in many machine shops, foundries, blast furnaces and steel mills. The strike has spread from Lombardy over the whole of northern Italy, to Tuscany and the larger part of central Italy. Iron and steel masters have proclaimed a lockout, declaring they will not attempt to reopen their works until given guarantees against further interruption.

Scarcity of coal and raw materials in Italy have deprived iron and steel works practically of all profit, according to the employers, and make it impossible to grant the workers' demands.

Toronto Machinists Strike is Settled

Toronto, Aug. 11.—Labor troubles which have held up business for the past three months are now being settled. About 60 shops in Toronto have resumed operations and machinists who were on strike have returned. While the strike is generally admitted to have been a failure in so far as all the strikers did not receive the 44-hour week and 50-hour pay demanded, it is pointed out by union officials that these conditions, as well as extra wages, have been conceded by 23 shops. The question of wages at 36 other shops will be settled at another conference. One of the union officials stated that the loss in wages was well over $1,000,000, while the union paid $500,000 in strike benefits.

Labor Turn-Over Cost is $2,500,000,000 Yearly

Yearly labor turnover in the United States costs employers $2,500,000,000, according to Col. Arthur Woods, assistant secretary of war. In commenting on the large number of discharged service men already employed who are applying for better jobs, Colonel Woods said: "A great deal of turnover can be directly attributed to the lack of a system of industrial training wherein men who are unskilled but have the ambition to become skilled can be trained for skilled work. Returned soldiers are certainly entitled to training. Even if they were not, it is to the advantage of the employer to give it to them. One of the largest electrical plants in the world has had such a system for some years, and outcome has been most satisfactory indeed."

Colonel Woods long has advocated the establishment of industrial training classes in plants, not only to upgrade present employes, but to make it possible for discharged soldiers who have no trade to become skilled workers.

Employers and Workers, Buy Army Foods

Employers throughout the country were quick to take advantage of the opportunity to aid their employes in coping with the high cost of living afforded by the sale of food supplies by the war department. In many instances arrangements were made whereby cars loaded with canned foods were sent direct to industrial plants. Companies purchased the goods through local civic authorities whom the government held responsible for payment, and then sold them to employes at prices fixed by the government. A number of companies went further in financing purchases and permitted their employes to make purchases with the understanding that the price was to be deducted from their wages at subsequent periods. Everything possible was done to facilitate the movement of the goods, and to get it into the hands of the consumers.

In Cleveland seven carloads of food were allotted to industrial corporations out of the initial shipment of 20

carloads. City officials were deluged with requests from companies seeking to help their employes, and many had to be refused after the limit of the first shipment was reached. The food was sold only by the case, making it inconvenient for some employes to obtain it, but where less than single carloads were taken employers used their trucks to see that quick deliveries were made.

Among the companies obtaining the goods were the Enterprise Tool Co., Electric Controller & Mfg. Co., Otis Elevator Co., McKinney Steel Co., Aluminum Castings Co., Guide Motor Lamp Co., National Lamp Works of the General Electric Co., the White Motor Car Co., and the Scott Co. These companies took goods valued at $9551, and it was estimated that their employes were saved $4775, the government sale price averaging about 33⅓ per cent less than the retail price.

Five out of the seven carloads of food allotted by the government to Youngstown, O., were shipped direct to manufacturing plants by arrangement between city officials and the Youngstown chamber of commerce.

LABOR NOTES

Employes of the Treadwell Engineering Co., Easton, Pa., held their annual outing Saturday, July 26, at Bushkill park, Easton.

One hundred employes of three Elkhart, Ind., foundries, including 60 molders, apprentices and laborers, are on strike to enforce the molders' demands for an 8-hour day, and a minimum wage of $6, instead of nine hours and $5. A fourth foundry granted the demands and continues in operation.

Club rooms have been opened for the employes' association of the Pratt & Whitney Co., Hartford, Conn. The rooms are equipped with bowling alleys, pool tables and a soda fountain, while another attractive feature is a comfortably furnished reading room. All of the social activities of the employes have been merged in the association.

In amending the Wisconsin workmen's compensation law by including occupational diseases as well as accidental injuries growing out of and incidental to employment, the state legislature appropriated $3000 for the employment of a sanitary engineer by the industrial commission. A campaign for the prevention of occupational disease will be started immediately. Special attention will be given to such hazards as lead poisoning, caisson disease, trade eczema and tuberculosis in sand blasting.

Obituaries

ALBERT VICKERS, who for 64 years was connected with Vickers, Ltd., the company which bears his family name, died at Eastbourne, Eng., July 12. Some time ago he succeeded his elder brother, Col. T. E. Vickers, as chairman of the company and continued in that position until December, 1918, when, at the age of 80 years, he retired on account of ill health. He was the third son of the late Edward Vickers, a partner in the firm Naylor, Vickers & Co., which in 1867 was taken over by Vickers, Sons & Co., Ltd. The concern became one of the most important iron and steel firms in the world. It has absorbed several other firms, including the Naval Construction & Armament Co.; the Maxim Nordenfeldt Guns & Ammunition Co.; William Beardmore & Sons, Ltd.; the Wolseley Motor, Ltd.; Electric & Ordnance Accessories Co.; and recently became united with the Metropolitan Wagon when its capital was increased to £26,000,000. The company has branches in London, Sheffield and Barrow-in-Furness. In 1854, when Albert Vickers joined the company it had a large American business and was sending to the United States annually 1500 tons of material for use in textiles. As the result of the financial crisis in America arising out of the recent war the firm had to find new markets for its products to take the place of its large business in the states. Some time ago the company introduced a successful process for the making of steel castings for a great variety of purposes. It played an important part in the industrial contribution to the success of the allies.

Daniel Watson Hildreth, secretary and treasurer of the Schutte & Koerting Co., died Aug. 4, at his home, 2037 North Eighteenth street, Philadelphia, aged 59.

Frank Poeppelmeier, aged 61, who for many years has been superintendent of the Platt Iron Works, Dayton, O., died Aug. 1, at his residence in that city, after an illness of four weeks, which followed a paralytic stroke.

Norris Elmore Clark, an inventor, one of the owners of the Clark Caster Co., Plainville, Conn., maker of steel corner, bead and hardware novelties, which was established by his father, died at his home in that town, Aug. 3, aged 41 years.

H. M. Shepler, who was well known in the sheet and tin plate trade through his 17-year connection with the sales department of the American Sheet & Tin Plate Co, died of pneumonia after a brief illness, at his home in Chicago, on Aug. 3.

Milton R. Wood, aged 79 years, purchasing agent for the Rock Island and Philadelphia & Reading railroads, died Aug. 4 at his farm estate at Plainfield, Ill. He was a veteran of the Civil war, and one of the principal promoters of the Outer Belt railroad system at Chicago.

John S. Shaughnessy, aged 55 years, connected with the construction department of Canadian Pacific railroad and brother of Lord Thomas D. Shaughnessy, chairman of the board of that railroad, died in Chicago, Aug. 10. He formerly was purchasing agent for the Soo Line railroad.

William H. Carter, who for many years had been in charge of the screw and bolt department of the Pratt & Whitney Co, Hartford, Conn., died recently at his home in that city after several weeks' illness. Mr. Carter became affiliated with the Pratt & Whitney Co. in 1881.

H. R. Moore, 63, general traffic manager of the Republic Iron & Steel Co., Youngstown, O., died at the Youngstown Country club, Aug. 8, after an hour's illness from heart disease and arterial sclerosis. Mr. Moore was born at Warrensville, near Cleveland, and at one time served the Lake Shore railroad as division freight agent at Cleveland. He had been affiliated with the Republic company since its organization 20 years ago. He was a member of the Youngstown and Country clubs, Youngstown ;the Duquesne and Traffic clubs, Pittsburgh, and the American Iron & Steel institute, New York City. In January, 1918, Mr. Moore was named Youngstown representative of the American Iron and Steel institute's subcommittee on traffic and transportation, which made daily reports to then Director General of Railroads McAdoo on carrier conditions.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

CAPT. A. W. THOMPSON resigned as president of the Inland Steel Co., First National bank building, Chicago, at the adjourned quarterly meeting of the board of directors held recently. P. D. Block was elected to succeed him. Other officers elected were L. E. Block, chairman of the board, a newly created office; G. H. Jones, first vice president; E. M. Adams, E. J. Block and H. C. Jones, vice presidents; D. P Thompson, assistant to the president, and J. W. Lees, works manager. All other officers remain the same.

James E. Strong resigned recently as superintendent of mines for the Sloss-Sheffield Steel & Iron Co., Birmingham, Ala.

Herbert S. Eades, formerly assistant mechanical engineer for the American Bridge Co., at Ambridge, Pa., has been appointed assistant mechanical engineer at its Pencoyd, Pa., plant.

C. Bateman Swasey recently was elected treasurer of the Belcher Malleable Iron Co., Easton, Mass. He formerly was superintendent of the Gorham Mfg. Co.'s Allen avenue plant, Providence, R. I.

W. L. Lindsley, who formerly was affiliated with the Trumbull Steel Co., Warren, O., now has offices in the Woolworth building, having organized the Lindsley Co., to deal in iron, steel and other metals.

Robert H. Young, Fort Worth, Tex., has resigned his position as purchasing agent of the Southwestern Mechanical Co., to become Texas district sales agent of the Alan Wood Iron & Steel Co., Widener building, Philadelphia.

Ernest P. Kipp, recently discharged from army service as a captain in an engineering corps, has been placed in charge of an office and warehouse, established at 1415 Wazee street, Denver, by the Hazard Mfg. Co., Wilkes Barre, Pa., wire rope, insulated wire, cables, etc.

I. C. MacKie, who for a number of years was chief chemist of the Dominion Iron & Steel Co., Sydney, N. S., recently was appointed metallurgist.

George C. Isbester has resigned as district sales manager of the Rail Joint Co., at Chicago, and has become district sales manager of welded and weldless products for the American Chain Co., Inc., with headquarters at Chicago.

H. C. Southgate, formerly local treasurer at the Chicago works of the National Malleable Castings Co., Cleveland, who has been absent from the organization since 1912, has returned to the Chicago works as assistant local treasurer.

J. M. Davis, manager of the New York properties of the Baltimore & Ohio railroad and formerly vice president in charge of operations, has resigned effective Sept. 1 to become president of Rock Hill Iron & Coal Co., No. 1 Broadway, New York City.

A. M. Conneen recently resigned as New York sales manager of the structural and plate departments of the Bethlehem Steel Co. to become vice president and manager of the Hedden Iron Construction Co., New York, steel fabricator. He succeeds A. E. Roberts, resigned.

E. C. Pierce, with his assistant, Charles E. Hale, now has charge of the new branch office in the Union arcade, Pittsburgh, established by the Baldwin Locomotive Works and the Standard Steel Works Co., Philadelphia. Mr. Pierce formerly was in the general sales offices in Philadelphia.

Col. Frederick Mears, general manager of the American railways in France and builder of the Panama railroad, has been appointed chairman and chief engineer of the Alaskan engineering commission in charge of the government railroad in Alasaka, with which he served prior to going to France.

T. J. Brown, general superintendent of the Nova Scotia Steel & Coal Co., Sydney Mines, N. S., recently was appointed chairman of a special committee of the Canadian Mining institute to consider the formation of a coal mining section of the institute. He is a member of the council of the Mining Society of Nova Scotia.

Sydney A. Foster will be placed in charge of a New York office to be established in the Tribune building, 5 Nassau street, on Aug. 15, by the L. B. Foster Co., and allied interests, including the Light Railway Equipment Co., Park building, Pittsburgh.

Charles E. Leedy, formerly assistant district manager for the United States shipping board at Youngstown, O., has been appointed manager of the Valparaiso, Chile, branch of the Federal Export Corp., New York. He expects to sail for South America early in September and at present is touring the United States for the Federal corporation.

Clifford L. Snyder, recently discharged as a lieutenant from the United States army, has become affiliated with the technical staff of the Detroit Testing Laboratory, 674 Woodward avenue, Detroit, as sales engineer. He received his commission at Fort Sheridan, Ill., and later was transferred to the nitrate division in charge of construction work at No. 1 plant, Sheffield, Ala.

George A. Paul and C. L. Jahn have become affiliated with the Pennsylvania Steel Export Co., Widener building, Philadelphia. Before Mr. Paul entered the United States army, from which he recently was discharged as lieutenant, he was connected with the Eastern Steel Co., Pottstown. Mr. Jahn, formerly was a salesman in the Philadelphia district for the Youngstown Sheet & Tube Co., Youngstown, O.

F. B. Gerard resigned recently as director of purchases for the Austin Co., Cleveland, engineer and builder. He now is general manager of the Thorold, Ont., branch of the Pilkington Bros. Co., St. Helens, England. He now is visiting the home office of the latter company becoming acquainted with its organization. He formerly was Indianapolis representative for the Austin Co., and prior to that time was manager of the former German-American Portland Cement Co., La Salle, Ill. As director of purchases for the Austin Co., he has been succeeded by F. W. Mettler, who formerly was chief engineer of the Hunkin-Conkey Construction Co., Cleveland, and later for the Crowell-Sherman Co., that city, now the Crowell, Lundoff, Little Co. For the past 10 years, however, Mr. Mettler has been in business for himself in Cleveland.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

ARTHUR B. REYNDERS, formerly director of production of the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., has been made works manager at its East Springfield plant. A. E. Kaiser, who has been his assistant since 1912, has been appointed to succeed to the position as director of production. Mr. Reynders was graduated from the University of Tennessee as a civil engineer in 1895 and one year later as an electrical engineer. He held various positions in his native state for three years and in 1899 he was employed by the Westinghouse company as a draftsman on switchboard and switchboard apparatus. In 1902 he was made an engineer on circuit breakers, switches and relays and at the end of two years became acting assistant chief draftsman. In February, 1906, Mr. Reynders became general engineer on insulation work and three and one-half years later was appointed assistant manager of engineering. In March, 1912, he was promoted to be director of production, which position he held until his latest appointment. At the present time, Mr. Reynders is supervising the installation of machinery at the new plant at East Springfield, which will manufacture small power motors, automobile starting, lighting and ignition equipment.

E. S. Chamberlain has been placed in charge of the New York sales office, established at room 553, 50 Church street, by the National Tool Co., Cleveland.

T. W. Carlisle has resumed his duties as treasurer of the Strong, Carlisle, Hammond Co., Cleveland, machine tool and supply dealer, having been discharged as a major in the government's service.

Charles F. Gilman now is general manager of Joseph Beal & Co., Boston, machine tool dealers. He succeeds A. P. Hanscom, who recently resigned and formerly was with the Factory & Mill Supply Co., that city.

John C. Moore, who has held a position of trust with the North & Judd Mfg. Co., New Britain, Conn., for the past 20 years, recently was elected vice president and director of exports. Fred J. Ward was made assistant treasurer. Other officers elected at the recent annual meeting are: President, Howard C. Noble; vice president and secretary, E. M. Wightman; vice president and treasurer, F. M. Holmes; vice president, Proctor Carr; assistant secretary, Samuel McCutcheon; directors, H. C. Noble, E. M. Wightman, F. M. Holmes, George M. Landers, A. J. Sloper, George C. Clark, Charles Glover and Proctor Carr.

Arthur J. Hayes, former sales manager of the Ford Motor Co. of London, Ont., has resigned that position to becomes sales manager of the Champion Spark Plug Co. of Canada, Ltd., Windsor, Ont.

Clarence E. Kinney has been made general manager and sales engineer with Ogden R. Adams Mfg. Co., Inc., Rochester, N. Y., lathes, etc. He formerly was identified with the Symington interests, that city

J. L. Canby has been made district manager of sales at Chicago for the Chicago Pneumatic Tool Co., Fisher building, Chicago. He succeeds Nelson B. Gatch, who has been transferred to New York, as district manager of sales.

H. W. Krehnbrink has been placed in charge of the recently established branch sales office at 724 Chamber of Commerce building, Detroit, of the P. B. Yates Machine Co., Beloit, Wis., manufacturer of woodworking machinery.

Philip T. King, recently discharged from the American expeditionary forces, in which he enlisted for overseas service, has resumed his duties as locomotive and traveling crane salesman for J. N. Kinney, 30 Church street, New York City.

E. J. Luster, mechanical engineer, who formerly was vice president and general manager of the Luster-Jordon Co., Inc., Philadelphia, now is head of the Luster Machinery Co., Widener building, Philadelphia, which represents over 78 companies in that city.

F. R. Mead, who recently was discharged as a captain in the ordnance department of the United States army, and who formerly was head of the gage section, inspection division, has become affiliated with the Wilton Tool & Mfg. Co., Boston, as eastern representative.

A. L. Valentine, who for 19 years was connected with the small tool department of the Pratt & Whitney Co., Hartford, Conn., the last 15 as superintendent, has resigned. He sailed for France recently to become works manager of the Societe des Usines Curial, Paris, France, manufacturer of small tools.

John McGrath has become affiliated with the D. M. Osborne Machinery Co., Cleveland, as salesman and production engineer. He formerly was with the Ingersoll-Rand Co., and the Bethlehem Steel Co., but has just been discharged from the United States army, having seen foreign service with an engineering corps of the American expeditionary forces.

W. G. Balph, formerly head of the fan motor division of the Westinghouse Electric & Mfg. Co., East Pittspurgh, Pa., and salesman in its New York office, has been made manager of the safety switch section of the Westinghouse Kranz factory, Brooklyn, N. Y. He will have charge of sales of all the plant's products as well as of the extension and development of safety switches.

Harry M. Giles, formerly superintendent of the marine erection department of the Corliss Steam Engine Works, Providence, R. I., has been selected to succeed the late Oscar Otto as general superintendent of the South Philadelphia Machine works of the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. His father, Charles E. Giles, has been in charge of the Providence shops of the Corliss Co for the past 35 years.

George G. Porter has severed his active connection with the Porter-Cable Machine Co., Syracuse, N. Y., of which he was one of the founders, and has opened offices as consulting mechanical engineer and factory organizer in the new Keith theater building, Syracuse. Mr. Porter will engage in a designing and drafting of special and automatic machinery, tools, dies, jigs and fixtures and will conduct an engineering and sales service.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

RICHARD HUNT HALLSTEAD was elected president and treasurer of the Sheffield Steel & Iron Co., McCormick building, Chicago, at its recent organization. H. C. A. Mitchell was elected vice president and general manager, and John W. Taylor, vice president and sales manager.

William H. Campbell resigned Aug. 4 as superintendent of the drop forge department of the Page-Storms Drop Forge Co., Chicopee, Mass.

Howard Coonley, president of the Walworth Mfg. Co., Boston, has been elected a vice president of the Massachusetts Credit Union association.

M. J. McGarr has been placed in charge of an office established in Chicago by the Jackson Hill Coal Co., Terre Haute, Ind.

Harry M. Schaff, of the sales department of M. A. Hanna & Co., Cleveland, now is representing his company in the Pittsburgh district.

Thomas A. Arthur, vice president of Hickman, Williams & Co., Inc., Pittsburgh, recently motored to Spring Lake, N. J., where he is to spend the month of August.

Robert F. Whelan, for the past 25 years with the Pickering Governor Co., Portland, Conn., has resigned to accept a position with the Russell Mfg. Co, Middletown, Conn

C. O'C. Sloane resigned recently from the Allied Machinery Co. of America, New York City, to become identified with the Betts Machine Co., Rochester, N. Y.

Charles H. Hanson, for many years chief engineer of the York Mfg. Co., Saco, Me., has been appointed a member of the new Maine water power commission

L. H. Meyer has been placed in charge of an office recently established in the Oliver building, Pittsburgh, by the John W Cowper Co., Inc., Buffalo, engineer and contractor.

Guy D. Anderson has been appointed and has assumed his duties as general sales manager of the coke department of the Reilly-Peabody Fuel Co., Pittsburgh, succeeding T. J. Atkinson, who recently resigned and severed all connection with the company. Mr. Anderson has been with the Reilly-Peabody company for about two years and previously had been with the Poland Coal Co., Pittsburgh.

Capt. Giles S. Pease, formerly plant engineer of the Spencer Wire Co., Worcester, Mass., who has been in Palestine the past year and a half with the American Red Cross unit, has returned home.

Harry C. Owen, formerly assistant district representative of the United States fuel administration at Fairmont, W. Va., has become affiliated with the Bertha Coal Co., with offices in the Chamber of Commerce building, Pittsburgh.

Ralph T. Fuller who for the past 10 years has been affiliated with the sales department of M. A. Hanna & Co., Cleveland, has been elected vice president of the Producers Fuel Co., First National Bank building, Pittsburgh.

B. F. Affleck, president of the Universal Portland Cement Co, Chicago, and president of the Portland Cement association, recently was elected a director of the Great Lakes Trust Co., Chicago, which commenced business a short time ago.

J. Earl Myers, who for several years has been manager of the Pittsburgh office of Whitney & Kemmerer, resigned on Aug. 1, and has been made sales manager of the Westmoreland Fuel Co., Farmers Bank building, that city.

George C. Isbester has resigned as district sales manager of the Rail Joint Co., at Chicago, and has become district sales manager of welded and weldless products for the American Chain Co., Inc., with headquarters at Chicago.

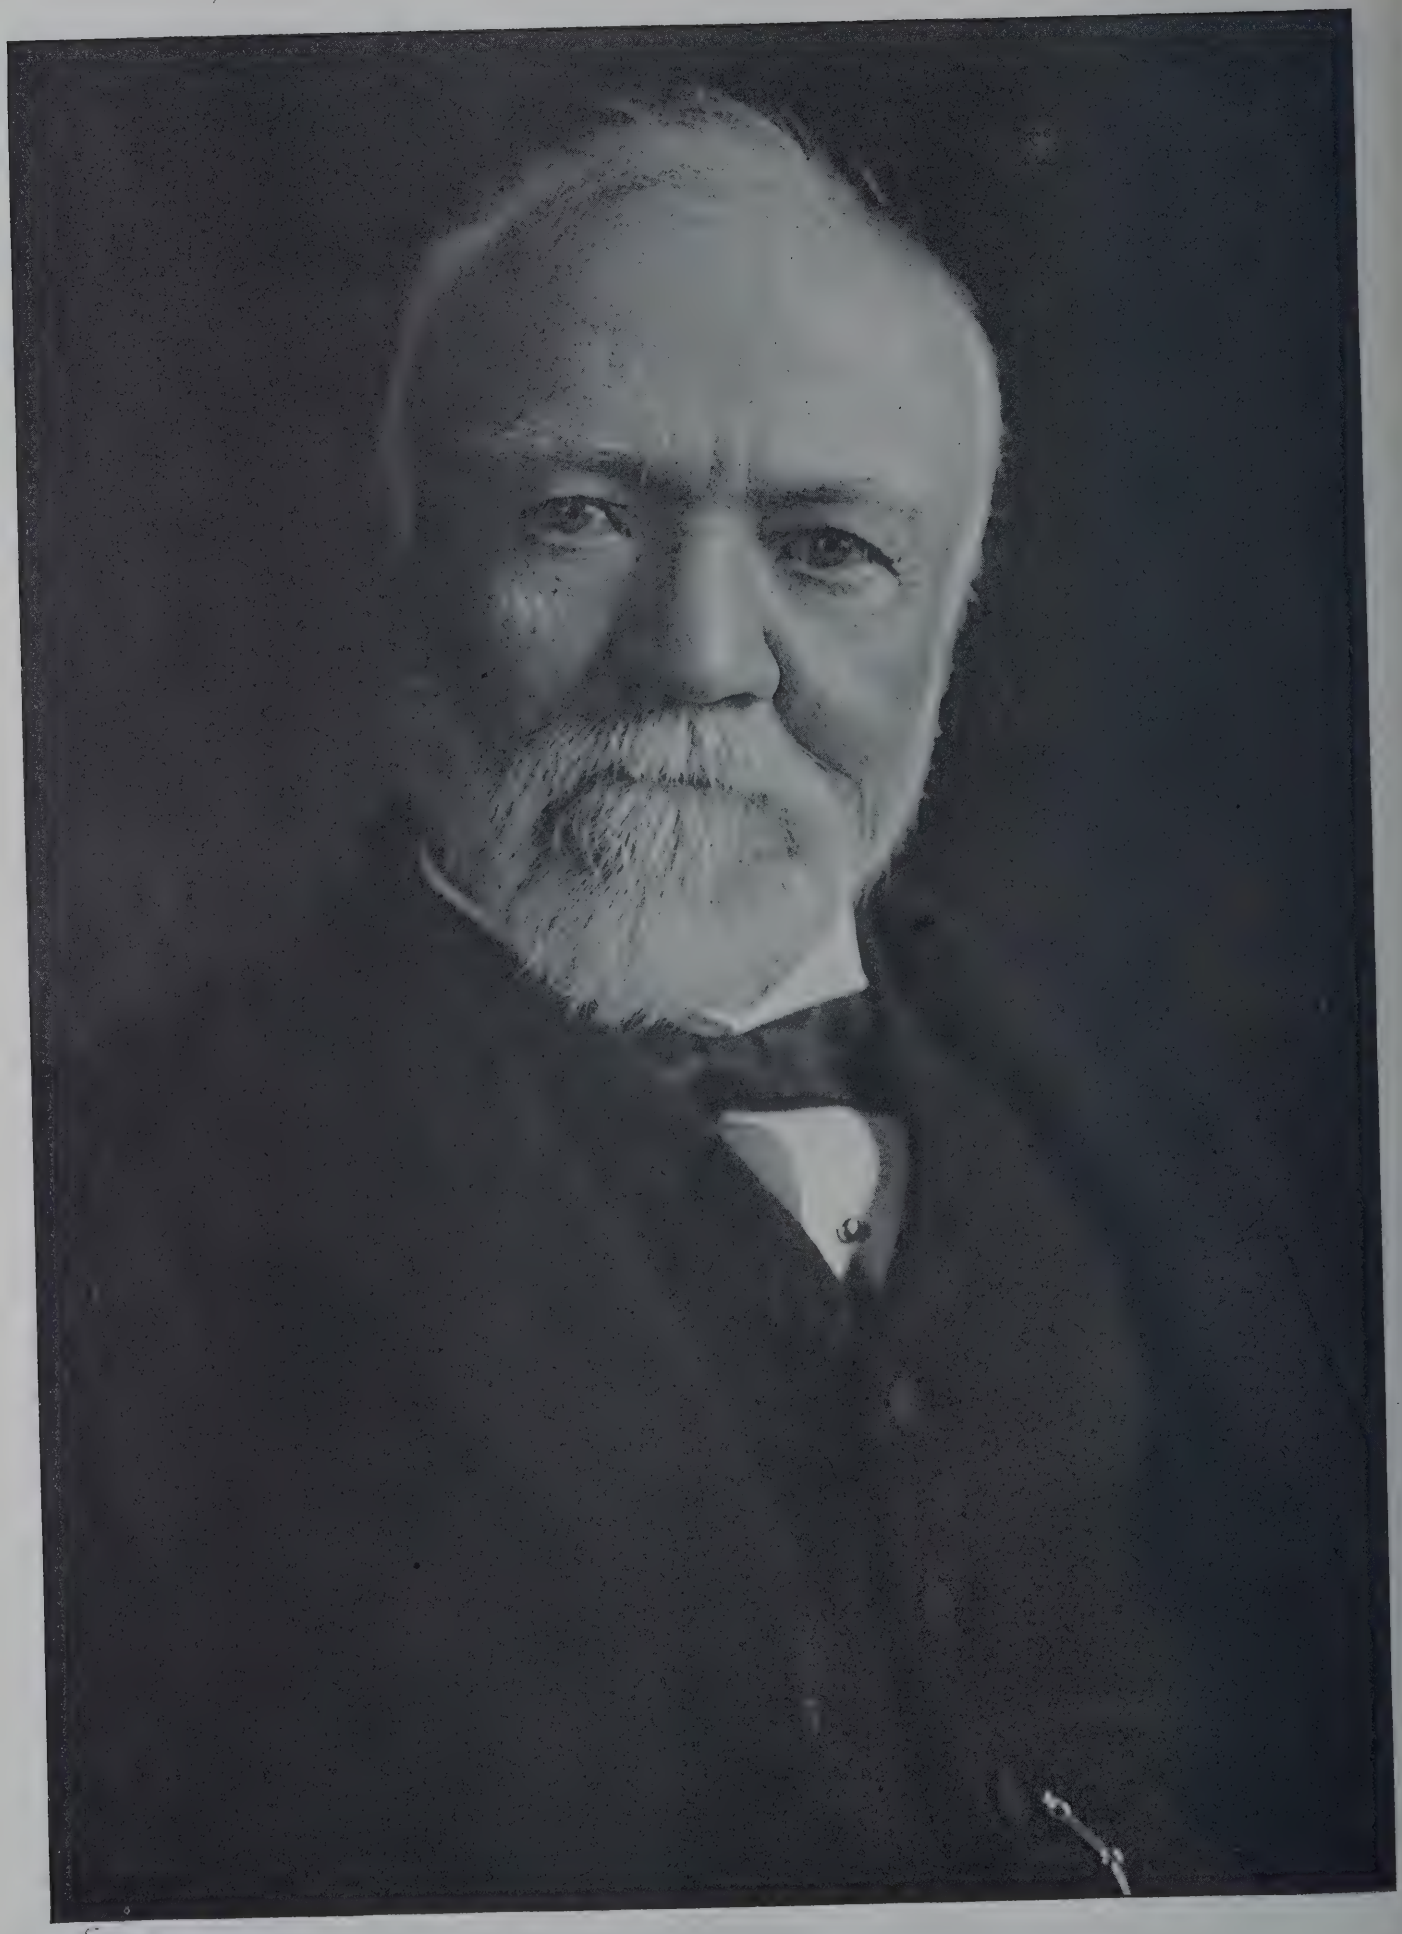
Franklin Remington has been elected chairman of the board of directors of the Foundation Co., New York, shipbuilder. John W. Doty was elected president of the company and H. J. Deutschbein, first vice president and general manager

Don M. Sutor has been placed in charge of the St. Louis office of the Sullivan Machinery Co., as sales manager, succeeding Phillips S. Jarvis. R. S. Wiener has been appointed district manager at El Paso, Tex., in place of Mr. Sutor.

Guy D Anderson has been appointed general sales manager of the coke department of the Reilly-Peabody Fuel Co., Frick building, Pittsburgh. Mr. Anderson has been with the company for some time and now succeeds T. J. Atkinson, who recently resigned.

Paul Mitchell, recently discharged as a sergeant of the provisional supply depot, American expeditionary forces, France, has returned to Chicago and has resumed his duties as traveling representative for the Independent Pneumatic Tool Co., 600 West Jackson boulevard, that city.

H. G. Nash recently was made manager of the Huntington, W. Va., district mine car department of the Hyatt Roller Bearing Co., New York City, Harry D. Hynds also is assigned to the same district to represent the Hyatt company in the mine car field.



Harvey C. Bartel, formerly identified with the coke industry in the Connellsville, Pa., region for about 10 years, has been placed in charge of the branch office recently established in Uniontown, Pa., by Fairbank & Co., Wade building, Cleveland, for the purpose of dealing in coal and coke.

Tampton Aubuchon has resigned as general manager of the Louisville Industrial Foundation, Louisville, Ky., which has been active in locating many manufacturing enterprises in that city. Mr. Aubuchon has been identified with the organization since December, 1916, and has had charge of the Foundation's $1,000,000 factory fund.

M. W. McClane was elected president of the Aetna Foundry & Machine Co., Warren, O., at the recent annual stockholders' meeting, where M. W. McClane, W. M. McKee, G. P. Gillmer, V. E. Rehr were elected directors of the company. Mr. Rehr was made vice president, G. P. Gillmer treasurer and M. C. Boyd was elected secretary.

Andrew Carnegie

1837-1919

ANDREW CARNEGIE

World's Great Steelmaster Dies

Andrew Carnegie's Death Comes Suddenly at Summer Home—Follows Brief Illness With Bronchial Pneumonia—In 1849 Earned $1.20 Weekly—In 1902 Started to Give Away $25,000,000 Annually—Benefactions Widespread

ANDREW CARNEGIE, premier of steelmakers and world renowned philanthropist, builder of libraries, etc., died suddenly at his summer home, Shadow Brook, Lenox, Mass., early Monday morning, Aug. 11. He had been ill since Friday, Aug. 8, with bronchial pneumonia. His health, however, had commenced to fail several years ago, and the decline was particularly marked after the outbreak of the world war, which was a severe shock to him. For several years he has not been seen much in public. Prior to the war, his summers were spent at Skibo Castle, his Scottish estate, but the last three summers have been spent quietly at Shadow Brook. Last May, he with his wife and secretary removed to Lenox and up until a few weeks ago, he spent much time fishing in Lake Mahkeenac, which borders Shadow Brook, and in riding about the grounds. Latterly, however, he was confined to his home. The advanced age of 82 left but little vitality to withstand the attack of pneumonia. The accepted authorities give his birth as Nov. 25, 1837; others make it 1835.

Notwithstanding Andrew Carnegie's strenuous efforts to achieve his ambition to "die poor" it is generally believed that his income was so great, he essayed the impossible. Huge amounts are given in various estimates of the value of his estate. While he was born poor, he early in life, expressed the conviction that it was a sin to die rich. Since 1902, his benefactions have averaged in excess of $25,000,000 annually. A little over a half century before that Andrew Carnegie was a bobbin boy in a cotton factory earning 20 cents a day.

While not a pioneer in the American iron and steel industry as regards its founding, Mr. Carnegie's name is closely interwoven in the history of its progress. He was a mighty factor in the stirring industrial times which followed the Civil war and the Carnegie works at Pittsburgh formed the nucleus of the United States Steel Corp., organized by J. Pierpont Morgan. With the formation of that corporation, Mr. Carnegie retired from active participation in the steel industry with approximately $500,000,000 in Steel corporation gold bonds.

All through his business career, Mr. Carnegie maintained an original attitude and viewpoint on the problems of capital and labor and on the duties of men of wealth. In his later years, he gave expressions to these views as well as advice to young men in business. These views are condensed in the following summary:

* * * *

Explains What Business Means

IN an interview a few years ago, Andrew Carnegie answered the query, "What does business really mean to you," by saying, "Service to the community must be always the root of business. Dollar-making is not necessarily business. Speculation is the counterfeit of true business. It creates nothing. It is a parasite fastened upon the labor of all real business men. A modern corporation can manage a business more efficiently than can an individual or a government. Business to me has been the means to an end—nothing more.

"I confidently recommend a business career as one in which there is abundant room for the exercise of man's highest power and of every good quality in human nature.

"If a young man does not find romance in business, it is not the fault

Chief Events in Life of World-Famous Steelmaker

Born Nov. 25, 1837, at Dumfermline, Fifeshire, Scotland.

Brought to America with his parents in 1848, settling at Pittsburgh.

Became bobbin boy or weaver's assistant in an Allegheny, Pa., cotton factory in 1849 at $1.20 per week.

Employed as messenger in the Pittsburgh office of the Ohio Telegraph Co., at $3 per week, in 1851.

Thomas A. Scott, superintendent of the Pennsylvania railroad, hired him in 1854 as his private telegraph operator at $35 per month. Soon became Mr Scott's private secretary.

Made first investment, buying 10 shares of Adams Express Co. stock at $60 a share; his mother mortgaged the home to raise the money.

Invested in a sleeping car company and in an oil well farm, which formed the nucleus of the Carnegie fortune.

In 1864, purchased an interest in the Iron City Forge Co., Pittsburgh; with Andrew Kloman and Henry Phipps. Then the Cyclops Iron Co. was started.

On April 25, 1865, helped to organize the Keystone Bridge Co., and shortly after resigned from the Pennsylvania railroad.

On May 1, 1865, the Union Iron Mills Co., was incorporated whose product chiefly was purchased by the Keystone Bridge Co.

Purchased control of Carnegie, McCandless & Co., which dissolved on Oct. 12, 1874, to be succeeded by the Edgar Thomson Steel Co., Ltd., with works at Braddock, Pa., incorporated at $1,000,000.

Introduced the making of steel by bessemer process upon his return from Europe, and in 1877 built the second Lucy furnace, both of which furnaces furnished pig iron for the Edgar Thompson works.

Purchased Homestead Steel Co., and the Duquesne Steel Works, Duquesne, Pa.

The Carnegie Steel Co. was formed in 1899, with a capital stock of $100,000,000, employing 45,000 workpeople.

In 1901, he sold out to the United States Steel Corp., and retired.

Died Aug. 11, 1919, at Shadow Brook, Lenox, Mass., his summer home.

INADEQUATELY DO THE PICTURES SHOW THE IMPOSING MAGNIFICENCE AND GRANDEUR OF ANDREW CARNEGIE'S HOMES. BORN IN THE UPSTAIRS ROOM OF THE HUMBLE COTTAGE AT DUNFERMLINE, SCOTLAND, SHOWN IN THE CENTRAL ILLUSTRATION, NONE VENTURED THE THOUGHT THAT HE WOULD ONE DAY BECOME LAIRD OF STATELY SKIBO CASTLE, ILLUSTRATED AT THE TOP. NOBODY IMAGINED HE WOULD OWN AMERICAN MANSIONS. THE ONE ON FIFTH AVENUE, NEW YORK IS SHOWN ABOVE ON THE LEFT AND ON THE RIGHT IS HIS HOME IN STAMFORD, CONN. BELOW IS ILLUSTRATED SHADOW BROOK, LENOX, MASS., WHERE HE SPENT HIS SUMMERS SINCE THE BEGINNING OF THE WAR IN 1914.

of business. Business is not all dollars. These are but the shell—the kernel lies within and is to be enjoyed later, as the higher faculties of the business man, so constantly called into play, develop and mature."

* * * *

Surrounded by Big Men

IT is a well known fact that perhaps the greatest contributing factor to Andrew Carnegie's success, was his peculiar faculty for surrounding himself with enterprising, energetic and capable young men. He was always quick to recognize ability in others and that recognition always took a tangible character. Listed among those who have been styled "Carnegie partners" are many present-day millionaires. They have achieved success along with the success their efforts brought to Mr. Carnegie. To mention only a few, names like Charles M. Schwab, James H. Reed, Lawrence C. Phipps, William P. Palmer, Frederic H. Kindl, David G. Kerr, Alva C. Dinkey, W. B. Dickson and William E. Corey stand out in industrial history. They all owe much to their affiliation with Andrew Carnegie, who was always cognizant of the measure to which he was indebted to them.

Gave Success Formula

When asked at one time what was the secret of his success, he answered with spirit: "Concentration. It has been often written that I made money by taking chances—by scrapping machinery even though almost new for some improved inventions—but these explanations never appealed to me. Before I scrapped any machine, I took good care to have the working models of the new machines approved. The way I made my money was by concentrating—doing one thing at a time—trying to do it better and more efficiently than anyone else. The trouble with most business men is that they mix themselves up into too many things. There's nothing in it.

"The way to succeed is to select some definite line of work—however small and insignificant it may appear to be—to know more about that than anyone else knows and to let outside things alone. I succeeded by doing one thing at a time and doing it well. Then when I had accomplished one job—developed a certain kind of rail or angle iron—I would turn to something else. In the meantime, I saved my money and kept my health."

* * * *

Broad Views on Labor

MR. CARNEGIE'S attitude on the labor question is well known. Indicative of his success as one of the largest employers of men in the world, is his own statement: "With the exception of the strike at the Homestead mills, we have never had a serious disaster but that one was terrible indeed. If it became necessary for me to return to industrial life, I should not consider the problem of labor at all difficult. On the contrary, conferences with the men, a practice which we always pursued, would make the solution an easy one. Those conferences, I always enjoyed. We had one rule, come what may, we never thought of running our works with new men. Able, sober, well-behaved workmen, such as ours were, are not to be picked up on the streets. We wished no other kind. We always were particular in regard to drinking: First offense, men were excluded from work for 30 days; second offense, 60 days; third offense, we parted company.

Carnegiegrams

A MAN who dies possessed of millions of available wealth, which was ever ready in his hands, to be distributed, will die disgraced.

There is always a boom in brains—cultivate a good crop—you cannot overstock the market.

Man should always be money's master; he should keep money in the position of a useful servant.

To try to make the world in some way better than you found it, is to have a noble motive in life.

Common sense is the most uncommon and most valuable quality in man or woman.

Cultivate a taste for reading that you may know what the world has done and is doing.

The habit of thrift constitutes one of the greatest differences between the savage and the civilized man.

Business is a means to an end; the greatest end is service to the community.

Maintain your self respect as the only true way to win the respect of others.

A business career must widen and develop the intellectual powers of its devotee.

To use wealth in ways beneficial to the community requires no less ability than that which acquired it.

The main consideration of charity should be to help those who help themselves.

The highest title man can write upon the page of history is his own name.

One of the serious obstacles to race improvement is indiscriminate charity.

Capital, labor and business ability are the legs of a three-legged stool.

As an end, the acquisition of wealth is ignoble in the extreme.

Happy is the man who has to work, to work hard and to work long.

Put all your eggs in one basket; then watch the basket.

You cannot push a man up a ladder unless he is willing to climb.

The race in life is to those whose record is best at the end.

No amount of ability is of the slightest avail without honor.

The vital enemy of labor is labor not capital.

A man must be egoistic before he is altruistic.

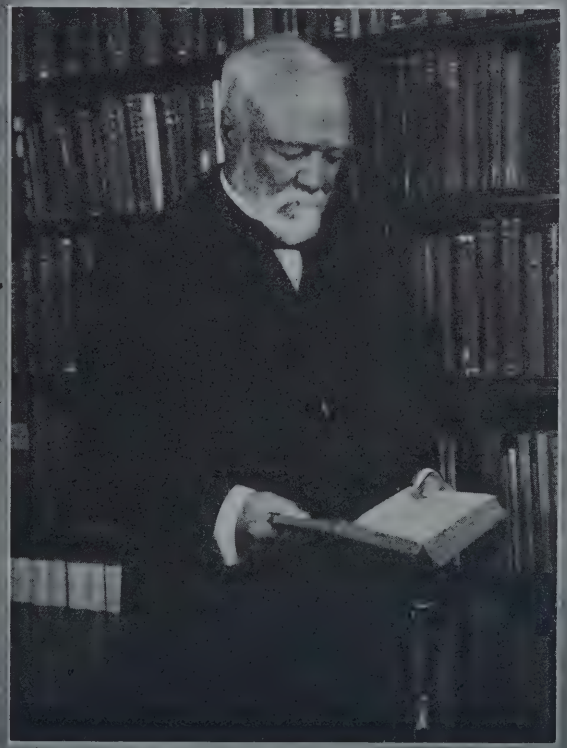
Mutual ignorance ever breeds mutual distrust.

Considered Homestead Strike Lamentable

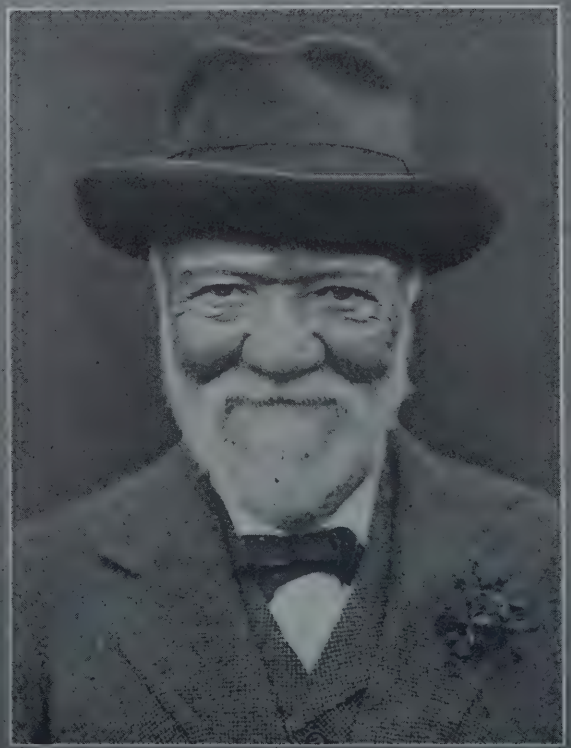
"Because I was in Scotland at the time of the lamentable Homestead riot, I did not hear of it until days after it had occurred. I cabled that I would take the first steamer home. My partners asked me not to come.

"Some of the men at the works cabled me: 'Kind master, tell us what you want us to do and we will do it for you.' It was too late. I believed from the cable dispatch that all had been settled and that it was best to conform to my partners' wishes. They made a most generous offer to the workmen. The new Homestead rolling mills increased the production 60 per cent. Rollers were offered a wage increase of 30 per cent, one-half the total gain. I would not have done more. The error was made in starting with new men, against our rule.

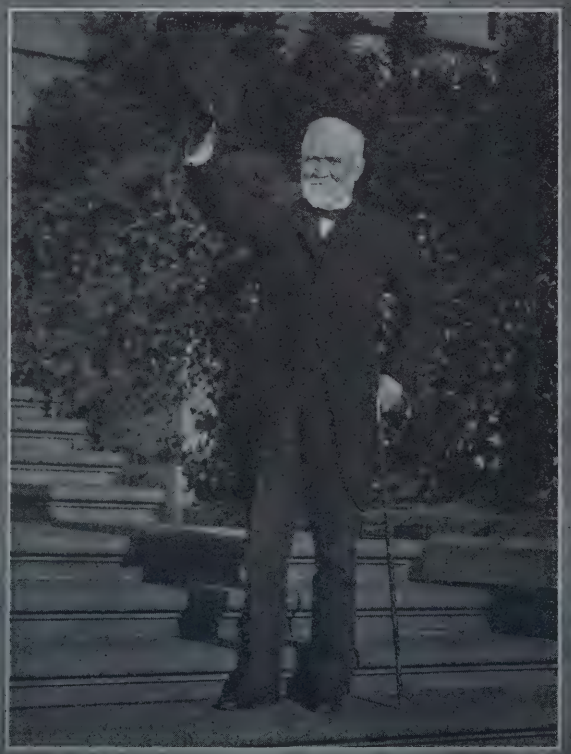
Selects Own Epitaph



"The governor of Pennsylvania, I understand, wished certain of our workers arrested for riot and bound over for trial. Consequently some of these disappeared, among them the burgess of Homestead. Some time afterward my friend, Prof. Van Dyke of Rutgers College, was ordered to California for his health. Upon his return he told me that he had met the ex-burgess working as a laborer in a Mexican mine at Sonora. I asked him to offer McLuckie any help he might need, and upon his return to the west he did so. Meanwhile McLuckie had got a position with the Sonora railways, driving wells, and was succeeding admirably. The professor said: 'You don't know whose money I was told to help you with.' He said that he had no idea. 'Well, it was Mr. Carnegie's. Then came the slow, earnest response: 'That was damned white of Andy.'



"When I heard this, I suggested to my friend Van Dyke that it wouldn't be a bad epitaph to grace one's tombstone. If it ever did, I hoped there would be no long blank



Personal Glimpses of Andrew Carnegie

MUCH OF THE FINANCIAL ACUMEN WHICH TOOK CARNEGIE, PHIPPS & CO., AROUND THE INDUSTRIAL ROCKS IN THE EARLY DAYS, CAME FROM ANDREW CARNEGIE'S FORMER PARTNER, HENRY PHIPPS. NATURALLY, THIS RESULTED IN A LIFETIME FRIENDSHIP. THE TWO OLD IRONMASTERS ARE SHOWN IN THE TOP ILLUSTRATION. ALWAYS A VORACIOUS READER, GOOD BOOKS WERE MR. CARNEGIE'S FRIENDS. THE ILLUSTRATION BELOW AT THE LEFT, SHOWS HIM IN ONE OF HIS SEVERAL PERSONAL LIBRARIES. HE ALWAYS DEVOTED A PORTION OF EACH DAY TO READING, NO MATTER WHERE HE RESIDED AND HE ENDEAVORED TO ENCOURAGE THIS PRACTICE IN OTHERS BY BUILDING THOUSANDS OF LIBRARIES. A PICTURE OF HEALTH AND VIRILITY, MR. CARNEGIE IS SHOWN IN THE CENTRAL ILLUSTRATION BELOW, READY FOR A GAME OF GOLF, WHICH WAS ONE OF HIS CHIEF HOBBIES. HE WAS AN EXPERT WITH THE GOLF CLUBS. IN THE ILLUSTRATION BELOW TO THE RIGHT IS SHOWN THE CUSTOMARY GENIALITY WHICH HE ALWAYS DISPLAYED WHEN HE CAME IN CONTACT WITH THE GENERAL PUBLIC.

space between the d's. Each letter should be put down to give McLuckie's proper expression.

"One or two partners out of our 40 may, as Mr. Phipps states, sometimes consider me foolish 'in always yielding to labor,' while I am satisfied that for every dollar so spent we had indirectly ample and more than ample reward. Frankly I consider that folly was one of my best virtues."

* * * *

Favored Tax on Incomes

SEVERAL years ago, Mr. Carnegie made a speech in New York favoring a graduated tax upon incomes. He lived to see its inauguration. At that time, he said: "It is hard upon millionaires in particular, but it is good for them. I believe in every citizen of this country bearing his share of the taxation in proportion to his ability to acquire money and in direct proportion to the amount he has. I for one welcome the income tax as one of the wisest steps which this republic has ever taken."

As to customs taxes, Mr. Carnegie said at that time: "It may be doubted if any tax is evaded so generally and with so few pricks of conscience as the customs tax on material brought from foreign lands to our shores. That is one of our people's glaring faults."

* * * *

His Views on Wealth

IN his testimony on the witness stand in February, 1915, before the federal commission on industrial relations, he said that his business in life was to "do as much good in the world as I can." Once he was asked what consideration weighed most with him in making his great public gifts and he replied: "Why, the gratification of the wish I have always had to leave the world a little better than I found it. If ever I have a coat of arms, my motto will be, 'All's well, since all grows better.' My theory is that there is nothing in the world that is not improving and there is no limit to the ascent of man."

Several years ago he said, and he has often repeated it since: "The day is not far distant when the man who dies, leaving behind him millions of available wealth which was free for him to administer during life, will pass away, unwept, unhonored and unsung, no matter to what use he leaves the dross which he cannot take with him. Of such as these the public verdict will be, 'the man who dies thus rich, dies disgraced.' Such, in my opinion, is the true gospel concerning wealth, obedience to which is destined some day to solve the problems of rich and poor and to bring peace on earth and good will to men."

* * * *

A Lover of Literature

FREQUENTLY, it has been said that one of Andrew Carnegie's mottoes was: "When in doubt, found a library." Mr. Carnegie had founded approximately 3000 libraries. They adorn cities all over this country and abroad.

He was always fond of reading and Shakespeare was one of his favorite authors. A few years ago at a birthday celebration in New York, attended by the members of the Young Men's Bible class of the Fifth Avenue Baptist church and by John D. Rockefeller Jr., he told, among other things, how his study of Shakespeare had benefited him throughout his life. He said that as a boy, when delivering a telegram in a theater, he had been admitted without charge. The play being enacted was one of Shakespeare's. It so impressed him that he secured a copy of the poet's works and began the study which he pursued all his life.

Andrew Carnegie's hopes for international peace became almost an obsession with him. At a cost of $1,500,000, he built The Hague peace palace, at which many peace parleys were held.

Carnegie's Hobbies

MUSIC: Mr. Carnegie has contributed over $6,000,000 for the installation of approximately 7000 church organs. His own magnificent organ at Skibo castle furnished music during the dinner hour. A piper marched around the castle each morning, playing stirring music on his pipes.

WRITING: Among the many works from Mr. Carnegie's pen are: "An American Four-in-Hand in Britain" (1883); "Round the World" (1884); "Triumphant Democracy" (1886); "The Gospel of Wealth" (1900); "The Empire of Business" (1902); "The Life of James Watt" (1906), and "Problems of Today" (1909). Many contributions to magazines have been made by him.

READING: He has always been a reader. Shakespeare has been his life study. As a boy he borrowed books and thus early resolved that should circumstances permit, he would make books accessible to all. The Carnegie libraries have done this.

SIMPLIFIED SPELLING: He always claimed that useless letters in words were misdirected energy. A few years ago he was riding this hobby horse. He said: "I convinced one man this afternoon. I told him to write 'tho' and then ask himself why as a rational man he should add 'ugh' to it." He has rigidly followed all rules for simplified spelling.

FISHING: Elaborate salmon and trout hatcheries were installed by him at Skibo castle. Fishing was one of his chief hobbies.

GOLFING: Before he became too feeble for it, he became an expert in playing golf. His private course at Skibo was noted as one of the best.

YACHTING: He has been the owner of several palatial private yachts, including the EVERGLADES, *the* SEABREEZE *and the* SURF.

GARDENING: He always spent considerable time in his gardens, where roses always grew in profusion, planting, trimming, cutting, etc.

A Millionaire's Duty

TO set an example of modest, unostentatious living, shunning display and extravagances; to provide moderately for the legitimate wants of those dependent upon him, and, after doing so, to consider all surplus revenues which come to him simply as trust funds, which he is called upon to administer, and strictly bound as a matter of duty to administer in the manner, which, in his judgment, is best calculated to produce the most beneficial results for the community. The man of wealth thus becomes the mere agent and trustee for his poorer brethren, bringing to their service his superior wisdom, experience and ability to administer, and doing for them better than they could or would do for themselves.

(Signed) ANDREW CARNEGIE.

Andrew Carnegie Gave With Lavish Hand

AMONG the many benefactions by Andrew Carnegie, the following is a diversified list which gave him ample proof that his was the correct theory, namely that a man to obtain the most out of his wealth should see to its disposal while yet alive:

The Carnegie Corp. of New York, which directs his endowments for the advancement of education and research	$125,000,000
Libraries	55,000,000
Carnegie Institute, Pittsburgh, which was considered by Mr. Carnegie himself as being his greatest gift	27,000,000
Carnegie Institution, Washington, designed for the purpose of original research in science, literature and art	22,000,000
Pension funds	15,000,000
Small colleges, United States	20,000,000
Carnegie Foundation for the advancement of teaching	16,125,000
Carnegie United Kingdom trust	10,000,000
Scotch universities	10,000,000
Endowment for international peace	10,000,000
Hero fund	10,540,000
Carnegie Steel Company's employes	5,000,000
Dunfermline endowment, to purchase a glen and convert it into a park where all children might play. He remembered that as a boy, he often looked longingly at it but admittance was forbidden	5,000,000
Miscellaneous in the United States	18,000,000
Miscellaneous in Europe	2,500,000
Total	$351,165,000

Master Minds Meet at Formation of Steel Corporation

Prior to the Exchange of These Historical Letters, All Arrangements for the Greatest Business Deal in History, Rested on the Spoken Word of the Two Principals

ANDREW CARNEGIE

FIVE WEST FIFTY-FIRST STREET

Messrs. J. P. Morgan & Co.,
Wall and Broad streets,
New York City.

New York, February 26, 1901.

Dear Sirs:

Referring to my conference with Mr. J. P. Morgan, and to your request that the results of that conference shall be stated definitely, so as to afford a basis for your further proceeding in connection with your negotiations with the United States Steel Corporation, I have to state to you as follows:

First: I understand that the United States Steel Corporation, a corporation organized under the laws of New Jersey, is about to issue and deliver its preferred stock for an amount approximating $450,000,000, *and its common stock for an amount approximating* $450,000,000, *and its 5 per cent bonds for the aggregate principal sum of* $300,000,000.

The stocks of the United States Steel Corporation are to be received by the syndicate represented by you, and a portion thereof is to be delivered in payment and exchange for stocks of the companies hereinafter named, provided that in no instance shall there be received less than two-thirds of the total outstanding capital stock of either of said companies, which two-thirds in each instance shall include two-thirds of the outstanding preferred stock of such company. The shares of the United States Steel Corporation to be issued in excess of the amounts deliverable for the aggregate amount of such shares of the companies hereafter named, are to be retained by and belong to the Syndicate which is to pay to the United States Steel Corporation certain cash sums.

Second:. That the other companies whose stocks are to be received in exchange for the stock of the new company are as follows:

The Carnegie Steel Co., Federal Steel Co., National Steel Co., American Steel & Wire Co. of New Jersey, National Tube Co., American Sheet Steel Co., American Steel Hoop Co. and American Tin Plate Co.

Third: I will deliver to you, or, upon your order for delivery, to the United States Steel Corporation 5 per cent bonds of the Carnegie Company of the par value of $86,145,000, *and 92,996 shares of the capital stock of that company of the aggregate par value of* $92,996,000, *and in payment therefor will accept the bonds for* $225,639,000 *(par value) of the United States Steel Corporation to be secured by a mortgage or pledge upon all its property now held or hereafter acquired (including bonds of the Carnegie Company as acquired), in general form similar to the mortgage or pledge now securing the collateral trust bonds of the Carnegie Company, and in form to be approved by my counsel, and providing for a sinking fund of 1 per cent per annum and minus redemption clause. It is understood, of course, that the charge of the collateral trust indenture upon property hereafter acquired by the company will be upon property so acquired, subject to the terms of the acquisition thereof, and also that such charge shall be so arranged as not to embarrass or limit the company in the use or disposition of property (other than stocks of the underlying companies and bonds of the Carnegie Company) not constituting an essential part and feature of the business of the company; and, further, that proper provision shall be made for the releasing from the lien of indenture property which may cease to be valuable to the company for the prosecution of its business, or which may be for the benefit of the company to exchange or alter for the business advantage. It is also understood that the charge of the indenture shall not apply to the current assets or receipts of the Corporation.*

Fourth: Knowing that upon the basis of this letter you are about to make a public offer, asking that the stock of the other companies be deposited on or before April 1, 1901, I will deposit, or cause to be deposited, with your firm, for the purpose of the transaction and against your receipt therefor, to be approved by my counsel, the stocks and bonds of the Carnegie Company above mentioned, it being understood that the bonds of the United States Steel Corporation to be received by me will be ready for delivery on or before the first day of July, 1901.

I am to receive a sum equal to my proportionate share as a stockholder of the monthly profits of the companies owned by the Carnegie Company until such time as the new bonds begin to bear interest, or the United States Steel Corporation, at its option, may pay interest on the new bonds from Feb. 1, 1901, in lieu of the interest on Carnegie Company bonds and profits on stock deposited by me.

The above proposition is conditional upon your taking from the other stockholders of the Carnegie Company, if they desire, their shares of stock at the same price per share as I am to receive, to be paid in preferred and common shares of the United States Steel Corporation, viz.: for each share of Carnegie Company stock 15 shares of preferred and 15 shares of common stock of the par value of $100 *each, and that the remainder of the bonds of the United States Steel Corporation shall be reserved and used to acquire bonds of the Carnegie Company.*

Yours very truly,
(Signed) Andrew Carnegie.

J. P. MORGAN & COMPANY

NEW YORK CITY

Andrew Carnegie, Esq.,
5 West Fifty-first street,
New York.

New York, March 2, 1901.

Dear Sir:

Referring to your letter of Feb. 26, 1901, we would say that upon the understanding (already confirmed by Judge Reed and Mr. Schwab) that our undertaking is based upon the completion of the transaction as stated in your letter or as approved by us jointly, and that (as arranged with you last evening over the telephone) the total bond issue may be $305,000,000, *we beg to confirm the arrangement as proposed by you.*

Very truly yours,
(Signed) J. P. Morgan & Co.

Ingot Production

In July Makes 13 Per Cent Gain Over June Output

Steel ingot production for July continued on the incline following the recovery in June after a steady drop since the first of the year, according to the statistics of the American Iron and Steel institute. A total of 2,508,176 tons were produced in July, against 2,219,219 tons in June, by the 30 companies which in 1918 produced 84.03 per cent of the output of the country. This is a gain of 288,957 tons or 13 per cent. Open-hearth production was 1,692,257 tons, 183,373 more than that of June, 1,692,257 tons. Bessemer totaled 625,246 tons, a gain of 103,612 tons over the 521,634 tons in June. Production of all other ingots was 7300 tons compared to 5328 tons in June, an increase of 1972 tons. The greatest percentage increase was made in the latter followed by bessemer and open-hearth.

Following are the institute's production figures from January, 1918 to July, 1919:

Months	Open hearth, gross tons	Bessemer, gross tons	All other, gross tons	Total, gross tons
Jan., 1918	1,763,356	429,588	10,901	2,203,845
Feb.	1,805,233	454,457	14,051	2,273,741
Mar.	2,331,048	763,255	16,078	3,110,381
Apr.	2,377,974	769,249	16,187	3,163,410
May	2,475,131	796,244	15,858	3,287,233
June	2,281,718	786,380	15,348	3,083,446
July	2,311,545	784,997	17,093	3,113,635
Total for 7 months	15,346,005	4,784,170	105,516	20,235,691
Aug.	2,299,177	766,860	17,643	3,083,680
Sep.	2,407,993	772,863	16,802	3,197,658
Oct.	2,527,776	807,043	17,377	3,352,196
Nov.	2,291,720	753,409	15,631	3,060,760
Dec.	2,273,189	706,844	12,273	2,992,306
Total 1918.	27,145,860	8,591,189	185,242	35,922,291
Jan., 1919	2,351,153	749,346	7,279	3,107,778

July	1,875,630	625,246	7,300	2,508,176
Total for 7 months	13,301,665	4,021,926	47,265	17,370,856

Daily average production for the 30 companies during July was 96,468 tons or 114,801 tons for the whole industry. The same figures for June were 88,768 tons and 105,638 tons. The July production was at the rate of 35,243,907 tons annually or 2,813,041 tons greater than the June rate of 32,430,866 tons. When compared to the high-point production of October, 1918, when the rate was 45,359,250 tons annually, the July production represented 77.8 per cent, a gain of 6.2 per cent over June. The total for the first seven months of this year is 17,370,856 tons or 2,864,835 tons less than the 20,235,691 tons for the same period last year. Thus the 1919 production for seven months represents 84.8 per cent of the 1918 production for the first seven months. For 6 months the same percentage was 86.8 per cent.

Ore Tonnages Lower

Tonnages of iron ore mined and shipped from mines in the United States were less in 1918 than in 1917. This is revealed in the complete statistics of iron ore mining for last year, compiled under the direction of Ernest F. Burchard, of the United States geological survey, department of the interior.

The iron ore shipped in 1918 and 1917, aggregated 72,021,202 and 75,573,207 tons respectively, a difference of 3,552,005 tons or 4.7 per cent. The iron ore mines in the two years (exclusive of that containing 5 per cent or more of manganese) was 69,658,278 and 75,288,851 tons respectively, a difference of 5,630,573 tons or 7.5 per cent.

The following is a comparative table of iron ore tonnages shipped from mines in the United States in 1918 and 1917:

State	1918 Quantity (gross tons)	1917 Quantity (gross tons)
Alabama	6,121,087	7,101,586
California	3,121	2,207
Georgia	262,003	211,591
Maryland	6,070	10,730
Michigan	17,587,416	17,712,916
Minnesota	43,263,240	44,962,127
Missouri	71,968	38,770
New Jersey	375,238	474,708
New Mexico	275,266	231,604
New York	899,970	1,356,011
North Carolina	108,332	90,957
Pennsylvania	515,845	548,674
Tennessee	408,954	520,460
Utah	52,722	(a)
Virginia	400,135	472,337
Wisconsin	1,167,640	1,179,709
Other states (b)	502,195	658,910
	72,021,202	75,573,207

(a) Less than three shippers in Utah in 1917 and permission not granted to publish state total. Figures for this state, therefore, included in "other states."

(b) 1917: Arkansas, Colorado, Connecticut, Iowa, Massachusetts, Montana, Nevada, Utah, West Virginia and Wyoming; 1918: Colorado, Connecticut, Idaho, Massachusetts, Montana, Nevada, Texas, Washington and Wyoming.

Iron ore in 1918 was mined by 458 mines in 26 states while the previous year, 452 mines in 25 states contributed to the total output. The rank of the three states producing the largest quantity of iron ore, Minnesota, Michigan and Alabama remained unchanged in 1918. Last year Minnesota produced more iron ore than all other states together, furnishing a little more than 60 per cent of the total output of the country.

Shipments of ferroalloys of all classes in 1918 amounted to 750,868 tons, valued at $115,433,943, as against 634,021 tons in 1917, valued at $83,731,724. This means an increase in quantity of 116,847 tons or 18 per cent and in value of $31,702,219.

Benzol Prices

Influenced by Heavy Demand Reflect Upward Tendency—Phenol Inactive

New York, Aug. 8.—Owing to a continued heavy demand for benzol and phenol, an advance in prices may go into effect shortly. At present, pure benzol is holding at 24 cents to 29 cents with 90 per cent material at 23½ cents to 28½ cents, and pure toluol at 27 cents to 35 cents. Even in these quotations an upward tendency may be noted. Sellers state that the peak of the demand for motor benzol has been passed, and that, so active is the buying of benzol and toluol, the fuel is now being distilled for these latter products on a larger scale. A fairly good demand prevails for solvent naphtha, which continues to hold around 22 cents to 27 cents for spot and contract business.

Pending final arrangements for the marketing of government phenol, the trade continues to mark time. For the present, quotations are purely nominal. Trading in naphthalin remains of rather restricted proportions. Prices are unchanged at 6½ cents to 7½ cents for naphthalin in flakes, and 8½ cents to 9½ cents for naphthalin in balls.

Activity in sulphate of ammonia is increasing as a result of a better interest by the fertilizer manufacturers. As yet, buying hasn't assumed large proportions, but the volume of inquiry is steadily increasing and all indications point to an active market within the near future. Prices remain unchanged at $3.40 to $3.65 for spot and $3.25 to $3.40 for contract business.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.24 to .29
Toluol	.27 to .35
Solvent naphtha	.22 to .27

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE Great Lakes Malleable Co., Milwaukee, recently incorporated with $100,000 capital, has perfected its organization by the election of the following officers: President, F. J. Vea, president of the Stoughton (Wis.) Wagon Co.; vice president, Olaf Hoff, Upper Montclair, N. J.; secretary, Raymond F. Ethier, Milwaukee; treasurer, C. M. Osterheld, Stoughton; general manager, W. T. Hercher, Milwaukee; directors, C. O. Egeland, Stoughton, and Matt Hoff, Upper Montclair. Mr. Hercher formerly was superintendent of the malleable foundry of the Chain Belt Co. and previously in the business at Bridgeport, Conn. Mr. Ethier also is a former Chain Belt Co. employe. The company is rebuilding the former Maynard steel foundry at 710-716 Reed street and erecting a new annealing building. It hopes to be ready to pour metal by Sept. 1.

* * *

INCREASE of from $150,000 to $300,000 in the capitalization of the Guide Motor Lamp Mfg. Co., Cleveland, is being used for financing a factory addition and new equipment for manufacturing automobile equipment.

* * *

AN order has been received from the Dodge Steel Co., Philadelphia, which recently built a steel casting plant, by the Electric Furnace Construction Co., that city, for a 3-ton electric furnace.

* * *

ORDERS for practically all of the machinery needed for its factory addition have been placed by the Rockford Milling Machine Co., Rockford, Ill., which recently tripled its $300,000 capitalization.

* * *

GEORGE W. BOOKER, president of the F. B. Stearns Co., automobile manufacturer, Cleveland, announces the company plans immediate construction of an addition to its plant to cost approximately $300,000.

* * *

NEW plant additions, which are being rushed completion, when completed will make the melting capacity of the Saginaw Malleable Iron Co., Saginaw, Mich., 160 tons per day. The additions consist of annealing room, 95 x 300 feet and a 2-story core building, 80 x 200 feet, the second floor of which will be equipped for rest and locker rooms, and a restaurant sufficient to feed 1000 persons ini 45 minutes. All new equipment needed for the extensions has been purchased, according to C. F. Drozeki, president and general manager.

* * *

THE West Virginia-Pittsburgh Coal Co. has awarded a contract to Roberts & Schaefer, Chicago, for improvements involving an outlay of $100,000. A new power plant is planned for the company's LaBelle mine, two miles of 70-pound rails on the main haulage from LaBelle mine and three new steel tipples.

* * *

THE Kirk Supply Co., Farmers' bank building, Pittsburgh, has become representative for western Pennsylvania, Ohio and western New York for the Chesapeake Iron Works, Baltimore, crane builders, and also the eastern district representatives for the International Clay Machinery Co., Dayton, O., for the sale of industrial cars made by that company.

* * *

IN order to care for its growing business the Decatur Bridge Co., Decatur, Ill., recently increased its capital. Various extensions to the company's plant have been made during the past few years and no addition to its facilities are contemplated at this time, although according to R. D. Wood, assistant manager, the company is planning to enlarge its facilities during 1920.

* * *

ORDERS for some new machinery have been placed by the Rickert-Shafer Co., Erie, Pa., manufacturer of machinery and machine tools, for the new wing it will add to its plant, but much of the equipment will not be ordered until construction is well under way or completed. An up-to-date hardening department will be installed and the company expects to market a number of new tools.

* * *

THE Kelsey Wheel Co., of Detroit, will invest $1,000,000 to increase its manufacturing facilities in Memphis, Tenn., and afford employment to 4000 men. Wheels and bodies for motor cars are the Kelsey product. Forty acres of land have been purchased as site for the additional buildings. The knocked specialties from the Kelsey works will be shipped to Detroit automobile plants for assembling.

* * *

ERECTION of a reinforced concrete foundry building is being rushed to completion by the Keystone Foundry Co., Plymouth, Ind., which was recently incorporated to manufacture small and medium sized gray iron, brass and aluminum castings. The company is capitalized at $10,000. J. E. Forgarty, formerly superintendent of the Electric Steel Co. of Indiana, Indianapolis, is president, and George Phol, who was connected with the Hill Pump Co., Anderson, Ind., is treasurer of the company.

* * *

CONTRACTS have all been let for the construction of the plant being erected by the Inland Motor Co., Evansville, Ind., incorporated recently at $250,000. It will build and assemble gasoline and steam trucks. Contracts for machinery, machine tools, etc., have yet to be placed and requirements include lathes, shapers, drill presses, arbor presses, cutter and drill grinder, power hack saws, etc. The company's address at present is 513-515 Sycamore street, but the plant will be located at the corner of Nevada avenue and Stringtown road.

* * *

ORGANIZATION of the Byron Engineering Works, Louisville, Ky., with a capital of $175,000, is announced by J. Stoddard Johnston Jr., who is acting chairman of a syndicate of Louisville business men who are backing the project. The company will manufacture pole and 4-wheel trailers and 3, 5 and 7-ton semitrailers for distribution throughout the United States. Present plans contemplate an annual output valued at approximately $750,000. O. E. Byron, automotive engineer, formerly identified with a truck trailer manufacturer, will be one of the chief officers of the company. Offices are to be established in Louisville and the company shortly will start development of its products, tools, jigs, and dies and its sales department will soon be organized.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

ORGANIZED by Warren W. Baker, Francis S. Carr, L. Norris Hall and Stephen J. Carroll, officers of the Pennsylvania Steel Export Co., Widener building, Philadelphia, W. W. Baker & Co., will engage in a steel jobbing business. They have acquired a 3-story concrete building at 940 Front street, Philadelphia, which has 16,000 square feet of warehouse space. Eventually it will house both Baker & Co., and the Pennsylvania Steel Export Co. While at present W. W. Baker & Co., will handle only hot rolled bars and wire products, later it will job miscellaneous steel products.

* * *

WORK of getting the Riverside plant of the National Tube Co., at Benwood, W. Va., ready for operation is progressing steadily. Fires have been lighted in No. 1 blast furnace of the plant and it is expected to be pouring metal in a few days.

* * *

THE Snell Mfg. Co., Fiskdale, Mass., one of the largest makers of augers and bits in the United States, began operations on a 9-hour day schedule, Aug. 4, this being the first time in its history of 85 years that the plant has been operated less than 10 hours a day.

* * *

THE Woodruff Coal & Iron Co., Oliver building, Pittsburgh, recently was appointed exclusive sales agent for the Chaplin Collieries Co., and the Scott Run Coal Co., Morgantown, W. Va. The mines of the two companies operate in the Pittsburgh and Sewickley seams.

* * *

THE resignation of H. L. Wadsworth from the American Foundry Equipment Co. and the Sand Mixing Machine Co., Inc., will not interfere with the manufacture of sand blast equipment by those combined companies. It has become a permanent branch of their business.

* * *

THE Kaukauna Machine Works Co., Kaukauna, Wis., recently shipped 17 power hammers to Paris, France, rounding out the largest month's business in the history of the company. The shipment comprised five each 25 and 50-pound hammers, three 100-pound and two each 250 and 500-pound machines.

* * *

INCORPORATED at $2,500,000, the Van Sicklen Speedometer Co., Chicago, will expand its manufacturing facilities and its business considerably. Eventually the plan is to furnish speedometers for the Willys automobile plants as well as to many other automobile manufacturers on contracts which have been negotiated.

* * *

EXTENSIVE alterations and improvements are being made to its plant by the Dayton Steel Co., Dayton, O. When they are completed, the company will be able to turn out approximately 600 tons of structural steel monthly. It contemplates the carrying of a large stock of shapes and plates so as to be in a position to take care of local contractors' requirements quickly, and be able to render the required service on heavier jobs.

* * *

PLANS now are being drawn for an artificial ice plant for the Minneapolis Sanitary Ice Co., 535 Metropolitan Bank building, Minneapolis, and the latest types of machinery will be installed. The main building will be one story, of brick and concrete construction and will be 75 feet wide x 800 feet long. It will have an addition, 50 x 150 feet high for permanent ice storage. It is expected that the plant will be in operation by Jan. 1, 1920.

* * *

WITH the purchase of 106 acres in the eastern extremity of Elyria, O., the Willys-Overland Co., that city, has announced its intention of building the largest engine works of the kind in the world. The property faces Abbey street and the New York Central railroad. The product of the plant will be sleeveless engines and engines for home lighting plants. The company contemplates the employment of 9000 men when the plant is finished.

* * *

OFFICERS of the Sheffield Steel & Iron Co., McCormick building, Chicago, recently organized are: President and treasurer, Richard Hunt Hallstead; vice president and general manager, H. C. A. Mitchell; vice president and sales manager, John W. Taylor. The object of the company is to buy and sell raw, semi-finished and finished steel products and carry stocks of steel bars, flats and sheets. The company advises it ultimately plans to build its own rolling mill.

* * *

WITH its plant working to capacity, the Ottawa Body Co., Ottawa, Ill., manufacturer of automobile bodies, which was recently incorporated with $100,000 capital, is now appointing distributors and dealers throughout the country. Officers are: President, A. Richards, Ottawa, Ill.; secretary, H. J. Mitchell, Joliet, Ill., and general manager, A. F. Scott, Detroit, who formerly was connected with the Packard Motor Car Co. and the Kelsey Wheel Co., both of Detroit.

* * *

FOR the designing and manufacturing of machine tools, the Hanson-Whitney Mfg. Co., Hartford, Conn., has been organized by B. M. W. Hanson, who until recently was vice president and works manager of the Colt's Patent Firearms Mfg. Co., that city. Clarence E. Whitney and F. W. Young, also of Hartford, are affiliated with the new company, of which Mr. Hanson is president. Prior to his connection with the Colt company, Mr. Hanson was connected with the Pratt & Whitney Co.

* * *

CONSTRUCTION of a modern plant to replace one recently damaged by fire will be undertaken by the American Beauty Stove Co., Erie, Pa., as soon as the company has adjusted all matters pertaining to the fire. For the present the company plans to repair its damaged machinery and equipment and plans to be operating in its old plant shortly pending the erection of the new plant. According to W. E. Jordan, general manager, the demand for the company's goods has been increasing and resumption of a selling campaign will be taken up within ten days.

Labor Unrest Hits Tool Trade

Some Inquiries Withdrawn—Wage Increases Mean Price Advancements—Standard Oil Chief Inquirer and Purchaser In East—Several Fair Sized Inquiries Out In Cleveland—Crane Awards Small

UNREST in the realm of labor is having its effect on the machine tool market. Prospective purchasers in the east have withdrawn their inquiries and state they will not make purchases until the present crisis is past. The granting of wage increases to machinists in the Pittsburgh district foretells additional advances in tool prices. Thousands of machinists are on strike in Bridgeport, Conn., Paterson, N. J., etc., and some tool builders have announced they will shut down their plants in the event of further trouble. In the Middle West, some manufacturers are curtailing their promised expansions and a holding back of expected machine tool inquiries is noted.

Notwithstanding these adverse conditions however, sellers of equipment are optimistic and prominent dealers in Cleveland see an era of tool selling ahead which will bear a resemblance to prearmistice days. In addition to the large inquiry from the White Motor Co., noted last week, on which some dealers still are busy, inquiries before Cleveland dealers include one for 50 tools from the Foote-Burt Co., Cleveland; three others call for 10 from the B. F. Goodrich Co., Akron; eight from the Aultman & Taylor Machinery Co., Mansfield, O., and six from the Burke Electric Co., Erie, Pa. The largest inquiry in the east comes from the Standard Oil Co., New York, for its various building projects. This company also is featured among the week's buyers of equipment. It is reported to have purchased $400,000 worth for its various plants, as well as about 80 machines for shipment to Roumania. Much buying lately has been done by the New England textile machinery manufacturers.

Small inquiries and sales are the rule in Chicago. In fact every tool distributing center reports an active movement of small amounts of light equipment. Many of the recent buildings erected have been constructed by well established companies, who already were well equipped and it only has been necessary to purchase equipment for filling in.

Two manufacturers of light equipment have announced their intention of increasing prices soon and a manufacturer of planers in the east states that an advance of 20 per cent on his product will go into effect Sept. 1. Increases on lathes and shapers are noted in Chicago, but other tools have not reached a higher level as yet.

The largest crane inquiries of the week are noted in Pittsburgh. The Carnegie Steel Co., and the Youngstown Sheet & Tube Co., each asked for four. Small inquiries for cranes are out from the A. Garrison Foundry Co., and the Duquesne Light Co., Pittsburgh. In the east, the majority of the inquiries now current, call for one crane only, trading not being as active as in recent weeks. The Bethlehem Steel Co. is inquiring for two additional cranes for its Sparrows Point plant and the Lehigh & Wilkesbarre Coal Co., Wilkesbarre, Pa., wants a 15-ton locomotive crane. Orders for cranes recently placed came from the Springfield Foundry Co., Indian Orchard, Mass.; the Wheeling Mold & Foundry Co., Wheeling, W. Va.; Acme Machine Tool Co., Cincinnati; Whitaker, Glessner Co., Wheeling, W. Va.; Ohio Seamless Tube Co., Shelby, O.; American Tube & Stamping Co., Bridgeport, Conn.; Abendroth Bros., Port Chester, N. Y., and the Singer Mfg. Co., Elizabeth, N. J.

The Eddystone Munitions Co., Eddystone, Pa., is selling about 300 machine tools and the salvage boards of the war department are offering approximately $2,500,000 worth of machinery in 17 cities.

Miscellaneous Demand Makes Good Tool Trade

OUTSTANDING in the activity of the eastern machine tool market is a heavy volume of buying by the Standard Oil Co., 26 Broadway, New York City. At the present time, this company through its New York office is said to be closing on approximately $400,000 worth of machine tools for numerous plants and new projects throughout the country. Various inquiries have been issued, and one of the latest orders to be placed involved several thousand dollars worth of miscellaneous equipment for a repair shop at Long Island City. Two plant projects, involving $1,000,000, for Trenton and Camden, N. J., respectively, have been announced recently, but so far as can be learned no lists have as yet been issued. Undoubtedly, the largest single instance of buying by the Standard Oil Co. of late is an order for about 80 machine tools for shipment to Roumania. It is understood the list went, almost in its entirety, to a New York concern.

While the improvement noted during the past two or three weeks is still in evidence in some sources, the increasing seriousness of the labor situation is acting as a damper on considerable business. Sellers of equipment state that in a number of instances, buyers who were in the market or else contemplating purchases in the near future have decided to postpone all action until the present crisis has passed. Some manufacturers,

Branch Offices: New York City, Philadelphia, Chicago, Detroit, Cleveland, Pittsburgh, Cambridge, Mass., Cincinnati, Buffalo

it is said, have made plans for closing up their shops completely and indefinitely in the event of any further trouble. Two storm centers in the east at the present time are Bridgeport, Conn., and Paterson, N. J. In both cities, thousands of machinists are on strike.

Despite this situation, some dealers report the best business in a number of weeks. No large lists are in evidence, yet they assert there is a good volume of miscellaneous demand. One particularly active source of demand at this time is said to be the textile equipment industry. Manufacturers of textile machinery, are said to be fairly overwhelmed with business, not only for account in this country but abroad, and are expanding their works as much as the scarcity of labor will permit. This situation is particularly true at the present time in New England.

The upward tendency in prices is still being noted. Two manufacturers of light machine tools have just announced they will advance their quotations 20 per cent in the near future. It is understood, also, that a leading manufacturer of planers has advised its representatives that a 20 per cent advance will be put into effect about Sept. 1.

The Eddystone Munitions Co., Eddystone, Pa., has issued for sale a list of more than 300 used machine tools. The bulk of the equipment is said to be of a special character. Reminiscent also of the war is a list of approximately $2,500,000 worth of tools now on sale by the war department at the district salvage boards of the army in 17 principal cities throughout the country. A fixed price has been set for each article, and complete details have been posted at the salvage offices. In New York City, there are six of these offices, as follows: Air service, 360 Madison avenue; chemical warfare service, 19 West Forty-fourth street; ordnance salvage board, 1107 Broadway; zone supply office, 461 Eighth avenue; signal corps, 8 and 10 Bridge street, and surplus property office, 109 East Sixteenth street.

Activity in cranes is not so pronounced. Inquiries have dropped off, and there isn't the volume of business being placed that there was recently. Included in recent awards is an order for a 5-ton electric crane, with 48-foot, 3-inch span for the Springfield Foundry Co., Indian Orchard, Mass. This business went to the Champion Engineering Co. Among other orders recently received by this company are two 20-ton cranes, with 5-ton auxiliaries, for the Wheeling Mold & Foundry Co., Wheeling, W. Va. One crane is to have a span of 46 feet, and the other a span of 26 feet, 10 inches. Further orders include a 5-ton crane, with 48-foot span, for the Acme Machine Tool Co., Cincinnati, a 10-ton electric crane for the Whitaker-Glessner Co., Wheeling, and two 10-ton cranes for the Ohio Seamless Tube Co., Shelby, O.

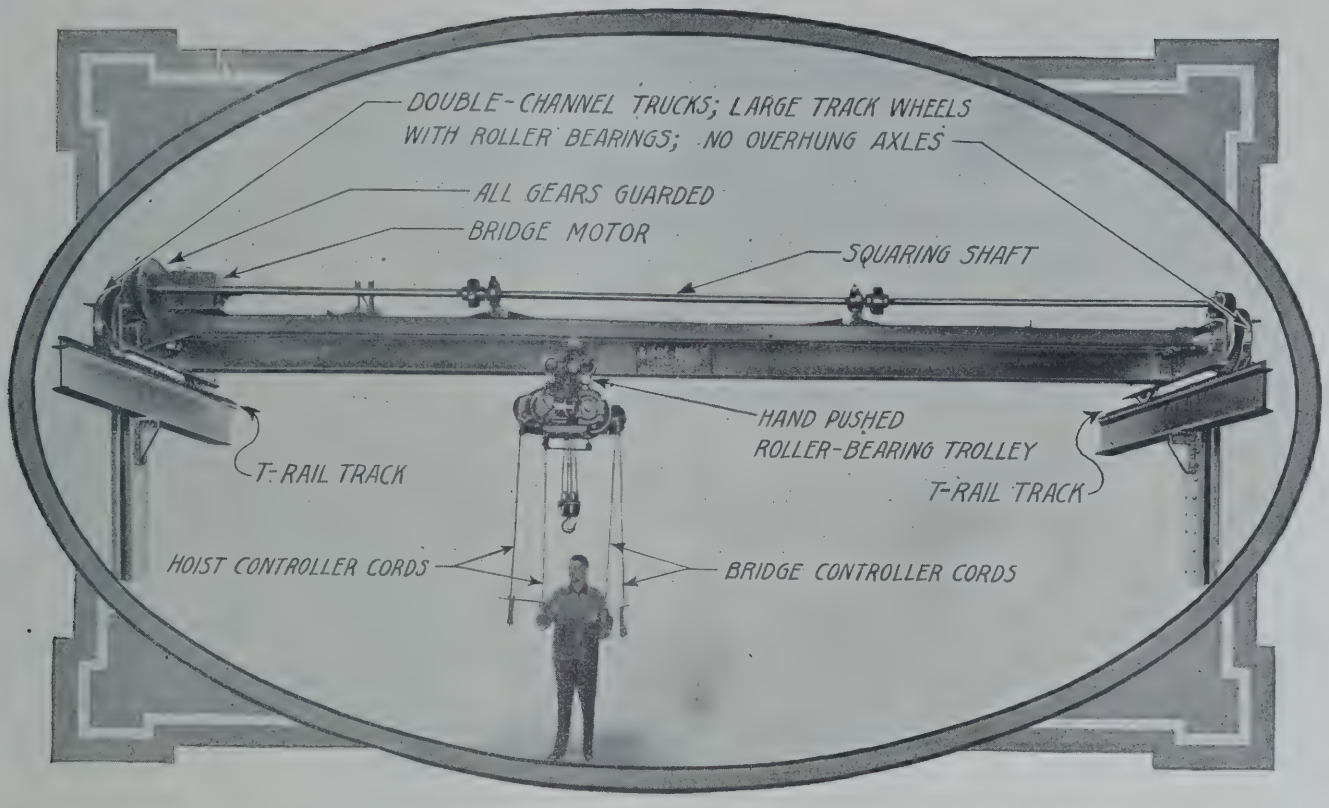
Abendroth Bros., Port Chester, N. Y., iron founders, placed two 3-ton cranes, with 30-foot spans, with Pawling & Harnischfeger. The Singer Mfg. Co. also placed two 3-ton cranes with this company. Both spans are 57 feet. The Lehigh & Wilkesbarre Coal Co., Wilkesbarre, Pa., is expected to close shortly on a 15-ton electrically-driven locomotive crane. The Bethlehem Steel Co. is inquiring for two additional cranes for Sparrows Point. One is of 15 tons capacity, with 61-foot span, and the other is of five tons capacity, with 33-foot span.

The American Tube & Stamping Co., Bridgeport, Conn., has placed a small overhead crane.

August Has Poor Start in Pittsburgh

AUGUST has gotten away to a rather slow start as compared with July in the Pittsburgh machine and tool trade. Manufacturers of steel mill equipment are fairly busy, but builders of cranes still wait the placing of several inquiries upon which they placed bids some time ago. The movement of light equipment also has tapered considerably from the July proportions. Plenty of business is in sight, but buyers probably are encouraged to put off placing orders by the uncertainty over the labor situation.

The Carnegie Steel Co. has an inquiry out for four cranes for its Edgar Thompson works. The Youngstown Sheet & Tube Co., Youngstown, O., also is in the market for four cranes and the A. Garrison Foundry



Sell British Machinery for More than Original Cost

SALES of British government war materials are bringing high prices, some machinery actually selling for more than it cost originally. Commenting on some recent sales, the *Ironmonger,* London, says:

"The most important lot in a sale of the plant of a national projectile factory at Thorncliffe Ironworks, Sheffield, last week, was a 3-crank 6-cylinder National gas engine of 750 brake horsepower which, together with a cooler, a starting set and a feeder panel, fetched £5500 ($28,400 normal rate), Newton, Chambers & Co. (Lim.), being the buyers. Electric motors sold readily, some of them fetching as much as £8 ($38.40 normal exchange) per horsepower, which is more than the cost of new machines. Sixteen vertical hydraulic forging presses of 150 tons power attracted no bidders, and these costly machines will probably be scrapped. A billet-breaking machine, nearly new, and valued at £1800 ($8640 normal), realized only £350 ($1680 normal). Four sets of horizontal 3-throw hydraulic pumps with automatic starting gear fetched £1000 ($4800 normal) each, or only £200 ($960) below the schedule price. Double-geared, self-acting screw-cutting lathes were sold at prices higher than the original cost, and in two cases profits of £60 ($288) and £65 ($312) were made. The prices varied from £128 ($614.40) to £285 ($1368). The lathes specially designed for special shell work did not sell. It is calculated that the government will net a substantial profit from the auction."

High prices for tools sold by British government boards also are noted by the London journal as follows:

"At a sale under the direction of the disposal board of the ministry of munitions, recently held at Halifax, £1050 ($5040 normal rate) was paid for a 6-ton Sentinel steam wagon which cost £750 ($3600 normal); a Churchill grinding machine which cost £368 ($1766.40) sold for £500 ($2400); a horizontal milling machine which cost £236 ($1132.80) was sold for £270 ($1296); and £180 ($864) was paid for a 20-inch stroke shaping machine, the original price of which was £130 ($624). A Brown & Sharpe type surface grinding machine which cost £120 ($576) was sold for £130 ($624). A sale of tools and machinery at the national projectile factory, Lancaster, realized about £150,000 ($720,000). This was the first sale held by the government in which the principle was followed that every second-hand machine before being offered should be put in such a condition that a purchaser could immediately set it to work. Buyers came from places as far apart as Greenock and Brighton, Yarmouth and Plymouth."

Here's The Ideal Crane for Side Bays

IT'S just the thing for machine shops, foundries, structural shops, mills, etc. The time it will save in a machine shop by quickly and economically serving machine tools with castings, etc., will soon pay for the crane. After that, the saving is "pure velvet".

Important Advantages

1. Crane always ready for service. Any shop hand can operate it. No need for keeping an operator up in a cage.
2. Pull a cord to operate hoist or crane; let go, and it stops. Simple as A, B, C.
3. All operating cords handy, both controllers mounted on hoist—right where the load is being handled.
4. Load is handled with greater precision and safety, than when operator is carried in a cage near ceiling and must depend on signals.
5. Like our mono-rail electric hoist and other Link-Belt products, this crane embodies Quality, Reliability, Accessibility, and High-Efficiency.

Built in 1, 2 and 3 Ton Capacities. Write for data blank. Let us figure on your requirements.

Place X in Square

Co., Pittsburgh, is inquiring for a crane. It is probable that at least one crane will be wanted for the new power plant of the Duquesne Light Co., which is to be erected at Cheswick, Pa., while the Phoenix Iron Works, Meadville, Pa., shortly will enter the market for a line of tools for its new machine shop. Competition on crane business is sharp and the willingness of some builders to sacrifice profits probably is keeping back orders, as buyers do not want to place them while the possibility of lower prices exists. Machine tools are firmly priced and with wage increases being sought from builders, it hardly is likely that lower prices will be seen.

Market in Cleveland is Fair

SEVERAL fair sized lists of tool requirements have reached Cleveland machinery dealers. These follow in the wake of the large one noted last week from the White Motor Co., Cleveland, for between 250 and 300 machines, several orders against which already have been placed. The Cleveland Duplex Machinery Co., Cleveland, received contracts which aggregated in excess of $25,000 on the White inquiry. Other dealers still are working on the list. One of the largest of the new inquiries comes from the Foote-Burt Co., Cleveland, machine tool builder. Its business growth has made necessary a new plant, for which it requires about 50 tools. The Aultman & Taylor Machinery Co., Mansfield, O., issues a list of eight tools at present and announces that more will be required later. The Burke Electric Co., Erie Pa., wants about six miscellaneous machines. The list of tool needs of the B. F. Goodrich Co., Akron, O., comprises 10 tools including an open side planer and will represent an outlay of about $25,000. The Firestone Steel Products Co., Akron, still is in the market for its large list announced a few weeks ago and the Firestone Tire & Rubber Co., that city, wants a shear for 4-inch x 1-inch stock.

Inquiries from territories outside the immediate vicinity of Cleveland continue to reach sellers of tools in that city. The Hardware City Mfg. Co., New Britain, Conn., is in the market for about $25,000 worth of tools and machinery. It will manufacture hardware specialties, steel and metal stampings. The Inland Motor Co., 513 Sycamore street, Evansville, Ind., is to manufacture gasoline and steam trucks. Its list comprises lathes, shapers, drill presses, arbor presses, cutter and drill grinder and power hack saws, etc. While the Rickert-Shafter Co., Erie Pa., manufacturer of machinery and tools, has placed some equipment orders for its new 2-story addition, a large number will not be placed until the building is completed.

Building activity on the part of manufacturers continues to promise large tool needs and announcements are expected soon. Unrest on the part of labor undoubtedly is holding up much business in machine tool trading. One of the largest projects to come to the attention of machinery sellers is the engine plant to be erected at Elyria, O., by the Willys-Overland Co. As announced it is to be the largest plant of its kind in the world and will employ 9000 men. Issuance of a list of its tool requirements is expected shortly. The F. B. Stearns Co., Cleveland, will construct a $300,000 addition immediately. The Guide Motor Lamp Mfg. Co., Cleveland has doubled its capital, to $300,000, to finance a factory addition and new equipment. The Kelsey Wheel Co., Detroit, is to spend $1,000,000 on expansions and improvements at Memphis, Tenn. The Lexington Automobile Co., Connersville, Ind., is building a plant 100 x 100 feet. B. F. Avery & Sons, Louisville, Ky., now are taking bids for the erection of a harvester plant 100 x 322 feet and a shear shop 100 x 120 feet, to cost $200,000. The American Radiator Co., Springfield, O., will require a miscellaneous lot of equipment for the machine shop it is building. The Spencer Metal Products Co., Spencer, O., has increased its capital from $100,000 to $1,000,000 to finance expansion and it probably will require considerable equipment.

Big Buying is Aggregate of Small Sales

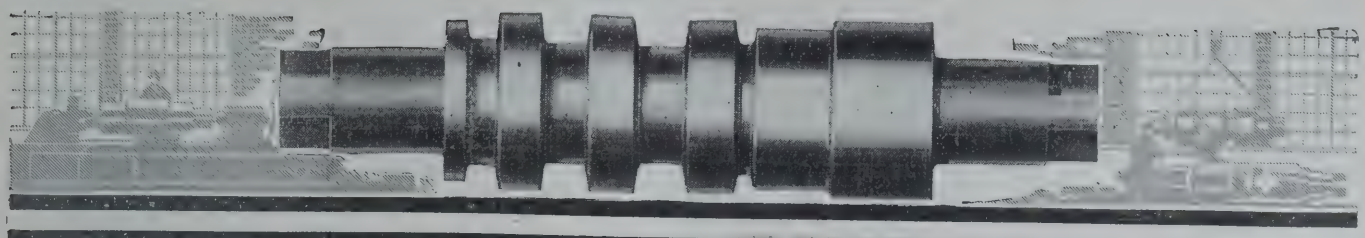
ALTHOUGH the Chicago machine tool market has been almost barren of sizable inquiries for a number of weeks, its condition shows no sign of change. The heavy business which has kept up without interruption continues to be an aggregate of small buying. An occasional exception to this rule does not disprove it. Although a number of new plants have been built recently, it is a fact that in most instances they are for occupancy by established concerns which already have equipment and usually buying on account of the new plant is simply to fill in and round out the assortment.

Price advances have been made only on shapers and lathes up to this time and other tools have not yet been put on a higher level. Delivery is being pushed farther back and on most lines it is not possible to get new equipment in less than 60 to 90 days. Most buyers at present want immediate delivery and have been taking what they could get from warehouse floors, but the assortment thus offered is now much reduced. A recent sale in this district, which is larger than most, aggregated about $30,000 and covered a variety of light equipment.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants



AUGUSTA, ME.—The Kistler Refining Co. has been incorporated to build refineries, wells, tanks, cars, pipe lines, etc., with $5,000,000, capital by D. A. Leland, R. W. Farris and C. L. Andrews.

BOSTON.—The McCulloch Mfg. Co. has been incorporated to make machinery and tools with $100,000 capital by Albert P. McCulloch, Daniel H. Sullivan and R. Berrenberg.

WINCHENDON, MASS.—The Alaska Freezer Co. has let the contract for a 48 x 72-foot addition to its foundry, a 3-story, 29 x 128-foot addition to its shipping building and a 3-story office building.

BOSTON.—The United Motor Equipment Co. has been incorporated with $25,000 capital by Leo. H. Dinner, H. B. Cohen and A. A. Cohen.

BOSTON.—Bids have closed for a brick, 2-story, 55 x 90-foot storehouse for the Holtzer-Cabot Electric Co.

Say, Fella's—

Just got off that boat I was tellin' y' about last week. Had some time! Rather roll with Hubbard Rolls than with these boats. Those rolls are steadier and as they're rollin' all the time they get to be a habit.

You'd better get the steady habit that comes with Hubbard Rolls.

So Long,

Rolling Mill Jim.—

Hubbard Steel Foundry Co.

EAST CHICAGO, IND.

All Kinds of Iron and Steel Rolls and Steel Castings.

HOLYOKE, MASS.—The Cowan Truck Co., Canal street, has started work on a plant addition, 2-stories, 100 x 200 feet, to cost $100,000.

QUINCY, MASS.—The Pneumatic Scale Co. recently awarded contracts for a machine shop, 3-stories, 17 x 38 feet, to cost $75,000.

CRANSTON, R. I.—The United Wire & Supply Co. recently let a contract for a plant addition, 2-stories, 40 x 250 feet, to cost $100,000.

WOONSOCKET, R. I.—The French Worsted Co. recently let a contract for a boiler house addition to cost $35,000.

BRIDGEPORT, CONN.—The Bridgeport Brass Co. will take bids shortly for a foundry to cost $100,000.

PLAINESVILLE, CONN.—The Trumbull Electric Co. recently let a contract for a plant addition, 4-stories, 50 x 106 feet.

North Atlantic States

ALBANY, N. Y.—The Thatcher Foundry & Propeller Corp., will build a 1-story, 23 x 28-foot trimming shop and test pit to cost $8000.

BUFFALO.—The Johnson Rim & Parts Co. has been incorporated with $50,000 capital, by L. E. and H. R. and P. T. Large.

BUFFALO.—The Bilger Steel Products Corp. has been incorporated with $50,000 capital, by R. L. O'Brian, D. Rochester and E. E. Finck.

BROOKLYN, N. Y.—The Neptune Boiler & Machine Works, Inc., has been incorporated with $50,000 capital, by J. C. Wilcox, F. B. Johnson and M. J. McDade, 434 Forty-ninth street.

DUNKIRK, N. Y.—American Locomotive Co. will build additions to its Brooks plant.

FALCONER, N. Y.—The Falconer Iron Works is erecting an addition.

LOCKPORT, N. Y.—The Harrison Radiator Corp. has had plans drawn for a plant addition, 38 x 160 feet.

NEW YORK.—The Challenge Machinery Hardware & Tool Co. has been incorporated with $8000 capital, by E. S. Jones, C. P. Jochum and E. F. Licari, 505 Sixth street, Brooklyn, N. Y.

NEW YORK.—The Peters-Morse Mfg. Co., adding and listing machines, recently was incorporated with $125,000 active capital, by F. L. Morse, J. F. Miller and J. H. Barr, 374 Broadway.

NEW YORK.—The Century Metal Bed Corp. recently was incorporated with $25,000 capital, by M. Baumgarteb, C. Cartoon and M. Feldesh, 938 East Parkway, Brooklyn, N. Y.

SENECA FALLS, N. Y.—The Westcott Valve Co., Erie, Pa., will build a plant in this city.

SYRACUSE, N. Y.—The Syracuse Auto Parts, Inc., recently was incorporated with $35,000 capital, by W. B. Carroll, F. D. Russell and P. B. Schober.

WATERLOO, N. Y.—The Waterloo Wagon Co. will build a plant here to manufacture automobile and truck bodies.

WHITEHALL, N. Y.—The Whitehall Engineering & Machine Co. recently was incorporated with $10,000 capital, by M. and J. and S. J. Goodkin.

AMBRIDGE, PA.—The Ambridge Iron & Steel Co. has been organized by J. H. Hammond and others, and will erect a mill.

ERIE, PA.—The Lovell Mfg. Co. is considering an addition.

NANTICOKE, PA.—The Duplan Silk Co. is having plans drawn for a boiler house, 2-stories, 90 x 100 feet.

NEW CASTLE, PA.—The New Castle Rubber Co. is considering an addition.

PITTSBURGH.—The National Tube Co. is expected to start work shortly on a welding plant.

PITTSBURGH.—The Damascus Bronze Co. will build a 3-story service station to cost $40,000.

PITTSBURGH.—H. O. Swoboda, Inc., engineering, capital $15,000, has been incorporated by Hans O. Swoboda, Edward H. Stehlman, Edgewood; Sarah Fley, Millvale.

PITTSBURGH.—The United Fuel and Iron Co., capital $50,000, has been incorporated by Lawrence Snapp, Beaver, Pa.; Charles Yon, Coraopolis, Pa.; Robert M. Steffler, Pittsburgh.

YORK, PA.—The U. S. Chain & Forging Co. recently let a contract for a plant, 1-story, 150 x 200 feet.

WHEATLAND, PA.—Ground has been broken for a machine shop and power building for the Slick-Know Co.

WHEATLAND, PA.—The McClintic-Marshall Co. has a contract for a power plant and machine shop 70 x 250 feet for the Slick-Knox Steel Co.

WILKES-BARRE, PA.—The Wilkes-Barre Iron & Wire Co. has been organized by B. R. Jones, Thomas Meade, John R. Wilson of this city, with offices at 1008 Coal Exchange building and will enlarge and re-equip the plant of the Wilkes-Barre Structural Steel Co.

WILLIAMSPORT, PA.—The Williamsport Radiator Co. will erect a machine shop.

WILLIAMSPORT, PA.—The Northern Central Gas Co. will erect a gas plant.

WILLIAMSPORT, PA.—The Housel & Bair Machine Co. will enlarge its plant.

BLOOMFIELD, N. J.—The Simms Magneto Co. has had plans drawn for a plant addition, 2-stories, 70 x 120 feet, to cost $75,000.

EAST ORANGE, N. J.—The Key Bolt Appliance Co. has been incorporated with a capital of $250,000 to manufacture bolts and forgings. The incorporators are H. H. Picking, C. O. Guyer and E. R. Coburn.

ELIZABETH, N. J.—The Singer Mfg. Co., 149 Broadway, New York City, has awarded a contract for a 3 and 4-story foundry, 176 x 252 feet.

JERSEY CITY, N. J.—The Magneto Generator Starter Electric Co. has just been organized to manufacture electric starters. A. J. Weger, 2527 Boulevard, is manager.

MONTCLAIR, N. J.—Filtration Engineers, Inc., has been incorporated with $80,000 capital to manufacture engines, etc., by G. H. Caffrey, F. W. Young, Verona, N. J., and H. E. Kinner.

NEWARK, N. J.—A brick foundry will be erected by Gustave Schoener, at 80-84 Newark street.

NEWARK, N. J.—A permit has been granted the Seton Leather Co. for a $10,000 brick boiler room, and a $55,000 tannery.

NEWARK, N. J.—Kell, Hock & Co. has been incorporated to manufacture and deal in machinery, by Jacob Kell, Joseph Hock Jr., and David Kell. The company is capitalized at $75,000.

NEWARK, N. J.—The Atkinson & Long Mfg. Co., metal goods, etc., has been incorporated with $40,000 capital, by High Atkinson, R. D. Atkinson and A. T. Long.

NEWARK, N. J.—The Newark Metal Findings Co. has been incorporated with $25,000 capital, by William Bittner, Glenridge, N. J., C. S. H. Rich and P. H. Burr.

NUTLEY, N. J.—L. Sonneborn Sons, Inc., have had plans drawn for a 1-story factory building, 38 x 112 feet, with a boiler room extension, 40 x 52 feet.

PASSAIC, N. J.—The Passaic Metal Ware Co. recently purchased a tract of land on which it plans to erect houses for its employes.

PATERSON, N. J.—Benjamin Buckley's Son, Inc., has been incorporated with a capitalization of $10,000 to manufacture machinery. H. A. Tiffany, J. V. Barnitt and others are the incorporators.

PATERSON, N. J.—The Myers Auto Pump Co. has been incorporated with a capital of $100,000 to manufacture automobile pumps. G. F. Myers and E. M. Culp are the incorporators.

PERTH AMBOY, N. J.—A machine and general shop will be established by the Perth Amboy Hardware Co., 311 Madison avenue, to be 50 x 75 feet and cost about $10,000.

RIDGFIELD, N. J.—The Zestoy Mfg. Co. recently was incorporated with $75,000 capital to manufacture toys, etc., by Isadore Zion, Rose Zion and A. G. Fortwengle.

TRENTON, N. J.—The National Radiator Co. has awarded a contract to Aitken & Babbington, 115 South Stockton street for one-story addition, 60 x 250 feet, to cost $18,000.

WEST ORANGE, N. J.—The S. P. Townsend Co., 15 Central avenue, has been incorporated with $500,000 capital, to manufacture lawn mowers, steam rollers, machinery, etc.

WILMINGTON, DEL.—The Electric Steel Products Co., with a capital stock of $300,000, has been incorporated to manufacture and sell steel products of all kinds.

BALTIMORE.—The Hess Steel Co. is building two additions to its plant on Biddle street near Loney's lane.

BALTIMORE.—Bids are being received by the Reinhart Motor Car Co. for a factory building. Larry B. Rothschild is architect.

Central States Activity

ANTIGO, WIS.—C. F. Dallman has taken the contract to build a 2-story addition to the manual training department of the Antigo high school. With new machinery and tools, the work will cost $45,000.

BARTON, WIS.—Charles M. Stevenson, Chicago, designer and patentee of steel barn equipment specialties, has organized the Stevenson Mfg. Co. with a capital of $100,000. Architect J. F. Hennen, Fond du Lac, Wis., is preparing plans for a factory building, 80 x 128 feet.

BELOIT, WIS.—The South Beloit Stove & Mfg. Co. has been incorporated with $75,000 capital to take over the business of Charles H. Burgess & Son, and engage in the manufacture of gray iron castings, stoves, etc.

DE PERE, WIS.—The general contract for erecting a machine shop, paper mill and auxiliary buildings for the George Diamond Economy Process Co., has been taken by W. E. Ule, Stevens Point, Wis.

HARTFORD, WIS.—Bids are being taken by the board of public works for new boiler equipment for the municipal light and power plant.

JANESVILLE, WIS.—The General Motors Corp. is having plans drawn for a power house.

KENOSHA, WIS.—Another large bed spring plant was merged with the Simons Co., when it on Aug. 1 took over the plant of the Hirsch & Spitz Co.,

FARRELL-CHEEK

Quality Begins In The Laboratory

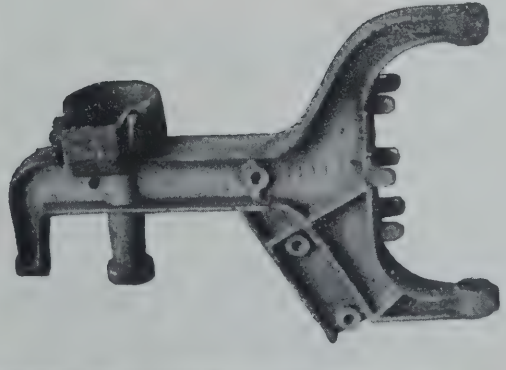
—and is verified there when the job is completed.

The Chemist and Metallurgist have the first and last word in regard to every order for Farrell-Cheek Steel Castings.

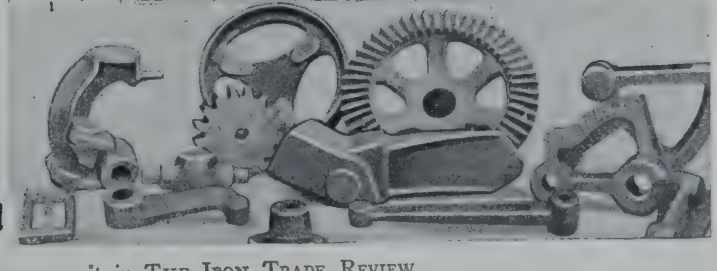
The very first step is the selecting of the correct type of steel for the particular conditions under which the castings are to be used, for herein lies the vital factor of *service*.

Even when metal specifications are furnished by the customer this procedure is followed, for we have frequently been able to suggest a more suitable metal than that specified, although, of course, the customer is not obliged to accept our suggestion.

Here also, in collaboration with the Foundry heads, are scientifically determined the proper positions for "gates," the correct sizes for "risers" and other important technical points upon which the ultimate quality of the castings depend.



Then, when the run is completed, every single casting must pass the "examining physicians" and be certified as being up to Farrell-Cheek standards before being given "factory clearance."



Send us your blueprints and let us tell you for how little more you can secure this super-quality.

Farrell-Cheek Steel Foundry Company
Sandusky, Ohio

BY INVITATION MEMBER OF

NEW YORK, U.S.A.

Atlanta, Ga. The plant will be enlarged and new machinery installed.

KEWAUNEE, WIS.—The Leyse Aluminum Co., which is completing a large factory addition, has purchased the steam power plant of the Seyk Canning Co. and will provide additional motive power.

LANCASTER, WIS.—At a special election it was voted to issue $175,000 in bonds for the construction and equipment of a new high school, which is to have manual training and domestic science departments.

MADISON, WIS.—Articles of incorporation have been filed by the Madison Tool & Stamping Co. to manufacture tools, etc., with $10,000 capital. The incorporators are W. L. Woodward, T. Rosten and G. A. Benson.

MILWAUKEE.—The Thomas Furnace Co. has let a contract to the Warden-Allen Co. for a pig-casting machine.

MILWAUKEE.—The Standard Steel Corp. is taking bids for a plant, 1-story, 120 x 150 feet, and cost about $50,000.

MILWAUKEE.—The Milwaukee Paper Box Co. let the contract for a 5-story plant and power house, 120 x 145 feet, costing $275,000.

MILWAUKEE.—Work on the proposed bascule bridge over the Milwaukee river will be delayed 30 to 60 days by reason of the disapproval of plans.

MILWAUKEE.—J. M. Nash, 842 Thirtieth street, is taking bids for a plant addition, 33 x 125 feet, to be used for the manufacture of special woodworking tools and machinery.

MILWAUKEE.—The Koehring Machine Co., concrete mixers and paving outfits, is completing an assembling floor extension and will begin work shortly on an erecting shop, 75 x 326 feet.

MILWAUKEE.—The M. J. Skubal Co. has been incorporated with a capital of $10,000, to do welding and machinery repairing. The incorporators are Matthew Skubal, Joseph A. Stika and James Talatzko.

MILWAUKEE.—Application for a Wisconsin charter has been made in behalf of the Steel & Tube Co. of America, recently organized in Delaware as a merger of the Steel & Tube Co., Northwestern Iron Co. of Milwaukee and several other corporations in Wisconsin and upper Michigan. The application gives the capital stock as $42,500,000. Armin A. Schlesinger, First National Bank building, Milwaukee, is Wisconsin agent.

RHINELANDER, WIS.—John Dedier, proprietor of the Rhinelander Iron Works, plans to build a new molding building.

SHEBOYGAN, WIS.—The Vollrath Co., manufacturer of enameled ware, will eerct a 2 and 3-story office building, 60 x 147 feet, and remodel the present office quarters for production.

SHEBOYGAN, WIS.—The Kohler Co., Kohler, Wis., has started on plant extensions which will involve the expenditure of between $200,000 and $250,000. New construction includes a foundry, 160 x 300 feet and an engineering building, 130 x 275 feet.

TWO RIVERS, WIS.—A smelting and refining plant, 60 x 150 feet, will be erected by Sam Schwartz & Sons, scrap iron dealers, at an estimated cost of $20,000, including furnaces and other equipment. Architects Juul & Smith of Manitowoc are preparing plans.

WAUKESHA, WIS.—The Ludwig Stock Machine Co. will build a 1 and 2-story machine shop in the fall.

WAUPACA, WIS.—The Stewart Tractor Co., 906 First National Bank building, Milwaukee, will award contracts shortly for a machine shop, 80 x 125 feet.

WAUSAU, WIS.—The Wisconsin Valley Sheet Metal Co. and the Seeger Mfg. Co. have merged their interests in a new corporation styled the Metal Products Co., having a capital stock of $15,000. The principal line will be heaters for private garages, farm and isolated buildings.

WEST ALLIS, WIS.—Riesen Bros. Co., 425 East Water street, Milwaukee, are general contractors on the gray iron and semi-steel foundry, 111 x 180 feet, to be erected on Greenfield avenue by the Motor Castings Co., 86 Michigan street, Milwaukee.

WEST ALLIS, WIS.—Adam Ahrendt, machinist, 557 Seventy-third avenue, will build a one-story shop addition, 50 x 75 feet. Frank Gruetzmacher, formerly foreman of the machine shop of the Federal Malleable Co., has become a partner.

WEST BEND, WIS.—Bids are being taken by the common council for a 90-foot concrete and steel bridge, 44 feet wide, across the Milwaukee river estimated to cost $20,000.

WEST BEND, WIS.—Architects Foeller & Schober, Green Bay, Wis., have been commissioned to prepare plans for a $50,000 addition to the West Bend high school. Manual training equipment will be purchased later.

BATTLE CREEK, MICH.—Architect E. W. Arnold, 488 South Main street, has plans for a boiler house, 1-story, 33 x 36 feet. The name of the owner has been withheld.

DETROIT.—The Miller Lightning Rod Co. has had plans drawn for a plant, 2-stories, 75 x 100 feet, to cost $40,000.

DETROIT.—The Central Forge Co. is altering and building additions to its die shop. The Atlas Iron Works has the steel contract.

DETROIT.—The Detroit Gray Iron Foundry Co. is erecting a 2-story addition to its plant. The Daigle Iron Works has the steel contract.

DETROIT.—The Ruhl Malleable Iron Co. is taking bids for a plant addition and shipping room, 1-story, 144 x 232 feet to cost $75,000.

DETROIT.—The Detroit Pressed Steel Co., 1800 Mount Elliot avenue, is taking bids for a plant addition, 5-stories, 84 x 223 feet.

DETROIT.—Architect Fred A. Evans, Book building, is taking bids for a machine shop to cost $30,000. The name of the owner is being withheld.

DETROIT.—The Fruehauf Trailer Co., manufacturer of automobile trailers, has broken ground for a plant, 150 x 500 feet. The company recently increased its capital to $250,000. A. C. Fruehauf is president.

DETROIT.—The P. W. W. Mfg. Co. has been incorporated with $15,000 capital to manufacture tools, jigs and fixtures by Anthony Perry, 363 Sherman street.

DETROIT.—The Ex-Celle Tool & Mfg. Co. has been incorporated with a $40,000 capital stock to do general machine work by N. A. Woodworth, 135 Leicester court.

DETROIT.—Esselstyn, Murphy & Hanford, architectural engineers, announce that the new differential gear and hardening shop of the General Motors Corp., will be completed in September.

DETROIT.—Plans are being prepared by Raseman & Freer, 1302 Penobscot building, Detroit, for a 1-story, 240 x 240-foot plant to be erected on Conant avenue for the Swedish Crucible Steel Co.

DETROIT.—Contracts for the erection of two plant additions have been awarded by the Timken-Detroit Axle Co., Clarke avenue. One will be 30 x 300 feet and the other 60 x 120 feet. The cost will be $50,000.

EVART, MICH.—The American Logging Tool Co. will enlarge its drop forge plant.

GRAND HAVEN, MICH.—The Keller Pneumatic Tool Co. is reported contemplating a plant addition, 1-story, 100 x 180 feet.

GRAND RAPIDS, MICH.—The Kent Foundry Co. has incorporated with a capitalization of $5000 to do a general foundry business.

GRAND RAPIDS, MICH.—R. C. Loosemore and A. A. Brown have purchased the Grand Rapids Boiler Works.

GRAND RAPIDS, MICH.—The Leitelt Iron Works, which was recently taken over by a group of employes of the company, has been incorporated for $250,000. David C. McKay, identified with the works for the past 40 years, has been named the new president.

GREENVILLE, MICH.—The Moore Plow & Implement Co., D. H. Moore, president, will build a 1-story foundry 50 x 80 feet, costing $10,000. Charles C. Kawin Co., Chicago, is engineer.

HOLLAND, MICH.—The pattern shop of the Western Tool & Machine Co. recently was damaged by fire. The loss was estimated at $10,000.

JACKSON, MICH.—The Jackson Steel Furniture Co. recently awarded contracts for a plant addition, 1-story, 100 x 140 feet, to cost $75,000.

JACKSON, MICH.—Two new buildings costing $70,000 will be constructed by the Jackson Steel Products Co. Both buildings will be used for steel storage. The smaller will be 60 x 115 feet and the larger, 121 x 140 feet.

LANSING, MICH.—The Michigan Screw Co. will build a plant addition, 60 x 236 feet, at a cost of about $125,000.

LANSING, MICH.—The Lansing Body Co., manufacturers of metal motor car bodies, is spending $50,000 in plant additions, A shop 80 x 100 is under construction.

OWOSSO, MICH.—The Owosso Mfg. Co. is erecting a machine shop and warehouse, 40 x 140 feet.

PONTIAC, MICH.—The Pontiac Spring Works is rebuilding its plant recently damaged by fire.

PONTIAC, MICH.—A 60 x 200-foot addition will be erected for the Van Auken Machine Co.

PONTIAC, MICH.—The Standard Parts Co. has awarded the contract for 100 x 200-foot steel building with tile roof and steel sash and a 2-story office building. The 7000 feet of floor space thus obtained will be used for general offices, an assembly room, a first aid room and a dispensary.

RIVER ROUGE, MICH.—Henry Ford & Son, Highland Park, Detroit are planning to build a 1-story, 250 x 1700-foot and a 2-story, 250 x 400-foot addition to its Eagle plant. This plant is to be converted into an assembly plant for tractors.

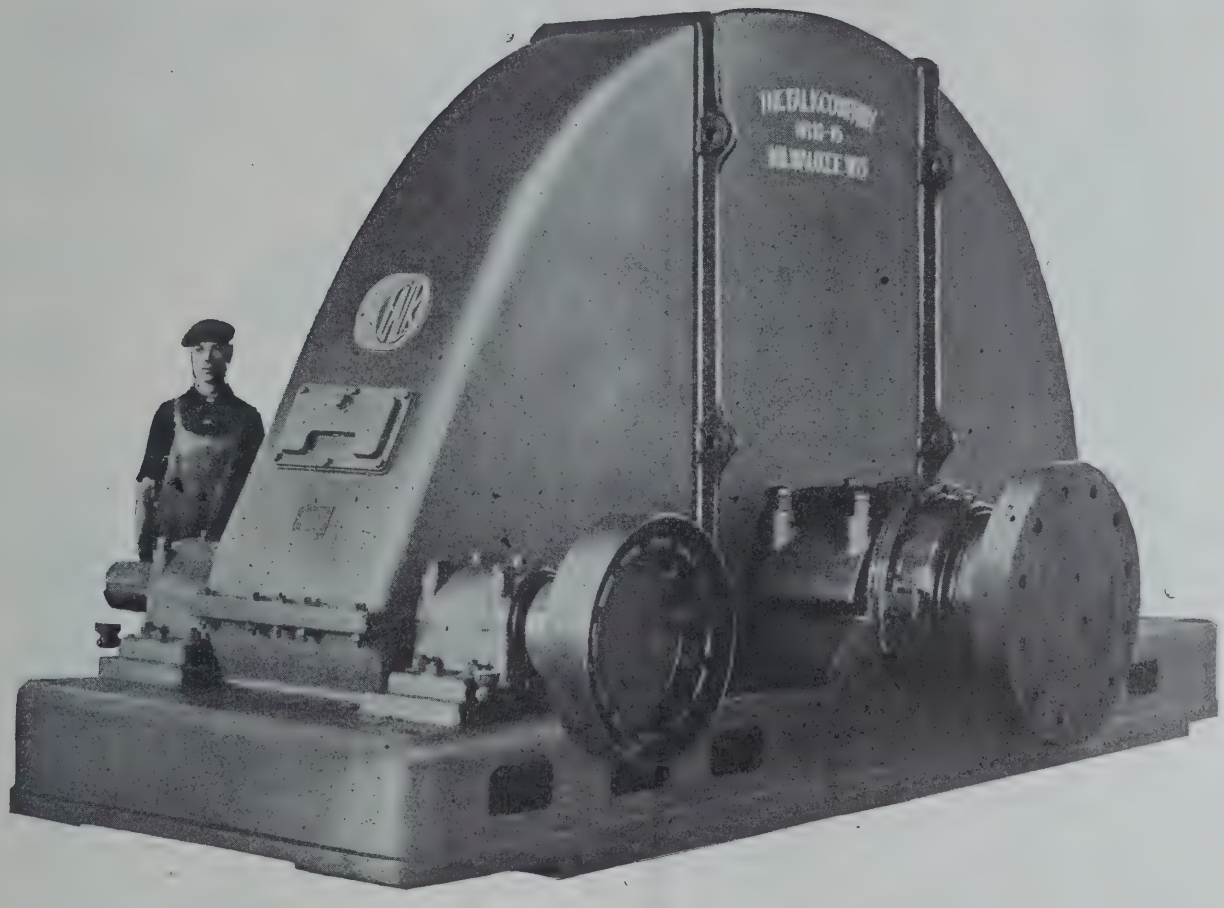
CHICAGO.—The Pettibone-Mulliken Co., 140 South Dearborn street, has let a contract to Westinghouse, Church, Kerr & Co. for the construction of a steel foundry to cost $200,000.

CHICAGO.—The Economy Machine Products Co., August Kopinski, president, 4755 London avenue, is planning to build a plant 161 x 205 feet for the manufacture of air brushes, screws, tacks and wire.

CHICAGO.—The Baker Iron & Metal Co., Sixteenth and Arnold streets, Chicago Heights, Ill., has been organized recently to carry on a scrap business. The incorporators are C. B. O'Neil, M. J. Atkinson, and Frank P. Page.

CHICAGO.—The Gill Mfg. Co., Chicago, manufacturer of automobile parts, E. P. Chalfont, president, 351 West Fiftieth street, will build a plant, the first unit of which will cost about $100,000, at South Chicago avenue and Jeffery boulevard.

ELGIN, ILL.—The Van Sicklin Speedmeter Co. has been reincorporated under the laws of Delaware with $2,500,000 capital.



MOLINE, ILL.—The Moline Forging & Mfg. Co. has let a contract for a machine shop.

PEORIA, ILL.—The capacity of the Holt Mfg. Co. will be doubled. Five buildings, which were under construction during the war and on which work ceased with the signing of the armistice, will be completed.

ROCKFORD, ILL.—The National Lock Co. will build a 6-story addition 84 x 284 feet, costing $200,000.

ROCKFORD, ILL.—The Winnebago County Tractor Co., capitalized at $150,000, has been chartered to manufacture tractors and do a general foundry and

Herringbone Gears Units

Large steel mills have accorded WUEST Herringbone Gears universal recognition for their electric drives, and heavy shaft line drives.

They have found that these gears are absolutely dependable and eliminate all shock, noise and vibration. They reduce upkeep and consumption of power.

machine business, by George N. Whitford, N. C. Bement and Albert Weinke.

ROCKFORD, ILL.—The Rockford Milling Machine Co., has increased its capitalization from $300,000 to $900,000, which will provide for enlargement of the plant of the Sundstrand Adding Machine Co., one of its subsidiaries.

SPRINGFIELD, ILL. — The Brun-Mill Co., of Pittsfield, Ill., has filed petition for incorporation to manufacture metal goods of all descriptions. The capital stock is $25,000.

SPRINGFIELD, ILL.—The Illinois Pattern & Foundry Co., of Geneva, Ill., has been incorporated with a capital of $50,000 for the manufacture of patterns and castings. The incorporators are Richard H. Mather, Lawrence C. Trager and A. M. Odegaard.

ANDERSON, IND.—Consolidation of the Indiana Silo Co., this city, and the Star Tractor Co., Findlay, O., has been completed, and the new company will be known as the Indiana Tractor & Silo Co. W. M. Swain, Pendletin, Ind., is president.

CONNERSVILLE, IND.—The Lexington Auto Co. recently let contracts for an automobile manufacturing plant, 1-story, 100 x 100 feet.

CONNERSVILLE, IND.—The Teetor-Hartley Motor Co., Hagarstown, Ind., has purchased 10 acres near its plant and will erect a building 100 x 1500 feet and a 100 x 400-foot structure.

EAST CHICAGO, IND.—George B. Lambert & Co. recently let a contract for a machine shop to cost $80,000.

EAST CHICAGO, IND.—George B. Lambert & Co., Railroad avenue and 145 street, expect to erect two machine shops costing $80,000. One will be 1-story, 90 x 176 feet, and the other 2-story, 52 x 88 feet.

EVANSVILLE, IND.—The Inland Motor Truck Co., capitalized at $10,000, has been chartered to manufacture auto trucks by William Lightner, A. R. Schultz and Henry J. Graf.

EVANSVILLE, IND.—The Crown Chair Co. has been purchased by local interests and a new company will be incorporated with $150,000 capital. New machinery and equipment will be installed. Edward D. Wemyss is president.

GREENSBURG, IND.—The United Engineering Co. will erect a factory building 50 x 250 feet within the next 60 days. Reed & Glaser of Indianapolis announce that the company has received an order from a London firm for 3000 machines of light construction.

HAMMOND, IND.—The Railway Motor Car Co. of America, Chicago, will build a plant at Hammond, 100 x 300 feet costing $80,000.

INDIANAPOLIS.—The G. & J. Tire Co. has awarded contracts for a power plant.

INDIANAPOLIS.—The Collapsible Auto Rim Adjustable Tool Mfg. Co., capitalized at $100,000, has been chartered to manufacture tools by Dave Yorer, Paul P. Scharffin and Edward P. Bauman.

INDIANAPOLIS.—The Dunn Motor Co. has incorporated with a capital stock of $50,000, to manufacture merchandise of metal. Directors are Henry F. Dunn, Benjamin D. Aufderheide and George H. Rossebo.

INDIANAPOLIS.—The Equator Manufacturing Co. has incorporated with a capital stock of $20,000; manufacturing machines, tools and machine accessories. Directors are R. C. Berry, Lloyd Beckwith, T. H. Endicott, A. T. Potter and M. M. Poole.

LA PORTE, IND.—The Advance-Rumely Co. will build a number of new buildings, the largest of which will be a new storage shed, 125 x 1000 feet. Others will be three 2-story additions to the present machine shop, one 20 x 300 feet, one 20 x 187 feet and the third 20 x 160 feet. The case-hardening and heat-treating departments will be increased by an addition of 30 x 40 feet. Improvements will also be made in the boiler room and power house.

MARION, IND.—The Marion Foundry Corp. is erecting a plant at an estimated cost of $200,000.

OAKLANDON, IND.—This county plans the erection of a 1-story power plant.

ALLIANCE, O.—This city contemplates the erection of a gas producing plant.

CANTON, O.—The Canton Stamping & Enameling Co. has awarded a contract for a 2-story plant, to cost about $30,000.

CANTON, O.—The United Iron & Metal Co. recently was incorporated with $250,000 capital, by Charles S. Weintraub, Gus Deierling, William Beresin, Robert Heller and Abraham E. Levi.

CINCINNATI.—The Reliable Engine Co., Portsmouth, O., is reported planning to move its plant to this city.

CLEVELAND.—The Brown Fence & Wire Co. has a permit to erect a plant addition, 3-stories, 100 x 179 feet.

CLEVELAND.—The Collinwood Foundry Co. has taken out a permit for the erection of a foundry addition, 25 x 42 feet.

CLEVELAND.—The Neale Products Co., metal cleaners, etc., has been incorporated with G. C. Hafley, H. T. Hoffman, J. A. Brune and others.

CLEVELAND.—The Horsey Products Co., motor accessories, recently was incorporated with $105,000 capital, by E. T. Horsey, E. C. Henn, R. F. Henn and others.

CLEVELAND.—The Martin-Barriss Co. recently awarded a contract for a saw mill and power plant, 36 x 165 feet and 55 x 77 feet, to cost $100,000.

CLEVELAND.—The Roto Pneumatic Co. recently was incorporated with $100,000 capital, by W. C. Sly, R. J. Emerich, R. O. Bartholomew, E. W. Leeper and others.

CLEVELAND.—The Puley Die Casting Co. has been chartered with $10,000 capital, by G. B. Puley, G. A. Campbell, Harry E. Johnson, Arline Puley and G. H. Campbell.

ELYRIA, O.—The Garford Engineering Co. is reported contemplating the erection of an electric foundry.

KENT, O.—The Mason Tire & Rubber Co., Leader-News building, Cleveland, is having plans drawn for a 1-story steam power plant.

NEW FRANKLIN, O.—The New Franklin Electric Lighting Co. has been incorporated with $2500 capital, by O. C. Bates, Arthur Crowl and others.

RAVENNA, O.—The Perfection Piston Ring Co. has awarded a contract for a plant, 1-story, 60 x 160 feet, to cost $20,000.

SPRINGFIELD, O.—The American Radiator Co. is taking bids for a machine shop, 1-story, 50 x 50 feet, to cost $12,000.

WELLINGTON, O.—The Sterling Foundry Co. has been incorporated with $150,000 capital, by R. E. Clisby and others.

ASHLAND, KY.—R. Dysard, mayor, has taken bids for a pumping station and filtration plant here. Address Alboard & Burdick, 1417 Hartford building, Chicago.

LOUISVILLE, KY.—The Dow Wire & Iron Works has awarded contracts for remodeling its plant.

LOUISVILLE, KY.—B. F. Avery & Sons is taking bids for a harvester plant and shear shop, 100 x 322 feet and 100 x 120 feet, to cost $200,000.

FAIRMOUNT, W. VA.—The West Virginia Metal Products Co. is reported having plans drawn for a brass and copper plant.

Business in Canada

KENOGAMI, QUE.—Price Bros. Co. plans the construction of a power plant here. John Ball is manager.

MONTREAL, QUE.—The Western Quebec Power Co., Ltd., has been incorporated with $1,000,000 capital by William K. McKeown, George E. Chart, Thomas H. Onslow and others.

THREE RIVERS, QUE.—Plans have been prepared and bids will be called shortly for hydroelectric development here for the International Paper Co., New York.

HAMILTON, ONT.—The Dominion Sheet Metal Corp. is making preparations for a large addition.

HAMILTON, ONT.—The Carr Fastener Co., Boston, manufacturers of metal fasteners, etc., completed arrangements for the erection of a plant here to cost $100,000.

LONDON, ONT.—Plans are being prepared for a warehouse and boiler engine room for Green Swift & Co., to cost $30,000.

OSHAWA, ONT.—The Pedlar People, Ltd., manufacturers of sheet metal products, etc., contemplate disposing of their factory and securing a site on which to erect a new plant.

OTTAWA, ONT.—The Great Lakes Dredging & Contracting Co., Ltd., has been formed by the amalgamation of the Great Lakes Dredging Co., Ltd., and the Thunder Bay Contracting Co. The directors are Michael J. O'Brien, Lawrence T. Martin, Joseph L. Murray, all of Renfrew, Ont.

TORONTO, ONT.—The Jefferson Glass Co. has let the general contract for an addition.

TORONTO, ONT.—The Willys-Overland Co. has awarded the general contract for an addition.

TORONTO, ONT.—The Steel & Radiation, Ltd., is having plans drawn for the conversion of a factory building into a foundry.

TORONTO, ONT.—The National Conduit Co., Ltd., has been incorporated to manufacture conduits, etc., with $100,000 capital, by John A. Kent, room 43, 44 King street west; Maxwell C. Purvis, Guy M. Jarvis and others.

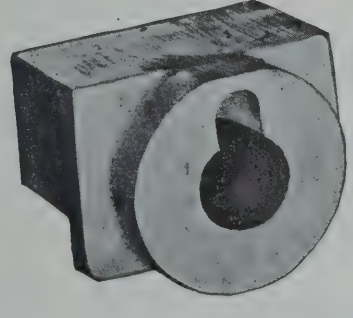
TORONTO, ONT.—The W. C. Hunt Mfg. Co., Ltd., has been incorporated with $40,000 capital, to carry on business as iron and brass founders, by William C. Hunt, 59 Paton road; Ambrose A. Crocker, 322 Symington avenue, and others.

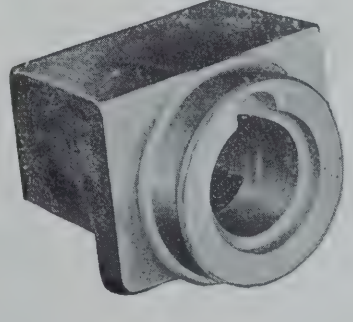
WALKERVILLE, ONT.—The Canadian Products, Ltd., has been incorporated with $10,000 capital by Alexander Leslie, John E. Laughlin, Hugh L. McDowell and others for the purpose of manufacturing auto trucks, tractors, farm implements, machinery, etc.

WALKERVILLE, ONT.—The American Auto Trimming Co. has been incorporated with $500,000 capital, to manufacture accessories, etc., by Benjamin Gotfredson, Frank H. Joyce, Mark H. Coleman of Detroit, Water G. Bartlet of Windsor, Ont., and others. The company will build a plant.

WINDSOR, ONT.—Tenders for the building of the Walkerville sewage pumping station will be received until August 12, by the Essex border Utilities commission, room 14, Victoria block.



WINDSOR, ONT.—The Dominion Tractors, Ltd., has been incorporated with $500,000 capital by George N. Hickey, Elmer E. Theis, both of Detroit; Ernest S. Wigle, William Horne of Windsor and others.



Cut Special Tool Expense

This No. 4 Universal operating at the Cleveland Tractor Co., Cleveland, was quickly tooled from the stock of Warner & Swasey standard tools to finish this odd shaped piece. You see here how the tools are designed to complete as many of the operations as feasible at one feed of the turret. This concentration means maximum output.

With W & S Standard Tools from Stock

Buy these machines, select your tools from the Small Tool Catalog and get a flying start without the costly delay of designing and making special tools that can be used for only one job. Our Engineers work with you in the selection of the best machine and tooling for your work. Result—Profit and Satisfaction.

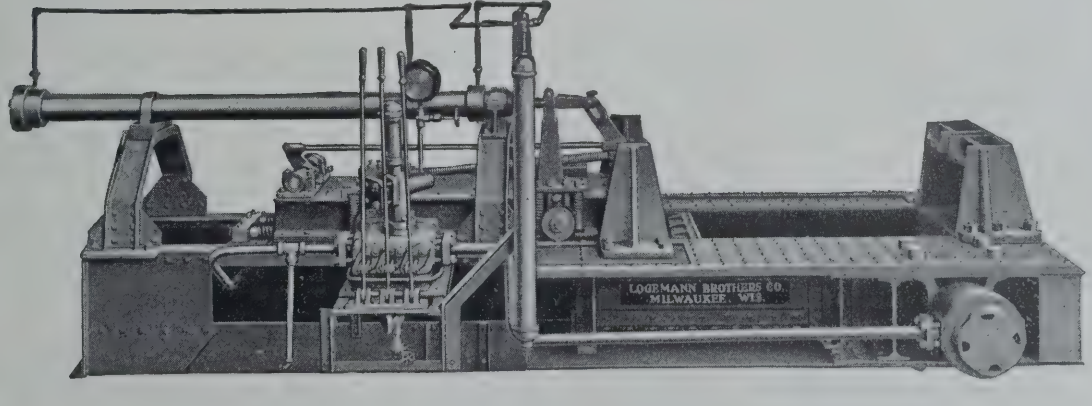
When the Scrap Market Is Dull

While seeking a more favorable market the best form in which to hold your sheet scrap, etc., and the form that always commands the best prices is the dense hydraulically compressed bundle.

Thus less storage space is required—under roof to prevent loss from corrosion; and because of greater car tonnage under minimum car rate, you add from 25% to 50% freight savings to your profits.



For greatest compression, largest daily output, at lowest operating cost, use

LOGEMANN Double Ram Hydraulic Scrap Metal PRESSES

You can enjoy the advantage of the accumulated experience from hundreds of Logemann scrap bundling presses now in use.

They embody a simplified mechanism that requires no special skill to operate rapidly. Press and pump are so designed that all the motive power applied is utilized, thus reducing power cost.

Powerfully built, all working parts constructed to resist the severest strains—selected material, first class workmanship—all minimize upkeep cost and insure lasting efficiency.

A medium sized press is shown; there are smaller and larger sizes in standard models.

Advise character and daily tonnage of your scrap and let us suggest press best suited to your requirements.

Logemann Brothers Co.

New Trade Publications

CUTTERS.—The Cleveland Milling Machine Co., Cleveland, is circulating its standard cutter catalog B, which was recently completed. This booklet contains 144 pages, and gives sizes, specifications, etc., of standard cutters and illustrations of machine tools, which the company manufactures. The booklet also contains a number of tables, including decimal equivalents, cutting speeds, weights of round bars of high speed and carbon steel, and other data of interest to engineers and plant executives.

HOSE COUPLING.—A newly designed hose coupling is described and illustrated in a folder being circulated by the Independent Pneumatic Tool Co., Chicago. This coupling can be disconnected instantly by a straight pull on the knurled sliding sleeves. The bevel jaws and locking shoulders are heavy, with large bearing surfaces, and according to the folder, cannot break, jar or work loose. The folder also describes a clamp, designed especially for hose couplings.

STEAM SHOVELS.—The Osgood Co., Marion, O., recently issued a large 32-page illustrated booklet, in which steam shovels, cranes, clamshell outfits and dredges, are described and illustrated. The shovels illustrated embody late features in steam shovel construction, such as steel gears, with machine cut teeth; manganese racks and pinions for dipper handle; cast steel swinging circle; large boiler and water tanks; steam hoisting friction and by-pass throttle. The illustrations, of which there are many, give the reader a comprehensive idea of the shovels, dredges and other equipment described. Many of the cuts show the shovels, etc., actually at work.

RELIEVING MACHINE.—A hack high-powered universal relieving machine is described and illustrated in a 4-page folder being distributed by the American Machine Tool Engineering Works, Chicago. It is a high production machine upon which hobs of straight or spiral gash, form cutters, counter-bores, face form cutters, taps and threading dies can be made. A side relieving attachment is supplied, which can be attached or removed at will. In this machine a self-contained countershaft forms a part of the head. Power is transmitted to the relieving machine directly from the line-shaft through one forward and one reverse belt. Other parts of the machine are thoroughly described.

PUMPS.—An 8-page catalog has been issued by the Michigan Machine Co., Detroit, in which a pump which it is said can be used on any machine, whether it is of low, high or medium speed, is described and illustrated. The principal moving parts are two rollers which rotate eccentrically in the pump chamber, causing the liquid to roll in front of the rotor. According to the booklet, it is self-priimng, requires no relief or check valves, or overflow piping. Although small in size, it is of large capacity and its power consumption is considered low. It pumps oil or water equally well. The pump can be furnished in either cast iron or bronze, and in sizes ranging from ⅛-inch to 2-inch intake and outlet with capacities from two quarts per minute to more than 150 gallons per minute.

STEEL CASTINGS.—A large cardboard-bound book of 62 pages, containing a pictorial portrayal of the plants at Attica, Ind., and Murphysboro, Ill., of the Harrison Steel Castings Co. and the National Car Coupler Co., and a brief description of their products, is being circulated. Printed on heavily coated stock, and well illustrated, the book is one of the most attractive trade publications of the year. A number of the illustrations are in colors. The first part of the book is devoted to a brief history of steel; then follows the history of the two companies. This is augmented by views of the plants, including the interior of the pattern shop, the foundries, the open-hearth furnaces at the Attica plant, the laboratory and other departments. The latter part of the book is devoted to a description of castings made by the companies.

OIL BURNERS.—Oil fuel burning installations for marine and land boilers are described and illustrated in a loose-leaf catalog of 44 pages, being circulated by J. Samuel White & Co., Ltd., 28 Victoria street, London, England. The first part of the booklet is devoted to a general outline of oil fuel burning equipment. These installations can be arranged to suit coal or wood fired boilers at present in use, for either land or marine service. To illustrate the system described in the booklet, 12 plates, the most of them line drawings, are presented. Part of the booklet is devoted to oil fuels, and the latter part of the catalog contains illustrations of British naval vessels, which are equipped with these installations. The booklet is printed on heavy stock and its appearance testifies to the pains taken in its preparation.

MINE EQUIPMENT.—An 8-page, 8½ x 11-inch booklet has been published by the Cutler-Hammer Mfg. Co., Milwaukee, in which reference to the mine-duty apparatus installed in the plant of the St. Louis Smelting & Refining Co. at St. Francois, Mo., is made. This includes a detailed description of handling the ore from the three levels of the mine until it is ready for shipment. Special emphasis is laid on the hoist and conveying machinery and the automatic control and safety apparatus with which this machinery is equipped. Illustrations show the mine hoist panel, master switches, limit switches, overspeed governors and electrically operated brakes as well as the automatic starters for the crushers and conveyors. The starters are controlled from push button stations and the speed of the conveyors and crusher is governed by armature regulators. The front and back covers of the booklet display a view of the buildings above the mine.

Opportunities Abroad

Requests for information should be forwarded to district or co-operative office in your district, of the Bureau of Foreign and Domestic Commerce. Each request should be on a separate sheet and be accompanied by the opportunity number

The purchase of iron ond steel cable, steamship supplies and kindred lines, are desired by a firm in Norway. Opportunity No. 30146.

A commission agent in Guatemala wishes to represent manufacturers of various materials, including barbed wire. Correspondence should be in Spanish. Opportunity No. 30148.

The purchase of German silver, nickel, copper, brass, tin, ingots in sheets, tubes, scrap, etc., iron sheets for all purposes, and dynamos, galvanized and tin plates, is desired by a firm in Switzerland. Opportunity No. 30149.

A firm in Norway wishes to purchase drawn copper tubes. Opportunity No. 30150.

Transmission machinery for mining use, cables, wheelbarrows, mining cars, mining tools, pumps, compresses, punching machines, metal sheets, metal construction material, are required by a firm in Spain. Opportunity No. 30151.

The purchase of lawn mowers, clothes wringers, carpet sweepers, spoons, knives, forks, metal choppers, electrical material, etc., is desired by a firm in Denmark. Opportunity No. 30154.

The representative of a firm in Sweden, at present in this country, desires to secure an agency for the sale in Scandinavia of boring, milling, and drilling machinery, shipyard machinery, locomotive building machinery, and tools of all kinds. Opportunity No. 30063.

A party in France desires an agency for the sale of electrical, sanitary and plumbing material. Correspondence should be in French. Opportunity No. 30064.

A mechanical engineer of the State railways of Finland is in this country and desires to purchase car and locomotive repairing machinery, tools, equpment, etc. Opportuity No. 30065.

The purchase of steel tubes, 2 inches and 2½ inches in diameter, in quantities of 100 tubes, are desired by a firm in Portugal. Correspondence should be in Portuguese. Opportunity No. 30067.

The purchase and agency is desired by a firm in Belgium for the sale of electrical appliances, wrought iron and steel tubes, malleable iron fittings, gun metal and brass fittings for gas, water and steam; copper and brass wire, sheets, bars, rods, merchant iron, steel bars, plates and sheets, tin plates of all sizes, etc. Opportunity No. 30069.

A company in England is in the market for small grooved rolled iron bars in sizes No. 2 full, to be used in the manufacture of brass cased round stair rods. The amount used by this company averages 5 tons a week in assorted sizes. Opportunity No. 30070.

An exclusive agency is desired by a firm in Spain for the sale of automobile lighting generators, starting motors and magnetos. Opportunity No. 30071.

A party from Gibraltar, in this country, desires to secure an agency for the sale of food products, motor cars and trucks, hardware, tools, typewriters, etc. Opportunity No. 30072.

The purchase and agency for the sale of paper machinery, printing presses, automatic machines for cutting paper, etc., are desired by a man in Czechoslovakia. Opportunity No. 30075.

The purchase or agency for the sale of rolled steel, iron and tin is desired by a firm in Belgium. Opportunity No. 30081.

A party in Norway desires to represent American firms in the sale of building materials, including soft copper sheets, galvanized, corrugated and plain sheets, sanitary appliances, iron goods, etc. Opportunity No. 30108.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, August 21, 1919 *No. 8*

Labor Conditions Cloud Market

Acid Test of Workers' Loyalty May Follow Youngstown Conference—Production Gains Steadily and Prices, as a Rule, are Firm—Large Tonnages are Sold for Export

AN unusual situation confronted the steel industry Wednesday, when representatives of 25 steelworkers' unions were scheduled to meet at Youngstown to canvass a strike vote. If a walkout is called, as it most likely will be, much will depend upon the strength of the newly formed unions. If it develops that great numbers of steelworkers have refused to listen to the appeals of union organizers, plants no doubt will continue to operate. On the other hand, if it is found that the unions have effected a strong organization in the industry, it is not unlikely that the country will witness a complete shutdown, paralyzing the industry at a time when the production of urgently needed iron and steel is steadily gaining daily. The threat of a general strike is only vaguely reflected in business of the past week. Although dealers in pig iron, fuel and finished steel have shown some hesitancy in booking orders, the large volume of actual sales indicates a strong confidence in the future.

Argentina Asks Credit

Buying for export during the past week was brisk. England placed orders for pipe, bars and hoops aggregating about 3000 tons and is inquiring for billets. France made several small purchases and is asking for prices on about 22,000 tons of finished steel products, including 14,000 tons of rails. Italy bought 8000 tons of pig iron and is inquiring for 20,000 tons of hematite iron. Holland, Brazil, China and Japan are in the market for small tonnages of finished steel. Argentina is requesting a credit for $11,000,000 to purchase equipment for railway and other improvements.

Iron Buying is Lighter

Although the first rush of iron buying has subsided, the demand for all grades still is heavy. There is an apparent hesitancy on the part of many producers to book business for first half delivery. With the possible exception of certain furnaces in the South, the productive capacity of the country is largely sold out for the balance of the year. Sales for the week in New England amounted to about 4500 tons, the lowest figure in two months. Three sales in the Pittsburgh district, aggregating 25,000 tons of foundry iron, were made at the quoted prices. Approximately 10,000 tons of foundry grades were disposed of in small lots by a Buffalo dealer at an average advance of 50 cents over listed quotations. Sales amounting to about 10,000 tons were reported in New York. There is evidence in the buying of 1920 iron in eastern markets that prices for first half will be from $1 to $3 above present quotations. Iron is scarce in the South, where furnaces ask $27.50 and $27.75 for No. 2 foundry.

Mills Still are Busy

A surprisingly large demand for semifinished materials has sprung up in the Youngstown and Pittsburgh districts. A valley interest booked an order for 18,000 tons of sheet bars. Automobile makers are buying large tonnages of strip steel. Bar mills are working at nearly full capacity to keep up with the rush of orders. A sale of 5500 tons of this product to South America is reported by a Pittsburgh manufacturer. The encouraging condition of the structural market is reflected in the report of the Bridge Builders and Structural society which shows that in July contracts involving 74 per cent of the entire capacity of the bridge and structural shops of the country were let. This is equivalent to 133,200 tons, as compared with 117,000 tons, the corresponding figure for June. Several sheetmakers have been compelled to turn away business on account of the sold up condition of their mills. Tin plate makers are also well supplied with orders. Wire is now being exported at the rate of 10,000 tons monthly and the prospective production for the next ten weeks is already engaged. Practically all users of finished steel, with the exception of the railroads, are buying liberally. The Carnegie Steel Co. is offering the U. S. navy plate, shapes and bars at prices decidedly lower than the prevailing market. Conditions at Duluth, Gary and South Chicago, where strikes were in progress, have improved. Steel workers are still out at Cleveland, Sparrows Point and Peoria.

Churchill's Plain Words

IN these days when the air has become so filled with discussions of "social justice," "tripartite control of large corporations," "industrial democracy," etc., that even some of the ablest champions of existing conditions seem to be afraid to speak openly, it is both refreshing and stimulating to encounter a straight-from-the-shoulder defence of the capitalist system. Such a defense was made by Winston Churchill in a recent speech in London. There is, therefore, wine in the words of that great British statesman, who has never feared to say what he thinks. Mr. Churchill makes his point so clearly that no comment or explanation is necessary. At the conclusion of his speech, he simply made the following statement:

"I remember to have said some years ago, 'Socialism attacks capital; liberalism attacks monopoly.' That is a useful distinction to bear in mind.

"Then there is a capitalist system. I am astonished to see how people are afraid to defend it. The politicians are afraid, the newspapers are afraid, and they prefer to give the thing the go-by. As a matter of fact, the capitalist system is capable of sustained and searching defense. In fact, it is the only system that has ever been devised for regulating the economic relations between man and man and for appraising the value of services which men render to each other or exact from each other—the only system, apart from slavery. But if the capitalist system is to be successfully defended it can only be defended by showing that there is a moral basis for property and you will not establish a moral basis for property or obtain conviction from the masses of the people unless you are able at the same time to make just laws, regulating and bringing up to date the conditions under which property is acquired and enjoyed, correcting by taxation the evils of unmerited acquisition or indolent enjoyment."

The World Needs Production

IT IS extremely gratifying, in these trying days when scarcely an editorial is written that does not touch on the labor situation, to note that practically all of the writers who pretend to deal with that troublesome problem agree on at least one point. Without exception they recognize the fact that, come what may, the production of essential articles must continue in undiminished volume if the world is to ride out the present wave of discontent.

An unprecedented situation exists in connection with the production of iron and steel products. Although ten months have elapsed since the armistice was signed, scarcely any noticeable improvement has taken place in the industrial position of Europe. The work of reconstruction, except in Belgium, has received comparatively little attention. Not a single nation on the far side of the Atlantic is in a position to relieve the growing pressure of demand for iron and steel. The countries of Europe must look to foreign manufacturers for a large proportion of their requirements.

Of the important industrial nations of the world only two are now prepared to assist in easing the tension of the present situation. Japan, which in the past has been a consumer of British and American steel is fast approaching a state of independence. Already several observers foresee the end of that enterprising nation's dependence on imported products and predict that within a few years Japanese steel will be seeking an outlet in Pacific markets. At the present time, the unusual industrial activity of Nippon is significant because it reduces the demands of an important consumer of Anglo-American goods, which are so urgently needed elsewhere.

Until Europe recovers from its present state of helplessness, the United States must continue to carry the lion's share of the responsibility for producing the world's requirements. That its manufacturers of iron and steel products are assuming this burden in a remarkably encouraging manner, in spite of the most imposing difficulties that ever have threatened its industrial life, is shown by statistics of production

made public during the past two or three weeks. The output of pig iron in July exceeded that of June by 300,626 tons, and the statement that a large per cent of the United States Steel Corporation's stacks are in operation and that 40 of the 46 furnaces in the Youngstown district soon will be in blast give promise that the production of iron in August will not fall short of July's gratifying total, notwithstanding the fact that strikes were expected to greatly curtail operations. The July production of steel ingots surpassed that of June by 288,957 tons, exceeding the gain of June over May. Unfilled orders of the corporation on July 31 amounted to 5,578,661 tons, an increase of 685,806 over the total for June 30, and appreciably topping the June advance over the last day figures for May. As yet, industrial difficulties calculated to seriouslly affect the production of iron and finished steel in August have not developed.

It is by no means certain that this ability of American industry to weather the storm of unrest will continue. However, it is a source of deep gratification to know that in the United States, as in no other country except Japan, iron and steel is being manufactured on a scale comparing favorably with prewar performances.

Peaceful and Law-Abiding

REPORTS of organizers working in behalf of the International Association of Machinists afford interesting reading for those who would be informed in regard to union labor activities. They show how peacefully strikes and strike propaganda are carried on, in conformity with the public statements of trades union leaders that no violence is resorted to or unlawful efforts made to coerce workers who do not desire to join their organizations. In the current issue of the machinists' publication, an organizer, after glorying in the victory he says was won by members of his union in Norfolk, Va., proceeds:

"Between three and four thousand men were called out, demanding recognition and the right to collective bargaining. For seven weeks these men hammered the pavement, and out of the large number involved, only two weak sisters were found in the ranks who tried to go to scabbing. I say 'tried to go' for one of them landed in the hospital and the other in the police court. How the imported scabs were taken care of, the strike-breaking agencies beaten at their own game, the private detective agencies frustrated, and the score or more other things of more or less importance were taken care of, is another story, but let it be known that it was as clean a strike as ever happened."

Read in the light of organized labor's protestations of innocence of wrong-doing and desire to be peaceful and law-abidding official reports of this kind are instructive.

Wartime Control of Tin Ends

AUGUST 15 brought to a close one of the most unique chapters in the history of the tin industry since the Phoenicians steered their galleys to England's chalky cliffs in search of the white metal. On Aug. 15 the last restriction was lifted on the importation of tin into the United States, ending the wartime control of the metal. The control, which involved a buying pool by the allies and the United States to operate in the tin producing markets, together with control of distribution in the consuming markets, was fully instituted only about the time the war ended. Had the war continued a time longer, doubtless the interallied tin control would have functioned efficiently to maintain a steady supply of tin to essential consumers. Like various other industries and systems the tin market has experienced an aftermath of discrepancies. Thus the domestic tin market for months was higher by 20 cents a pound than the London market. But with the restoration of commerce in tin to its normal channels these price differences have disappeared and the world markets now are practically in their usual alignment. In the past two weeks the price of spot high grade tin has crumbled from the artificial level of 70c, to 55½c; and the price of lower grade (99 per cent) tin has dropped from 67 to 54c. From now on tin importations and distribution will be conducted in the normal prewar manner.

Government Pursues Sound Plan

AN intelligent policy is being followed by the office of the director of sales, war department, with regard to the disposition of surplus tonnages of steel. It is evident that those in direct charge of the disposition of supplies are thoroughly aware of the upward trend of prices and that, with complete propriety, the government is taking advantage of the situation. Not only are tonnages being offered after a careful survey of the market, with a view to obtaining the best figures possible but care has been taken not to resort to a process of dumping stocks on the market, a practice which would adversely affect the healthy conditions now prevailing, and likewise would work injury to the government in its effort to recover as far as possible the financial outlay represented in the enormous tonnages it bought for purposes of war. That this plan is a wise one is shown by the increasing prices the government is obtaining at present for its stocks as compared with those received for the first lots it sold, when the market was weak.

By pursuing this system the government has benefited and the market has not been disturbed. So far as known neither the pig iron nor scrap interests have had cause to complain of the rather large tonnages sold and being sold by the government,

Initial Rush for Pig Iron Subsides

Although Demand for All Grades Still is Heavy Sales of Week Fall Behind – Prices are Firm with Promise of Early Increase—Relighting of Stacks Forecasts Increased Production

Philadelphia, Aug. 19.—There still are sales of foundry iron at 28.50, eastern Pennsylvania furnace for No. 2X grades, but prices continue to strengthen and more furnaces now are regarding $29 as the minimum price for this iron with No. 2 plain at $1 less. On the other hand, sales are being made right along at higher prices. While there was a lack of spectacular business, individual orders comprised a large total. Much of this is for 1919 delivery although considerable first quarter business has been taken. Eastern furnaces are asking an advance of from $2 to $3 over present prices for 1920 iron. Current inquiries include 4000 tons of foundry iron for the J. L. Mott Co., Trenton, N. J., to be delivered in fourth and first quarters; 2000 tons for the Sanitary Co. of America; and many smaller ones. Sales of Virginia iron include 1500 tons at $29 furnace for No. 2X and $30 for No. 1X. The only basic sale reported was for 1000 tons for export. A tonnage of Buffalo malleable iron was sold here at $29, Buffalo.

Buying Falls Off in New England

Boston, Aug. 18.—Prices of pig iron remain firm in all localities although the flurry in 1920 buying has almost entirely ceased in the local market. Orders for the last quarter continue to come in although in no case has the tonnage been at all sizable. The majority of the furnaces still refuse to open their books for the next year's business and those that have been selling for first half have either sold as much as they originally intended to at this time, or else feel that it is wise to wait for still higher prices. In any case the first half quotations have jumped to an almost prohibitive mark and no orders for this delivery have been reported among the week's sales. At least two of the Buffalo furnaces report their books filled for the balance of this year. The eastern Pennsylvania furnaces are still booking last quarter orders but do not seem anxious enough for the business to shade prices. In one or two cases small tonnages from this latter territory have sold for $29 at the furnace for the No. 2X eastern (2.25-2.75 silicon), but a large number of sales of this iron at $30 at the furnace seems to establish the higher level as a market price. Southern furnaces continue to feel sufficiently independent of the New England market to refuse any freight concessions. One furnace is selling 2.25-2.75 silicon iron at $28 at the furnace and another concern is selling the same grade at $29. Some orders at these prices from both of these furnaces have been taken during the week for New England delivery. All sales have been small. A Boston consumer bought 400 tons of malleable iron from a Pennsylvania furnace which has a $4.70 freight rate into New England. The price was $27.50 at the furnace bringing it to $32.20, delivered.

An eastern Connecticut consumer bought 500 tons of Buffalo iron, 2.25-2.75 silicon, at $29 at the furnace for last quarter delivery. The central Massachusetts foundries in several instances bought small lots for the balance of the year. A Connecticut manufacturer bought 600 tons of No. 2X eastern from an eastern Pennsylvania furnace at $30.25 at the furnace for last quarter delivery.

Inquiries which are out at the present are all for 1920 delivery and none of them are for any exceptional tonnages. The total of the week's sales handled by New England dealers is estimated at 4500 tons which is a lower figure than for any week during the last two months. The 1920 business has as yet hardly been touched and the feeling is that this will start in earnest within a few weeks with lively market conditions.

Brisk Foundry Sales

New York, Aug. 18.—Sales of pig iron in this district during the past week involve well over 10,000 tons of foundry iron. Included in this business was some foundry for first-half of 1920 delivery to consumers who already had closed for the remainder of this year with the furnaces taking the first-half business. In view of the impending increased cost of manufacture, the business for first half was entered at the equivalent of slightly more than 32, delivered at New York and Brooklyn, for 2.25 to 2.75 silicon foundry; this is approximately $2 higher than can be done for this grade of foundry for this year. The market is strong and the minimum prices for foundry iron are $29.35, delivered Newark and Jersey City, and $30.05 delivered New York and Brooklyn for 2.25 to 2.75 silicon, while the minimum prices on 1.75 to 2.25 silicon foundry delivered at the same points are lower. At the same time, sales of round tonnages have been made in this district at as much as $2 higher than these figures for the same grade. Included in the business transacted was a good-sized tonnage in the aggregate of Buffalo iron for this year's delivery, at $29 Buffalo, for 2.25 to 2.75 silicon foundry. Export inquiry continues active, and although the major portion of the current in-

quiry disappears after floating around the market for a short while, no inconsiderable portion of it is being placed. During the past week, for instance, approximately 3000 tons of southern foundry were sold for export at the new prices, which are based on $27.75 Birmingham, for 1.75 to 2.25 silicon foundry. While there is nothing unusual with respect to current inquiry, it is of healthy proportions, and included is one lot of 5000 tons of foundry for this year and next year. New inquiries call for 4000 to 5000 tons of basic for England and Italy.

Week of Light Dealing

Pittsburgh, Aug. 19.—Not only has there been a considerable contraction in the demands for pig iron here, but talk of higher prices also has subsided to a large extent. Practically all of the consumers of foundry, forge and malleable iron now are well protected against the requirements over the remainder of the year, and seemingly few holes remain to be filled on the steelmaking grades. The big purchases a few weeks ago of basic appear to have filled the most pressing needs that existed for this grade, although the American Steel Foundries, as far as is known, has not yet covered against an inquiry put out recently for from 5000 to 10,000 tons for delivery over the last four months of this year at its Alliance, O., plant. Steel demand in the past few months for this grade has been from the steel foundries and they appear to be covered against their immediate requirements. In spite of advances of 50 cents to $1 per ton which were asked recently on foundry iron, it is noted that three sales aggregating close to 25,000 tons were placed at the regular market quotations. A shortage of pig iron does not seem imminent at the moment, for the increase in production lately has been keeping pace with the gain in the demand and a good many stacks still are idle and represent considerable prospective tonnage. Of course, if the coke continues to bring the prices it now commands and there is any boosting of labor costs, production hardly would be increased materially, unless a commensurate increase is established in iron prices. In the past week the Dover furnace of the Penn Iron & Coal Co., Canal Dover, O., and the Scottdale furnace of the McKinney Steel Co., Scottdale, Pa., were lighted and about the first of September, the Ella furnace, West Middlesex, Pa., is expected to go in. The Anna furnace, Struthers, O., is expected to be lighted next Sunday. The Cherry Valley furnace operated by M. A. Hanna & Co. will be blown out this week for relining and No. 2 stack of the Pittsburgh Steel Co. was blown out last Friday after being in continuous operation since June 14, 1915.

Business Good at Buffalo

Buffalo, Aug. 19.—From the producers' standpoint the pig iron market here during the past week has been in a healthy condition. One interest has been doing most of the selling, while another interest has made sales during the week at an advance over any price yet quoted in this district. Business would be done in greater volume if there was no fear of industrial disturbances. Two interests have been out of the market for the past month, and the field has practically narrowed to two makers. One of these booked about 10,000 tons of iron during the week. This was mostly foundry with only a small tonnage of malleable. This interest is now well supplied with orders for the balance of the year. An inquiry for 6000 tons of foundry and several inquiries for 100, 200 and 300-ton lots are reported. The other booking interest reports that the rush of last week has subsided, but that business is still very good, with a steady market for all grades. There seems to be a steady buying of the high silicon and high phosphorus irons, with considerable business being done in manganese and magnesite. An interest which has been to all intents and purposes out of the market for a month reports sales of approximately 400 tons at the following figures: No. 2 plain $28.50; No. 2 X $29.50; gray forge $28. This constitutes an average advance of 50c.

Volume of Sales Still Large

Cleveland, Aug. 19.—Sales of pig iron in the Cleveland district, although falling off slightly during the latter part of last week, recovered on Monday and Tuesday of this week. Dealers claim that the volume of inquiries give no evidence of a slump in business. As usual, makers of pig iron are assuming a backward attitude in accepting business for first half delivery, many of them feeling that it is unwise to book orders for material the manufacture of which may be involved by labor trouble and increase costs of both labor and raw materials. Although the aggregate sales amount to a rather imposing total, no exceptionally large single transactions are reported. Prices remain firm, but expected increases have not yet been announced.

Supply Scarce at Cincinnati

Cincinnati, Aug. 18.—Word has been received that the Milton furnace in Jackson county, O., has been closed down for repairs. The three other silvery iron furnaces in that district, shut down several weeks on account of labor disturbances, are still idle. High silicon iron is difficult to obtain, as the limited supply from the South is not sufficient for present requirements. Although foundry iron is growing scarcer in the South and nearly all furnaces are quoting $27.50, Birmingham, for 1.75 to 2.25 silicon, one selling agency has placed some iron at the former figure, $26.75. The supply of this low-priced iron is limited and is being distributed in small tonnages. Northern makers have advanced to $27.75, Ironton, for this year's shipment. No iron from either district mentioned can be had for first quarter shipment, and users of foundry iron are endeavoring to buy for last quarter shipment, intending to use the iron during the first quarter of next year. An expected advance in freight rates is inducing many buyers to urge forward shipments, but cars are too scarce to move the metal as fast as wanted.

Price Increased

St. Louis, Aug. 18.—Inquiry for p iron is confined mostly to small lots. One inquiry is out for 1000 tons of southern No. 2, another for 300 tons, and one for 100 tons, all for shipment during the next three months. The price of No. 2 iron has been advanced to $27.75, Birmingham. Furnaces are adhering to the silicon differentials.

Further Advances Expected

Birmingham, Ala., Aug. 19.—Inquiries for pig iron for 1920 delivery are still being received in the Birmingham district, and a statement of one interest that $30 will be the price in the first quarter next year is regarded as significant. Spot iron is the principal sellin feature, but not many sales are recorded. Not a large amount of the probable make of the fourth quarter has been sold. Quotations are firm, with $27.75 as the minimum for No. 2 foundry (1.75 to 2.25 per cent silicon). The Woodward Iron Co. has blown out one furnace for repairs, but another furnace was blown in. The Sloss-Sheffield Steel & Iron Co. and the Woodstock Furnace Co. may each blow in a furnace this month.

Iron Shipments Are Delayed

Birmingham, Aug. 18.—An important factor in this district right now is transportation. Shipments of iron from the furnaces of the Republic Iron & Steel Co. are being delayed. Several thousand tons of pig iron are stocked in the iron yard on account of the failure of the railroads to deliver cars. Little ground remains for future stocking. The situation has become serious and if not relieved soon, the only course remaining for the company to follow is to bank both stacks. It is heard a maker in this district took on recently an order for 5000 tons of foundry at $28.50, furnace, for December delivery.

Chicago Situation Strong

Chicago, Aug. 19.—With most producers, both north and south, well sold for last half production, the pig iron situation has elements of strength which promise higher prices before long. While not enough tonnage remains unsold in the north to make it worth while to raise quotations on ordinary grades of iron and producers are averse to making higher silicon analyses, it is believed more of the latter may be contracted but at a quotation $1 or more above the ruling differentials. Northern producers have comparatively little tonnage remaining for delivery during 1919 and are using this for the accommodation of their regular customers. Additional capacity will be available shortly as the Illinois Steel Co. is about to blow in the remaining stack at Bayview, Wis., and the remaining stack at Mayville probably will be in blast before the end of this week. This leaves one merchant stack at Iroquois furnace, and one at Federal furnace, both of which are undergoing repairs. Demand at present is principally for prompt shipment in small lots, although some inquiry for larger tonnages is being entertained. Iron from the Algoma Steel Co.'s stack at Sault Ste. Marie, is being sold here as it can compete with considerable advantage over southern iron. The quotation for this iron is $29.75, furnace, for 2.75 to 3.25 silicon. The freight rate is $3.20, to Chicago and the iron can be laid down here at

from $4 to $5 below prevailing cost for southern grades. General demand is somewhat slacker than it was a fortnight ago with most present activity in malleable and great scarcity of silveries, bessemer ferrosilicon and high silicon iron ranging from 2.25 to 3.25 silicon. It develops that southern makers had a large tonnage hanging over from second into third quarter and are not catching up, as a result going into fourth quarter with enough unfilled contracts to shorten materially the tonnage they can sell. An inquiry for 10,000 tons of basic iron for a plant of the American Steel Foundries in the Pittsburgh district is current here, but probably will be placed further east. Other inquiry for basic in this district is practically absent.

Ore Demands

Now Largely for Manufacture of Basic Iron—Current Orders Light

Cleveland, Aug. 18.—Ore for the manufacture of basic iron is in greater demand as furnaces devote more of their capacity to the production of this grade. Several fair-size sales made during the current week were to supply requirements of furnaces turning entirely to the manufacture of basic. New orders, however, are light, most furnace interests having closed contracts covering their requirements. While shipments to Virginia furnaces last year amounted to 325,000 tons, so far this season there is no record of any ore from the upper lakes districts going to Virginia. Southern interests report they cannot afford to pay the price of Lake Superior iron ore and manufacture pig iron at the present selling price. They are buying the cheaper native ores, and also saving freight charges, which to Roanoke is $1.70 a ton.

One of the largest iron ore operators reports having received no orders during the past week; another representative concern received several orders amounting in all to about 40,000 tons, while the week's business of another interest did not amount to over 5000 tons.

Independent furnace interests claim to have large tonnages on hand, or contracted for, sufficient to provide for their operations until next season. A few of the smaller interests are buying from hand to mouth and it is from these interests that a larger demand is expected toward the close of the season.

The strike of railroad shopmen and dockmen shut off shipments for about 10 days, and as shipments averaged 300,000 tons daily previous to the walkout it is estimated that loss in shipments will amount to approximately 3,000,000 tons. Ore companies were advised Wednesday, Aug. 20, that while the railroad shopmen at the head of the lakes had returned to work dock workers at Marquette, Escanaba and Ashland were still out. The strikers are holding conferences at Marquette to decide the question of returning, pending a settlement of their demands. Some of the strikers at Duluth and Two Harbors returned to work Monday, but not a sufficient number to permit of normal operations.

Coke Advanced Sharply

Minimum of $4.50, an Increase of 60 Cents, Now Quoted on Spot Business—Contract Fuel Held at $5.50

Pittsburgh, Aug. 19.—The market here for beehive oven coke has experienced a radical change in the past week or 10 days, and instead of being in the buyers' favor it now is tending strongly toward prices in effect during the period of government control. Operators generally are quoting $4.75, and some are even asking $5, ovens, against spot inquiries for standard furnace fuel. While these prices have not found really substantial basis in sales, the current market may be quoted at $4.50 minimum. This represents an advance of 60 cents a ton since a week ago, and an increase of 75 cents from the recent low point when unconsigned cars in the Connellsville region were numerous. Coke on contracts for the remainder of the year is held as high as $5.50 ovens, and it is doubtful if any of the producers at present would consider a bid of less than $5. It is claimed by some dealers that $5.35 has been refused on a good contract for the remainder of the year. Most of the contracts for the last half of this year which were made last June are on a sliding scale basis on a ratio of 6¼ to 6:1 on basic iron at $25.75, furnace. That scale meant a price of $4.12 to $4.28, ovens, and proved unsatisfactory to operators because of the failure of pig iron prices to go up. When quoting recently the operators have insisted on fixed price contracts. A week ago $4.75 was the highest named on future furnace coke, and measured by today's asking price the market is 75 cents a ton higher. As much as $6.50, ovens, is being asked by some producers of selected standard foundry coke on spot or for prompt shipment, and $5.50 is about as low as any of this grade may now be obtained. Nothing has been done recently in foundry contract coke, and prices are nominal. The transition in the coke market from a condition of weakness to one of strength may be ascribed to the fact that fear of a shortage later in the year has prompted considerable buying for stocking, as a result of which the recent accumulation of loaded cars has vanished. While production has been gaining steadily during the past few weeks in the Connellsville region it is not going ahead of contract obligations. In view of the fact that there is a strong demand for coal at far more remunerative prices than have been prevailing for coke, the outlook rather suggests a continued restriction of production. The production of coke in the Connellsville region for the week ended Aug. 8 is estimated by the *Connellsville Courier* to have been 222,170 tons as compared with 209,100 tons in the previous week.

Buying Coke for Storage

Boston, Aug. 18.—During the freight embargo which has just ended many foundries frantically doubled their orders for foundry coke hoping they would in this way stand a better chance of getting deliveries made. The fact that a comparatively few of them have coke in storage for any appreciable future requirements has been evident, and the embargo has had the effect of waking all foundries up to the seriousness of an interruption to the transportation facilities. The requirements for delivery are now exceptionally strong. Many concerns normally taking one car a week are now asking for two and in some cases three. This additional tonnage is undoubtedly for the purpost of storage, for the foundries, although busy, have not suddenly increased their production to the point of requiring double the amount of coke. The price of $10.40, delivered, coke.

More Export Business

New York, Aug. 18.—Two more cargoes of northern New Jersey by-product foundry coke have been sold for export. This was the most spectacular business during the past week in the coke market here.

Complain of Slow Shipments

Cincinnati, Aug. 18.—Complaints are coming in as to delayed shipments of coke, due to car shortage and scarcity of labor. Connellsville furnace coke is around $4 to $4.25, ovens, and foundry from $6 to $6.50. Wise county and Pocahontas foundry coke range from $7 to $7.50, and quite a number of carloads for filling in purposes are being sold. Supply is not equal to the demand in any field, with the possible exception of the Connellsville district, where producers seem to be more fortunate in filling orders and shipping on old contracts. New River foundry coke is unchanged around $8, but none can be had for nearby shipment.

Increase Southern Production

Birmingham, Ala., Aug. 19.—Coke ovens are being lighted up in this section, as demand for both foundry and furnace coke is improving. Spot foundry coke is selling well at $9. Contract foundry coke is priced at $9.50. Furnace operations are increasing and the need for coke has increased materially in the last four weeks. Some orders are being offered by western consumers. A car shortage is felt by the industry in this district.

Shipments Far Behind

St. Louis, Aug. 18.—Coke shipments, particularly from the Connellsville district, are away behind. The market is strong, ranging in price from $5 to $6.25, ovens, for Connellsville 72-hour foundry. Inquiry is good for both prompt and future shipment and spot coke is in demand. One order was placed recently for 2500 tons of furnace coke, for early shipment. An inquiry is out for 500 tons of Connellsville foundry, for western delivery, at the rate of two cars per week, and other scattering inquiries probably aggregate 1000 or 1200 tons, both foundry and furnace.

Scrap Market is Inactive

Majority of Dealers Are Not Tempted by Low Prices—Steel Plants Are Largely out of Market

FOR COMPLETE SCRAP PRICES SEE PAGE 540

Pittsburgh, Aug. 19.—So little is going on in the scrap iron and steel market here that it is extremely difficult to arrive at actual selling prices. Between the fact that they already are carrying good sized stocks and the possibility of labor troubles, steel manufacturers are only casually interested in the market. On the other hand, dealers, although most of them have liberal stocks, are inclined to look upon the dullness as merely temporary, and practically the only offerings that are coming upon the market are the cars which are thrown back on the hands of dealers who have no yard facilities. One important Pittsburgh steel plant lately has been holding up shipments of all sorts and in a number of cases has made rejections of shipments. This company is said to be melting scrap accumulations which were deteriorating and is refusing to accept further shipments until this material is out of the way. Heavy melting steel takes a range from $21 to $21.50, but these prices have found no recent basis in sales other than for rejected carload lots. The principal user of machine shop turnings in this district practically has withdrawn from the market by naming a price of more than $2 a ton below that of a week or 10 days ago and also below what holders generally consider this grade to be worth. Dealers show little sign of becoming stampeded by the dullness and one explanation for this condition is the fact that the salvage board lately has been rejecting bids on ordnance department material a little below what this material recently has been bringing.

Boston Market is Dull

Boston, Aug. 18.—After a general atmosphere of activity and lively price competition in the scrap iron market, the sudden dropping off in heavy melting steel comes as a surprise in most quarters. An unmistakable dullness exists in all grades excepting No. 1 cast scrap, and whether this is due to the recent railroad tie-up or not is a question which it is hard to answer. Some feel that the natural result of the freight embargo which has been in effect throughout New England would be toward advancing prices; however the shading in the heavy melting grade among eastern Pennsylvania consumers was immediately reflected in the local market here, and concessions of a dollar have been repeatedly made within the last few days. No. 1 cast scrap has been the unusual feature in the market. The price has advanced in spite of the lull in other grades. It is now difficult to obtain and is being purchased for $28.50 at the point of sale. Many foundries have offered to buy this grade for future delivery which in itself is an unusual action. An Everett consumer recently paid $23.50 for rerolling rails which is higher than has been reported at any time this season for this grade. The market established by other recent sales is $20 to $21, delivered to consumer. There is a general feeling among foundrymen that scrap dealers are a little worried over the high priced stocks which they have stored in their yards. Speculative buying has continued for weeks here with ever increasing prices, and any continued slump at this time would mean a loss to many dealers. However, the dealers themselves point out that a serious scrap slump is hardly possible with the present bullish condition of the pig iron market.

Easier Tone in Philadelphia

Philadelphia, Aug. 19.—The scrap market here reflects a distinctly easier tone and consumers seem less anxious to buy and are willing to pay less than heretofore. The Lukens Iron and Steel Co. is reported to have bought 2000 tons of heavy melting steel at $19.50, delivered. The same company now is said to be offering $19. The scrap business of the past week has been comparatively small. However, the actual condition of the market is strong as practically all grades are scarce.

Buffalo Market Firm

Buffalo, Aug. 19.—The market for scrap is good, with prices holding firm. Local mills are increasing production rapidly and are operating at 85 per cent of capacity. The vision of $25 heavy melting steel in the near future has gone glimmering, and dealers are not so insistent on high prices. One of the most potent causes of this is the fact that there has been no $22.50 scrap sold during the past week to Pittsburgh and Valley interests. No large orders have been placed during the week.

Eastern Market is Quiet

New York, Aug. 18.—The American Brake Shoe & Foundry Co., which has been a heavy buyer of stove plate in the east and freely has paid as high as $21 delivered, Mahwah, N. J., now has named $20.50 as the highest price which it is willing to pay for this grade of scrap. However, dealers are holding tight to their stocks and no sellers at this price are reported so far. The market in scrap iron and steel has been quiet here during the past week, mainly due to the fact that Pittsburgh no longer is seeking to buy scrap here. Owing to the fact that sales are being made in the Pittsburgh district right along, however, and that the supply there is a good deal less than what is needed, Pittsburgh interests again are expected to be buying here before long. As a result, the tone of the market here is strong. Wrought scrap is scarce and railroad wrought has been sold during the past week at $1 higher than during the previous week. Machine shop turnings also have gone up about 50 cents. A notable sale during the past week was one of 1000 tons of cast car wheels sold by an eastern railroad at $25 per gross ton along the line. There are inquiries right along for scrap for export but none of them are being closed. It is learned that a sale of several thousand tons of heavy melting steel which recently was made to England involved scrap which is to be shipped from Panama and not as at first understood, from this country.

Chicago Market Quiet

Chicago, Aug. 19.—After a rapid rise in quotations and a recession from the high mark, present prices on iron and steel scrap seem to have struck a balance and are remaining practically stationary. Consumers are not deeply interested in the market and dealers are not anxious to press their holdings for fear of bringing about lower prices. The general opinion is that resumption of buying will carry prices to higher levels and that scrap will be comparatively scarce. Settlement of the strike of railway shop men is bringing renewed activity to the plants of consumers and further buying is expected to follow before long. The ordnance department is asking for bids up to Aug. 21 on 15,000 tons of 6-inch gothic billets on which former bids were refused. From the same source 900 tons of steel bars are also offered. The Chicago, Burlington & Quincy railroad has issued a list containing 5600 tons, including 1500 tons of No. 1 steel rails and the Michigan Central railroad offers 4000 tons.

Slight Reduction at Cincinnati

Cincinnati, Aug. 18.—Another small price reduction has been made on many grades of scrap metal. There is little demand for heavy melting steel. No. 1 railroad wrought also is moving slowly. Shipments on contracts are held up by the scarcity of cars. The plant of the Andrews Steel Co., Newport, Ky., is still closed down on account of labor troubles and is not absorbing scrap. Local and nearby foundries are melting a fair tonnage and many of them are buying for last quarter shipment, but few contracts are reported for scrap to be shipped in the first quarter of next year.

Little Activity in Southern Market

Birmingham, Ala., Aug. 19.—With the exception of sales of No. 1 cast, there is little activity in the scrap iron and steel market in the South. Quotations show no change. Demand for cast scrap is strong because foundries using the product are unable to get all the pig iron they need promptly. Melters of heavy melting steel in this section refuse to pay prices dealers want.

Pipe Orders

For Prompt Delivery Refused—Butt-weld in Greater Demand

Pittsburgh, Aug. 19.—Manufacturers of pipe occasionally are able to accept a few tons of lapweld business from their regular customers to meet some

pressing need but as a general rule they are too heavily committed in this direction to be at all interested in the orders seeking them for early delivery. Deliveries against the present bookings of the National Tube Co. will keep that company busy until over the turn of 1920 and the independent manufacturers are equally as well provided with tonnage. No large line pipe inquiries recently have come out but a great number of small ones are seeking manufacturers. Improvement in the demand for buttweld pipe continues, due to the expansion in building operations. New building activities are especially heavy in New York and on the Pacific coast. The Riverside plant of the National Tube Co. at Benwood, W. Va., which is a buttweld pipe plant, went into operation yesterday after a long shut-down.

South America Buys Tonnage

New York, Aug. 18.—Prices on cast iron pipe continue to reflect a strong advancing tendency. Although some business is being taken at $52.70, New York, for 6-inch, class B, and at $55.70, New York, for 4-inch, class B, considerable business is being booked at $1 higher than the level. In fact, one interest has sold more tonnage at the $1 advance during the past week than during the two weeks before at the old level. The business which now is being booked is comprised principally of carloads which are being taken by the regular buyers and the latter are showing a disposition to buy what they need rather than wait, due to their expectation of further advances.

Detroit Wants Tonnage

Chicago, Aug. 19.—One of the largest cast pipe tonnages offering in the West recently is that of Detroit, 3080 tons, on which bids were to be opened Aug. 18. Several other tonnages are pending during the next few weeks, so that the market has a better air of activity than usual. The United States Cast Iron Pipe & Foundry Co. has been awarded 125 tons at Council Bluffs, Iowa, and 350 tons at Edgeley, N. Dak., has been given to a contractor who has not yet placed it with a maker.

Southern Demand Increasing

Birmingham, Ala., Aug. 19.—All pits in shape at the cast iron pipe plants in the South are being put to work, demand for pipe being good, with more business in sight. Activity at the plants is increasing weekly, but cast iron pipe and sanitary pipe makers report a shortage of labor. Cast iron pipe manufacturers are being asked to make early deliveries, municipalities and others being anxious to lay pipe before winter.

Maintain New Schedule

Philadelphia, Aug. 19.—Warehouses are reporting a better demand due to some extent to the fact that mills are crowded for shipment on most finished lines. Warehouses here are maintaining the new method of quoting which involves the $1 warehouse differential and the use of the Pittsburgh base plus the freight rate from Pittsburgh to destination on out of town shipments.

Semifinished is in Demand

Rush for Sheet Bars Springs Up Over Night—Valley Mill Books 18,000-Ton Order—Strip Steel Active

Youngstown, O., Aug. 19.—Prompt rolling of semifinished materials is out of the question in this district. The Republic Iron & Steel Co. has withdrawn not only from the sheet-bar market but from the iron and steel market in general. Few specifications can be squeezed into fourth quarter rolling schedules at certain mills here, so heavy is the demand for all grades. Makers state they do not recall a period in which the demand for practically all steel commodities has sprung up so quickly. A month ago mills here were in a position to promise an attractive delivery date, but during the past three weeks, business was booked in such volumes that mills in many instances are committed until the latter part of December. Among large orders of sheet bars booked here recently is one for about 18,000 tons. Delivery to a nearby consumer is to be scattered over next quarter.

No Surplus of Sheet Bars

Pittsburgh, Aug. 19.—The supply situation in sheet bars still is extremely taut as the demands upon the makers of sheets and tin plate show no diminuition and the latter constantly are in the market for additional supplies of steel. It is understood that a valley sheet manufacturer who recently put out an inquiry for 18,000 tons of sheet bars has covered on the greater part of this requirement with another valley producer. That any such a quantity of sheet bars was available is explained by the fact that the seller at present is rebuilding and enlarging his own sheet mills and did not need the sheet bars. It is possible that some tonnage of sheet bars will be made available through the suspension of a Canton, O., sheet manufacturer. Open market offerings of skelp also are scarce, due to the big demands before the pipe manufacturers. Demand for rolling billets is good but manufacturers are able to turn out ample tonnages. Fair sized offerings of wire rods are made available as a result of the fact that producers who have their own finishing mills have not been able to get finishing operations up to a point where they will take care of their output of rods. Export demand for rods is quite good and one sale of 400 tons for shipment to England, which included equal quantities of soft and high carbon rods, is noted at $55, base Pittsburgh. Although production of slabs is being curtailed in keeping with the demand for plates, supplies still are quite ample and the prompt market is not especially firm. In fact, it is reported that 3000 to 4000 tons of slabs recently were sold to a valley manufacturer at around $39, Pittsburgh.

Strip Steel is in Demand

Youngstown, O., Aug. 19.—Hot and cold-rolled strip steel makers here have withdrawn from the market. Three weeks ago the demand for both grades was so light that makers were obliged to go out after business in order to schedule mills satisfactorily. Conditions changed almost over night and makers soon found their commitments far enough ahead to warrant the closing of books. Practically no tonnages for fourth quarter delivery can be had from mills in this territory. It would seem from the heavy volume of last week's inquiries that certain consumers of this material are urging their brokers to cover their next quarter requirements immediately. Automobile makers are consuming a large per cent of the output of strip mills here. The demand from this class of the trade continues heavy.

Makers Well Filled Up

Pittsburgh, Aug. 19.—Strip steel manufacturers by contrast with their recent conditions when they were eagerly seeking business, now have practically all the business they care to accept and because of the unsettled labor situation are fighting shy of taking on additional tonnages. While hot rolled strip steel still is in much stronger demand than cold rolled, the latter is gaining steadily in activity, which would suggest that other consumers besides the automobile manufacturers were buying. Hot rolled strip steel can be used by automobile manufacturers without additional finishing. In order to give hot rolled strip steel stamping quality, it must be cold rolled. Prices on both grades are firm at the March 21 basis and demands for prompt shipment are so urgent that it is believed that slight premiums could be obtained if manufacturers were disposed to seek them.

Low Bids

Submitted by Carnegie Steel Co. on Big Navy Job

Washington, Aug. 19.—The Carnegie Steel Co. last week submitted bids with base prices of 2.50c for plates, 2.40c for shapes and 2.35c for bars, all f.o.b. Pittsburgh, in connection with the navy's receipt of tenders for 28,000 tons of steel for battleships 49 and 50 to be built at the Brooklyn navy yard. The Carnegie company's submissions for plates and shapes were 15 cents and 5 cents respectively under the bids of the Bethlehem Steel Co., the Brier Hill Steel Co. and the Midvale Steel & Ordnance Co. for the same material, the bids of the three companies being at the prevailing market level.

The total requirements involved are made up of 21,019 tons of plates, 5354 tons of shapes and 1403 tons of bars. The navy's schedule of supplies requires delivery at the rate of 5000 tons monthly to begin not later than Sept. 15, the navy reserving the right to buy more or less steel for the specified work as the actual construction may require. The Carnegie company offers to make delivery commencing immediately.

No Let-up in Bar Demand

Valley Interest Withdraws from Market—Steel Bars Sold for Export—Chicago Mills Resume Operation

Pittsburgh, Aug. 19.—Active demands are being made upon the makers of merchant steel bars particularly for rounds and squares of 1 inch and under. Demand is good in the sizes up to 1½ inches and fairly good up to 3 inches but rounds running 3 inches or more are going slowly. If there is anything unsatisfactory about the steel bar business at the moment it is the uneven distribution of orders which, of course, is carried to the mill operations. Prices are firm, with some makers demanding substantial premiums on the product of mills which involves considerable hand labor when specifications run too heavy to these sizes. Bars that can be rolled on continuous mills can be made without a loss at the base of 2.35c Pittsburgh, but on hand mills reports are coming that this price shows a loss. Export demands are brisk, especially in rounds and squares running 1 inch and smaller. Included in such business was one sale aggregating 5500 tons for South America which was extremely desirable because of the fact that no less than 100 tons of any one size was specified. Demands for concrete reinforcing bars have dwindled somewhat during the past week, but makers have a fair amount of business booked and prices hold quite firm at the recent levels. Demand for iron bars is moderate but is not confined to anyone class of consumers. Refined iron bars are quoted at 2.35c Pittsburgh in carloads and 3.00c for less than carloads.

Accept Orders With Care

Philadelphia, Aug. 19.—The demand for steel bars continues active and mills are accepting new orders with care. Some makers have work ahead for from 10 to 12 weeks and are practically out of the market, particularly on small sizes. Although 2.50c Pittsburgh is the usual price on bar iron, sales continue to be made at 2.35c Pittsburgh.

Chicago Mills Resume

Chicago, Aug. 19.—Return of railway shopmen to their duties pending settlement of their demands has given mills opportunity to resume operations on a larger scale. The leading interest has added seven stacks at its Gary and South Chicago plants, which felt the effect of the strike most keenly, and will render the remaining stacks active as rapidly as conditions will warrant. Backing up of business, due to slack operation, has given a large order book and consumers of soft steel bars have been put to some inconvenience by lack of supplies from mills. However, every effort has been made to avoid distress, and minimize the lack of material. Demand for soft steel bars is excellent but mostly in small tonnages. Specifications against contracts are being received in large volume. Inquiry for bar iron is somewhat less than present production and operation of mills over the next few weeks is uncertain. The quotation remains firm at 2.62c, Chicago. Good demand for hard steel bars exists and it seems to be growing better. Most of this is from manufacturers and reinforced concrete builders are not taking much of this material.

Brisk Demand in Cleveland

Cleveland, Aug. 19.—With the exception of the railroad companies, practically all users of finished steel are in the market for moderately large tonnages. One large manufacturer of bars and small shapes reports that sales for the last week surpassed those of any week for some time. Most of the business is coming from automobile builders for bars and from manufacturers and others who are erecting buildings for shapes. Prices remain unchanged. Except in a few sizes of bars and shapes, mills are unable to promise deliveries earlier than first quarter.

Orders Exceed Production

Youngstown, O., Aug. 19.—Steel bar sales have been so numerous during the past three weeks that mill commitments are now in excess of production. The Republic Iron & Steel Co. has withdrawn from the market. Implement makers are taking further tonnages and are specifying heavily against contracts. This class of the trade is well covered. Differentials on various grades of shafting materials have been revised by makers in general and the trade is now being notified to this affect. Specifications for screw-stock and shafting steel are heavy, makers having little to offer under six to eight weeks' delivery.

Good Export Demand

Buffalo, Aug. 19.—The export demand for bars is very strong. Local mills are working close to 90 per cent of capacity.

Bolt Demand Heavy

Chicago, Aug. 19.—Demand for bolts and nuts continues strong, and specifications on existing contracts indicate that consumers are using the material on hand at a rapid rate. Considerable new business is offered and most plants are operating at as high a rate as the labor supply will permit.

Specifications Are Slower

Cleveland, Aug. 19.—Full operations continue among the nut, bolt and rivet manufacturers. New business is received from diversified industries, although the widespread industrial unrest is beginning to have its effect and a slight slackening up of specifications is noted. Jobbers' requests for deliveries on contracts continue frequent. Rivetmakers claim they are enjoying a satisfactory business at present, with considerable business from the Emergency Fleet corporation. Outside of shipbuilders, demands for rivets are more or less spasmodic, with carbuilders running a close second.

Well Supplied With Business

Pittsburgh, Aug. 19.—Makers of nuts, bolts and rivets are well provided with business and 100 per cent operations are the rule at plants not suffering from the scarcity of labor. The new prices recently announced are firmly insisted upon on all new business as it is contended that while neither bars nor rods have advanced in prices producing costs have risen as a result of the efforts of manufacturers to maintain their working organizations.

Demand Gradually Enlarging

Pittsburgh, Aug. 19.—Demands upon the manufacturers of cold finished steel bars gradually are expanding, although considerable room for improvement still exists. While the demand is best from the automobile industry, other users of drawn, turned and rolled steel bars are coming into the market for larger tonnages than before in some time. A fair amount of advance orders are before makers and some of the bookings are for delivery over the remainder of the year. A new system of quoting has been adopted by the leading manufacturers and instead of the list and discount method, a pound basis hereafter will be quoted. Since the old base price was 5.00c Pittsburgh and carried a discount of 28 per cent, the net base price was 3.60c. The new card of prices and differentials which became effective yesterday and applies to all unfilled tonnages as of Aug. 18, quotes a base of 3.60c Pittsburgh but the base size now is 2¼ to 3 inches instead of 2 to 3 inches as in the old card adopted March 15, 1915.

Premium on Bands for Export

Pittsburgh, Aug. 19.—The feature of the situation in hoop and band steel is a rather active export demand for the latter and with sales at 3.35c to 3.50c, Pittsburgh, or from $6 to $9 a ton from the regular base price. Demand for the narrower widths, both domestic and foreign, is moderate. Continued good demand for band steel is noted from the makers of automobile accessories and parts. Little new business is coming along in cotton ties and buyers are not specifying at all freely on old contracts. It is reported that the cotton crop is late this year and free specifying for ties is not expected until next month. Some makers have ceased rolling ties for the present, having accumulated a sufficient stock to cover the probable requirements of the next month or so.

Plate Demands

Continue to Lag—Ship and Car Building Have Supplies

Pittsburgh, Aug. 19.—No appreciable improvement can be chronicled of the demand for plates, for while makers of tanks and oil refinery equipment are fairly free buyers, the requirements of the car, locomotive and shipbuilders are extremely moderate in the lack of new orders. The plant of the Standard Steel Car Co., Butler, Pa., is down because of a strike of a por-

tion of its workmen who have organized and have made demands upon the company for higher wages, shorter hours, and recognition of the union. Car manufacturers in Pittsburgh proper appear to be well fortified in the matter of plate supplies and some of the Pittsburgh steel manufacturers have considerable tonnages of suspended business with the shipbuilders. Plate production is being curtailed in keeping with the demand and no important shading of the March 21, base of 2.65c, Pittsburgh, for tank plates is noted.

Shading in Eastern Market

Philadelphia, Aug. 19.—The plate market was shaded considerably in bids of more than 20,000 tons of plates for a battleship to be built at the Brooklyn yard and a number of good sized tonnages are reported to have been placed by private consumers at concessions. Such shading is being done only on choice tonnages. At the same time, a large portion of the current business is going at 2.65c. While the demand has improved considerably, the eastern mills are not operating at more than 45 per cent of capacity. It is believed that there is a good prospect that some of the suspended orders of the Emergency Fleet corporation are going to be reinstated. Several private ship orders are being held up, it is learned, while prospective owners are ascertaining whether they can obtain suitable vessels from the shipping board at reasonable figures.

Boiler Makers Buying

Cleveland, Aug. 19.—Orders for plates continue to be received in fair volume, although the tonnages called for are not so large as during the recent buying movement on the part of automobile manufacturers. The latter are still placing some business, but the heaviest demand at present is coming from the makers of boiler plates.

Demand Holds Well

Chicago, Aug. 19.—New business in steel plates continues to be excellent and plate mills have comfortable backlogs, in sharp contrast to the slack condition of the early part of the year. An inquiry has been received for about 1600 tons of plates, and an equal tonnage of shapes for two colliers to be built at New Orleans.

Southern Mills More Active

Birmingham, Ala., Aug. 19.—The bessemer rolling mill plant of the Tennessee Coal, Iron & Railroad Co. has orders in hand warranting steady operation on plates and shapes for several months. Foundry and machine shop operations are increasing. Two of the larger plants are working day and night. Labor is being sought by one of the largest foundries and machine shops. While the union is not recognized, union hours are observed and union wages are paid at one of the larger shops, so anxious are the proprietors to increase production. Government sugar machinery and cotton compress work is voluminous. The plant of the Joubert-Goslin Machine & Foundry Co. has been greatly improved and enlarged.

Sheet Mills Refuse Orders

Have No Sheets to Sell Until 1920—Three Plants Close Doors Because of Labor Threats

Youngstown, O., Aug. 19.—Practically all valley sheet mills are obligated until the latter part of the fourth quarter. Several makers have withdrawn from the market and state they have no sheets to sell until Jan. 1. In spite of the heavy demand for all grades, there is no tendency on the part of makers to increase prices, no doubt because the general trend of conditions over the country is now toward lower prices. Two valley mills are turning away business daily. One large producer, however, states he has not taken on any fourth quarter business as yet and that he is about to open his books. The entire output of a mill in a nearby district producing blue-annealed sheets has been contracted for by a dealer here. This dealer is now offering to the trade 1200 to 2000 tons monthly of this grade in 7 to 14 gages for prompt rolling. An inquiry from a New York buyer for 18,000 blue annealed sheets is now pending. Heavy tonnages of this grade are now being consumed by makers of enameled ware and good-sized inquiries continue to come from this class of the trade. All galvanizing pots in the valley are filled except those at the DeForest plant of the Republic Iron & Steel Co. This plant is idle pending the installation of new driving equipment. Inquiries for galvanized range from 100 to 500 tons and mill commitments for this grade are heavy. The volume of inquiries from brokers indicates that they have been advised by their customers to get on mill books immediately. The mills here are obligated so far ahead now that it is a question whether any tonnages, no matter of how large a volume, can be had before the first quarter of 1920.

Still Flooded With Business

Pittsburgh, Aug. 18.—Sheet manufacturers still are flooded with orders and if not another ton of business is placed, practically all makers can keep going full on present bookings to the end of this year. Illustrative of the size of the demands, it might be stated that one company is almost two weeks behind in entering its orders. Not only are new demands on a tremendous scale, but several consumers who some time ago placed orders at less than the March 21 prices are in doubt about securing deliveries and are seeking to place protective orders with other manufacturers. In a few cases such demands have been prompted by notification by manufacturers who took the original orders that they will be unable to ship owing to labor troubles. The labor situation is the "fly in the ointment" in the steel industry today, for without strikes or disputes, the prospect would be extremely roseate.

Demand is Heavy

Chicago, Aug. 19.—Consumers of steel sheets in all grades are seeking much material, but mills are well filled and those located in this district have comparatively little remaining for this year's delivery. The leading independent is entirely out of the market on galvanized, but can offer December delivery on a small tonnage of black sheets and can take a few more blue annealed for November and December.

Tin Plate Mills

Are Nearly Sold Out—Manufacturers Predict Record Output in 1920

Youngstown, O., Aug. 19.—Steady operation of tin plate mills here throughout the fourth quarter is assured. Business for this month has been heavy and mills are practically sold out. The Trumbull Steel Co., Warren, O., has withdrawn from the market and, as far as known, will have no tin plate for sale until 1920. Many tin-plate makers in this and nearby districts hold that the production of tin plate for 1920 will be the largest since the beginning of the industry in this country. They base their opinion on the fact that this year's crops, while comparatively small, will consume the supply of cans now available. Canmakers did not contract for as many boxes of tin plate this year as they have in the past and, hence, after this season's crops are packed, the surplus of cans will be exceedingly small. With enormous crops expected for 1920 and with practically no cans available for the pack, it is thought that canmakers will be out soon for enormous tonnages of tin plate. Inquiries are pointing this way now. It is heard the leading canmaker is about to come into the market for several thousand boxes. The large inquiry for tin plate, which has been before certain makers during the last three weeks, has been satisfied. Quotations on this inquiry ranged anywhere from $6.75 to $7 base. The business, however, was closed with a maker in the Pittsburgh territory at $6.65, base.

No Let Up is Noted

Pittsburgh, Aug. 19.—Demands upon the makers of tin plate still are on an enormous scale for in addition to heavy specifications against unfilled tonnages, new orders, especially for export, are extremely numerous. There are few foreign countries where tin plate is used which are not now sending in orders. Meanwhile, the domestic demand is heavy, especially from the Pacific coast where estimates of the perishable crops fell seriously below actual yields and nowhere nearly enough tin plate had been ordered. Manufactured cans recently have gone to the Pacific coast from as far east as Baltimore in the effort to make good the deficiency. Restoration of practically normal transportation conditions in and around Chicago has permitted of the movement of some large shipments of tin plate which were held up by the railroad strike.

Shape Demand Increases

Seventy-Four Per Cent of Capacity of Bridge and Structural Shops Engaged

New York, Aug. 18.—Demand for structural steel which has been active recently continues to improve in this district. Lettings in the metropolitan territory reported during the past week aggregate at least 4000 tons, and the total probably was in excess of this figure. Further improvement is expected as a result of the closing of numerous jobs on which quick action is expected. One such job is the proposed Linnard hotel, Park avenue, involving 4000 tons, for which the general contract has been let. Bids on 1100 tons for the proposed dirigible hangar at Lakehurst, N. J., were rejected last week and the plans are to be redesigned. It now is rumored that a similar dirigible hangar may be erected in Florida in the future. Prices on fabricated business in this district continue low. In fact, the current quotations on fabricated steel delivered in New York range from $70 to $75 per ton. The great improvement in the structural business is shown in the report of the Bridge Builders and Structural society made public today. The records of this society show that during the month of July, 74 per cent of the entire capacity of the bridge and structural shops of the country were contracted for. This figure is equivalent to 133,200 tons, which compares with 65 per cent, or 117,000 tons for June. A comparative statement follows:

Month	Per cent	Approximate tonnage
July, 1919	74	133,200
June	65	177,000
May	49	88,200
April	24½	48,100
March	17½	32,300
February	12½	22,500
January	12	21,600
December, 1918	29	52,270
November	27	48,700
October	43	77,400
September	60	108,000
August	57	102,000
July	116½	209,700
June	56	100,800
May	60	108,000
April	64	115,200
March	47	84,600
February	55	99,900
January	53	95,400
December, 1917	121	205,200
November	77	138,600
October	61½	110,700
September	29	52,200
August	38	68,400
July	41½	74,700
June	47½	85,500
May	56½	102,000
April	61	110,000
March	68	122,000
February	59	106,000
January	61½	119,000
December, 1916	86	148,000
November	78	134,000
October	77	133,500
September	52½	99,400
August	64	112,600
July	47½	83,600
June	58	100,000
May	80	137,000

Small Tonnages Placed in East

Boston, Aug. 19.—The value of new construction work in New England at present is practically in accordance with the average established in the past few years, but the bulk of the work is in outlying industrial additions and improvements. In the larger cities practically no hotels are being built, and office building construction is almost negligible. A comparatively small tonnage of shapes is being used. The records of the leading New England construction companies indicate an average established by structural steel users' reports of two and two-thirds months of future work on hand. New England companies are now running their steel construction plants at an average of about 80 per cent of capacity, and the work in these same plants during the past year shows an average for that period of little over 50 per cent of the total capacity. The estimated steel tonnage booked by Boston construction companies during the past month is 4000 tons or about 60 per cent of total capacity.

Shape Mills Are Busy

Philadelphia, Aug. 19.—All eastern shape mills are rushed with business. One mill, which only recently was on part schedule, now is rolling more shapes than it was able to turn out during the war. Most of the current business consists of small orders, but these are in such volume that mills are beginning to pile up considerable tonnage ahead. Included in current business are several export orders for ship shapes, one for 1000 tons for France and a round tonnage for Argentina. The structural market is quieter.

Numerous Inquiries Being Figured

Pittsburgh, Aug. 19.—While new structural lettings in this district have been few and small lately, fabricating interests report numerous inquiries upon which they are figuring. Few of the shops are at all well provided with business and competition on such new projects as are coming out still is sharp enough to make the award unprofitable for the successful bidders.

Several Large Contracts Let

Cleveland, March 19.—Structural lettings in the Cleveland district have increased in number and tonnage, although several of the largest jobs figured on during the past few weeks are still in abeyance. Detroit is proving a particularly good market for fabricators, and two large contracts have been awarded in that city. The American Bridge Co. was awarded a contract for a power plant for the Detroit Edison Co., and a contract for a building for Henry Ford in connection with his new enterprises at River Rouge. The latter calls for 6000 tons, while the former will require 3500 tons. The contract for 600 tons for the Studebaker Corp.'s new building in Detroit was awarded to Whitehead & Kales Co., Detroit. It is understood that the contract for 4500 tons for a building for the Cleveland Tractor Co., Cleveland, has been closed, but confirmation as to who received it is lacking.

West Buying More

Chicago, Aug. 19.—Despite adverse circumstances surrounding the building trades, new construction in the West seems to be going forward at an increased rate. No settlement has been reached in the strike and lockout at Chicago and no construction is going on here. However, considerable business is coming in from outside sources, showing general activity throughout this territory. Some of this is railroad construction, and by far the greater part is industrial, with occasional hotels and mercantile buildings, although the latter are scarce. The American Steel Foundries is taking bids for a machine shop and an extension to its No. 2 foundry at Granite City, Ill. The Leonard Construction Co. is taking bids on 500 tons of steel for the Larrowe Milling Co., at Rossford, O. F. D. Chase, engineers, Chicago, is taking bids on about 400 tons for the Ohio Steel Foundry Co., Lima, O. Bids are under consideration for about 270 tons of steel for the substructure of the Madison street bridge at Chicago.

CONTRACTS AWARDED

Broadway theater, Buffalo, N. Y., 100 tons; to Kellogg Structural Steel Co.

Tanks and other equipment for the Beacon Oil Co., Boston, 3000 tons; to Memphis Steel Works.

State capitol building for the state of Idaho, Boise, 629 tons; to Omaha Structural Steel Co.

Three buildings for the Northern Paper Mills Co., Green Bay, Wis., 425 tons; to Worden-Allen Co.

Foundry building for the Danville Malleable Iron Co., Danville, Ill., 241 tons.

Power station for the Middle West Utilities Co., Tulsa, Okla., 235 tons; to Kansas City Structural Steel Co.

Structural steel for paper mill building for the Peshtigo Pulp & Paper Co., Peshtigo, Wis., 169 tons; to the Northwestern Iron Works, Milwaukee.

Fuel oil storage tank for the United States railroad administration, Missouri, Kansas & Texas railroad, 144 tons.

Power plant and foundry for the Samson Tractor plant, General Motors Co., Janesville, Wis., 1500 tons; to the Vierling Steel Co. and A. Bolter's Sons.

Bridge for the East Erie Commercial railroad, Water street, Erie, Pa., 100 tons; to the Jones & Laughlin Steel Co.

New central trade school, New Orleans, 300 tons; to the Price-Evans Foundry Co., Chattanooga, Tenn.

Building for Henry Ford, River Rouge, Mich., 6000 tons; to American Bridge Co.

Plant for Studebaker Corp., Detroit; to Whitehead, Kales & Co.

Power plant for Detroit Edison Co., Detroit, 3500 tons; to American Bridge Co.

Building for Anderson Motor Car Co., Rock Hills, South Carolina, 300 tons; to Fort Pitt Bridge Works.

Gymnasium for Lake Erie college, Painesville, O., 65 tons; to Fort Pitt Bridge Works.

Storage house for Star Worsted Mills, Fitchburg, Mass., 120 tons; to New England Structural Co.

Two buildings for Pennsylvania Sugar Co., Philadelphia, 1400 tons; to American Bridge Co.

Buildings for Texas Co., Port Arthur, Tex., 1900 tons; to Kenwood Bridge Co.

Five bridges for New York Central railroad, 300 tons; to American Bridge Co.

Building for Bryant Electric Co., Bridgeport, Conn., 300 tons; to American Bridge Co.

Building for National Biscuit Co., New York, 400 tons; to Hay Foundry & Iron Works.

Building for Kerr Steamship Co., Beaver street, New York, 800 tons; to Hay Foundry & Iron Works.

Buildings for Fraser, Brace & Co., Staten Island, 400 tons; to American Bridge Co.

Two transfer bridges for Lehigh Valley railroad, 750 tons; to American Bridge Co.

Power plant for Hershey Chocolate Co., 500 tons; to Shoemaker-Satterthwait Bridge Co.

Building on Madison avenue and Twenty-seventh

street, New York, 300 tons; to Passaic Structural Steel Co.

Building for United Dressed Beef Co., New York, 600 tons; to Hay Foundry & Iron Works.

CONTRACTS PENDING

Building for Cleveland Tractor Co., Cleveland, tonnage indefinite; bids to be taken soon.

Building for the Ohio Steel Foundry Co., Lima, O., 400 tons. F. D. Chase, engineers, Chicago, taking bids.

Manufacturing plant for the Larrowe Milling Co., Rossford, O., 500 tons. Leonard Construction Co., Chicago, taking bids.

Machine shop and 225-foot extension to No. 2 foundry of American Steel Foundries, Granite City, Ill. Company taking bids.

Substructure for Madison street bridge, Chicago, 270 tons. Bids being considered.

Building for the Manz Engraving Co., Chicago, 160 tons. Bids asked.

Stacy-Trent hotel, Trenton, N. J., 400 tons; bids being taken.

Germania Mill building at Holyoke, Mass., 400 tons; bids being taken.

Boat and storage building for Philadelphia navy yard, 1000 tons; bids being taken.

Building for Eclipse Gas Stove Co., Rockford, Ill., 650 tons; bids being taken.

Bridge for Baltimore & Ohio railroad across Allegheny river, 5500 tons; bids being taken.

Dirigible hangar at Lakehurst, N. J., 1100 tons; all bids rejected, plans to be redesigned.

Linnard hotel, Park avenue, New York, 4000 tons; general contract to Thompson-Starrett Co.

Railway express building, Grand Central terminal, New York, New York Central railroad taking bids on contract to convert this building from 4-story to 16-story structure.

Alloy Market

Shows Trend Toward Lower Prices—Caution in Buying

New York, Aug. 18.—While neither English nor domestic producers of ferromanganese have changed their asking prices, there have been sales by both groups during the past week at less than those prices. One round tonnage of English metal was sold at $100, c.i.f. Atlantic tidewater, and two domestic producers have sold round tonnages at less than $110, delivered. It now is apparent that although the current domestic quotation is $110 delivered, business can be placed at less on a competitive basis. The last quotations which have been made by English producers in response to inquiries are $105, c.i.f. Atlantic tidewater, but in view of the fact that the English makers recently accepted lower bids on definite tonnages, it is figured that by making a firm bid a consumer still could buy English metal at less than $105. Foreign inquiries for spiegeleisen which previously were noted still are under negotiation, but there is no indication that they will be closed at once. Domestic demand for spiegeleisen is at a low ebb, and the market is largely nominal.

It is estimated that current production of 50 per cent ferrosilicon is not over 10 per cent of the 1918 production. However, makers generally have ample stocks to take care of the requirements of their customers for the present. Only one or two makers are out of supplies of the alloy. Competition continues keen on inquiries for 50 per cent ferrosilicon. Little contracting has been done for a month or two, business being largely for carload lots for early shipment. Most makers are asking $90 to $95, delivered, both on carloads and contracts, but some resale alloy, it develops, still is on the market at around $80. Producers say the average cost of making 50 per cent ferrosilicon is around $90 a ton and assert that this quotation will be considered low before many more months.

The markets for the special steel making ferroalloys remain rather slow. Makers of special steels seem well supplied, one Pittsburgh consumer having more than 50 tons for which he paid about $2.50 a pound contained as against the current price of $1.15 to $1.25. The trade is interested in the bill now in congress to impose a tariff on tungsten ore and ferrotungsten. Representative Timberlake, who introduced the bill says that it would fix the price of American-mined tungsten concentrates at $18 to $20 a short ton unit, as against the current price of about $10. Several inquiries for ferrovanadium are reported and this market is somewhat stronger. Business has been done in the standard 35 to 40 per cent alloy for delivery over the remainder of the year at $7 a pound contained.

Hold to Market Prices

Philadelphia, Aug. 19.—It has been learned that while several sales of domestic ferromanganese have been made at less than $110, they involved off-quality material. Domestic producers refused several firm bids on carload lots of standard metal at $109. They say they now are selling below cost and state that if the market does not improve there will be no incentive to keep on producing, with the result that there will be a great shortage of ferromanganese next spring. A sale of 300 tons of spiegeleisen is reported.

Price Tendency Lower

Pittsburgh, Aug. 19.—Reports from the east of a weaker market in ferromanganese have been reflected promptly in this market. A Pittsburgh steel manufacturer recently took a round tonnage of 76 to 80 per cent domestic material at $105, delivered, and while no actual business has been reported in 78 to 82 per cent alloy, the impression is fairly general that even that grade can be bought at $105, delivered. The market also has gone to a lower base on 50 per cent ferrosilicon with one large producer now offering to accept business at $80, furnace, freight allowed, and while others are asking up to $90, it is extremely doubtful if any more than the lower figure could be obtained today as consumers appear to be well covered and such new demands as are coming out are for small tonnages. In view of the fact that the higher grades of ferrosilicon can be substituted for bessemer ferrosilicon, some surprise is occasioned by the fact that demands for the former are not more numerous. It is noted that consumers of ferromanganese are not buying more than 60 days ahead and so long as they maintain this policy it is considered probable that domestic material will have the preference over English ferromanganese and that it will command a moderate premium.

Exports of Wire

Average 10,000 Tons Monthly—Makers Book New Business Cautiously

New York, Aug. 18.—Wire makers, because of the uncertain railroad situation, continue to be careful about adding new business to their books. Where it is necessary to take care of regular customers orders are being entered, but such buyers are beginning to understand that in view of the present situation, they will not be entitled to receive more tonnage each month than they had been receiving on the average during 1917 and 1918. Wire mills in New England are unable to ship along the New York, New Haven & Hartford railroad, but are able, by using other roads, to ship to points outside of New England. It is learned that although the strike of the trainmen and switchmen of the Newburg & South Shore railroad at Cleveland has been terminated, the operations of the American Steel & Wire Co. at Cleveland continue handicapped by reason of the fact that the furnace men have not yet gone back to work. Export business in wire products, it is estimated, now averages around 10,000 tons of wire and wire products per month.

Export Demand Exceeds Supply

Buffalo, Aug. 19.—The export demand for wire is beyond what the trade can take care of in this district. With mills going day and night, one local maker had to reject a booking for 400 tons of 20-inch mesh.

Not Eager For New Business

Pittsburgh, Aug. 19.—With prospective production for the next 10 weeks already engaged, manufacturers of wire and wire products are not especially eager to enter new business. As a matter of fact, all of them are practically out of the market for third quarter business and those who still are quoting against new inquiries are taking only a portion of the business that is being offered. To satisfy some regular customers, one Pittsburgh independent has taken some business in nails on a basis of 3.50c, Pittsburgh, but with the stipulation that the order is to be filled at the convenience of the manufacturer. The American Steel & Wire Co. is one of the companies which is out of the market in this district and is confining its activities to deliveries against standing orders. With the adjustment of the labor troubles this company recently had at its Cleveland plants, it is expected that it will be better able to make shipments. The general average of wire mill operations today is about 80 per cent. No. 1 rod mill of the Pittsburgh Steel Co., which has been down for the past few weeks for repairs, again is in operation.

Low Price Still Holds

Chicago, Aug. 19.—Although demand for wire, nails and wire products is unusually heavy and supplies on contracts are equally strong, the leading interest continues to hold its former quotations and refuses to advance prices. Under these circumstances, new business is offered this seller in unusual tonnages, and it is necessary to choose carefully what can be accepted.

Exporters Foresee Obstacles

Idleness Added to Lack of Funds for Commercial Undertakings Will Cripple Foreign Sales—Italy Buys 8,000 Tons Pig Iron and Asks For 20,000 Tons of Hematite

NEW YORK, Aug. 18.—Although exports during the past week have held up fairly well, agents here are inclined to advise of a curtailment in the not distant future. The business that has been under way, it is said, has unduly raised the hopes of American producers, whereas the day of reckoning is fast approaching. This outlook is predicated upon two conditions, lack of money and idleness abroad. This is a situation which is peculiar to Europe in general. Those nations are overburdened with debt, and their taxes for the future years will be extremely heavy. This is a matter which will be overcome in time, but the general idleness of labor in those countries is a check upon their nationals meeting the situation sooner.

The organization of the Foreign Trade Corp., to deal in acceptances does not at the moment offer extensive relief as it is understood the new financial concern will be limited to doing a business of probably not more than $50,000,000.

The situation is now disclosed in the falling off in European business. The purchases of iron and steel those peoples have made of the United States were purchases dictated by dire necessity. The United States Steel Products Co., according to report, has been and still is shipping pig iron to England as ballast, but it is understood that the bulk of this has gone out of the Birmingham district in cotton ships through the southern ports. On the other hand, England has sent in an inquiry for 1000 tons of billets.

England, not being permitted to import English standard pipe under 2 inches, is now purchasing American standard pipe with English standard threads. A sale of 500 tons of this commodity was noted. England has also purchased 1000 tons of steel bars and a like tonnage of iron bars, and 250 tons of hoops.

France has made inquiry for a number of finished materials, but the tonnages generally have been extremely small. For instance it was learned that one inquiry was for a few tons of soft steel bars. The market was somewhat interested in a French inquiry for 14,000 tons of rails, but that was so unusual an inquiry as to cause considerable skepticism as to its sincerity of purpose.

France has purchased a small tonnage of hoops, sheets and bars, and has sent in an inquiry for 5000 tons of sheets, 2000 tons of plates and 600 tons of bars. Italy has purchased 8000 tons of pig iron and a new inquiry for 20,000 tons of hematite iron has been received from that country. Italy has also purchased 1000 tons of bars.

One house received an extremely promising inquiry from Holland for a long list of materials the aggregate tonnage of which would mean good business. It requested offerings of steel for axles, galvanized iron, bronze wire, spring steel, sheets, rods, copper, zinc, tin plate, lead, tubes and other materials. Holland, of course, purchases for the Dutch West Indies as well as for herself, and it is furthermore believed that many of the Dutch inquiries are advanced on behalf of German interests.

The bad plight in which the European producers find themselves on account of the money situation and because of the idleness of labor naturally broadens the opportunities of American exporters in the markets of other continents. There are many prospects in South America and new ones are developing every day. All of these might be availed of had the Americans the money with which to finance the projects.

Argentine has approached the market with a request for a credit of $11,000,000 for railway and general improvements in the country. Peru and Bolivia have many extensions in mind but have not undertaken as yet to find assistance in this country. These include nitrate plants, railway improvements, water works, sewerage undertakings, etc.

A small sale of corrugated sheets to Brazil has been noted, as well as 10 tons of copper sheets. A sale of 12,000 reels of wire to South America has been made. South America is also inquiring for rails in varying tonnages.

The ocean rates from Atlantic ports to South America are now weak and it is said that the scheduled quotations could be shaved if a shipper offered considerable tonnage. Inasmuch as the material is moving forward in such small quantities, however, this opportunity is one that few if any have been able to avail themselves of. The shipping board has already recognized this situation and has cut the rates on a selected list of articles.

The Shanghai and Tokyo trade has been booming. The increase in the Chinese business has been especially pleasing, although not all the export houses have been lucky enough to be in on this. One agent has sold several hundred tons of bars to China and a new inquiry for boiler plates has been received. China is buying tin plate, rods, bars, sheets, wire, galvanized shorts and nails. Among the recent sales made to China has been 200 tons of soft steel bars. The average Chinese order, however, calls for but 30, 40 or 50 tons of material.

Japan continues to buy in the volume that has become customary. Sales recently have been composed largely of bars, plates, shipbuilding material and tin plate. It is said that the individual orders vary from 300 to 2000 tons. A number of sales of 1000 cases each of tin plate have been made to Japan and China. Several orders of 1000 kegs each of nails have been placed by China, Japan and India. A number of sales of 100 tons each of bars and sheets have been made to India.

China has purchased 300 tons of plates, 3300 kegs of nails, 2500 cases of tin plate, 100 tons of angles, and 100 tons of bars from one house alone. A new inquiry for 100 tons of light sheets has been received from Japan. There is a Japanese inquiry in the market for pipe and a Chinese inquiry for light rails and rods. The tonnages do not run large. Many cables from the Orient are missing and about 50 per cent of those received are so badly mutilated as to render them worthless.

Foreign business generally has been greatly hampered by the lack of adequate cable facilities. The Pacific communications are extremely difficult and the commercial interests of this port are greatly concerned over the announced intention of the navy department to retain control of the wireless stations.

Industrial Boom

In Toronto Gives City 14 More Industrial Plants

Toronto Ont., Aug. 18.—From the time of its organization in February up to July 1, the industries department of the harbor board negotiated with 105 business concerns to induce them to establish plants in this city. As a result of its efforts, 14 new firms will be established here. Among them are: The Anthracite Briquette Co., a new coal company; Baldwins, Ltd., tin plate and steel plant, Swansea, Wales; Crane, Ltd., valve manufacturers, Chicago; Neptune Meter Co., New York; Taylor Instrument Co., Rochester, N. Y., and the Toronto Steel Construction Co., Toronto. Seventy-one companies in the United States were urged to establish plants in Toronto. An extensive publicity campaign is expected to place 1500 other companies in possession of information relating to this city.

A number of leading industrial concerns in the dominion have been looking forward to greatly increased business since the signing of the peace terms, but the change has been very gradual. Better business in iron and steel lines is reported, and steel interests especially are encouraged by the better feeling that prevails. Although there is very little heavy buying there is a feeling throughout the trade which has a tendency to give manufacturers an optimistic view in regard to business in the near future. Although the sale of used machinery and tools is holding the leading place in the market, the demand for new equipment is gradually increasing. Orders now being placed are not confined to any special line, but are well distributed. Railroad equipment, equipment for automobile shops and garages, woodworking plants and other lines are well represented in new orders which are being booked.

The Canadian National railways are again in the market for new equipment. This latest inquiry is for small tools, mostly carbon drills. The list calls for about 1500 of the latter and about 50 high-speed drills. The opening up of the various machine shops, which have been operating at limited capacity for three months, owing to a strike, is expected to increase sales of small tools.

Owing to failure of crops in some parts of the West, demand for agricultural implements will not be nearly so heavy as appeared probable some weeks ago. The outlook in Ontario is much more favorable and an active demand for implements is coming from that province. Manufacturers are preparing for a large export trade with Scandinavian countries and France and Belgium, provided the great obstacle of inadequate shipping accommodations can be overcome.

Hon. J. D. Reid, minister of railways, estimates there will be a loss of $28,000,000 this year in connection with the operation of Canadian government railroads. In addition to making good this amount, there must be provided for the railways during the coming year, $11,121,000 for construction; $20,000,000 for equipment and rolling stock and $21,421,000 for betterments, making a total of $80,542,000. The following contracts have been given out. Locomotives, $2,350,000; freight equipment, $8,650,000 and passenger equipment, $4,450,000.

Valley Stacks

Recently Relighted Give Youngstown District 40 Active Furnaces

Youngstown, O., Aug. 18.—The relighting of the Claire, Ella and Anna furnaces at Sharpsville and West Middlesex, Pa., and Struthers, O., respectively, means that only six furnaces in the Youngstown district, including the Mahoning and Shenango valleys and adjacent territory will be idle after Aug. 24. The total number of furnaces listed as belonging to the district is 46.

After Aug. 24, unless further changes take place there will be one furnace banked and five blown out in the district. Relighting the Struthers furnace will make the total number of active furnaces in blast in the Mahoning valley 22 out of a gross total of 25 stacks in the valley proper.

There are now no furnaces, owned by steel companies and directly attached to plants, out of blast in the Mahoning valley. The Hannah, a detached furnace of the Republic Iron and Steel Co., located on Crab creek in Youngstown is banked. The Niles stack of the Carnegie Steel Co. at Niles, O., was blown out some months ago. It is some miles from the main plant of the company in the valley, the Ohio works.

The Republic Iron and Steel Co. has two detached furnaces in Pennsylvania, the Hall at Sharon, Mercer county, and the Atlantic, New Castle, Lawrence county, not in blast. Both were blown out when the demand for iron dropped in the early part of the year. The McKeefrey stack at Leetonia, which also went out of blast early in the year, is on the list of furnaces concerning which no announcement has been made.

Steel Treaters

Announce Tentative Program for Chicago Meeting

The American Steel Treaters society has just announced a tentative program for its annual convention, to be held in Chicago, Sept. 23 to 27, inclusive. The convention and exhibits are to be held at the Seventh Regiment armory.

Registration of members will begin at the Seventh Regiment armory at 9 a. m. Tuesday morning, Sept. 23. A brief business session will be held at 10 a. m., followed by the first technical session on the subject, "Relation of Heat Treatment, Design and Selection of Steels for Metal Cutting Tools to Factory Production," by C. P. Berg. At 2 p. m. the president-elect will present his address, which will be followed by a technical session on the subject, "Heat Treatment of Steels for Cutting Purposes." Due to the large number of papers to be presented, and subjects to be discussed, technical sessions will be held on Tuesday and Wednesday evenings at 8 p. m. On Tuesday evening papers on "Case Hardening" will be presented.

A technical session at 10 a. m. Wednesday will be devoted to "Heat Treatment for Miscellaneous Purposes" and an afternoon session to "Heat Treatment of Steel for Intermittent Cutting Purposes." The evening session will be devoted to "Results of Investigations on Heat Treatment."

On Thursday morning heat treating equipment will be discussed and in the afternoon several papers will be presented on "Solution of Modern Demands on Heat Treating." An informal banquet followed by entertainments and dancing will begin at 6:30 p. m. at Hotel Morrison,

Friday and Saturday will be devoted to exhibitions at the armory and to plant visitation.

Serial advertising has been adopted by the Lakewood Engineering Co., Cleveland. Through the *Lakewood Aerial Bulletin,* it will endeavor to familiarize the buying public with its products, industrial tractors, cranes, etc. The first issue of the paper made its appearance on Aug. 15, when George M. Comey, recently discharged from the American air service, distributed copies from his Curtiss biplane in a flight from Dayton, O., to Cleveland. The bulletin is edited by W. G. Grayell and carries illustrations and descriptions of the equipment produced by the company. It likewise has an editorial column.

Discount Scheme

Of Quoting Prices of Cold Finished Steel Bars Abandoned

Pittsburgh, Aug. 19.—Effective yesterday and applying against all unfilled tonnages, leading manufacturers of cold finished steel bars have abandoned the discount scheme of quoting and in its stead have adopted a system similar to that employed in quoting merchant steel bars; in other words, on a pound basis. The new cards, while resulting in slightly lower prices on the average, does not disturb the present base price, which remains at 3.60c Pittsburgh. The old card adopted March 15, 1915, and which was revised on Jan. 1 of this year, quoted the base size at 5c per pound. The discount recently in effect has been 28 per cent, off list, which would result in a net price of 3.60c. In the new card the base size is from 2¼ to 3 inches instead of 2 to 3 inches as in the card previously in effect.

Manufacturers of cold finished steel for some time havce felt the necessity of quoting on a pound basis due to the evolution of shafting manufacture from a purely transmission product to one entering many manufacturing purposes, not to mention the desire to get away from a card that was extremely cumbersome and to a certain extent confusing. It is believed that greater stability in prices will be achieved as a result of the change which never could be obtained under the old system for the extras for sizes, quantity, etc., now become fixed and no longer subject to the fluctuations in the discount.

Quantity extras which in the old card were 5 and 15 now are 15 and 35. All specifications for less than 2000 pounds of a size will be subject to an extra of 15 cents per 100 pounds net on lots of 1000 to 1999 pounds and of an extra of 35 cents per 100 pounds net for less than 1000 pounds. Extras for cutting also have been increased but in practically all other directions where changes have occurred in the extra charge, reductions have been the rule.

Express View's on Basing Point Problem

Washington, Aug. 19.—Answers and views are beginning to reach the federal trade commission on the question of new steel price basing points as raised by the Western Association Rolled Steel Consumers in a complaint against the Illinois Steel Co., Carnegie Steel Co., Inland Steel Co., Interstate Iron & Steel Co., and the Steel Tube Co. of America. Most of the answers are from associations, such as that of the implement manufacturers, and other consumers. Practically all declare in favor of basing prices f.o.b., mill.

The statements have not yet been made public by the commission, but are expected to be after Sept. 1, the time limit for the filing of views. A member of the commission today said he hoped all producers and consumers will consider the question seriously and submit views so that the question, when called for final settlement, may have the widest possible latitude.

Henry Hay Sr., Dies

Chicago, Aug. 19.—Henry G. Hay Sr., assistant treasurer of the United States Steel Corp., died of heart disease yesterday at Gary, Ind., at the home of his son, Henry G. Hay Jr.

Buys Mines and Mills

Johnstown, Pa., Aug. 19. (By wire.)—Incidental to the decoration of J. Leonard Replogle, former director of steel supplies of the war industries board, by the French government at the chamber of commerce picnic here today, it became known that Mr. Replogle and Charles M. Schwab, chairman of the board of the Bethlehem Steel Corp., had bought the mines in Peru and the mills near Pittsburgh of the American Vanadium Co. It is said that the sale foreshadows a reorganization of the company with Mr. Replogle as president. The Vanadium company controls about 90 per cent of the world's output of vanadium.

Pittsburgh, Aug. 20—(By wire).—The report from Johnstown, Pa., to the effect that J. Leonard Replogle and Charles M. Schwab have purchased the mines in Peru and the mills near Pittsburgh of the American Vaandium Co. elicited neither confirmation nor denial at the company's offices here today.

The Nonferrous Metals

* July shipment from Singapore, c.i.f. New York.
† American Smelting & Refining Co.'s price.
‡ Producers' price. Outside market up from 21.87½c to 23.50c.

NEW YORK, Aug. 19.—The nonferrous metal markets experienced a definite recovery the past week, due to the absorption of copper, zinc and lead which had been held by dealers and speculators. The markets for several weeks had been the playthings for speculators, but about last Wednesday it became evident that the time was near when producers again would dominate in the markets. The margin in prices between the outside market and the producers' quotations narrowed very considerably by Monday of this week. Whereas second hands had been cutting copper prices by 2¼c a pound, zinc by ¼c and lead by ½c, these concessions had dwindled on Monday to ½c on copper, nothing on zinc and about 10 points or 1-10c on lead, and today some outside copper was as high as the producers'. The producers all along have been confident of the statistical position of their industries and so have refused to meet the outside market, but they have been booking little business.

Bargain hunters among consumers were attracted by the offerings by speculators and smaller producers of electrolytic copper at prices below 22c a week ago and accumulated a considerable amount of such metal in the aggregate. The copper market has been helped materialll by the settlement of several strikes at consuming plants, including the difficulty at Rome, N. Y., which had been in progress two months, involving over 4000 laborers at the works of the Rome Brass & Copper Co. and other plants. It is said 10 per cent of the country's manufacturing consumption of copper is centered at Rome.

The lead market showed an exteremly rapid recovery from the low prices quoted by second hands a week ago. The leading producer has stood firm at 6c, New York, for seevral weeks,. but outside sellers, growing anxious to take their profits, offered lead for August shipment from the west down to 5.50c, New York, some spot lead being sold at 5.45c. This was in the face of very strong statistical position for the metal. Supplies of lead in the hands of the producers and the government are not over 17,000 tons, or less than two weeks' production. The embargo on railroads elading out of southeast Missouri due to the shopmen's tsrike ha been lifted, enabling a freer movement of the metal.

The zinc market has been the particular football for the speculators the past few weeks. Dealers have driven the price over swings of ¾c a pound. The offering of 192,000,000 pounds of government brass was considered a bear factor for zinc, but this offering now appears to have been discounted. The amount of zinc in outside hands seems to have been largely absorbed and producers are not inclined to quote much below 7.75c for early shipment, in view of current costs of ore and smelting. High grade zinc prices are steady at 8.87½c, New York.

The last restriction on the importation of tin was lifted Aug. 15. The market is now entirely free. As a result of the renewed competition of foreign tin, the domestic tin market experienced a sudden decline the past two weeks, so that now the market is in fair alignment with London and Singapore. Suot high grade tin dropped from 70c to 56c in the course of a few days; spot 99 per cent tin dropped from 66c to 54c in a similar period, due to the lifting of the import bars.

Bethlehem's Ingot Mold Foundry

Direct Metal From Blast Furnaces as Well as Cupola Metal is Used — Arrangement for Storing and Charging Coke is Unique — Molds are Poured From a Long Platform

BY E. C. KREUTZBERG

PRIOR to the tremendous expansion in the steel production facilities of the Bethlehem Steel Co. during the past few years, all of the ingot-mold requirements of the company were taken care of by the iron foundry at the Lehigh plant. This foundry had sufficient capacity to produce 4000 to 4500 tons of ingot molds per month. After the Bethlehem Steel Co. took over the properties of the Maryland Steel Co., the Pennsylvania Steel Co. and the American Iron & Steel Mfg. Co., the capacity of the foundry at the Lehigh plant became wholly insufficient, and it became necessary to purchase a large portion of the ingot molds required for the operation of the various works.

In order to meet the needs resulting from this expansion, the erection of a new ingot-mold foundry was undertaken at Bethlehem. This plant, which only recently was completed, is an unusual establishment. Its capacity is 10,000 tons of ingot molds, stools and bottom plates per month. This output not only is large enough to supply the full requirements of the Bethlehem Steel Co. plants at Bethlehem, Sparrows Point, Lebanon and Steelton, but 30 to 35 per cent of the total capacity will be available to other eastern steelmakers. The new ingot mold foundry contains about 85,400 square feet of floor space, has a maximum length of 550 feet and a maximum width of 272 feet. Of this area, a 75 x 275-foot space is given over to the raw material yard which, unlike the stock department in most foundries, is completely covered by a roof. Of an unusually substantial character, the foundry building has a steel frame, brick walls, a poured gypsum roof and other details which make it thoroughly fireproof.

Mixer Metal Used

Due to the general plant layout at Bethlehem, the ingot mold foundry is arranged for handling both hot metal and pig iron. Hot metal is obtained from blast furnaces which supply all other departments of the plant; hence a supply of hot metal cannot at all times be obtained at the moment it is required. For this reason arrangements were made for melting pig iron when hot metal cannot be obtained. Two cupolas, each with a capacity of 40,000 pounds per hour, and one 450-ton mixer comprise the equipment for providing metal at this foundry. Of the raw material for the cupolas, 90 per cent is bessemer pig iron made by the Bethlehem Steel Co. in its own blast furnaces. The remaining 10 per cent comprises scrap originating in the various departments of the company. The mixer, shown in an accompanying illustration, is of standard construction. It is equipped for burning oil or by-product coke oven gas, and hot metal may be maintained in it at a satisfactory temperature for any desired length of time.

The arrangement for handling the charges for the cupolas and for facilitating their operation generally is of considerable interest. For serving the cupolas, there are two platforms, one at the level of the spout and the other at the charging level. Pig iron and scrap are loaded into flat tote boxes which are brought to the charging platform by means of two 25-ton cranes which

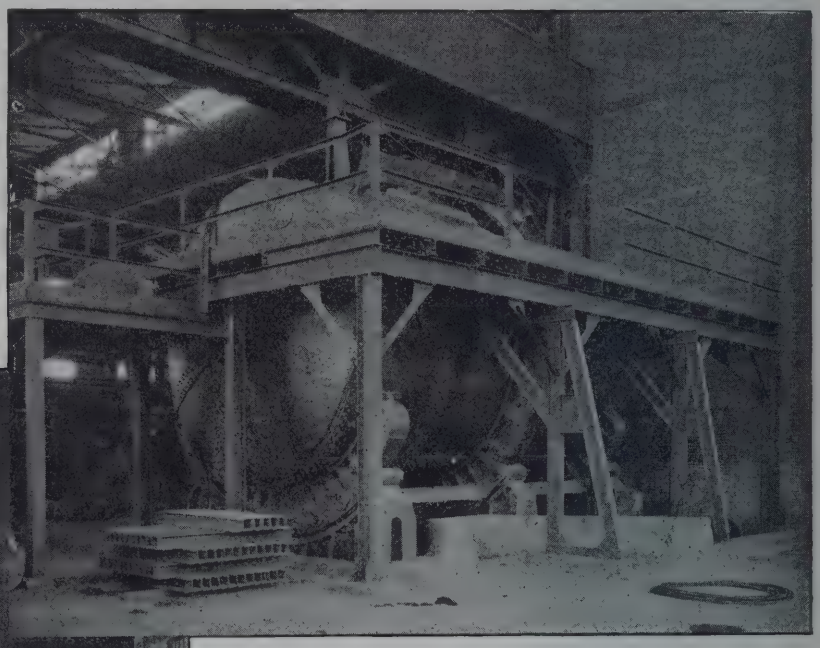

FIG. 2—COKE IS ELEVATED TO BINS ABOVE THE CHARGING FLOOR FROM WHICH MEASURING BUCKETS ARE FILLED FOR CHARGING THE CUPOLA

FIG. 4—THE FOUNDRY IS EQUIPPED WITH A 450-TON MIXER WHICH IS CHARGED WITH MOLTEN METAL FROM THE BLAST FURNACES

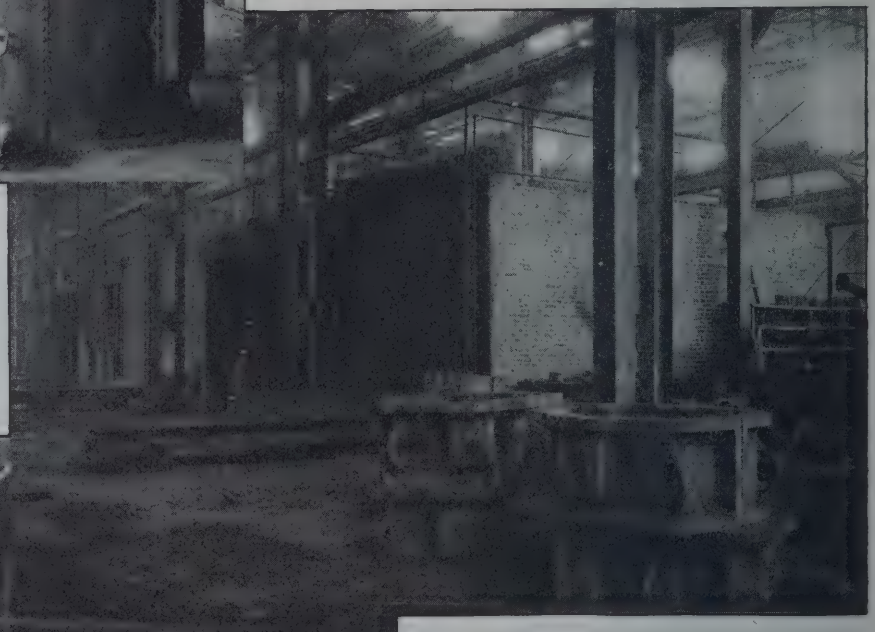

FIG. 3—THE CUPOLAS ARE ELEVATED SO THAT THE BOTTOMS MAY BE DROPPED DIRECTLY INTO CARS INSTEAD OF ON THE FLOOR, THUS SAVING EXPENSIVE HANDLING

FIG. 5—THE MOLDS ARE DRIED IN DOUBLE-ENDED OVENS FROM WHICH THEY EMERGE ONTO THE POURING FLOOR

span the raw material yard. On the charging floor they are placed on buggies which are pushed in front of the charging doors where the pig iron and scrap are charged by hand to insure proper distribution of fuel and metal. All iron is charged by weight; fuel, however, is charged by volume.

How Coke is Handled

The iron is charged through doors at the front of the cupolas and the fuel through doors at the rear. Fuel is delivered to the foundry in cars which are spotted over track hoppers and from the bottom of the hoppers the cope is conveyed by a skip hoist to bins above the charging floor. These bins are three in number and each has a capacity of 30 tons. From the bins the fuel passes into fixed-volume buckets, the flow being controlled by means of gates at the bottoms of the bins. In order to facilitate the removal of refuse from the cupolas, the latter were built at an elevation so as to afford ample clearance for cars which are spotted beneath them at the conclusion of each heat. Into these cars, which operate on rails, the bottom is dropped and the cars then are pushed to a dump where their contents are discharged. This system greatly decreases the amount of work necessary around the cupolas and accordingly cuts down the cost of operation. In order to have a clear space beneath the cupolas, the bottom doors are kept in place by pneumatic plungers, which are released at the time of dropping.

On the molding floor, specially designed 3-part flasks are used. The flasks are cast iron. Unlike the practice at many plants where the spindle is molded separately and set on the bottom plate, the Bethlehem Steel Co. molds the bottom and spindle as a unit. In this operation, the spindle is set in place and keyed to the cast-iron plate, after which the sand bottom is rammed.

FIG. 7—THE STOCKYARD IS ENTIRELY PROTECTED FROM THE WEATHER AND IS COMMANDED BY CRANES WHICH LIFT THE CHARGES TO THE CUPOLA PLATFORM

Next, the pattern is set in place over the spindle, being maintained rigidly in position by the use of an arbor which fits inside the top of the pattern and centers it about the spindle. The flask then is lowered onto the bottom, after which sand is filled in between the spindle and the pattern, and between the pattern and the flask, both being rammed together. The flask is then lifted and the pattern drawn. The ramming of the molds is done in pits, and the molding of the bottom and spindle in one piece results in a smooth casting since this method prevents the formation of fins which result when the spindle is not integral with the bottom.

Molds Are Bottom Poured

From the molding pit the molds are transferred by cranes to the drying ovens. There are eight of these ovens, each 12 x 25 feet. They are of the car type and are fired with by-product coke-oven gas. The entrance to these ovens is on the molding side and the exit, from which the dried molds are discharged, is on the pouring side of the shop. On being withdrawn from the ovens, the molds are assembled alongside a raised concrete pouring platform 7 feet wide and 175 feet long. Each mold, when rammed, is provided with a sprue reaching from the top down to the bottom in order that the casting may be poured from the bottom. In order to pour without causing injury to the mold, through spattering of the metal, the sprue is surmounted by a large sand box.

The use of the concrete pouring platform supercedes the old method of pouring in pits. It has been found that the platform makes it possible to assemble, finish and pour the molds with greater facility and a greater degree of safety than is possible with the pit pouring method.

In addition to the cranes in the raw material storage yard, the casting and cleaning section of the foundry is provided with one 40-ton and three 25-ton cranes. The mixer department is provided with a 100-ton ladle crane and the molding shop with three 25-ton cranes. The foundry is provided with a sand mixing screen and with a pneumatic system for conveying molding sand to the various floors. A 30-ton jar-ramming machine has just been installed for ramming the molds.

The foundry is provided with a full equipment of flasks large enough to produce molds for ingots ranging all the way from 6 x 6 inches up to 22 x 80 inches. Ingots of the latter size weigh 34,000 pounds each. The foundry equipment includes a wet pan for mixing material for luting the cupolas and also for mixing foundry facing.

All Flasks Are Machined

The foundry is provided with the necessary equipment for finishing cast-iron flasks, including a planer, a radial drill and other machinery. Scales are at hand for weighing the individual molds

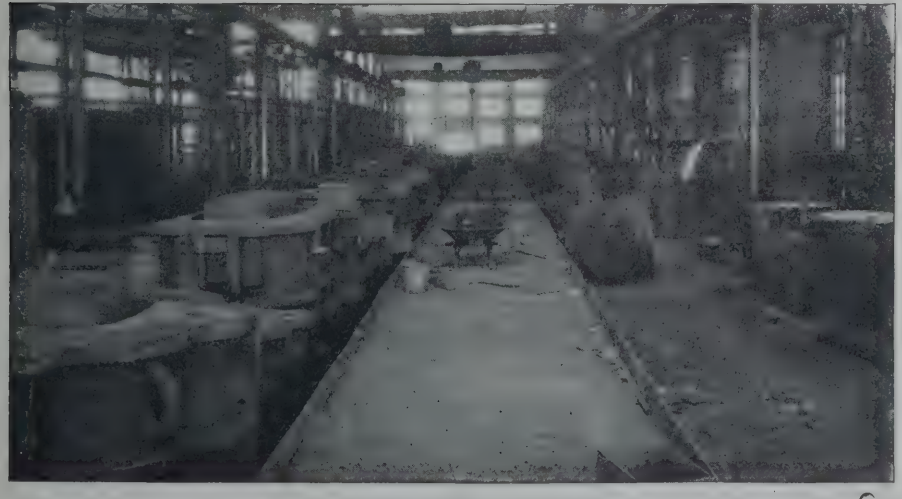

FIG. 6—AFTER COMING FROM THE DRYING OVENS THE MOLDS ARE SET UP ALONGSIDE A 175-FOOT CONCRETE PLATFORM ON WHICH THE OPERATOR STANDS WHEN POURING

as well as for weighing carload shipments of molds and of raw material as it is received. A building for storing patterns, which also houses the pattern shop, connects with the foundry.

Not only have the mechanical appliances and the molding facilities been studied out carefully, but the comfort of the workmen also has been considered. A large well lighted and ventilated wash room and toilet is furnished for the convenience of the employes. The wash basins and shower baths are supplied with both hot and cold water. A steel locker provided for each man affords a place for him to keep his personal tools and clothes.

Women in Industry

A report, more comprehensive in its scope than any which it has released heretofore, recently was published by the British committee on women in industry. The report covers a wide range of industries and records the results of experience gained from the employment of women over the entire war period. The general tenor of the report seems to indicate that Britain is ready and willing to see the women retire from industry, relinquishing their jobs to such men and boys as have not yet been replaced. The concensus of opinion among the British people seems to be that woman labor was regarded strictly as a war emergency; now that the war is over they desire to see prewar conditions resumed.

In this connection the report states that if women are paid the same wages as men, the men always receive the preference at the employment bureau; if they are paid more than boys, the boys receive the preference. The reason for this is that the employment of women entails greater difficulty and expense in management, that they are less permanent in employment, and that they have less personal ambition to acquire skill. On the other hand, women do not object to monotonous work and can equal the output of skilled men on all work which does not tax their strength unduly. During the period of the war the employment of women was always marked by a greater degree of success when they were confined to a separate shop, under managers who understood how to handle female labor.

G. H. B. Ward, attached to the labor section of the wages regulation department, said that "women are not equal to semiskilled men, especially on machines, due to the fact that they are less capable of taking care of them. In light repetitional machining, such as drilling or grinding and in gaging small parts they are superior to the boys whom they replaced. This," he added, "will be women's work in industry in the future."

The concensus of British opinion seems to be that if women find a place in industry in the future the nature of their work will be similar to that outlined by Mr. Ward. In commenting on women employed in British dockyards, E. R. Bates, deputy director, had the following to say: "The work of women, as far as quality is concerned, is quite comparable with that of men, but it has in nearly all cases to be supervised by men. The work at the dockyards during the war was devoted almost exclusively to repairs. There was practically no repetition work, which meant that when a women completed one task she was given another which entailed new and unfamiliar work, in which she had to receive a certain amount of instruction before being able to go ahead with it. Her resourcefulness is not equal to that of a man who is able to turn from one job to another."

Retards Iron Shipments

Embargoes on various railroads due to strikes of the shop men threaten to play havoc with operations at manufacturing establishments all through the east. Embargoes on New England roads prevent the bringing in of fuel and the taking away of product which makes it but a matter of a short time, if the embargoes continue, before all kinds of manufacturing establishments in New England close down. An embargo which is having very bad results is that on the Pennsylvania lines west which makes it impossible to ship to any points along these lines. Incidentally, mills in the Pittsburgh district by reason of this embargo as well as by reason of the embargo which prevents them shipping toward New England destinations, are limited greatly in the directions in which they can ship. Merchant pig iron furnaces in Virginia are greatly handicapped by the embargo on the Chesapeake & Ohio, which makes it impossible for them to move raw materials or product.

Engineering Body Moves

Headquarters for the Cleveland Engineering society have been established on the parlor floor of the Hotel Cleveland, Cleveland. Present quarters in the Chamber of Commerce building have proved inadequate owing to the increased membership and the expansion of the society's library.

The new quarters will contain a lounging room, conference room, dining rooms, general offices and a library sufficiently large to accommodate the 22,000 volumes now owned by the society.

Favor Reduced Customs in Canada

Adoption of a resolution which goes farther than any policy previously adopted, in the direction of free trade with Canada, was the highspot of the recent convention in Ottawa, Ont., of the National Liberal party. The tariff question is expected to be the main issue at the next Canadian election.

The principal plank of the platform which was adopted demanded substantial reductions in the burden of customs taxation; the abolition of all duties upon many necessaries of life and instruments of production, including farm implements and machinery, farm tractors, mining, flour and sawmill machinery, lumber and cement and a downward revision of the tariff effecting substantial reductions on articles of general consumption; and an increase of the British preference to 50 per cent of the general tariff.

Electric Smelting of Ores

Dr. Stansfield, of McGill university, has prepared a report on the commercial feasibility of the electric smelting of iron ores in British Columbia. He considers this smelting is metallurgically feasible, there being sufficient supplies of ore and of the requisite fluxes for carrying out the process. The present cost of electric power, however, makes the profitable production of pig iron impossible. The ores are chiefly magnetites and are consequently unsuitable for blast furnaces if unmixed with other ores. The magnetite ores are not of high grade, but contain 50 to 55 per cent iron. They are practically free from phosphorus, titanium and copper, and the proportion of sulphur could be kept as low as 0.1 per cent.

Although British Columbia has ample water supplies which could be utilized for the requirements of the electrical smelting industry, it would take so long to carry out this plan that it is not immediately helpful. Dr. Stanfield considers the possibility of utilizing the surplus power supplies of local electric railways, and he draws attention to the abundant supply of timber at hand from which charcoal for the electric smelting could be easily obtained.—*Engineering and Mining Journal.*

Paying Claims for Employes' Acts

Liability of Employers for Negligence of Their Workmen Cannot be Escaped by Contracts to Contrary, Courts Hold — Differ in Their Decisions Relating to Accidents Due to Error of Judgment

BY CHESLA C. SHERLOCK

THERE can be no doubt but that an employer is liable for the wrongs committed by his employes against third persons. This liability has been recognized from the remotest times. Blackstone, in his Commentaries, which were written some 40 years before the Revolutionary War, said: "If a servant by his negligence does damage to a stranger, the master shall be answerable for his neglect."

Employers generally admit that they are liable for the acts of their employes which contemplate acts of agency or contract, but as a matter of law their liability does not end here. It is immaterial so far as the employer's liability is concerned whether the service in which the employe is engaged contemplates these relations with the public or not. The rule of law is stated on the weight of judicial authority to be the same in either case.

In Maryland it was held that the employer may be liable for the torts or negligent acts of the employe while the latter is acting in a representative capacity of the employer. In Illinois it was said that the employer was liable whether the employe was liable to him at law or not.

Joint Employers Responsible

A long list of cases hold to the view that where there are joint employers of the offending employe they are jointly and severally liable to the injured third person, even though the workman was employed in a service for only one of the employers and received his pay from that one employer. The same cases announce the conclusion that the rule of liability cannot be changed by a contract which is to the effect that only one of the joint employers shall bear the entire responsibility for the wrongful acts of the employe. This means that legal liability for the wrongful acts of employes to the public is not the subject matter of a valid contract and that the law cannot be defeated by contracting away such liability, or even by partially diminishing it by contractural agreement.

California, Wisconsin, Missouri and some other states have said, however, that where the injured person discharges the employe from personal responsibility for his wrongful acts, such discharge will operate to discharge his employer also from liability.

In California, Georgia and Missouri it has been said that where the employer and the employe are sued jointly, but the verdict exonerates the employe and holds the employer liable, such verdict should be set aside, as the exoneration of the employe from liability accrues to the benefit of the employer also. However, this rule is by no means general, many other jurisdictions specifically holding that the exoneration of an employe will not relieve the employer from liability.

Formerly corporations were not deemed liable for the torts or negligence of employes because the corporation was an artificial person. The early decisions were much confused by this fact. They said that since a corporation was an artificial person that it had no mind with which to form an intent, no lips with which to utter a slander, or no hands with which to commit a tort or personal injury.

So the early judges dismissed corporations from liability for crimes and personal wrongs and passed the matter by. But it soon came to pass that corporations abused this blind protection from the law. Under the protection of a corporate body men did things that they were unable to do as individuals. They committed crimes, they committed personal wrongs and they so generally abused their protection that public opinion arose in arms and demanded that some means be found at law to curb their abnormal and unnatural powers.

It was then that the decisions came to say that corporations were liable for the wrongful acts of their employes in the same measure that individual employers were. The courts said that the intent of the officers of the corporation was the intent of the corporation and that the hands of the officers or their agents were the hands of the corporation and whatever they did wrongfully would be charged against the corporation. The former rule may now be said to be obsolete for it does not obtain in any jurisdiction of our knowledge at the present time. The rule now is that so far as liability for the wrongful acts of employes is concerned there is no distinction between corporations and individuals.

Decision on Errors in Judgment

It is often hard to determine just when liability for the wrongful acts of employes will attach to the employer. When does it arise? What degree of care is required of the employe?

In Montana it was held that as soon as the employe fails to exercise the degree of care in a given case that he would have exercised had he been acting in his own behalf liability will commence to attach to the employer. In other words no greater degree of care is required of employes by the law than they would be required to exercise as private individuals acting in their own behalf under similar circumstances. And as soon as there is a departure from that degree of care the employe is deemed guilty of negligence as he would be had there been no contract of employment binding him to the employer.

It is naturally true, however, that the degree of care required varies with the character of the employment and the danger which it holds to the general public. This statement is drawn from decisions in Iowa and Massachusetts.

In New York and Pennsylvania, it has been held that the employer is not liable for errors of judgment committed by an employe in an emergency. This brings us to a consideration of what is known as the emergency rule. It has been held that an employer cannot be held liable for the acts of his employes committed during emergencies, because of the unusual circumstances present and because of the fact that however wrongful an act may appear at the

---

The author was formerly secretary of the Iowa Industrial Commission.

time, the existence of the emergency is ample justification for it, even though the employe in fact commits a grave error of judgment under the stress or excitement of the occasion.

In Pennsylvania a servant attempted to remove a burning lamp. Upon being severely burned he threw it from himself, whereupon it exploded and injured a third person. The court applied the emergency rule and relieved the employer from liability.

In Maine it was held that where an employe who is sent to install a certain machine in another's plant and who adjusts the machine in an emergency does not render his employer liable for damage caused the plant, provided he acted to his best judgment at the time, even though it later appear to have been wrong.

The measure of the employer's liability, once that liability has been definitely determined, is also a stumbling block for many courts and authorities. It is always hard to say offhand what the measure of liability in a given instance shall be, because it varies greatly, but an examination of the cases discloses a marked uniformity of holding in cases under this point.

In California, Connecticut, New York, Ohio and Wisconsin, five of the strongest courts in the country, it has been held that the employer's liability extends to a liability for full compensation for the injuries caused by the wrongful acts of his employes to others. This rule is general and seems to be accepted everywhere as soon as the employer's liability is established. However, where an attempt is made to collect exemplary damages there is a conflict in the authorities.

California, Connecticut, New York, Rhode Island, Texas, West Virginia and Wisconsin have held that the employer cannot be liable for exemplary damages unless it be proved that there was an express authorization in advance or a subsequent ratification of the wrongful act of the employe.

The United States Supreme Court has extracted this rule from a survey of the authorities: "Guilty intention on the part of the defendant (employer) is required in order to charge him with exemplary or punitive damages."

Another authority states: "Exemplary damages, being awarded, not by way of compensation to the sufferer, but by way of punishment of the offender and as a warning to others, can only be awarded against one who has participated in the offense. A principal (employer), therefore, though liable to make conpensation for injuries done by his agent within the scope of his employment, cannot be held liable for exemplary damages merely by reason of wanton, oppressive or malicious intent upon the part of his agent."

However, in Arkansas, Illinois, Kentucky, Massachusetts, Michigan, Mississippi and Wisconsin it has been held that where the employe's act was wilful, malicious and grossly negligent, but still in the scope of the employment, the employer will be liable for exemplary damages, the same as if he had committed the act himself.

Steam Boiler Efficiency

In order to economize floor space, horizontal type boilers have gradually been replaced by vertical boilers in Germany, as this type permits of a much greater concentration of tubes. Such boilers have been built with a heating surface of 10,700 square feet, but experience has shown that the best results are obtained from a heating surface not exceeding 6500 square feet.

Boilers of this type have given an overall efficiency equal to 87 per cent of the calorific value of the fuel. They are invariably provided with economizers having about two-thirds of the heating surface of the boiler and giving the maximum efficiency with a moderate evaporation of from 5 to 10 pounds of steam per square foot of heating surface. A higher rate of evaporation necessitates the escape of the gases at too great a temperature and makes excessive demands on the economizer.

The result of 18 experiments showed that the economizer tubes absorbed more than 600 B.t.u. per square foot of heating surface, and that the feed water often reached a temperature of 390 degrees Fahr., to the detriment of the working of the boilers. Exhaustive tests have proved that an economizer surface exceeding 60 per cent of the heating surface of the boiler does not increase the efficiency of the installation, and that 87 per cent may cause a decrease in the efficiency. — (*Zeitschrift fur Dampfkessel und Maschinenbetrieb.*)

Electric Feed Control for Boilers

A feed water control has been invented which works on the following principle: A float connected to an iron rod is free to work up and down as the water level varies, the rod protruding vertically through the boiler shell, encased in an arrangement of tubes. The outer tube, fixed to the boiler, has fitted to its upper end a totally enclosed electromagnet. The movement of the float rod through this magnet tends to make or break the magnetic field.

The feed valve of the boiler is automatically actuated by a piston magnet. When the movement of the float rod closes the magnetic field of the electromagnet, it causes the piston magnet to open the feed valve. By the same current a lamp is lit so that the fireman is immediately informed that feeding has commenced. The same magnetic action actuates another piston magnet on the steam valve of the feed pump, which starts to work simultaneously with the opening of the boiler feed valve and the lighting of the lamp. When the water has risen sufficiently high to break the magnetic resistance by forcing the float rod upward, the magnetic field is broken, the valves are closed, and the lamp goes out.

The water level can be adjusted while there is steam up in the boiler, and the float and magnet can be set so that they will act with a slight water-level variation. In this way, almost continuous and regular feeding takes place.

An alarm bell can be fitted to the control which will strike when the water continues to sink, in spite of the fact that feeding has begun, when too much water is being fed in, or if the electric current is interrupted.—*Zeitschrift fur Dampfkessel und Maschinenbetrieb.*

Exploit Swiss Iron Mines

Until the first half of the nineteenth century, Switzerland supplied her own needs in iron, according to an article, printed in a recent issue of *Commerce Reports,* but during late years she has depended on surrounding countries, principally Germany.

No data are available as to the production of iron in the country, prior to the nineteenth century, but during the first half of that period, it has been estimated the production totaled 3,000,000 pounds. Before the outbreak of the world war, the attention of some prominent metallurgists was turned to the ore beds on the Gonzen, and since then a students' synlicate has carried out experiments which have disclosed the presence of ore beds of considerable importance.

According to Swiss papers, the exploitation of the ore beds is to be taken up shortly by a large Swiss concern, and the problem of working the mines is being planned. In view of the inability to obtain cheap fuel, smelting furnaces, which will be built, can be operated by means of electricity generated from the waterfalls.

Miners' homes in the Briey region, adjoining Thionville. Nothing was damaged on the German side of the border; on the French side everything not used by the Germans was laid in ruins

French Operating German Plants

Mines, Furnaces and Mills of Thionville Basin, Undamaged by War, Now Delivering Their Products for Rebuilding Ruined Cities on French Side of Border — 30 Blast Furnaces Relighted

BY FRANCIS MILTOUN

BISMARK, it was said, never pardoned himself for having, in the treaty of Frankfort, accepted the tracing of the Lorraine frontier so that any part of the Briey basin became the heritage of France. The frontier of 1871 divided a great mineral deposit into nearly equal parts. That which went to France produced about 19,000,000 tons of ore annually, while district Germany annexed produced approximately 21,000,000. Possession of the deposits left to France permitted that country to build up its chief iron and steel industries, notably those of Meurthe et Moselle. This department, of which Nancy is the capital, produced in 1913 nearly 3,600,000 tons of pig iron and 2,500,000 tons of steel, while the Germans in the Thionville basin, on the other side of the border, produced 3,900,000 tons of pig iron, but did not make more than 1,600,000 tons of steel. Recently in the French parliament Joffre gave evidence to the effect that it was impossible to defend the region for the reason that it lay within the range of the big guns of the ring of fortresses surrounding Metz. Be this as it may, possession of the Thionville basin by the Germans opened the way for the continual harassing of the French armies, and the prolonging of the war by the provisioning of German ammunition and armament plants with basic raw materials. France made a mistake in failing to put forth efforts to protect her possessions. Collectively, then, it is shown that the inter-related basins of Briey and Thionville were the chief economic elements which made it possible for Germany to sustain the war so long.

The mines and plants of the French section were from the first all under direct fire of the firmly entrenched German batteries and many were destroyed. Out of 74 blast furnaces in the region a third scarcely can be put into operation again before the end of the present year, and even this depends upon the acquisition of much construction and factory material of a special nature. The remainder will remain cold only if skilled workmen cannot be had. Sixty per cent or more of the local blast furnaces are out of commission, and recuperation, at best, will be slow. French plants which were in possession of the Germans during the occupation of the region for four years were either destroyed or dismantled, and the equipment transported across the Rhine. In the Nancy district plants suffered

CHILDREN OF MINERS OF THE BRIEY ORE FIELDS ADOPTED BY AMERICAN WELFARE ORGANIZATION

bombardment by cannon and from the air. The ore deposits of Pienne-Murville were flooded, and the exterior works of Amormont-Dommary were in part destroyed. The mines which had been in possession of the Germans, and which had been worked by them, were to a certain extent left in fair condition, this for the reason that the Germans thought they were to be theirs for all time. In the interval they claim to have extracted 14,000,000 tons of ore, a volume about equal to the annual exports from this region before the war.

As with all mines throughout Germany, those of Thionville had a fluctuating production for the period of the war, the total probably being not more than 50,000,000 tons. The output of iron and steel plants likewise diminished as a result of the difficulties of the transportation of coke by reason of rail congestion during the active and prolonged movement of troops. When it is considered that Thionville and its district produced before the war in the neighborhood of 4,000,000 tons and about 2,000,000 annually during the war, it is seen that the German production was but 50 per cent of normal in this region.

Since the armistice German mines and furnaces in the occupied regions have been conducted under the sequestration regime. The *inspection des forges* of the ministry of industrial reconstruction in France is the ruling power in the present operation of the former German plants. Since November 30 blast furnaces have been relighted, but shortage of coke is preventing further activity.

The banner plant of the region unquestionably is that of the De Wendel firm. Its Grande-Moyeuvre plant in Lorraine was but a few kilometers from the war frontier. Closely coupled therewith was its plant at Joeuf, and the Homecourt and Marine plant, with its seven blast furnaces of 850 tons capacity, and its four 12-ton converters. At Hayange, just to the west of Thionville, are seven blast furnaces of 900 tons daily capacity, six converters of 12 tons capacity, and three martin open-hearth furnaces of 30 tons. These two plants were offered for sale under the guarantees of the German government during the war, and a German group, among which were Thyssen and Roechling, were to capitalize a company with 140,000,000 marks to operate a part of the mines and plant, the other portion being exploited by another group capitalized with 50,000,000 marks. Two immense plants are being put in operation and when in full operation are expected to produce 850,000 tons of pig iron and 800,000 tons of steel per annum.

The Rombacher Huttenwerke is a distinctively Lorraine organization, exploiting mining concessions in the neighborhood of Sante Marie aux Chenes, and possessing also coal deposits as yet unexploited, on the left bank of the Rhine.

The Rombach plant proper comprises seven blast furnaces of 1500 tons daily capacity, a steel plant with six converters of 26 tons capacity, four martin furnaces of 25 to 30 tons, nine rolling mills and seven blooming mills. At Maizieres there is another plant of four blast furnaces of 900 tons daily capacity and at Zweibrucke the association possesses 128 coke ovens producing 200,000 tons of coke per annum. The association of Rombachs has a total production of 800,000 tons of pig iron and approximately 600,000 tons of steel.

A Belgian society also is operating in this region. The Société Sambre et Meuse has at Maizières a plant which as far back as 1912 was being run more or less in connection with Thyssen interests for the reason that its operation under exclusively Belgian direction was not thought to be politically or economically efficient. Before the war there existed three blast furnaces and three batteries of 14 ovens each for the production of coke. A fourth blast furnace and a fourth battery of coke ovens was in construction at the opening of hos-

THE POMPEY PLANT IN FRENCH LORRAINE, WORKED INTERMITTENTLY DURING THE WAR AND WAS COMPARATIVELY UNDAMAGED

RUINS ON AN ORE-CARRYING RAILROAD IN BRIEY REGION

tilities. Since the armistice the former German directors and foremen have been discharged.

The Hagondange plant of Thyssen sits astride the railroad from Thionville to Metz. It is the pearl of the collection of this firm's interests. It covers an area of more than five kilometers in length and a kilometer in width. There are six blast furnaces of a capacity of 2000 tons per day, four converters of 30 tons and two martin furnaces of 80 tons, besides a rolling mill plant. The annual production is figured as 450,000 tons of pig iron, 400,000 tons of steel ingots, and 120,000 tons of cement.

Between Hagondange and Thionville is the Uckange plant with five blast furnaces of 800 tons daily capacity. The same firm has also a plant at Neuenkirchen, to the north of the Saar basin which also has five blast furnace units, a steel works and a rolling mill. The property is in the name of Stumm.

The Rochlingschelisen und Stahlwerk possesses the Carlshutte plant at Thionville, consisting of four blast furnaces of 800 tons daily capacity. A director of this plant is reported to have been sentenced to five years' detention for receiving stolen tools and machinery from French plants during the war.

The Belgian company of the Hauts-Fourneaux d'Aumetz la Paix has the Knuttange and Fontoy plants, just to the east of Thionville. The first plant has six blast furnaces of a daily capacity of 1000 tons and six converters of 30 tons, the second, three blast furnaces of 650 tons daily capacity. These plants can produce an average of 650,000 tons of pig iron and 500,000 tons of steel annually.

The Rumlinger und Saint Ingberter-Hochofen und Stahlwerk possesses at Ottange three blast furnaces, situated near the Luxembourg border; and bordering upon the frontier of old France, its Rumelange plant has three blast furnaces.

Germans "Selling" Lorraine Ore Deposits

The Audun le Tiche plant belongs to the Gelsenkirchen, and is situated in the angle formed by the Luxembourg frontier and the old French frontier, near Micheville and Villerupt, two of the most productive of the French plants of the former French Lorraine. It comprises four blast furnaces of 800 tons daily capacity, and another is to be fired within a few weeks.

The Dillinger Huttenwerke belongs to the Redange company of which 40 per cent of the capital is French. It has five blast furnaces of 850 tons daily capacity, three converters of 15 tons, one of 20 tons, 10 martin furnaces, of which one is of 60 tons, two of 50 tons, one of 25 tons, three of 20 tons and three of 15 tons.

A late German report announces that the Lorraine Hutten und Bergwerksverein of Nilvingen is in process of selling its ore deposits which it possesses in Lorraine and in the basin of Briey, also its plants of Kneuttingen and Feutsch. The same report states specificially that on the day of the armistice there were in the region 68 blast furnaces actually in operation, but that owing to the scarcity of coke these were subsequently reduced to 26, and later to 12.

With the peace treaty now ratified by Germany, and with the many rough corners of readjustment smoothed off, the French administration is daily bringing these German-owned plants into operation to meet the pressing need of France. The lining up and the protecting of the various interests, private and public, German and French, is a work of imposing magnitude but is being undertaken with a vigor hardly more noticeable elsewhere than in the basin of Thionville, which, with Briey, may be said to control the iron and steel trade of Europe.

Arrangements for manufacturing a steam-driven motor truck have been completed by the Winslow Boiler & Engineering Co., which has established a factory at 530 North Western avenue, Chicago. The general offices of this company are at 1423 McCormick building, Chicago.

Preventing Occlusion of Gases

Silicon Assists Materially in the Reduction of Unsoundness and Blowholes and Tends to Rid Steel of Absorbed Gases — How Severe Requirements Were Met in Making Hydraulic Cylinder Casting

BY SIR ROBERT HADFIELD

IN the early days of steel castings the difficulties which then had to be overcome to get rid of occluded gases were literally enormous. The useful element silicon, which prevents the occlusion, was hardly obtainable except in combinations which caused as much trouble as the unsoundness itself. There were no high-percentage ferrosilicons with low carbon available or silicospiegels. Aluminum was unknown for practical purposes. Manganese, while useful, was only a partial cure. Moreover, it was thought that the element silicon produced a material with inferior qualities; in fact, the presence of even as much as 0.2 per cent of silicon was looked upon with horror. We owe a great debt of gratitude to the French metallurgists who perfected and introduced the successful production of ferroalloys containing high percentages of silicon, such as silicospiegel also ferromanganese, and to others, including Hunt of Pittsburgh, who later brought about the production of cheap aluminum. The proper and most suitable manner of making the addition of these elements to obtain soundness in steel had also to be most carefully studied.

This great advance was largely due to three Frenchmen, Euverte, Pourcel and Gautier, of the Terre Noire Works, France, who were among the first to give us the necessary silicon and manganese alloys of the proper composition and character which have enabled us to produce sound steel. It is always satisfactory and pleasant to be able to trace and give the credit where it is due, and in this case it can be done. Several papers were read on the subject by Gautier before the Iron and Steel institute in 1877 and 1881 on "Processes of Producing Sound Steel Castings." These aroused great attention, in fact, sent a flutter through the metallurgical world at the time.

It is without doubt from the work of these metallurgists who pioneered the way that we are so largely benefiting today. German metallurgists never gave help of this nature, they have only copied, absorbed, and made use of the principles of French, British, American and Swedish metallurgists. I cannot remember any specific instance of the Germans teaching us any basic principles in ferrous metallurgy.

Among the magnificent exhibits of the Terre Noire Co. at the Paris exhibition of 1878, a series of specimens was shown illustrating this firm's research work. This then new material, known as "Cast Steel without Blowholes," made a great sensation in the metallurgical world. Its manufacture necessitated the employment of highly silicious pig iron, silicospiegel, also 60 to 80 per cent ferromanganese, which the Terre Noire produced and offered to the world. These alloys were produced in the blast furnace and contained combinations of iron, silicon and manganese, eventually known as silicospiegel.

The Terre Noire Co. was also one of the first if not the first firm to produce on a large scale the alloy known as ferromanganese, which is today of such enormous importance and interest to every steelmaker in the world.

The Production of Intricate Steel Castings

It is now possible to produce sound steel castings of all kinds and weights, provided the section is not too thin. As an instance, I will describe a particular application, namely hydraulic cylinders for cotton baling presses. These cylinders cast of steel and not forged or pressed in any way, are of particularly difficult nature, in some cases running up to lengths of over 30 feet. Such considerable length is for the purpose of obtaining a long stroke in pressing at the same time as many cotton bales as possible. The complete presses are made in this country and sent to India, Egypt and elsewhere. The ram is usually 7 to 9 inches diameter, the walls of the cylinders must be as thin as possible in order to save weight, and yet must stand the severe hydraulic test pressure of about 4 tons per square inch, and they must be guaranteed to work constantly day and night during the baling season at pressures up to 3 tons per square inch.

Picture to yourself, therefore, a cylinder of this nature, which is about 30 feet in overall length including the sinking head, the internal portion of which is subjected without intermission during the baling season to the severe hydraulic pressure mentioned—some 3 tons per square inch. There must not be the slightest weeping or oozing through the walls, for if the pressure was not fully maintained the baling would be a failure, that is, the bales would not be packed sufficiently tightly, and therefore occupy far too large a volume in shipment from the district where the cotton was produced to the cotton mills.

The problem of satisfactorily producing such a cylinder is greatly increased and intensified by the severe contraction met with in the cooling down of molten steel from about 1540 degrees Cent. This contraction is slightly over ¼ inch per foot, thus adding to the practical difficulties experienced, the mold for such cylinders being required to be not less than 7 inches longer than the cylinder itself is when cooled down, in other words, the cast-steel cylinder itself has to contract this considerable amount between its length as cast compared with its dimensions when cold.

It should be remembered that fluid steel at a high temperature, and as in the first part of the pouring into the mold of the cylinders referred to there is a drop of no less than about 30 feet in depth down the thin walls of the cylinder formed of sand or composition, that is, the space forming the walls of these cylinders for cotton presses is in some cases only about 1½ inches in width or thickness, and is seldom more than 2¼ inches. Bearing in mind, too, that the fluid steel when being poured is at the temperature of some 1540 degrees Cent., and that gases are given off from the sides of the mold which is formed of fire-resisting material such as silica sand, composition and other mixtures, it will be readily seen, specially with regard to the early poured steel dropping this full and long distance, how great must be the tendency of the molten steel to absorb gases and become unsound. It must be remembered that molten steel, which is quite fluid at from say, 1500 to 1540 degrees Cent., immediately below about these temperatures, can no longer be termed really fluid, it has more the consistency of thick cream, and not many degrees lower it is quite pasty. The great difficulties, therefore, of working within these narrow margins of fluidity and semisolidity will be readily understood. The only wonder is that under these severe conditions the steel remains sound

Abstract of a paper presented at a meeting of the Faraday society, England. The author, Sir Robert Hadfield, is a distinguished British metallurgist and chairman of Hadfield's, Ltd., Sheffield.

and the finished cylinder so successfully stands the high working hydraulic pressure before mentioned. It will, therefore, be admitted that the study of methods which get rid of occluded gases is of the highest service to the constructive engineer, and that our gratitude is due to those French metallurgists who, in the early days of the development of ferrous metallurgy, attacked this severe and complex problem of giving us alloys by the aid of which we could obtain the necessary sound steel free from blow holes, occluded gases and other defects.

Mineral Production for 1916

The report of the United States geological survey on mineral production for 1916 is now being distributed. Owing to the lateness of publication, resulting from the delay caused by war work, the summary is presented in the briefest form. "The elaboration of its many interesting features," the survey states, "will be left to reports for subsequent years."

The metals established a new record in 1916, exceeding for the first time $1,000,000,000 and approximating a total of $1,621,000,000. Pig iron and copper contributed more than 78 per cent to the total increase of $629,000,000, but large gains were made in zinc, lead, aluminum, ferroalloys and tungsten ores. As compared with the figures for 1915, the metallic products increased 63 per cent. The total value of the nonmetallic products increased more than $320,000,000 over the value for 1913, the year of next highest output.

As in the past, coal and iron are the most valuable of the mineral products. The value of coal in 1916 was $867,126,000 and that of pig iron $663,478,000. Copper registered an enormous increase, the production value of $474,288,000 being almost double that of the previous high record of 1915. Of chromic iron ore, 47,035 tons were mined in 1916 as against 3281 tons in 1915. The production of refined lead was 552,228 short tons compared with 507,026 tons in 1915 and 512,794 tons in 1914. The production of manganese ore was approximately tripled, 26,997 long tons being mined in 1916 as against 8708 tons in 1915.

Arthur Young, 15 Prudential building, Pinstone street, Sheffield, England, iron and steel merchant, is seeking connections with American producers of ingots, billets and bars, and also with American manufacturers of special ferroalloys such as ferrovanadium, ferrochrome, etc. In addition to his office in Sheffield, Mr. Young maintains a branch at 6 Lloyds avenue, London.

Plays Big Part In Britain's War Program

PROMINENT among the British steel plants, which arose to England's call for ordnance and ordnance products, is the firm of Thomas Firth & Sons, Ltd., Sheffield. At the beginning of the war 2900 workmen were employed at the plant which consisted of 44 acres. The plant extensions became so great that on Nov. 11, 1918 the employes numbered 10,500, of whom 2500 were women.

For a long time before the war the company had been producing armor-piercing shells for the British navy but in the early part of the war, when Britain realized that its army ordnance plants were hopelessly inadequate, the Firth company erected a huge plant at Tinsley. This plant produced over 4,000,000 shells up until Nov. 11, 1918. For the navy all types of guns were manufactured.

In addition to the above the company during the war produced shafting and turbine forgings for five cruisers and 10,000 additional tons of shafting and turbine forgings for the British merchant marine. In this connection it is interesting to note that the famous old ship VINDICTIVE, which played such an important part in the Zeebrugge fights, was equipped with crank and straight shaft forgings and other parts from the Firth works. The company furnished approximately 2,000,000 bullet-proof steel helmets for the British army and covered a large number of armored cars, airplanes, tanks and field guns with the same grade of steel.

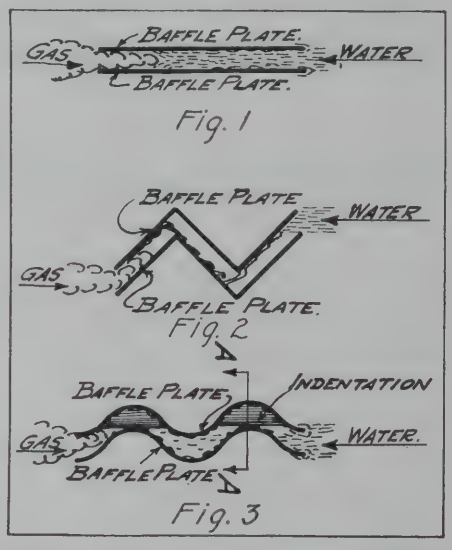
The Firth foundry is among the largest in the kingdom and during the war it was devoted exclusively to ordnance castings. In addition to the armor plate, enough of which was manufactured to equip 12 battleships, it made exclusively all the valve castings for 153 torpedo boats, and many of the tank castings and gun mountings, etc., used in France.

INTERIOR OF THE SHELL PLANT AND FOUNDRY OF THOMAS FIRTH & SON, ENGLAND

Cleaning Gas By Effective Method

Corrugated Baffle Plates Built on the Interior of a Gas Washer Give a Large Cleaning Area and a Uniform Condition Throughout the Washer—Comparison of Various Types of Baffles

BY GEORGE B. CRAMP



IN thoroughly and efficiently wet-washing blast-furnace gas, the principle as applied to the design, construction or operation of wet washers, is to subdivide the gas volume to be washed into as small bodies as possible and bring them into intimate and positive contact with as small amount of water as will clean the gas to the desired point of dust content without too great a reduction in the temperature of the gas. Positive contact of gas with water is secured best in those types of washers having sprays of water directed on baffles, the latter being located between the washed or sprayed surface of which the gas must pass in order to travel from the gas inlet to the gas outlet of the washer.

The efficiency of these types of washers depends upon the uniformity of water distribution, the uniformity of baffle arrangement, and the amount of area of baffle surface, provided the baffles are arranged sufficiently close to split up the gas volume into small bodies. With these conditions obtained it must follow that the greater the baffle area, the greater the positive contact of gas with water and the cleaner the gas, with a resultant use of less water, and less reduction in the temperature of the gas.

Obtaining Uniform Water Distribution

The spray nozzle has been developed to the degree of perfection where it can be depended upon to deliver a comparatively uniform spray of water over a given surface under specified conditions. It only remains to arrange several of them to secure a uniform distribution of water over any area greater than one nozzle spray will cover. With a uniform distribution of water provided, the vital point in wet-gas washer design, construction, and operation is the proper selection of the baffle shape to be used in the washer.

Fig. 1 shows two vertical plates spaced a given distance apart. The gas passes upward between these plates and the spray water either drops between or flows down the surfaces, picking up dust from the gas that comes in contact with it. As the gas travels upward, the central core of the gas does not come into intimate or positive contact with the wet surface of the baffle plates. Although it does not meet the spray of water, the action of the gas in traveling between the plates is so rapid that the spray is blown onto the surfaces of the baffles. The latter perform their function in confining the gas to narrow channels but on account of their straightness they do not entirely prevent the channeling of the gas between them.

FIGS. 1, 2 AND 3—VARIOUS SHAPES OF BLAST-FURNACE, GAS-WASHER BAFFLES

A baffle shape with the courses sloped at about the angle shown in Fig. 2 directs the films of water from the upper surface of one course to the upper surface of the next-lower opposite course while the under sides of each course remain unflushed by water. This results in the deposit of moist dust on these surfaces which increases until the washer becomes clogged or a heavy stream of water is necessary to remove the deposit. A further objection to this type of baffle is that it is not a commercial shape or one often met with even under special conditions. By reason of its contours it is doubtful whether it could be bent to fit within a cylindrical-type gas washer. To arrange straight plates of these contours in a cylindrical or square-type washer would result in dead ends. These are undesirable because they do not maintain uniformity throughout the main section of the washer.

The shape which lends itself for use as wet gas-washer baffles is the corrugated sheet represented in Fig. 3. The corrugated sheet is a commercial shape and can be bent readily without deformation of its corrugations to fit within a cylindrical shell. The corrugations are a mean between the two extreme shapes shown in Figs. 1 and 2, and permit the water to flow evenly down the surfaces. Not only do they tend to prevent the gas from traveling in a straight line but they cause it to deviate, eddy and wind its way between the plates, thus bringing it time after time into contact with the flushed surfaces of the baffles and, in so doing, removing a far greater amount of dust from the gas.

The corrugated plates may be held rigidly in the desired position by indenting the corrugation at section *A-A*, shown in Fig. 3. The indentations may be provided at odd points in sufficient number to space the plates equally apart when one plate is set against another. The indentations may be shaped further so that they are in the direct path of the wash water and are flushed thoroughly by it, thus offering no place for the dust to collect. Baffles arranged in a cylindrical washer in this manner give a uniform condition throughout the entire section of the washer, and a large baffle area.

Concerning Gas-Washer Shells

The outline of a gas-washer shell is probably of less importance than the arrangement of spray nozzles and the shape and arrangement of baffles. The shell should be built cylindrical, the gas entering at the side of the washer near the bottom and leaving the washer above the last course of baffles either centrally or at the side. This arrangement would leave the entire section of the washer free for building in baffles. The diameter of the shell could be less for an equal area of baffle surface than the arrangement shown in Fig. 4, but the difference in diameter is so small that this feature is outweighed in importance by the points of advantage gained in the construction shown.

The gas, upon entering the washer

is directed downward and tends to drop the heavier bodies of dust immediatey into the pool of water which always is maintained in the bottom of the washer. The gas then tends to distribute itself uniformly about the center of the washer and begins to rise through the baffles. Another advantage is gained by this construction in that it may be readily used as a water-seal valve. A further advantage of the larger diameter shell is gained in shaping or bending the baffle plates.

As the gas rises to pass through the lower or first set of baffles it strikes the thin edges of the plates and is immediately broken into annular-cylindrical bodies of about 3/8-inch thickness. These films of gas pass between the wavy surfaces of the baffle plates and meet a film of water. The latter during its downward flow continues to pick up dust by contact with the gas and keeps the surfaces of the plates washed free from deposits of dust.

The rough or heaviest dust along with considerable of the finest dust is washed out of the gas in passing between the first set of baffles. The final cleaning is done in the second set of baffles which are spaced 3/16-inch apart. In passing between the first set of baffles each cubic foot of gas is subjected to about 160 square feet of washing surface and in the second set about 320 square feet, and for a modern furnace installation with a gas inlet of 6 inches, diameter and a gas-washer shell 12 feet diameter, the total area of the first set of baffles would be 14,000 square feet and the second set about 28,000 square feet.

Gas Temperature is Reduced

As the gases pass through the washer it drops its dust burden and the temperature of the gas is reduced in relation to the amount and temperature of water used. The gas may pick up some moisture in the form of vapor, but if the gas is cleaned thoroughly and the temperature is not greatly reduced, the desired result is obtained particularly when the gas is to be burned under boilers or in hot-blast stoves. However, a lower temperature is probably more desirable for gas engines, though if a mean temperature of cleaned gas can be allowed for all three purposes, this washer will clean the gas sufficiently for all purposes.

Though the moisture in vapor form may not be reduced without reducing the temperature of the gas, at least, any entrained moisture in the form of drops of water, or even a fine mist that the gas always picks up and carries with it on leaving the gas washer, may be removed by subjecting the gas to impingement against an additional, unsprayed baffle surface. The principle applied here is the same as that in the removal of tar mist or fog from coke-oven gas by causing it to project itself in small jets at a comparatively high velocity against a plate surface so that every particle of gas comes in contact with the baffle.

In this type of blast-furnace gas-washer the same results are obtained by decreasing the diameter of the washer shell at the top and by inserting baffle plates 1/8-inch apart. The velocity of the gas is thus increased, the gas hurling itself rapidly in small bodies 1/8-inch thick against the corrugations of the baffles. This causes the entrained moisture to impinge on

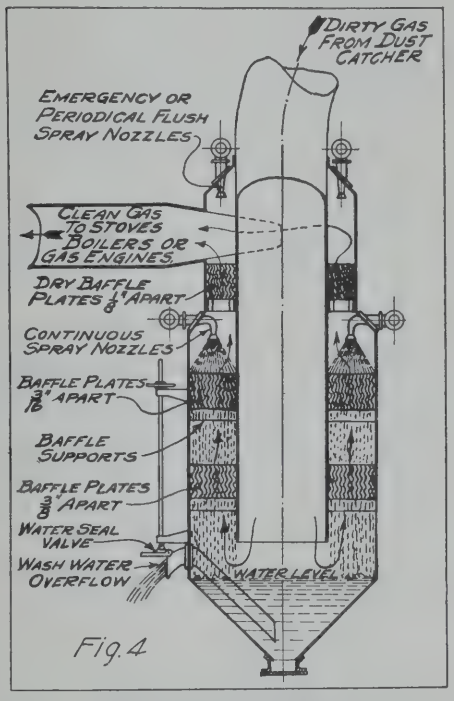


FIG. 4—CYLINDRICAL GAS WASHER EQUIPPED WITH CORRUGATED BAFFLES

the surfaces and as more moisture collects it will form into drops and gradually flow down the baffles. This keeps the surfaces wet and cleans the gas of any remaining impurities.

If the gas is not caused to come again into contact with a spray of water, after leaving the dry baffles, it passes out of the washer as free from entrained moisture as it is possible within a one-piece gas-cleaning apparatus to make it. Within an annular space of 6 feet inside diameter and 9 feet outside diameter there may be arranged more than 20,000 square feet of impinging surface with the plates spaced 1/8-inch apart. One cubic foot of gas receives the cleaning effect of 480 square feet, and in a height of 15 feet, 1 cubic foot of gas receives the cleaning and drying effect of nearly 1000 square feet of baffle surface. In traveling through the washer, the gas receives the total cleaning and drying effect of 62,000 square feet of baffle surface.

Spray nozzles may be inserted above the dry baffles to flush them should dirt tend to collect. These sprays may be connected with the furnace by means of a pressure-operated regulating valve which opens the spray-nozzle feed line when slips occur and insures the thorough cleaning of the gas during the slip. The principles of gas cleaning and drying just outlined are applicable to many other types of gas cooling, cleaning, drying and absorbing apparatus.

Book Review

Industrial Good Will, by John R. Commons; cloth; 213 pages; 5½ x 8¼ inches; published by the McGraw-Hill Book Co., Inc., 239 West Thirty-ninth street, New York, and furnished by THE IRON TRADE REVIEW for $2.

Good will is a competitive advantage. The employer who succeeds in obtaining the good will of his workers will be benefited in meeting competition by lower costs of production. For this reason alone is it advisable that employers study all angles of the labor problem if they wish to succeed in business.

In his book on "Industrial Good Will," Mr. Commons calls attention to the fact that good will is coming to be an intangible asset of business, more valuable than the tangible properties. If a man is not satisfied with conditions at the plant where he is employed, he is sure to seek work elsewhere. Frequent changes in organization are costly, as a new man on the job produces at a much slower rate, thereby adding to production costs.

Various methods of shop management are discussed. Mr. Commons tells of many labor problems of which he has personal knowledge and gives in detail the settlement in each case. The concluding chapter is devoted to a review of progress of labor organizations and trade unions in the leading countries of the world during the past 70 years.

A paper read by R. G. Mercer at the recent British Iron and Steel institute states that in the British Isles there are installed or being installed 141 electric furnaces with a total capacity of 112,000 kilovolt amperes. Of this number, 24 will be used for various alloys while the remaining 117 are for electric steel manufacture with a total charging capacity of 384 tons and a power capacity of 98,769 kilovolt amperes. Based on five days a week and four weeks to the month, the calculated output is 31,170 tons per month.

Arranging Industrial Cost Factors

Proper Division of Elements Essential to Keep Production Department Operating in Accordance With Preconceived Plans — Basis for Estimating Future Costs a Valuable Feature of the System

BY M. H. POTTER

IN previous articles of this series it has been pointed out that the first requirements in industrial cost accounting is the separation of the various items to show the regular annual payments for specific services, the payments being termed the production factor. Annual payments are apportioned among the various production centers, and to these are added certain factors, such as repairs, depreciation, etc., the desire being to show the cost of all the indirect charges at the production centers.

The relation of the machine rates to the production factors is shown in Fig. 1. It will be noted that certain elements are of a variable nature and that their value cannot always be determined with accuracy in advance, while other elements always are constant and can be readily and accurately predetermined. The purpose is to fix all factors with such accuracy that at any stated financial period all will correspond with one another. It is important, therefore, that actual expenditures in each element be constantly tabulated and compared with predetermined unit values. The value of comparison is self-evident and its application to the system outlined is of great importance.

Fig. 2 is a form used for tabulating the various elements of the different factors. Any items or elements which show a difference between the actual expenditure and the amount placed in the column "per factor" will require special consideration. It is important that the total estimated expenditures equal or slightly exceed the total of actual expenditures for the financial period. The difference, or balance, may be accounted for at the end of the period. However, it is obvious that if any degree of care is maintained errors will not be so great as to seriously affect the machine rate. Inasmuch as each factor is made up of a number of elements, it will be found in actual practice that errors when items are totaled, probably will cancel one another.

What Balancing Accomplishes

The balancing of one error against another, when this system is worked out properly, will show the value of determining the different elements and the reason for dividing these among the various factors. When estimated expenses fall considerably below the actual expenses, the difference may be carried forward and taken care of in the next financial period. When this system is applied to a definite line of work or operations, the person estimating the expenses under each element should study the nature and the extent of variation of such elements and make due allowances. Naturally, different lines of work will show different charges and it is only by the exercise of thought and judgment that true figures may be secured.

When the factors with their elements have once been determined it is not a difficult matter to check the figures under each, from one financial period to another. Here again comparison will afford a basis of check upon the figures.

Control accounts are figured for each production center and must be separated and tabulated if the desired results are to be obtained. The nature of the work in hand and the cost which is desired to be determined will, of course, be taken into consideration when determining production centers. The system outlined can be used to secure costs of service as required by the management.

In Fig. 3 are shown the factors which must be charged to the machine rates in order to balance the cost of production with the total expenditures, these being factors which are not distributed through machine rates.

Manufacturing costs and selling costs together, with related expenditures, are of interest to all manufacturers, although different lines of industry have leading or important selling-cost factors peculiar to themselves.

In Fig. 4 are shown the leading divisions of cost accounting as applied to the manufacturing and marketing of the output. By referring to Fig. 4 it will be noted that a definite period

This is the seventh article in this series on industrial cost accounting especially prepared for THE IRON TRADE REVIEW.

is used as a time basis and that the balances are figured and recorded, either outgoing or incoming, for intervals of time. It is by summing up the factors as thus secured and tabulating them in accordance with the accompanying forms that the desired total or aggregate of costs is obtained.

Fig. 5 illustrates the relationship between various costs. The sum total of the costs when deducted from the selling price gives the profit. Principal factors of manufacturing and selling costs are shown in Fig. 6.

Relining A Worn Pump By Welding

CENTRIFUGAL pumps used for dredging silt, sand, mud and gravel from the bottoms of channels and for mining soft ore by the hydraulic mining system, are subject to wear due to the abrasion of the sand and gravel against the inner walls of the pump chamber. When the wear becomes so great as to interfere with the operation of the sand sucker, it becomes necessary to put the pump out of commission for repair. This is often a long and expensive process in cases where new parts have to be fitted.

Such a sand sucker chamber that had become badly scored through use was recently restored by the Oxweld Acetylene Co., Chicago, by means of the oxyacetylene process. When it is consand sucker shown in the accompanying illustration is 14 feet outside diameter, and consists of two massive steel castings having a total weight of 7 tons. The abrasion had been so severe it was necessary to rebuild both side walls of the pump chamber for a distance of 8 inches from the inner circumference. The thickness of the added metal varied from 1½ to 2½ inches. In addition, a new section approximately 14 x 18 inches in area had to be welded into the throat of the casting. The latter was approximately 3½ inches thick.

In order to insure holding the two halves of the chamber in alignment during preheating and welding they were bolted together. The heavy outer reinforced sections of the castings were not heated, because this would have produced internal strains. Preheating by means of charcoal was applied locally for a distance of about 14 inches inward from the edges of the flanges, each preheat extending for a distance of 3 feet around the inner circumference.

SPLIT CASTING OF A DREDGING PUMP WHICH WAS REPAIRED BY BUILDING UP THE WORN SURFACES

The total weight of steel added to the castings by welding amounted to 1264 pounds. The operators worked in pairs. As the heat in the small enclosure where the men worked was intense, it was necessary to hold several welders in reserve and to work in relays, each shift welding for a period of 20 minutes. Six days were required to complete the building-up work. As the built-up surface will be subjected to the same abrasive action of sand and gravel, high-carbon steel welding rods were used for the purpose of building up. This grade of steel gave a surface, which after cooling was impossible to cut with a file.

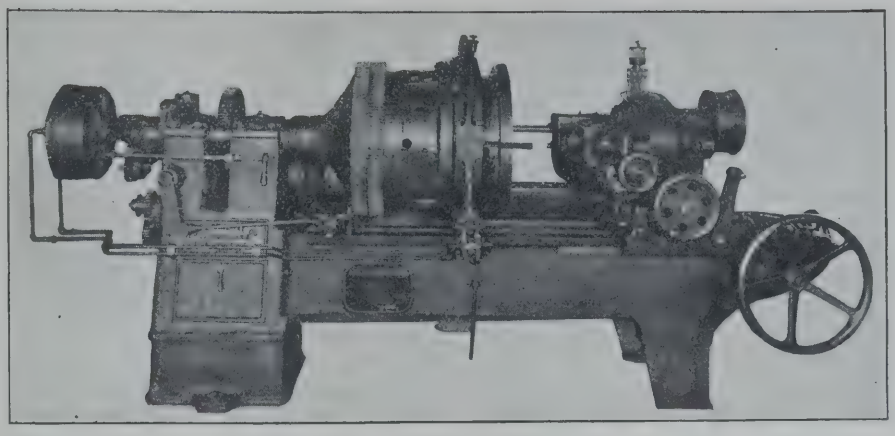
The oxyacetylene welding work was completed in six days, and effected a saving of approximately $2500.

The John C. Vance Iron & Steel Co., Chattanooga, Tenn., just purchased additional frontage at the plant for the purpose of establishing a structural yard.

Mills Pipe From Rough Flange Threads

Steam and other pipe lines subjected to heavy duty and continuous service require properly fitted pipe flanges. With the object of producing accurate flange threads for pipe installations, the Smalley General Co., Inc., Bay City, Mich., recently developed the machine shown in the accompanying illustration.

The machine is of rigid construction throughout and is designed for heavy duty. It consists of a substantial bed with which is incorporated the headstock for rotating the work while the carriage that supports the cutting mechanism travels on ways provided for this purpose. The machine, it is said, can be successfully and economically operated by semiskilled labor.



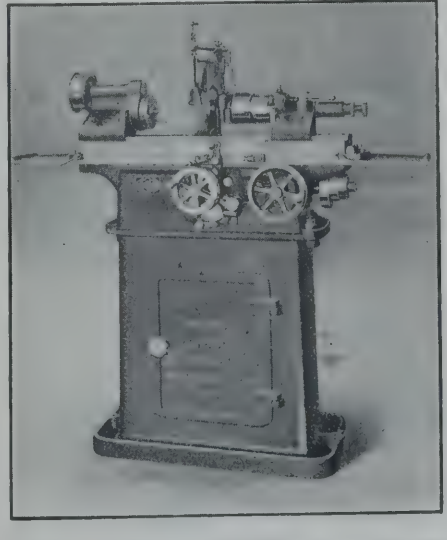
The work to be threaded revolves in a chuck while the cutting is accomplished through the medium of a revolving hob. With the object of giving the hob the proper travel to produce a tapered thread, a rigid taper attachment is provided. It is pointed out that this machine dispenses with a boring operation as the thread is milled from the rough, a practice which requires an accurate taper device.

The collet chuck for holding the work is of the air-operated type. This device holds the work securely and it is said that the time required for taking out the finished piece and substituting a new one is but a few seconds. The chucks are equipped with false jaws to adapt them to various sized flanges. They are arranged to take any size flange up to 23½ inches, outside diameter.

The chuck body is threaded to the main spindle and is driven through the medium of a staggered-face, broad-tooth spur gear. It is stated that this feature delivers the driving power as near as possible to the cutting point, thus reducing torsion to a minimum. The shaft that carries the pinion is driven through the medium of a worm gear from another shaft, the latter having a 3-step cone. This gives three speeds from the countershaft. Six speeds are possible if a 2-speed countershaft is used.

A power facing attachment is provided which is driven from the main spindle. Three feeds are provided: 3/16, ⅛ and 5/16-inch for each revolution of the work. This feature is so arranged that it is readily reversed and it is also provided with trips to throw out the feed when the tool has traversed the required distance. The machine is equipped with a lubricating pump which supplies cutting compound to the hob, through the medium of a flexible pipe.

In operation, the flange is chucked with the face out. Then the flange is faced at the correct turning speed after which the milling speed is thrown in and the thread milled. The approximate horsepower required to drive the machine varies from 5 to 7, depending on the class of work to be threaded.



THIS TOOL IS EQUIPPED WITH A ROTARY HOB—IT FACES THE FLANGE AND CUTS THE THREAD FROM THE ROUGH CASTING AT ONE SETTING

Self-Contained Grinder for Precision Work

For finishing small, accurate, cylindrical parts in the toolroom and also for use on general production work in the manufacturing department, the Warren F. Fraser Co., Westboro, Mass., recently developed the tool shown in the accompanying illustration. This machine is a self-contained unit, the principal parts being a box-type bed on which the platen travels by means of an automatic feed, head and tailstocks for holding and rotating the work, and a rigidity constructed head which carries the grinding wheel.

The wheel is mounted on the end of the spindle in order to facilitate the ready change of wheels. To insure cool grinding and a satisfactory finish, the machine is equipped with a circulating pump which supplies cutting lubricant to the work at a point just over the line of contact with the wheel. The machine is semiautomatic in operation which enables a large number of like parts to be finished consecutively, once the machine is set up for a given operation.

SMALL CYLINDRICAL GRINDER FOR PRECISION WORK

The grinder takes work 8 inches long and 5 inches in diameter according to its rated capacity although in emergencies pieces 20 inches long and 6 inches in diameter can be accommodated. The swing over the guards is 5 inches. The head and tailstock spindles are hardened and finished by grinding and are equipped with No. 2 Morse taper.

The grinding wheel is 12 inches in diameter with 1½-inch face and 3-inch arbor hole. The wheel spindle is driven by a 2½-inch belt over a 4½-inch pulley. The wheel spindle is hardened and ground and runs in bronze journals. Three horsepower is required to drive the machine.

Wheel speeds range from 1800 to 2150 revolutions per minute. Six work speeds are provided as follows: 30, 50, 75, 107, 150 and 210 revolutions per minute. The ample range of wheel and work speeds enables the operator to adapt the machine to all classes of work.

The survey for the cut-off on the Philadelphia & Reading railroad between Sinking Spring and Blandon, Pa., has been completed and it will cost at least $1,500,000 to construct the projected bridges, which are to be of concrete. The entire line may cost in the neighborhood of $4,000,000. The distance is more than 10 miles and the road will provide a belt line around Reading, Pa., for traffic between Harrisburg and Allentown.

Refractories

In Greater Demand, with Prices Unchanged—Car Shortage Delays

Pittsburgh, Aug. 19.—While prices of refractories show no special change, both orders and specifications continue to increase and with most manufacturers now fairly busy competition for business is not as sharp as it was recently. Steel plant brick are in particularly good demand, as the big stocks of these kinds which existed as a result of free buying during the war and the sudden ending of the conflict, now are well out of the way. Steel manufacturers are replenishing stocks and are seeking prompt shipments because of the desire to be fortified against possible transportation delays later in the year.

Some shortage of magnesite brick exists at present, due to the fact that only small lots of Austrian magnesite are reaching the country, while the one domestic producer of brick-making magnesite only recently resumed after several months' shut down. Shortage of cars has interfered with the eastern movement of Washington magnesite and manufacturers of those brick cannot take much business until shipments are more certain and regular. Such tonnages of Austrian magnesite as are coming in fall far short of making good the deficiency in the domestic output of the past few months.

No trouble is experienced in making fairly prompt shipments of other kinds of blast furnace and steel plant brick, although Kentucky manufacturers have been hampered by a shortage of cars. Those dependent upon the Chesapeake & Ohio railroad have suffered most, as orders with some have warranted 80 per cent operation, while car supplies have permitted less than 50 per cent operation.

Refractories

(Per 1000 f. o. b. works)

FIRE CLAY BRICK (First Quality)	
Pennsylvania	$36.00 to 41.00
Ohio	36.00 to 38.00
Kentucky	36.00 to 38.00
Illinois-Missouri	30.00 to 40.00
FIRE CLAY BRICK (Second Quality)	
Pennsylvania	$30.00 to 35.00
Ohio	20.00 to 25.00
Illinois-Missouri	25.00 to 30.00
SILICA BRICK	
Pennsylvania	$40.50 to 45.00
Chicago	45.50 to 50.50
Birmingham	46.50 to 51.50
MAGNESITE BRICK (Per Net Ton)	
9 x 4½ x 2½	$80.00 to 85.00
CHROME BRICK (Per Net Ton)	
9 x 4½ x 2½	$80.00 to 90.00
BAUXITE BRICK (Per Net Ton)	
55 per cent	$ 40.00 base
76 per cent	100.00 base

Pattern Manufacturers Hold Convention

The National Association of Pattern Manufacturers held its second annual convention at the Statler hotel, Buffalo, Aug. 16-17. President E. K. Ball, in his opening address, reviewed in a general way the activities of the association and mentioned some of the problems encountered during the past year. It was decided to hold the next convention on the second Friday in August, 1920, in Toledo, O.

The following officers were re-elected for the ensuing year: President, E. F. Ball, Newark Stamping & Foundry Co., Newark, O.; first vice president, Vaughn Reid, City Pattern Works, Detroit; second vice president, J. W. Brost; secretary-treasurer and business manager, E. O. Melville, Melville Bros, Columbus, O. For trustees: S. H. Thompson, S. H. Thompson Mfg. Co., Dayton, O., one year; J. H. Bridge, Maumee Pattern Co., Toledo, O., two years, and A. E. Schuchert, A. E. Schuchert Pattern Works, Cincinnati, for three years.

The Buffalo branch provided a program of entertainment, including a banquet at the Statler hotel. An address on "Industrial Relations" was delivered by D. D. Fennell, general manager, the Belmont Packing & Rubber Co., Buffalo. On Sunday the party boarded special trolley cars and viewed Niagara Falls.

Bethlehem Iron Ore Dock in Chile Completed

The iron ore dock of the Bethlehem-Chile Iron Mines, at Cruze Grande, Chile, construction of which was held up by the war, has just been completed. The dock has capacity for 30,000 tons of ore and is provided with 17 spouts, by which all 17 hatches of the standard, 20,000-ton ore boats of the company may be fed simultaneously. The loading time is expected to average three or four hours per vessel, the discharge of water ballast requiring more time than actual loading. The dock is similar to the ore docks in Lake Superior. It is nearly 500 feet long and is loaded by discharging the ore from hopper cars at the top of the dock. The height of the dock from low tide to top of rail is 120 feet.

Strong Demand

For Benzol, Toluol and Sulphate of Ammonia—Prices Pointing Upward

New York, Aug. 19.—Heavy buying of benzol and toluol continues, and as a result prices are tending upward. No change, however, has yet been made. The market may be quoted at 24 cents to 29 cents for pure benzol, spot or contract shipment, and 27 cents to 35 cents for toluol. Ninety per cent benzol is holding at 23½ cents to 28½ cents. With inquiry for motor benzol of somewhat smaller proportions and demand for pure benzol and toluol increasing, greater quantities of the latter are being distilled. Solvent naphtha is more plentiful, but the price is unchanged at 22 cents to 27 cents, producers' plants, spot and contract business.

Coke Oven By-Products

Spot	
Per Gallon at Producers' Plant	
Pure benzol	$0.24 to .29
Toluol	.27 to .35
Solvent naphtha	.22 to .27
Per Pound at Producers' Plants	
Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	0.08½ to .09½
Per 100 Pounds at Producers' Plants	
Sulphate of ammonia	3.40 to 3.65
Contract	
Pure benzol	$0.24 to .29
Toluol	.27 to 35
Solvent naphtha	.22 to .27
Per Pound at Producers' Plant	
Phenol	nominal
Naphthalin, flake	0.06½ to .07½
Naphthalin, balls	.08½ to .09½
Per 100 Pounds Producers' Plants	
Sulphate of ammouia	3.25 to 3.40

A better demand by the dye industry is noted in the naphthalin market, and considerable quantities of this product are now moving. The market on naphthalin in flakes is 6½ cents to 7½ cents on spot and contract orders, and on naphtha in balls it is 8½ cents to 9½ cents. Phenol continues at a standstill pending final arrangements for disposal of government supplies. Prices are nominal.

Better strength is noted in sulphate of ammonia. The fertilizer industry is buying in greater volume, and prices are tending upward. Export demand remains light.

Nine hundred or more strikers have returned to their jobs at the plant of the Waclark Wire Co., at Bayway, near Elizabeth, N. J. The men went out for an increase of 15 cents an hour but agreed to return to work for an increase of 5 cents.

Surplus Metals in Great Demand

War Department's Stocks of Iron and Steel Reduced 269,915 Tons in 30 Days, With 577,021 Tons Still on Hand—Total of $1,733,872,000 Paid Thus Far in Liquidation of Contracts

WASHINGTON, Aug. 19.—The general resumption of business as reflected in the iron and steel industry in the past few weeks has carried with it an increased demand for the iron and steel stocks held by the various bureaus in the war department. The office of the director of sales has announced that on Aug. 9 the total of these materials was 577,021 tons. This is 269,915 tons less than were on hand July 10. This reduction in 30 days compares with an increase of 50,222 in the preceding 40 days and has caused officials of the department to feel well pleased with the progress being made in disposing of surplus war materials.

The greatest decreases in the size of stocks occurred in billets, shell forgings, cast steel slugs and heavy melting scrap, while increases largely were in ingots, tool steel, shell steel, bars and rods, and terne plate. There were changes in other items carried in the surplus list, but the more pronounced fluctuations were in these. The net change in the month elapsing since the last inventory was reported showed daily sales averaging 9000 tons. This compares with an average daily net increase of 1125 tons in the period ending July 10.

The quantity of shell forgings in stock Aug. 9 was 224,219, as compared with 391,590 on July 10. Billets decreased from 136,948 tons to 110,382, while, on the other hand, ingots increased from 22,119 tons to 46,270. The tonnage of cast steel slugs, nearly 50,000 tons on July 10, was only 8386 tons on the last available comparative date. Heavy melting steel fell from 17,229 tons to 1539 and the stock of heavy melting nickel steel, 3457 tons a month ago, was cut in half. The 1027 tons of carbon tool steel on July 10 increased to 2724, and 234 tons of miscellaneous tool steel has been increased by more than 13,000 tons.

Pig Iron Tonnage Increases

While the pig iron and spiegeleisen tonnages increased, the quantity of ferromanganese and ferrosilicon decreased. The 728 tons of iron ore listed on July 10 has disappeared and in its place is zirconium ore, of which 740 tons are held. The pig iron tonnage increased from 3970 to 5137 and spiegeleisen from 114 to 769, while ferromanganese tonnage fell from 466 to 37 tons. The ferrosilicon drop was less precipitous, 144 tons being disposed of out of stock aggregating 390 tons.

Other stocks on hand Aug. 9 include rails, 919 tons; bars and rods, 56,752 tons; structurals, 697 tons; plates and sheets, 4696 tons; terne plate, 8058 tons; strip steel, 845 tons; pipes and tubes, 600 tons; angle iron, 155 tons; band iron, 11 tons; flat iron, 446 tons; adapter steel, 1523 tons; annealed steel, 938 tons; beveled steel, 11 tons; coil steel, 72 tons; copper clad steel, 5 tons; decarbonized steel, 36 tons; flange steel, 2098 tons; gun steel, 690 tons; machine steel, 226 tons; high speed tool steel, 206 tons; spring steel, 120 tons; steel shafting, 2 tons; bessemer bars, 86 tons; miscellaneous forgings, 56,857 tons; alloy steel, 7752 tons; galvanized sheets, 210 tons; shell steel, 41,674 tons; grey iron, 127 tons; armor plate, 871 tons; reinforcing steel, 192 tons; machine borings and turnings, 924 tons; nickel steel borings and turnings, 1590 tons; high speed tool steel scrap, one ton; miscellaneous mixed iron and steel scrap, 35 tons; low phosphorus steel scrap, 192 tons; high speed solids, 114 tons; cast iron scrap, 514 tons; malleable iron scrap, 1239 tons; shells in process, 442 tons; miscellaneous scrap, 9350 tons.

Value of Sales Announced

As most of the material now on hand in the department came through liquidation of contracts, it is interesting to note that the total liquidations to date now aggregate $1,733,872,000. Suspended contracts awaiting liquidation total $2,012,635,000. The department has also announced in detail the value of sales reported by bureaus from Jan. 1 to Aug. 1 as follows:

Construction division, $1,837,275; signal corps, $56,016; military railways, $71,274,706; chemical warfare, $719,888; ordnance, $70,999,494; military aeronautics, $3,502,811; surplus property division, purchase and storage, $210,639,412; aircraft production, $4,784,952.

The value by classes is as follows:

Wool, $163,604,111; railway rolling stock, $69,023,732; chemicals, etc., $31,982,542; textiles, $22,865,910; nonferrous, $20,345,679; animals, $19,080,999; subsistence, $13,351,384; clothing and equipage, $5,139,253; miscellaneous, including iron and steel, $18,420,944.

Plan National Business Meet in September

Washington, Aug. 18.—A committee to arrange for a national industrial congress to be held at Atlantic City late in September has been announced by directors of the United States Chamber of Commerce. A. C. Bedford, chairman of the Standard Oil Co., of New Jersey, was named chairman. The other members are D. A. Cooke, New York; James H. Defress, Chicago; John F. Fahey, Boston; James A. Farrell, New York, Homer L. Ferguson, Newport News; Edward A. Filene, Boston; Thomas W. Lamont, New York; I. L. Lee, New York; Alfred E. Marling, New York; Edward G. Miner, Rochester; William Fellows Morgan, New York; Lewis E. Pierson, New York; S. Goodwyn Rhett, Charleston; George Edward Smith, New York; Ernest T. Trigg, Philadelphia; Harry A. Wheeler, Chicago; Theodore Whitmarsh, New York, and Owen D. Young, New York.

Government Buys Brake Shoe Plant

Washington, Aug. 13.—On Aug. 15, the sale of the entire holdings of the American Brake Shoe & Foundry Co., in Erie, Pa., to the United States government was consummated. The reported consideration is $495,835. The plant is to be used as a government arsenal. Under the terms of the deed, the government obtains possession of three parcels of land near the city limits on West Twelfth street, together with all the buildings, plants, machinery and personal equipment of the company.

More Steel Bids Asked

Washington, Aug. 19.—Sealed proposals will be received at the St Louis district ordnance office until Aug. 28 on approximately 7543 tons or 73,641 forgings for 8-inch common steel shells. These weigh about 315 pounds each and are located at the plant of the Wagner Electric Mfg. Co., St. Louis. Bids will be

taken until Sept. 2 on 1698 tons or 11,885 forgings for 8-inch common steel shells, 320 pounds each; 4946 tons or 20,905 forgings for 240 millimeter shells, 530 pounds each; 500 tons or 2035 cast steel ingots for forging 240 millimeter common steel shells, 550 pounds each, all three lots located at Curtis & Co. Mfg. Co.'s Carrie avenue yards, St. Louis. Bids will be taken until Aug. 28 at St. Louis on approximately 70 tons of structural material such as bar spacers, roof slabs, construction bars, column bars, beams, straight bars, bent bars, spandrel beams, spirals, lintels, stirrups, etc., purchased for use on a government project, at the plant of the Western Cartridge Co., East Alton, Ill.

Bids will be taken until Aug. 25 at the Detroit ordnance office, on approximately 7098 tons or 30,000 240 millimeter shell forgings, located at the plant of the American Car & Foundry Co., Detroit.

At Philadelphia, bids will be opened on Aug. 27 on 460 net tons of 1 1/32-inch round hot rolled steel bars, average length 15 feet, at the United States Eddystone rifle storage arsenal, Eddystone, Pa., and on Aug. 29 bids will be opened on 805 tons of 1⅞-inch round cold rolled steel bars, located at the plant of the Eddystone Munitions Co., Eddystone, Pa.

Coal and Cement Producers Under Fire

WASHINGTON, Aug. 19.—Among the outstanding industrial features of the government's crusade against the cost of living was the decision last week of the senate to investigate the coal industry and the institution by the department of justice of antitrust proceedings against 19 of the largest cement manufacturing companies in the East. While the latter suit cannot be attributed to the concentrated efforts of the government in its fight against high prices, it is part of the general campaign, as one of the charges against the producers is that they conspired to increase and maintain high prices for their product.

The senate's investigation of the coal industry was authorized in the adoption of a resolution by Senator Frelinghuysen, of New Jersey. Power is given the committee on interstate commerce to "make inquiry into the cause or causes which have brought about the enormous increase in the market price of coal, and to that end obtain full data regarding freight rates, wages, profits and other matters bearing upon the question" in order to determine "who or what may be responsible * * * whether due to economic causes * * * or whether due to manipulation or profiteering on the part of miners, shippers and dealers in coal."

Charges of various kinds have been made in the house and senate against the coal operators and others connected with the industry. Congressman Huddleston, of Alabama, who introduced a bill to regulate the coal, iron and steel and other industries, accused the National Coal association of bad faith in its efforts to get the public to buy coal now. He said there is no car shortage as alleged, there is not a labor shortage as charged, nor any other grounds for the agitation to "buy coal now" at unwarranted prices.

While the house and senate will take the necessary time to investigate the various causes contributing to the cost of living, the department of justice is expected to act promptly. This was indicated in the filing of suit in the New Jersey district court of the United States against the cement producers. The Universal Portland Cement Co., a subsidiary of the United States Steel Corp., is not a defendant in the case. The defendants named are the Atlas Portland Cement Co., the Allentown Portland Cement Co., the Alpha Portland Cement Co., the Bath Portland Cement Co., the Coplay Cement Mfg. Co., the Dexter Portland Cement Co., the Edison Portland Cement Co., the Giant Portland Cement o., the Glens Falls Portland Cement Co., the Hercules Portland Cement Co., the Knickerbocker Portland Cement Co., the Lawrence Cement Co., the Lehigh Portland Cement Co., the Nazareth Portland Cement Co., the Penn-Allen Cement Co., the Pennsylvania Cement Co., the Phoenix Portland Cement Co.,, the Security Cement & Lime Co., and the Vulcanite Portland Cement Co.

Among the charges against the cement producers is one that they formed an "unincorporated association" for the control of the cement industry of the East.

Col. Marting Presented with Loving Cup

Col. Henry A. Marting, president of the Marting Iron & Steel Co., Ironton, O., was presented with a large silver loving cup by the people of Ironton, Aug. 15, in recognition of his services to the city. The presentation was made by a committee representing the citizens and two officials of the chamber of commerce in the presence of Col. Marting's family. It was purposed to have a public presentation at the opening of a hotel, which Colonel Marting's assistance made possible for the city to have, but following the advice of the colonel's physicians who feared the excitement might have an adverse effect on his health, the ceremony was limited. In accepting the loving cup, Colonel Marting announced a gift of $38,000 to the Ironton Y. M. C. A., for the erection of a building on property which he formerly gave for the project. Colonel Marting's benefactions, his interest in public affairs, and his affection for the people of Ironton have enshrined him as "Ironton's most public spirited and most generous citizen."

To Build Foundry

The T. W. Price Engineering Co. recently has completed the design and purchase of equipment for a large rolling mill to be installed in Japan, and also at the present time is engaged in making plans for a large foundry for making cast iron pipe, by the new process known as the "centrifugal cast iron pipe process," which has proved very satisfactory in an installation at the plant of the National Iron Works, Toronto, Ont. The Price Engineering company will continue the construction and installation of electric furnaces of improved design. For some years T. W. Price has been identified with the development and installation of electric furnaces, having installed and placed in satisfactory operation a number of electric furnaces in this country, and having also sold a number of furnaces in Japan. J. L. Dixon, an electric furnace engineer, recently has become affiliated with the company and he will aid in designing the new line. In addition to the electric furnace business, the T. W. Price Engineering Co. will continue the practice of consulting engineering, specializing as heretofore in the design of foundries, rolling mills, forge shops, and also special machinery and processes.

Recently started at the School of Arts of the Carnegie Institute of Technology is a course in ornamental modeling, both iron and brass. The student is taught to mold in clay, to transfer the model to plaster paris and then to metal. Night and day classes are held.

A French-Belgian Economic War

Manufacturing Interests in France Opposing Belgium's Plans For Increasing Exports of Finished Products—Strong Trade Barriers May be Erected—French Employers and Employes Smooth Out Differences

BY FRANCIS MILTOUN

Paris Correspondent of The Iron Trade Review

CONSIDERING the metal trades as characteristic of the bulk of the interests and industries of northeastern France and Belgium, Belgium's prewar situation for disposing of her finished products was by no means as favorable as that of France.

Outside four or five cities, from Louvain to Ypres, which were blotted out or stunted in their growth by the Germans, Belgium suffered little on-the-surface damage. France's wounds are everywhere visible. Belgium did undergo requisition and looting to the extent that nearly a million of its population today are without work from the fact that there are no raw materials, no tools or machines left in their stripped factories which they can put into operation. This is the situation *en plein.*

Northern France was essentially different as to its industrial organization from that of Belgium. France largely produced finished articles in most branches of the metal industries, while Belgium in the majority of cases supplied only raw materials or semifinished products.

These conditions were due to the prewar relations of Belgium and France with contiguous countries, relations based on import restrictions and customs dues, one or the other equally effective to encourage or strangle trade, depending upon whom they favor.

Belgium today is looking for a lowering of the barriers, as well as looking for means of fitting up its factories anew so that it may export finished locomotives and tractors and other machinery instead of merely rails, rough forgings and castings and boiler plates.

So far as France is concerned, the interests of the country oppose this elaboration of Belgian policy, even more than they would a similar policy of some overseas country where the same line of manufactured products were concerned. As an economic policy it is good for France and bad for Belgium. The fact that the countries are contiguous makes the status the more acute in that things point to legislation on both sides which will define the limits of mutual trade intercourse. It will not be a trade war, but rather an economic one.

France with her tutelage over the basin of the Saar and its coal fields, and of the whole of the Briey and the Lorraine iron fields, is more self-sufficient than ever. For this reason alone she can afford to be generous in her policies with relation to Belgium, at least not to antagonize her in foreign markets.

The fact is the case for Belgium is serious, and without question she looks to the United States to put her on her industrial feet again, either by supplying capital in association with American concerns, or by extending credit for machines and tools which she needs at once.

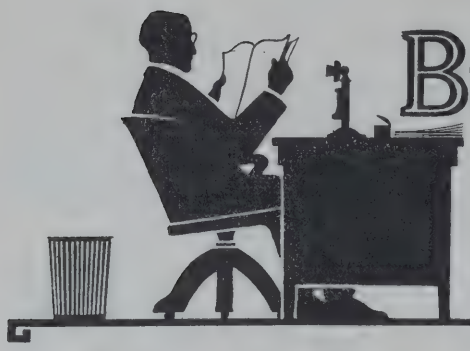
* * * *

Decentralization has ever been a policy of the French. Paris, however, still remains the greatest manufacturing center of the country. The great disaster which befell the French iron and steel industry in the war was due to the fact that so much of the industry bordered upon the frontiers of the north and east. The location was in line with an economic policy which was sound enough had one not to reckon with the possibility of war and invasion.

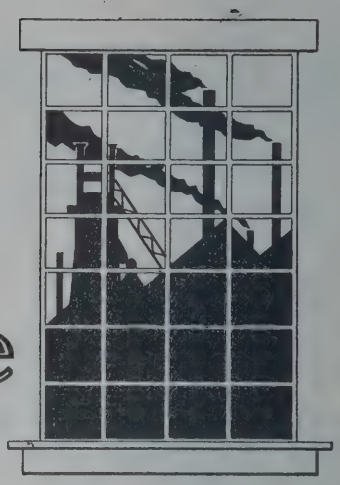
Outside Paris the greatest centralization of manufacturing industry in France is in the Lyons-Saint Etienne-Roanne district in central France. Lyons is the second city of France, with a population of a little less than half a million before the war and now well on to a million, approximately 300 miles from Paris by road or rail and somewhat less as the airplane flies.

The associated metallurgic industries of Lyons have produced some interesting statistics which prove the virtues of decentralization. Without specifying as to what part of it was due to war work, the whole industry of Lyons has taken a remarkable leap to the fore. From an index number of 100 for 1913 the metal trades have advanced to 155, 172, 200, 204, 300 in successive years to the beginning of 1919.

During the same period there were 291 individuals or firms dealing with 32,600 customers for fully finished products and 608 firms dealing with 15,000 customers in semifinished products. These figures show a wide distribution of home products.



It is symptomatic that when the employers of the French metal industry and the employes recently got together to discuss the 8-hour day they fell into complete accord. The two elements opposed their respective signatures to an agreement which recognized the 8-hour day for application in the metallurgical industry, mining, naval construction and electrical enterprises—a perfect accord. The convention marked a big step forward, the more so since 53 groupments or syndicated special trades, all born of the metal industry, put their stamp of approval on it. The workmen's federation, on its side, is one of the most powerful bodies of the proletariat in France.



* * * *

The chamber of commerce of Paris recently began a series of conferences on "Commercial Camouflage." France fears the introduction of enemy products under the guise of their being French, lacking any label which shall indicate the country of origin. Primarily the movement is against German-made goods, files, locks, door hinges, bolts and nuts. Krupps used to accept order for a thousand bolts valued at but a few dollars. No order was too small and it received the care and consideration of an order for millions. There was no reason why France should have not kept this business at home. Today the "Made in Germany" will be less popular than it was before; one wonders if for business reasons it will not disappear.

France is seeking to protect her own industries and products by the adoption of a national trade mark, UNIS-FRANCE, or simply U-N-I-S. It should be sufficient, once the idea is thoroughly propagated. The only criticism from the American manufacturer who hopes to import his goods in France is that it looks as though it was an abbreviation, or a coined contraction, of Etats-Unis, United States.

Little Stories of Business Life

Senators Do It

THE commodious home of the national engineering societies in New York was made possible largely through the generosity of the late Andrew Carnegie. Its construction was supervised by a rather large committee, including representatives from each society, and one thing which impressed the old iron-master was the perfect harmony of its workings. In his address at the dedication exercises he commented especially on this fact, observing that such an absence of friction would hardly have been possible in Scotland. "Over there," he explained, "it would doubtless have been like the case of Sandy and MacDougall. Sandy was walking down the village street one evening and passed MacDougall's house.

"'Where ye gaen, Sandy?'

"'Oh, juist doon tae th' inn tae contradic' a bit.'"

Uxtry! Coke Mine Discovered

AN article which appeared recently in the *Shreveport (La.) Times,* ought to be of interest to the iron and steel industry in general and to blast furnace operators in particular. The item follows:

"According to the head of (a stated) steel company, recent discoveries of coke, suitable for use in the manufacture of iron and steel, and existing in large quantities near Howe, Okla., about 165 miles from Shreveport, changed the original plans of the company to locate its plant at Beaumont, Tex. The haul of the raw material and coke and limestone is much shorter to Shreveport than to the Texas city. One other city is under consideration as a possible location, namely, Texarkana. The location in Shreveport, however, it was conceded, has many superior advantages."

Looks Easy, But . . .

GETTING the other fellow's viewpoint is an interesting process. Recently at the plant of the Youngstown Sheet & Tube Co., according to the employes' new paper, *Bulletin,* a foreman took occasion to rebuke one of the laborers in regard to the number of days absent. The foreman showed his own attendance card, which indicated an excellent record, and remarked if he could be on the job regularly the man also should be able to do so.

The culprit shook his head and said with a shrug: "You give me easy job like you, sit around all day, do nothing, me come out every day, too."

A Real Literary Gem

HERBERT N. CASSON, in *The Romance of Steel,* tells of an English editor who once asked the late Andrew Carnegie to write an article on "Organization in Business." The busy steelmaker said he could do it, but feared his price might be too high.

"Then name your own price," retorted the delighted editor.

"Well, I couldn't let you have it at less than the knowledge has cost me, could I?" he replied. "Suppose we say $5,000,000—and that will be very much under cost."

Zero in Investigations

ACCORDING to a correspondent of *The Railway Age,* it cost the valuation department of one of the large railroads of the country $21,849 to ascertain the fact that it cost one-tenth of a cent to drive a track spike. The advisory board of the railroad consisted of a valuation engineer, two assistant valuation engineers and an engineer of unusual ability. This board held a conference lasting two and one-half months to learn all about track spikes; what they were, their use, etc. Detailed figures of the cost of the advisory board's, accountant's' clerks' and stenographer's time, stationery, printing, etc., aggregated $5827.50. Then 176 railroads were written to asking for details of the methods and cost of spike driving. These roads took the matter up with 1760 roadmasters, who in turn obtained the opinions of five section foremen. The detailed expense in this connection totaled $13,621.25. The advisory board then decided to have a practical demonstration of track spike driving and invited 50 valuation engineers to be present. Time and traveling expenses for the 50 engineers was figured at $2400, which brought the total cost of the investigation to $21,848.75. One Mike O'Reilly, a section hand, was selected to drive the spike. The official time was 10 seconds and on the basis of 40 cents per hour, the cost of driving the spike was one-tenth of a cent.

Buying Them on the Hoof

IN the old days it was customary to value the services of a man according to what he possessed above

the neck. Under the new industrial order to which some alleged sociological experts insist the world is coming, this will all be changed. A forerunner of the new scheme is seen in a serious notice recently published in a New York daily. It called attention to a chance for 100 former service men to obtain immediate employment through the re-employment bureau which has received a call from the Merchant's Shipbuilding Corp., Bristol, Pa.

According to the notice "men weighing between 135 and 150 pounds will be started at the rate of 46 cents an hour and will be advanced to 58 cents at the end of 12 days. Men who weigh 160 pounds or over will be started at 54 cents an hour and will be advanced to 70 cents just as soon as their work warrants the increase. The men later are to be put on piece work, which pays more than the wages quoted."

Manganese Production is Decreasing

Reports sent by operators of manganese mines to the United States geological survey covering the first three months of 1919, show that the shipments of manganese ore during that quarter were much smaller than during any other quarter since 1917. The shipments of high-grade ore were 23,937 tons, against 75,465 tons during the last quarter of 1918 and 305,869 tons during the entire year. The number of shippers was only 24, against 247 during the year 1918.

The extraordinary decrease in shipments is due to the unwillingness of the makers of ferromanganese to increase further their rather large stocks of ore, which were purchased at high prices, especially as there is now only a small market for the alloy. Early in November, 1918, the stocks of high-grade ore and ferromanganese were equivalent to nearly nine months' supply, the price of 50 per cent ore ranged from $60 to $67 a ton, and the price of 80 per cent ferromanganese was $290 a ton. In June, 1919, the prices offered for 50 per cent ore by the few furnaces that were making purchases ranged from $25 to $35 a ton and the price of 80 per cent ferromanganese ranged from $110 to $125 a ton.

Practically all the ore shipped during the first quarter was material delivered on contracts made before Nov. 11, 1918. The outlook of the domestic ore industry is gloomy, and there is no reason to change an earlier estimate that the shipments for the year will probably not exceed 60,000 tons.

Program is Announced

Many Technical Papers are Scheduled for Chicago Meeting of Mining and Metallurgical Engineers—To Visit Plants

FINAL arrangements for the annual meeting of the American Institute of Mining and Metallurgical Engineers to be held at the Congress hotel, Chicago, Sept. 22 to 25, inclusive, are nearing completion. The program covers a wide range of activities. All-day excursions have been arranged for Tuesday, Thursday and Friday. On Tuesday members will visit the plant of the Illinois Steel Co., Gary, Ind.; Thursday they will go to the La Salle district for an inspection of coal mines, cement works and other industries, and on Friday they will participate in all-day excursions to North Chicago, East Chicago, Milwaukee, Whiting, and other points. Technical sessions will be held on Monday and Wednesday. On Monday evening members of the institute will be entertained at a smoker, given by the Chicago University club and on Wednesday evening a banquet, followed by dancing, will be held at the Congress hotel.

Of the large number of papers to be presented at the technical sessions, the following are of particular interest to men of the iron and steel industry:

SESSION ON INDUSTRIAL ORGANIZATION
Monday, September 22, 2 p. m.

Method of Curtailing Forces at the Copper Queen. By Charles F. Willis.

Educational Methods at the Copper Queen. By Charles F. Willis.

Physical Examination Previous to Employment. By Charles F. Willis.

SESSION ON IRON AND STEEL
Tuesday, September 23, 2 p. m.

Blast-furnace Refractories. By Raymond M. Howe.

Effervescing Steel. By Henry D. Hibbard.

Aircraft Steels. By Albert Sauveur.

Determining Gases in Steel and the Deoxidation of Steel. By J. R. Cain.

Effect of Time and Low Temperature on Physical Properties of Medium-carbon Steel. By G. A. Reinhardt and H. L. Cutler.

Erosion Tests of Rifle Barrels. By A. E. Bellis.

Metallography of Rifle-barrel Steel. By G. F. Butterworth.

SESSION ON IRON AND STEEL
Tuesday, September 23, 8 p. m.

Industries of the Chicago District. By T. W. Robinson. Lantern slides, etc.

Manufacture of Steel Rails. By Robert W. Hunt.

The World's Largest Plate Mill. By C. L. Huston.

SESSION ON IRON AND STEEL
Wednesday, September 24, 10 a. m.

Cooling Properties of Technical Quenching Liquids. By N. B. Pilling and T. D. Lynch.

Differential Crystallization in Cast-steel Runner. By Francis B. Foley.

Manufacture and Properties of Light Wall Structural Tubing. By H. J. French.

Oxygen in Cast Iron and its Application. By Wilford L. Stork.

Graphitization of White Cast Iron upon Annealing. By Paul D. Merica and L. J. Gurevich.

Experimental Data Obtained on Charpy Impact Machine. By F. C. Langenberg.

Heat Treatment of Cast Steel. By John H. Hall, Arvid E. Nissen and Knox Taylor.

Deep Etching of Rails and Forgings. By F. M. Waring and K. E. Hofammann.

SESSION ON PYROMETRY WITH SPECIAL REFERENCE TO IRON AND STEEL METALLURGY
Wednesday, September 24, 2 p. m.

Report of the Pyrometer Committee of National Research Council. By George K. Burgess.

Pyrometry in Blast-furnace Work. By P. H. Royster and T. L. Joseph.

Pyrometry and Steel Manufacture. By A. H. Miller.

Electric Open-hearth and Bessemer Steel Temperatures. By F. E. Bash.

Some Thermal Relations in the Treatment of Steel. By Charles F. Brush. Illustrated by lantern slides.

Pyrometry in the Tool Manufacturing Industry. By J. V. Emmons.

Rate of Heating and Cooling of Large Ingots for Forging. By F. E. Bash.

Obituaries

John N. Benson, vice president of the Big Savage Fire Brick Co., Frostburg, Md., died Aug. 3. He had been connected with the fire brick industry for many years.

William Henry Trippett, secretary of Henry Bessemer & Co., Ltd., Sheffield, England, died recently. He had been connected with the company for about 35 years and prior to 1912 was its chief clerk. At that time he was appointed secretary.

John Frank Harden, chief clerk of the Philadelphia office of the Carnegie Steel Co., died Aug. 9, at Abington hospital, Jenkintown, Pa., of complications following pneumonia. He had been connected with the Philadelphia office of the Carnegie company for 15 years.

Colin Kennedy, manager of the Vancouver branch of the A. R. Williams Machinery Co., died recently at Vancouver. He was well known as a machinery traveler and previous to his going to the Pacific coast was connected with the Warnock Edge Tool Works, of Toronto.

Edward P. Bates, president of the E. P. Bates Co., Inc., Syracuse, N. Y., died recently in Butte, Mont. He was 75 years old, and was a member of the American Society of Mechanical Engineers and the American Society of Naval Architecture and Marine Engineers. He established the firm that bears his name, and which is one of a chain of engineering and water system offices maintained throughout the east, in Syracuse in 1876.

Resuming Work at Ore Docks

Operators Plan to Rush Shipments as Railroad Shopmen Return—Dockmen at Duluth and Two Harbors Back, While Those at Marquette, Escanaba and Ashland Hold Conferences—Mines Short of Men

(Special Correspondence)

DULUTH, Aug. 16.—Mining and other industrial enterprises at the head of the great lakes were demoralized as a result of the tieup at the ore docks, brought about through the railroad shopmen's strike, which fortunately has just been called off. It was the first time in the history of the upper lakes mining industry that the handling of iron ore at the docks was stopped entirely in the busiest part of the season through labor difficulties. First the railroad shopmen went out, and as locomotives and rolling stock would soon have become inoperable for want of attention, the railroad administration placed an embargo against shipments of ore from the mines to the docks. The men on the Duluth, Missabe & Northern railroad and the Soo and Northern Pacific railroad docks at Superior did not strike prior to the embargo. They have been ordered to resume work immediately on ore shipments.

The men on the Great Northern docks at Allouez struck for higher wages, and Duluth & Iron Range railroad dock operators at Two Harbors made demands after they were laid off. They, with the striking dockmen at Ashland, Wis., Escanaba and Marquette, Mich., have been notified that they must return to work before any attention will be paid to their demands.

Later advices were to the effect that dockmen at these three ports were still out Aug. 19. At a conference in Marquette Aug. 18 they failed to reach an agreement among themselves to return, and were to resume their conference the following day. Most of the dockmen at Duluth and Two Harbors have returned to work.

It is believed all the disputes will be satisfactorily adjusted and that shipping will be active from now on until the end of the season. Up until ten days ago, when the strike developed, independent operators were planning to increase operations. They are now taking up the work where they left off, and it is predicted that larger shipments of ore to the docks will be made during the next few weeks.

A majority of authorities in the trade generally hold optimistic views regarding the season's shipments. It is assumed that the independents will make special efforts to rush ore down the lakes during the closing weeks of navigation, but those in close touch with the situation are skeptical of their ability to obtain a sufficient number of miners. Large numbers of aliens are leaving for Europe. "We are losing our best miners," one operator said.

In the event of a substantial increase in demand for ore it is assumed that efforts will be made to speed up work at the low-cost open pits, and that labor will be conserved through closing down underground properties, as was done last season.

The outlook for manganiferous ores interests on the Cuyuna range is not cheerful, for the reason that there is no demand for their product, substantial tonnages having been carried over from last season at Lake Erie docks.

J. H. McLean, general manager of the Oliver Mining Co., said that the Oliver forces on the Lake Superior ranges, approximating 11,000 men were held intact during the strike by development work and stockpiling. The company is now in position to rush large tonnages to the docks. The company's washing plant, located near the Leonidas pit shaft in the Eleventh district, has been completed. It has a 35-foot log washer and an attempt will be made to wash ore without the use of tables or turbos, reducing cost and saving time.

Another mining village on the Mesabi range has moved. Houses near the Stevens mine, noted for years as being one of the best planned mining communities, have been taken to Aurora. The buildings were erected 15 years ago. The mine was taken over by the Oliver Mining Co., and operations suspended, it being decided to hold the ore in reserve.

The industrial situation at Duluth is improving. Prominent local interests have acquired a building for the establishment of a large stove foundry. The McDougall-Duluth Co., has announced it will erect a steel casting plant to be operated in connection with the Duluth Iron Works plant in West Duluth, a subsidiary enterprise. Two units will be constructed, the first of which will be ready to go into operation by Oct. 1. The furnaces will have a capacity of 15 tons each, sufficient, it is estimated, to supply the present needs of the trade in this territory. Incidentally, the McDougall-Duluth Co.'s shipyard is now employing a force of over 4700 men.

The Minnesota Steel Co. is still marking time at its plant here. The furnaces are being operated at about one-third of their capacity but various improvements have been made in the plant which is now equipped to make light steel rails.

Further assurance has come from Judge E. H. Gary, chairman of the United States Steel Corp., that the promise made by him last October to erect four finishing mills for steel products at Duluth at an estimated expenditure of $10,000,000 will be carried through "as soon as industrial conditions become adjusted to a more normal basis."

U. S. Coal Price is Low

According to an official statement made upon request by the board of trade in parliament, the comparative prices per ton of coal at the pit head in Europe and America average as follows: Scotland, $6.94; Great Britain excluding Scotland, $7.04; United States, June, 1919, $2.68; France, June, 1919, $8.64; Belgium, 1917, $4.32; Spain, 1917, $9.36. The average price of coal at the pit head in the United Kingdom in 1913, the last prewar year, was $2.43 per ton. The British production price is therefore practically two and a half times as great as the corresponding price in America and nearly three times as great as the corresponding price in the United Kingdom before the war.

The American chamber of commerce in London further points out that in 1917 the American production per worker was 770 tons while the British equivalent was about 240 tons, and that the British production is still declining while the American production is still advancing.

The Beverly Tool & Machinery Co., Beverly, Mass., has filed a voluntary petition in bankrupcy in Boston with liabilities of $4556 and assets of $4513.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

DR. MILTON L. HERSEY, who has been elected president of the Canadian company, located in the New Birks building, Montreal, Que., recently organized by the General Combustion Co., Chicago, manufacturer of industrial furnaces, is affiliated with a large number of industries in Canada. These include the Steel Co. of Canada; the Canadian Tube & Iron Co.; the Colonial Wire Mfg. Co.; etc. Vice presidents Wm. T. Dean and Max Sklovsky are principal owners of the parent company in Chicago and also hold executive positions in it. P. J. Woolf, secretary and treasurer, recently was released from military service and the Canadian company's managing director, Norman M. Campbell has been actively associated for a number of years with the Canadian Ingersoll-Rand Co., and occupies a place on its board of directors. H. H. Vaughan, who is a director of the Canadian General Combustion Co., is a past president of the Engineering Institute of Canada, is vice chairman of the Canadian Engineering Standards association, and is associated prominently with a number of Canada's industrial companies, including the Dominion Bridge Co., Dominion Copper Products Co., the Armstrong Whitworth Co. of Canada, etc.

Robert Moore, foreman of the operation department of the Noiseless Typewriter Co., Middletown, Conn., has been promoted to assistant superintendent.

E. H. Mangan has been appointed plant engineer of the crystolon plant in Chippawa, Can., of the Norton Co., Worcester, Mass., to succeed R. R. Pratt, resigned.

Harry Goldberg has been made manager of the branch office recently opened in Detroit by the Loewenthal Co., Chicago, maker of a number of kinds of ingot metals.

William D. Hannah, chief fuel inspector of the Grand Trunk railroad, with headquarters at Montreal, Que., has retired after 40 years of continuous service with this road.

A. G. Nutter has been placed in charge of the recently opened branch sales office at 145 St. James street, Montreal, Canada, by Wonham, Bates & Goode, Inc., 17 Battery place, New York.

Judge Will Cummings was elected president of the Southern Foundry & Machine Co., Chattanooga, Tenn., at its recent organization. E. D. Herron was elected vice president and general manager.

Thomas McCollum, a fuse inspector for the Ensign-Bickford Co., Simsbury, Conn., has completed 44 years of service with the company. He began work when 12 years old and is the oldest employe.

L. W. Cash, who for the past two years has been purchasing agent for the Wisconsin Parts Co., Oshkosh, Wis., successor to the E. B. Hayes Machinery Corp., has resigned, effective Sept. 1.

Maurice Mary, 16 rue du Rocher, Paris, is calling on Worcester, Mass., builders of machinery and machine tools for the purpose of purchasing to equip devastated industries in France.

Frederick H. Paine, first vice president of the Greenfield Tap & Die Corp., Greenfield, Mass., has been admitted as a general partner in the firm of Tucker, Anthony & Co., investment securities, and members of the New York and Boston stock exchanges.

A. Newman resigned recently as tool room foreman for the Heald Machine Co., Worcester, Mass. Horace Olliver, who has been foreman of the grinding department for two years, recently was transferred to the service department.

G. Yana, representative of the Toyeda Textile Machine Co., Noyaga, Japan, is visiting textile machinery builders in Worcester, Mass., for the purpose of studying methods of operation and production with the intention of reproducing them in Japan.

John H. Bride, Bristol, Conn., for the past three years office manager of the Rockwell-Drake Corp., Plainville, Conn., who has resigned to engage in business with his brother, has been presented an Elk's watch charm by his associates.

Robert F. Herrick, Milton, Mass., president of the Reed-Prentice Co., Worcester, Mass., and several other Massachusetts industries, has declined appointment to the Massachusetts Street Railway commission because he is going to South America.

N. S. Braden, formerly sales manager of the Canadian Westinghouse Co., Ltd., Hamilton, Ont., has been elected vice president of the company and H. N. Bostwick, who has been assistant sales manager, has been appointed sales manager, succeeding Mr. Braden.

Maj. T. F. Flynn, senior officer in charge of the government work at the plant in connection with the New Britain Machine Co., New Britain, Conn., has been transferred to the government works in Alliance, O., where he will be in charge of the heavy ordnance construction.

Carl F. Dietz was appointed vice president and general sales manager of the Norton Co., Worcester, Mass., when the Norton Co. and the Norton Grinding Co. were combined. W. LaCoste Neilson became vice president and foreign manager; Herbert Duckworth and Howard W. Dunbar became sales managers of the grinding wheel and grinding machine divisions, respectively; and John C. Spence and Charles H. Norton became superintendent and chief engineer, respectively, of the grinding machine division. These appointments are in addition to those noted in the July 3 issue of THE IRON TRADE REVIEW.

Thomas O. Morgan, formerly head of the service department of the New York office of the American Steam Conveyor Corp., Chicago, now is sales engineer in charge of Long Island and Connecticut territory. H. S. Valentine has been made sales engineer in charge of Philadelphia territory, with headquarters in the North American building, Philadelphia. Mr. Valentine is a mechanical engineer and formerly was affiliated with the Link Belt Co., Philadelphia, for over five years; with the Brown Hoisting Machinery Co., and the Yale & Town Mfg. Co., for about six years and with the Badenhausen Co., New York, manufacturer of water tube boilers, for about one year.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

GEORGE N. PEEK, formerly vice chairman of the war industries board and former vice president of Deere & Co., Moline, Ill., has been elected president and general manager of the Moline Plow Co. to fill the vacancy caused by the retirement of Frank Gates Allen, head of the plow company for many years and largely responsible for its development to present proportions. Mr. Allen will remain in an advisory capacity until Jan. 1 when he will devote his efforts to personal affairs. Mr. Peek will take up his new duties shortly. The Moline Plow Co. now is controlled by the Willys-Overland Co. At the time this transfer of control was made Mr. Allen wished to retire, but agreed to remain as head of the concern until a suitable successor could be secured. The retiring president and general manager has been in active business for the past 38 years.

Edward Shearson, of Shearson, Hammill & Co., New York, has resigned as a director of the American Steel Foundries.

A. Bigelow, formerly with the Metz Automobile Co., Waltham, Mass., has been made superintendent of the brass and aluminum foundry operated by the Rider-Bagg Co., Springfield, Mass.

James Savage, formerly of Brooklyn, N. Y., now is foundry superintendent for the Atkinson Co., Rochester, N. Y., successor to Clum & Atkinson.

Frederick M. Risler has been appointed manager of the office established at 6 Church street, New York, by the Gardner Machine Co., Beloit, Wis., maker of polishing and grinding machinery.

W. T. Howell, who formerly was affiliated with the Stewart-Warner Speedometer Corp., Beloit, Wis., has been appointed superintendent of foundries for the Emerson-Brantingham Implement Co., Rockford, Ill.

J. H. Hogue will on Sept. 1 become foundry superintendent for the French Oil Mill Machinery Co., Piqua, O., having resigned his connection with the Great Western Mfg. Co., Leavenworth, Kans.

W. J. Lynch, formerly with the Reliance Coal & Coke Co. and the United Coal Corp., has associated himself with the Pittsburgh office of Eaton, Rhodes & Co., and will handle sales in this office of by-product, steam and domestic coal.

Harold A. Wright, who for five years was sales manager of the Hendey Machine Co., Torrington, Conn., now is factory representative of a general line of machine tools and has established headquarters at 1101 Scollay building, 40 Court street, Boston.

Robert L. Kift, formerly vice president and general manager of the Bethlehem Construction Co., has resigned and purchased the entire stock of the Lehigh Structural Steel Co., Allentown, Pa. Thos. R. Mullen, formerly of the Austin Co., is general manager of sales.

B. F. Bart has been appointed district sales manager for the Standard Seamless Tube Co., Pittsburgh, in territory comprising New York, Philadelphia and New England. New headquarters have been established at room 1232 Tribune building, 154 Nassau street, New York City.

F. J. McGrail, who now has charge of the foundries operated by the Honolulu Iron Works Co., Honolulu, Hawaii, formerly was superintendent of the Struthers-Wells Co., Warren, Pa., for eight years. Prior to that time, he was affiliated with the Henry R. Worthington Pump Co., Harrison, N. J.

W. L. Tedford, who was discharged as a captain from the United States army last May, has been appointed European representative for the Commonwealth Steel Co., St. Louis. His headquarters will be at Paris, France. President Clarence H. Howard of that company, recently returned to St. Louis, after an extended tour of France, Belgium, England and Scotland.

R. E. Blood has opened offices at Room 523 in the Hudson Terminal building, 30 Church street, New York, as eastern representative of the Lockhart Iron & Steel Co., Pittsburgh, and also of the Pittsburgh Rivet Co., of that city. Mr. Blood for the past 20 years has been associated with the American Locomotive Co., serving in the last five years as assistant to the vice president.

Andrew K. Barr recently was made foundry superintendent of the Wakefield, Mass., branch of the Gibby Foundry Co., Boston. Formerly he was foreman patternmaker with Davis & Furber Machine Co., North Andover, Mass., for more than six years.

Lyman F. Copeland, a highway bridge engineer for the bureau of public roads, Washington, has been sent to Colorado, Arizona, New Mexico and other places in the west to work on the designs of steel bridges used over the large rivers there. He is a graduate of the class of '08, Worcester Polytechnic institute, Worcester, Mass.

J. L. Dixon, formerly connected with the John A. Crowley Co., is now associated with the T. W. Price Engineering Co., Woolworth building, New York, as metallurgist and electric furnace engineer. Mr. Dixon has had a wide experience in the design, installation and operation of electric furnaces, covering a period of over 11 years.

J. H. Jackson recently was discharged after serving 18 months as a lieutenant in the United States army, and was appointed sales manager of the Pittsburgh Gear & Machine Co., Pittsburgh. He succeeds W. H. Thompson.

William H. Woodin, president of the American Car & Foundry Co., has been elected a director of the American Locomotive Co., to succeed the late George R. Sheldon. W. Spencer Robertson of the American Locomotive Co., also has been elected a director to succeed Harry Bronner, who resigned because of the press of other matters.

Leonard B. Miller, member of the ore firm of Oglebay, Norton & Co., Cleveland, has returned to his desk after an illness of two and one-half years. Mr. Miller was spending his vacation in New Smyrna, Fla., when taken ill. The local physicians there and in Daytona had difficulty in diagnosing his disease, and finally it was necessary to bring him to Cleveland in a private car, where he entered a hospital. Transfusion of blood was resorted to, after which an operation was performed on his hip. He was in the hospital two years. Mr. Miller has been with Oglebay, Norton & Co., for about 40 years, and was in active charge of the company's mining operations.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

GEORGE W. SHORT has tendered his resignation as vice president and general superintendent of the Sharon Steel Hoop Co., Sharon, Pa., to take effect Aug. 30. Mr. Short has been connected with the company for the past 12 years commencing as superintendent of the open hearth and blooming mill departments, subsequently being made general superintendent of the plant. In 1910, he was elected vice president of the company. He is a director of the recently formed Slick-Knox Steel Co.

Charles D. Reeve now has charge of an office established at Grand Rapids, Mich., by the Wilcox Pressed Steel Co., Chicago.

Col. Charles Clifton at a recent meeting was elected chairman of the board of directors of the Pierce-Arrow Motor Car Co., Buffalo. John C. Jay Jr. was made president of the company.

John Barton Payne's appointment by President Wilson as chairman of the United States shipping board has been confirmed by the senate. He succeeds Edward N. Hurley, who has resigned. Mr. Payne, like Mr. Hurley, is from Chicago.

Charles Yon is president and Lawrence Snapp, secretary and treasurer of the United Fuel & Iron Co., which has opened offices in the House building, Pittsburgh, to deal in coal, coke and scrap iron. L. E. Huggins has been appointed assistant manager of sales of the coal department.

Will H. Brown has been appointed supervisor of purchases and material for the Nordyke & Marmon Co., Indianapolis, succeeding J. H. O'Brien, who resigned recently. Mr. Brown has recently returned from France, where he served as a lieutenant in charge of motor transport of Base Section 1, American expeditionary forces.

E. W. Wallbank, who formerly was tool designer with the Savage Arms Corp., Sharon, Pa., has been made superintendent for the Parkersburg Rig & Reel Co., Parkersburg, W. Va. At one time, Mr. Wallbank was foreman machinist with the New York Yacht & Engine Co., New York City; foreman patternmaker with the Producers' Supply Co., Franklin, Pa., and tool designer with the General Electric Co., Erie, Pa. He also has contributed various articles on pattern-making and molding methods to *The Foundry*.

W. P. Clark, who for the past two years has been connected with the Bullard Engineering Works, Inc., Bridgeport, Conn., as works manager of its gun plant in the manufacture of 155-milimeter guns has resigned to become affiliated with the Metal Ball Co., Danbury, Conn. Mr. Clark has become financially interested in the company and will be its treasurer and general manager.

Louis Resnick has been appointed director of publicity for the National Safety Council, Chicago. He formerly was general manager of the Associated Trade Press, of which he was the founder. Prior to that he was connected with the Associated Press for about four years, first as editor of the night bureau at St. Louis and later as editor of the west wires in the central division office at Chicago.

J. Leonard Replogle, who was awarded the decoration of chevalier of the Legion of Honor by the French government in recognition of services in connection with the direction of munition manufacture and distribution during the war, was formally invested by the French ambassador at the Johnstown chamber of commerce community picnic at Luna park, Johnstown, Pa., Aug. 19.

William H. Moreman, who has been connected with the Truscon Steel Co., Youngstown, O., for about 11 years, latterly as superintendent of the sash department, has resigned. He has been made general superintendent of the Milwaukee Corrugating Co., Milwaukee, effective Sept. 1. He entered the employ of the Truscon company as a machinist and after a series of promotions became department superintendent.

S. I. Sterret has resigned as purchasing agent for the Republic Iron & Steel Co., Youngstown, O. He will be employed in an executive capacity by the Kelly Island Lime & Transportation Co., Cleveland. S. H. Hedges, formerly assistant purchasing agent of the Republic company, has been named to succeed him. Edgard F. Kidd, recently promoted to the position of assistant traffic manager, is expected to be appointed general traffic manager to succeed the late Henry R. Moore.

Charles L. Allen, president and general manager of the Norton Co., George F. Fuller, president and treasurer of the Wyman-Gordon Co., and Lucius J. Knowles, president of the Crompton & Knowles Loom Works, all of Worcester, Mass., and Harding Allen, Barre, Mass., are trustees of the New England Farm and Food Foundation, which met in Boston, Aug. 9, when methods were discussed to encourage farm production with a view to cutting down the high cost of living.

Albert E. Newton, vice president and general manager of the Reed-Prentice Co., Worcester, Mass., and president of the National Machine Tool Builders' association, is said to be slated for the presidency of the National Metal Trades association, at its twenty-second annual meeting in New York, in April, 1920. He is a member of its administrative council at present and has been identified with the association for many years. He was the sixth president of the Worcester, Mass., branch, N. M. T. A., serving in 1910-11, since which time he has been a member of its executive board.

Meigs H. Whaples, secretary and treasurer of the Collins Co., Collinsville, Conn., and a director of the Pickering Governor Co., Portland, Conn., and the Stanley Rule & Level Co., New Britain, Conn., has been elected chairman of the board of trustees of the new Hartford-Connecticut Trust Co., Hartford, Conn. Other trustees are Charles E. Billings, chairman of the board of the Billings & Spencer Co., Hartford, and William A. Hitchcock, president of the Upson Nut Co., Unionville, Conn. Frank C. Sumner, who is president of the company, is a director of the Niles-Bement-Pond Co., the Peck, Stow & Wilcox Co., Southington, Conn., and the Plimpton Mfg. Co., Hartford.

War Labor Board Ends Its Work

Final Act is to Grant 12 Per Cent Increases in Wages in Ten Traction Cases—Labor Adjustment Service of Department of Labor Now Sole Federal Agency for Settlement of Disputes

WASHINGTON, Aug. 19.—The national war labor board terminated its activities last week with the adoption of resolutions declaring its work at an end. The granting of increases of approximately 12 per cent in wages in 10 traction cases was the last official act of the board. With its passing all labor disputes revert back to the labor adjustment service of the department of labor. Hugh L. Kerwin is director of this service, and was in charge of it before the war labor board came into being.

Of more than 1200 cases heard by the board, that of the Bethlehem Steel Co. in which the board's authority was questioned, stands out most prominently. In this case, however, the company agreed to permit collective bargaining, and the wage awards were taken up by the ordnance bureau of the army.

The end of the activities of the labor board was hastened by exhaustion of funds. There is a feeling that had the board been given more money it might have served for a longer time. Secretry Wilson of the labor department in July practically gave the board its opportunity to suspend when he sent the following letter:

"As the activities of the national war labor board which was created for the war emergency practically terminated with the close of the fiscal year, I want to take this opportunity of conveying to you and through you to the members of the employers and the employes groups and to the other officials of the national war labor board my sincere appreciation of the valuable and splendid work accomplished. I feel that the work of the war labor board contributed in large measure toward the solution of the economic and industrial problems with which the government was confronted during the world war."

While a full report of the board's work is not available now, the memorandum report of W. Jett Lauck, secretary, for the 12 months ended May 31, 1919, is of interest. According to that summary, 1270 cases were received by the board, 25 of which were consolidated with other cases, leaving 1245 separate controversies. In these, 462 awards and findings were made; 391 cases were dismissed, 315 were referred to other agencies, 23 were pending, 53 remained on the docket and one was suspended.

Cases were referred as follows: To the labor department's division of conciliation, 164; to the employment service, one; railroad administration, 13; navy, six; treasury, one; post-office department, eight; Emergency Fleet corporation, 10; war industries board, three; war labor policies board, one; fuel administration, six; federal oil inspection board, one; war department, 81; board members, 10; officers of international unions, 10.

Of the 391 cases dismissed, 93 were canceled for lack of jurisdiction; 11 for lack of agreement; 159 for lack of prosecution; 116 because of voluntary settlements, and 12 were withdrawn.

A monthly summary shows more cases reached the board last November than in any other month, the number being 275. September was second with 219. Decisions, however, were more numerous last March, 132 awards being made in that month, as compared with 99 in April.

Steel Plants May Close if Men Strike

PITTSBURGH, Aug. 19.—Although wide publicity has been given the announcement, emanating from William Z. Foster, secretary of the national committee of the American Federation of Labor for organizing the iron and steel workers of the country, that the result of a strike vote taken among the newly organized men would be made at a meeting of the committee in Youngstown, O., Aug. 20, the steel trade here refuses to become excited. While more or less interest is evident and the possibility exists that a general strike may be called for the purpose of gaining recognition for the union, few of the manufacturers are worried over the outlook.

Only in spots is there any real dissatisfaction among the workmen over wages or hours. The present "drive" of organized labor on the steel industry is not so much for the purpose of gaining for members of the union an increase in wages or a reduction in the number of working hours, but to compel official recognition of the unions. Of course, once this is gained other demands may follow.

What may be considered an answer to the demands of organized labor already has been made in a few cases. Officials of the Andrews Steel Co., and the Newport Rolling Mills, both at Newport, Ky., as long ago as June 28, discovered that the men were organizing, and since that date not a wheel has turned in either plant. The owners perceived that they would be called upon some time to negotiate with the unions and decided that it was preferable to suspend operations. Similar steps were taken by the Pittsburgh Steel Products Co., with plants at Allenport and Monessen, Pa., and by the Stark Rolling Mills at Canton, O.

Whether this will be the course of the entire steel industry is something for the future to disclose, but not a few officials of companies here believe that to shut the plants would be the most effective method of bringing the men to their senses. To be sure, all of the workmen in the steel plants have earned large wages in the past few years, but in the meantime, the companies also have earned considerable, but in contrast with the men, most of whom have been living right up to their incomes, the companies have put away sufficient funds to be able to stand a complete and indefinite shutdown much better than can the workmen.

Sheet and Tube Workers Publish Paper

Brimful of interesting items pertaining to its plant and its people, and well illustrated, the Youngstown Sheet & Tube Co.'s *Bulletin* has made its first appearance. Features of personal interest to the workers are interwoven with information relating to the operation of the plant. An editorial announcement says: "It is published by and for the Sheet & Tube people exclusively, and its purpose will be to pro-

mote better acquaintance among them, enlarge their understanding of the work upon which they are engaged, and stimulate their enthusiasm by giving them a wider view of the big institution with which they are connected."

Latest news is printed in regard to the employes' representation plan in operation at the plant, and another interesting article deals with the plan for co-operative buying to aid employes in reducing the cost of living.

"I am glad to see our employes begin the publication of a plant paper," wrote J. A. Campbell, president of the company, in sending his greetings. "At one time it was my privilege to know personally almost every man in our plant, but of course this is not now impossible for anyone. The new paper should at least help everyone to understand better the big organization of which they are a part."

Taylor-Wharton Adopts Works Council

The Taylor-Wharton Iron & Steel Co., High Bridge, N. J., has joined the ranks of those industries which are sharing with their employes the responsibilities of management. The officers long desired to apply the underlying principles of an industrial democracy, but the big problem in their minds was the development of a practicable plan.

After a study of various plans in operation the joint council plan generally was accepted as the best for adaptation to local conditions at High Bridge. It is desired by the company that the plan will be much more than a means of adjusting minor matters as they occur in the experience of the average workman.

A works council will be formed of representatives of the employes and of the management. The two sets of representatives will be equal in number and both will at all times have an equal voice and voting power in considering matters coming before the council.

Subject only to the right of the board of directors of the company to veto or annul, as stipulated in the constitution which was adopted by vote of the employes July 26, the works council may consider all matters of mutual interest, and decisions shall be final. The council on its own initiative may investigate and make recommendations to the management regarding the company's policies, problems of production, etc., and the management may refer matters to the works council for investigation and report.

The Taylor-Wharton Iron & Steel Co., in addition to the plant at High Bridge, owns the plant of Wm. Wharton Jr. & Co., Easton, Pa., having 850 employes, the plant of the Philadelphia Roll & Machine Co., Philadelphia, having 400 employes, and the plant of the Tioga Iron & Steel Co., Philadelphia, having 350 employes. At High Bridge the company has 750 employes and its plant is the only industry in the town. Its labor requirements are supplied by the surrounding rural country and villages as well as by the town of High Bridge. The relations between the company and its employes always have been pleasant and the company is the dominating factor in promoting the general welfare of the community.

During the period in which the new plan was under discussion, the department heads and foremen were freely consulted and their co-operation enlisted. Next followed a mass meeting of all employes at which the plant executive presented the general principles underlying the plan. One week later an election was held to determine whether or not the employes approved the plan and this resulted in approval. Then followed election of nine employe delegates who, in joint session with nine management delegates, drafted a constitution, and now are serving as the joint council. If the plan is found satisfactory at High Bridge, it will be submitted to employes at the company's other plants.

Tax Labor Agents $12.50

In furtherance of a plan to eliminate labor agents in Alabama who have been sending many negro laborers to West Virginia, Kentucky, Ohio, Illinois and other sections, the board of revenue of Jefferson county, Alabama, of which Birmingham is the county seat, has ordered that each agent pay an annual license of $1250. The Alabama legislature also has passed a bill restricting the activities of labor agents.

Seeks to End Strike

Chicago, Aug. 18.—Strikers at the plant of the Keystone Steel & Wire Co., Peoria, Ill., have been given a tentative offer of recognition by the local union but have been refused recognition by the American Federation of Labor. Barney Cohen, state director of the department of labor, is seeking to mediate between the strikers and the company. The Tenth Regiment of Illinois National Guard has been called to Peoria and is held in reserve if further disorder results. In a riot at the plant recently, Reuben Sommers, aged 19 years, son of P. W. Sommers, president of the company, was shot and is in a serious condition.

Return to Work

Several hundred of the workmen of the Standard Steel Car Co., Butler, Pa., who went out on a strike on Aug. 6, returned to work last Friday morning. This was the first break in the ranks of the strikers and officials of this company as well as of others affected expressed the belief that the backbone of the strike had been broken. Of the 7000 men who have been idle at the Butler plants, it is understood that almost with the strike, which was brought half of them were not in sympathy about by the refusal of the officials of the several companies to grant an increase in wages.

End Two-Month Strike

An agreement was reached at Clarksburg, W. Va., last Friday between officials of the Grasselli Chemical Co., and representatives of the 2000 workmen on strike at its plants at Ziesing and Grasselli, W. Va., and Terre Haute, Ind., whereby the men returned to work Aug. 11. The men went out two months ago because of a reduction of 25 cents a day in wages along with a reduction in working hours. The agreement provides for a restoration of the old wages, an 8-hour day and the right of the men to decide for themselves in the matter of organizing.

Strike Closes Plant

The management of the Columbia Graphaphone Co., Bridgeport, Conn., has announced that it will make good its recent threat to locate its plant elsewhere if its striking workmen did not return to their jobs. The plant was closed Aug. 14 at noon, apparently not to reopen. P. C. Roberts, assistant to the president, who made the announcement, said that no statement would be made at this time as to the location of the plant elsewhere.

Birmingham, Ala., Aug. 12.—There is not a word of verification to be heard in the Birmingham district on reports circulating in Baltimore and New York as to mergers in which southern iron concerns are involved. The Baltimore report tells of a merger of the Alabama company, the Sloss-Sheffield Steel & Iron Co. and the Woodward Iron Co. The New York report tells of a merger of United States Cast Iron Pipe and Central Foundry Co.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

EARLY in 1920, the Chicago Pneumatic Tool Co. plans to move its general headquarters from the Fisher building, Chicago, where it has been located for a number of years, to its own building in New York City. This office building now is under course of construction at 6 to 8 East Fourty-fourth street, New York. It is of combination steel, brick and limestone construction and is being erected by the Westinghouse-Church-Kerr Co. All of the initial 10 floors are to be occupied by the Chicago Pneumatic Tool Co., and the ground floor is designed for a permanent exhibition room, where the company's products will be displayed. A completely equipped service station will be maintained in conjunction and a sales and service organization will be retained at Chicago on a more extensive scale than heretofore. The company believes that the operation of its six plants and 26 sales and service branches can be directed more efficiently and economically from New York than from any other point.

* * *

THE Southern Pipe & Foundry Co., capital $75,000, has been incorporated at Knoxville, Tenn., by F. S. Mead, J. G. Simpson, T. S. Webb, R. W. Brown and Malcolm McDermott.

* * *

THE Standard Mfg. Co., Worcester, Mass., has purchased a factory in Malden, Mass., and will remove its business there when machinery has been installed.

* * *

THEODORE L. DODD & CO., 80 East Jackson boulevard, Chicago, recently were appointed western sales representatives for the Worth Steel Co., Claymont, Del., manufacturer of steel plates.

* * *

J ARTHUR LAVIGNE and Jule Charbonneau, both of Worcester, Mass., have formed a partnership under the name of the Standard Machine Works, to make jigs, tools and gages in that city.

* * *

THE Kirk Supply Co., Farmers' Bank building, Pittsburgh, has been appointed selling agent for Ohio, western Pennsylvania and western New York for the Pittsburgh Furnace Co., Milwaukee, builders of electric furnaces.

* * *

THE plant of the Essex Machine Corp., Lynn, Mass., which in the last two years has been engaged in special machine shop work for the government now, is offered for sale. The reason given is that the equipment is of such a special nature that its adaptation to general machine shop practice is not advisable.

BUILDING BEING CONSTRUCTED IN NEW YORK FOR THE CHICAGO PNEUMATIC TOOL CO., CHICAGO

* * *

RECONSTRUCTION work at the Cambria Steel Co., Johnstown, Pa., is progressing steadily, though somewhat hampered by a scarcity of common labor. It is understood that the plans of the company call for an extensive addition to the steel car works, as a result of which the company will enter the manufacture of steel tank cars.

* * *

COMPETITION among communities near Follansbee, W. Va., for the new plant to be constructed by the Follansbee Brothers Co., Pittsburgh, is sharp. Committees are at work in Toronto, O., soliciting a fund of $65,000 to buy a site to insure the location there of the new plant and land of sufficient size has been optioned.

* * *

THE Baker Iron & Metal Co., Sixteenth and Arnold streets, Chicago Heights, Ill., capitalized at $30,000, is in the market for new or slightly-used derricks, a locomotive crane, and one large and one small shear. B. Baker is president, Samuel Baikovich vice president and Phillip J. Cohen secretary and treasurer.

* * *

OPTIONS taken on a site at Wellsburgh, W. Va., are reported to be the first step by the Follansbee Bros. Co., Pittsburgh, toward the erection of a $3,000,000 steel plant at Wellsburg. The site under option is priced at $157,650. Erection of 400 dwelling houses for employes is said to be part of the proposed development.

* * *

THE Bethlehem Mining Corp., has commenced work on the erection of the crusher plant and the development of a face at the limestone property at Bittinger near Hanover, Pa., which it recently acquired. The stone is combined dolomite and calcite and it will be used at the Sparrow's Point blast furnace plant of the Bethlehem Steel Co.

* * *

SCREW machine products, dies, shipbuilding tools and automobile parts will be manufactured in a new building now being erected for the Paragon Tool Co., 411 Occidental avenue, Seattle. The 2-story building will be of reinforced concrete construction, 100 x 100 feet. Officers of the company are: President, John Graham; assistant manager, C. A. Griffith; secretary and treasurer, M. E. Gulliford and sales manager, A. F. Slater. E. B. Chaurette is superintendent.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

INCREASED rolling and drawing capacity will be provided in the new building about to be started by the Dallas Brass & Copper Co., Chicago. The new site is 100 x 212 feet, at the corner of Orleans street and Institute place. The building will be four stories and cost about $300,000. In addition to the most modern brass mill equipment, comforts for employes will be provided on the roof. The new building will replace the present factory and warehouse on North Jefferson street. The concern was organized in 1907 and has enjoyed a substantial growth of its business, which consists of all descriptions of rolled and drawn brass and copper products. It specializes in thin metal and lock-seam tubing. Branch offices are in Detroit and Cleveland.

* * *

WILLIAM A. BREE has been appointed receiver of the Noyes Tool & Cutter Co., New Haven, Conn., a co-partnership conducted by Harry W. Noyes and William W. Ferguson. The company is said to be solvent. The application for a receiver was made by Mr. Ferguson to wind up the co-partnership, as the co-partners are unable to agree.

* * *

HOWELL DAVIS, Knoxville, Tenn., has purchased the property of the Pioneer Jellico Coal Co., at Jellico, Tenn., and will equip and make extensions which will bring the mine in a class with the largest in this field. The company had been in existence only eight months. The land consists of 1896 acres, with 500 acres containing 5 to 6-foot coal veins.

* * *

THE Miner-Morse Corp., Erie, Pa., recently has opened up a mill supplies department. Among the concerns represented are: The Brown & Sharpe Mfg. Co. (tools); Greenfield Tap & Die Corp. (taps and dies); J. E. Rhoades & Son (leather belting); Cleveland Twist Drill Co. (drills); and the Cortland Corundum Wheel Co. (grinding wheels).

* * *

ARTHUR YOUNG, 15 Prudential building, Pinstone street, Sheffield, Eng., iron and steel merchant, is seeking connections with American producers of ingots, billets and bars, and also with American manufacturers of special ferroalloys such as ferrovanadium, ferrochrome, etc. In addition to his office in Sheffield, Mr. Young maintains a branch at 6 Lloyds avenue, London.

* * *

CAPT. TEIXEIRA, a member of the Brazilian military commission, who recently spent several months in the United States, investigating steel plant practice and electric furnaces, recently placed an order for an electric furnace, manufactured by the Electric Furnace Construction Co., Philadelphia. The order was taken by Fenwick Freres & Co., New York City.

* * *

THE idle factory of the Peck, Stow & Wilcox Co., Southington, Conn., in East Berlin, Conn., has been sold to the Connecticut Metal & Chemical Co., New Britain, Conn., to care for its increasing business. The latter is a subsidiary of the Stanley Works, New Britain, and makes a specialty of reclaiming old metals from refuse scrap received from different factories.

* * *

AGRICULTURAL implements will be made at a $1,000,000 plant which the Farm Implement Mfg. Co. will build at Cedar Grove, an industrial suburb of Shreveport, La. The management has secured a 10-acre site and is having plans and specifications prepared for the buildings. Production will start Jan. 1. A. B. Picket is president and general manager.

* * *

THE Industrial Steel Casting Co., Toledo, O., representing a reorganization of the Taylor Coupler & Steel Castings Co., has commenced work on the reconstruction of a building for its increased needs. When completed the work will provide space 120 x 180 feet in addition to the office and will represent an expenditure of approximately $60,000. Four electric furnaces for producing steel for automobiles, etc., will be installed. The officers follow: President, L. S. Dukes; vice president and general manager, W. E. Wine; treasurer, Jos. L. Tillman, and secretary, R. F. Tillman, these being the same as the executives of the Win Railway Appliance Co., Toledo. This building activity recently was listed incorrectly as taking place at Ironton, O.

* * *

RECENTLY completed at Cross and West Sixth streets, Chattanooga, Tenn., the new plant of the Southern Foundry & Machine Co. is to be equipped at once with modern machinery. Operations will begin within a few weeks. The company, which was organized not long ago with a capital stock of $100,000, will engage in a general foundry and machine shop business on extensive scale. Judge Will Cummings is president and E. D. Herron vice president and general manager.

* * *

THE Carnegie Steel Co. has bought the former site of the Windsor Glass Co., West street and Third avenue, Homestead, Pa. The plot is 240 x 629 feet and contains a brick factory building erected 30 years ago and used for years in the manufacture of table glassware. It has been idle for several years. It is understood that the consideration was $100,000. No announcement has yet been made as to the purpose of the purchaser.

* * *

THE Harriman shipyards at Bristol and Chester, Pa., have been consolidated as one company. This was accomplished through the merging of the Merchant Shipbuilding Corp. and the Chester Shipbuilding Co. which action had been under contemplation for some time and was due to requirements of internal organization. Hereafter the two yards will be known as the Bristol and Chester yards, respectively, of the Merchant Shipbuilding Corp.

* * *

WORK has commenced on improving and enlarging the plant of the Lehigh Structural Steel Co., Allentown, Pa., recently purchased by Robert L. Kift, former vice president and general manager of the Bethlehem Construction Co. The property comprises 10 acres and will be engaged in the fabrication of structural steel for buildings and bridges. At present the plant has a monthly output of between 1200 and 1500 tons and is operating at capacity.

Increased Output Present Need

Lloyd George Sounds Plea for Work Which Applies in America as Well — Prices to Stay Up Until "Scarcity Demand" is Met in World—Foreign Exchange Problem—General Financial News

BY JOHN W. HILL, FINANCIAL EDITOR

LLOYD GEORGE'S plea for increased production might well have been addressed to labor the world over, in America as well as in Great Britain. It is the uneconomic attitude of labor in this country toward the great fundamental problem of correcting the undersupply of goods, that is largely responsible for much of whatever discouragement there is in the outlook at the present time. Wall street frankly is disturbed, for the moment at least, and its sentiments are being reflected in declining quotations for many important stocks.

Next in seriousness to the problem presented by restless labor comes that of the continued demoralization of the foreign exchanges, of which no bottom now is seen. With the pound sterling at a discount of 11 per cent, francs of 32 per cent, lira of 42 per cent and marks at 75 per cent it is difficult to see how American exports to Europe can be maintained on anything comparable to the grand scale of recent months. Of course Europe must buy some things, including food and raw material regardless of price, but every dollar will be spent grudgingly and only for strictly indispensable purchases.

Attracts U. S. Imports

The present situation is one making American purchases in Europe attractive, while buying by Europeans here is discouraged. If America would import largely from Europe, correcting the adverse trade balance against the nations abroad, the problem would be solved. This is the way Europe's debts must be settled eventually, but most Americans would prefer to have the liquidation with goods spread over a long period of years, rather than to have industry confronted with excessive foreign competition in the home markets just now. There is no immediate danger from this source, however, because Europe is too thoroughly disorganized and lacks the raw materials and machinery to produce a substantial exportable surplus. In fact there is a crying need over there for many of the things America has to sell which will help them get on their feet industrially.

This brings the question around to the necessity of extending credits abroad. The world has waited long and in vain for the announcement of a comprehensive plan of financing which American bankers started to work out some time ago. Doubtless this plan has been held up to some extent by the delay in the ratification of the treaty, but more largely by the desire on the part of the bankers to be assured of the support of industrial and investing interests and that a broad scheme will have government approval and possibly aid. This latter will be forthcoming should congress pass the bill providing for the federal incorporation of an immense organization designed to co-ordinate the financing efforts of the country. This bill was introduced by Senator Edge, of New Jersey, and action upon it is expected soon.

In the meantime applications for credits from foreign sources are being met by individual sources in this country. In all, about $300,000,000 in credits have been advanced since the armistice, but this is only a small beginning of the vast volume of credits necessary to rehabilitate Europe. The immediate sum needed is estimated, in conservative quarters, at around $3,000,000,000. A number of banking corporations to extend foreign credits have been formed and individual industrial companies, including steel companies, are advancing credits to foreign customers when sales are made. Sufficient has not yet been done, however, to turn the tide of the exchanges, and this will be impossible until a broad, comprehensive plan is launched, it is believed.

The problem of exports has a peculiar relationship to the labor disquietude and the high cost of living agitation. If exports of foodstuffs and commodities were stopped through embargo or through default of proper financing, prices would fall in this country drastically. But what would be the result? Europe would be thrown into despair and what might happen there, with the people deprived of adequate food supplies and of raw materials with which to start to work may be left to the imagination. In this country industry, in the opinion of authorities, would be dealt a severe blow, occasioning widespread unemployment and much distress, from shrinking inventories and inability of the domestic market to absorb surplus goods.

Remedy Worse Than Ill

Labor would find this remedy for high prices worse than the disease. As Britain's premier so truthfully points out, the only permanent cure for the present economic ills lies in increasing production and greater practice of economy and thrift by the people. Ill-advised labor seeking to better itself by keeping up the "vicious cycle" of more wages to be followed by higher prices and then more wages, should weigh this consideration well.

Barring preventable profiteering in necessities, prices generally cannot become normal until conditions become normal. Production must be brought to a point where it is more equal to the demand. At present the world is pleading for goods of all kinds, and the period of high prices occasioned by the "scarcity demand" will be indefinitely prolonged if labor refuses to face the facts and perseveres in its policy of curtailing output through strikes, general inefficiency, and other means. If capital and labor get together and solve in a sane, rational way this fundamental problem of production the future of the country is bright. Prices will gradually recede and in that process labor will be the gainer as wages will not come down apace. If industrial strife continues, with output hampered, there may be breakers ahead.

American Locomotive on 6 Per Cent Basis

The issue of the common stock of the American Locomotive Co. has been placed upon a 6 per cent annual basis, instead of 5 per cent, by the action of the directors in increasing the quarterly dividend from $1.25 to $1.50. The regular quarterly dividend of 1¾ per cent in preferred was also declared. Both dividends are payable Sept. 30 to stock of record Sept. 13. The company's common shares carried a 5 per

cent dividend rate from February, 1906, to August, 1908, when the usual quarter disbursement was passed. Dividends were resumed upon the issue until August, 1916, when the 5 per cent rate was established. William H. Woodin, president of the American Car & Foundry Co., has been elected a director in place of Harry Bronner, who resigned and W. Spencer Robertson succeeds the late George R. Sheldon.

Plan to Tax Companies of Other States

(*Special Correspondence*)

Harrisburg, Pa., Aug. 18.—Plans to put into effect the new laws of 1919 relative to state taxation of foreign corporations are being worked out at the auditor general's office and it is estimated that there will be many thousands of dollars secured from companies chartered in other states and doing business in Pennsylvania. Some of the new laws increase the state tax on interest paid on bonds or scrip, while others are designed to reach the stock and bonds, for taxation purposes, of companies whose treasurers do not reside in Pennsylvania and have offices outside of the state. This has been one of the chief matters which has been concerning state taxation officials for years. Others will change systems of reports and returns on payments to residents of this state. Auditor General Charles A. Snyder, in charge of the collection of the revenues, says that in his opinion they will be ample to meet the appropriations of $103,000,000 made for two years by the legislature which adjourned in June.

Continue to Operate

Receivers of the Groton Iron Works, Groton, Conn., have been granted their motion by the court that they be permitted to continue the operation of he plant for an additional four months. It has been asked to dissolve the injunction which prevented the sale of the property Aug. 2 on judgments secured by 17 creditors, which question will be heard Aug. 29. These judgments amount to $70,000 in addition to which there are claims amounting to about $800,000 against the company.

No Foundries Statement

No earnings statement of the American Steel Foundries, Chicago, for the quarter ended June 30 will be published at this time it was announced following a meeting of directors of the company at Chicago recently. The company's six months income account filed with the New York stock exchange shows the following:

	1919	1918
Net earnings	$2,970,600	$4,187,455
Depreciation	133,516	184,728
Balance	$2,837,083	$4,002,727
Other income	162,096	95,758
Total income	$2,999,179	$4,098,485
Charges	28,403	86,561
Federal tax res.	965,000	1,043,000
Surplus	*$2,005,776	$2,968,924

* Equal to $3,89 a share on $17,184,000 stock (par value $33⅓), as compared with $17.27 earned in the corresponding six months of 1918 on $17,184,000 stock (par value $100).

It was explained that the transition period coincident with the taking over of the Griffin Wheel Co. made a statement at this time impracticable. Commenting on the railroad situation and its relation to equipment buying, an official of the company expressed the opinion that buying this fall would be forced upon the roads by dire necessity. It was pointed out that 85 per cent of the cars of the country are in constant use and that wear and tear would make it imperative to replace many cars.

Hits License Proposals

Opposition to the proposal to license industries as exemplified in the bill before congress to license the packers is expressed in a letter addressed to the members of the National Founders association by its president William H. Barr, of Buffalo. An active campaign on the part of all industries against the principle involved is urged. Any step in that direction will be but the beginning of a campaign for legislation applying similar principles to all other business, he declares. There is a general interest in this bill, according to Mr. Barr, on the mere question of licensing and entirely irrespective of the packing industry. Any protest directed to congress, in his opinion, should be specifically against the starting of any license for domestic commerce and it should be stated there is no interest in the bill except with regard to this phase of it.

Receiver is Appointed

New York, Aug. 18.—Stanton S. Freeman has been appointed receiver of the Seaboard Steel & Manganese Corp. on application of Philip E. Wright and other creditors. Mr. Wright alleged that the company has two blast furnaces at Temple, Berks county, Pennsylvania, but that they have not been operated for several months, with the result that the book value of the corporation which amounted to $1,720,694 on Jan. 1 had declined to $950,000. The application for a receiver also stated that Mr. Wright's claim amounts to $11,419.99 for merchandise, that the claims of other creditors total $150,000 and that the corporation owes to note creditors $558,000 which is guaranteed by the Guarantee Trust Co. The corporation, it is alleged, is without funds to meet its applications and it also is alleged that it is not known whether the assets are sufficient to liquidate the indebtedness. William R. Hopkins, president of the corporation, concurred in the application.

Financial Crop Ends

Berlin announces that Budapest banks will try to raise $375,000,000 to float a Hungarian loan.

* * *

Director General Hines says that a car shortage is beginning to be felt as railroad business picks up and expects the operating deficit will be small this month.

* * *

Notice has been sent creditors of the National Iron Works, Detroit, that the company has been adjudicated bankrupt and that the first meeting of creditors will be held at No. 117 Fort street west, Detroit, Aug. 28, at which time creditors may prove their claims and appoint a trustee.

* * *

William A. Bree has been appointed receiver of the Noyes Tool Co. & Cutter Co., New Haven, Conn., a co-partnership conducted by Harry W. Noyes and William W. Ferguson. The company is said to be solvent, the application for receivership having been made to wind up the co-partnership.

* * *

It is stated that from Dec. 31, 1914, to Dec. 31, 1918, 104 industrial companies mostly engaged in the metal-working field, after heavy expenditures for new construction and the payment of dividends, added the total of nearly $2,000,000,000 to their working capital. This increase practically all came from surplus earnings.

* * *

The new manufacturing plant of the Bridgeport Tube Works, Bridgeport, Conn., has been sold at auction to H. B. Houghton, Asbury Park, N. J., for $17,000. The mechanical equipment, machinery, machine tools, stock, office furnishings, etc., were sold in 368 lots to about 75 different manufacturers in the eastern part of the country.

* * *

The United States treasury has announced an issue of certificates of indebtedness, the second for the present fiscal year. The minimum amount is $500,000,000 and the certificates are dated Aug. 15, 1919, and mature Jan. 15,1920. The interest rate is 4½ per cent. The treasury announces a substantial over-subscription of the first issue of the certificates offered for the fiscal year of 1920.

Tool Users Postpone Purchases

Labor Situation Creates Cautious Buyers in Many Districts—Standard Oil Buys in New York—Aluminum Castings Wants 50 Lathes for Cleveland Plant—Cranes Move Faster in Pittsburgh

HESITANCY on the part of manufacturers to carry out their expansion programs is one of the outstanding features of the past week's tool market. This is true in increased measure as compared with the preceding week. A disinclination to close upon machinery requirements is noted in Milwaukee, Chicago, Cleveland, Cincinnati and further east and is superinduced by the general labor situation and industrial unrest which is sweeping the country. Manufacturers in Akron, O., face a tie-up unless they meet the organized machinists' demand for $1 per hour for a 44-hour week. Some tool sellers in the east are experiencing considerable hardship because certain manufacturers have withdrawn from the market until the crisis is past. Several tool manufacturers have avoided labor trouble by granting wage demands and have advanced tool prices accordingly. One increase of 15 per cent by a Cincinnati lathe manufacturer is noted and more increases are slated for Sept. 1.

Buying by the Standard Oil Co., New York City, continues to feature the eastern market. Its inquiries are frequent and its recent purchases include a number of tools for Mexico and over 28 small jib cranes. All but eight or nine fabricating machines have been bought on the list for Roumania. The recent lull in Pittsburgh has been superceded by a buying movement in both machine tools and cranes. Demands for small tools are on the increase and while few large lists are out, individual purchases bulk large. Crane sales include a number to the Youngstown Sheet & Tube Co., and four 10-ton cranes to the Youngstown Steel Car Co., Youngstown. Single cranes were sold the Blaw-Knox Co., Pittsburgh; the Birmingham Coal & Coke Co., Birmingham, Ala., and the A. Garrison Foundry Co., Pittsburgh. The Whitaker-Glessner Co., Wheeling, W. Va., and the Duquesne Light Co., Cheswick, Pa., are about to award small crane contracts. One Pittsburgh dealer sold a complete line of equipment for a mold manufacturing plant in Havana, Cuba.

Chicago dealers are interested in an auction sale of $100,000 worth of equipment at the Donaldson & Fisher Mfg. Co.'s Chicago plant, while the New York trade is interested in the announcement by C. A. Calleson, 50 Church street, that the information regarding the equipment of the plants of the Savage Arms Corp., has all been compiled and it now is ready for purchases.

Midwestern dealers have sizable inquiries from several concerns in Rockford, Ill., including the Barber-Colman Co., the Mechanics Machine Co., and the Sundtrand Adding Machine Co. Cleveland sellers still are at work on propositions which have been before them for several weeks. These include the Aluminum Castings Co., Detroit, for 50 lathes for its Cleveland plant; 50 tools for the Foot-Burte Co., Cleveland, action on which has been delayed; equipment for the tractor plant at Akron, O., for the Wellman-Seaver-Morgan Co., Cleveland, a formal list of which is expected soon; and the large list of requirements by the White Motor Co., Cleveland, noted two weeks ago, on which several fair-sized orders have been taken. Smaller inquiries are received in fair number from day to day.

Standard Oil Active in Tool and Crane Markets

CONTINUED buying by the Standard Oil Co., 26 Broadway, New York City, is again a feature of the eastern machine tool market. Orders, it is said, are being placed almost daily and new inquiries frequently are being brought before the market. While these inquiries are not large individually, the aggregate represents considerable business. Included in the latest inquiries are a number of machine tools for shipment to Mexico. Although virtually all machine tool equipment has been purchased for Roumania, there still remains outstanding a list of eight or nine fabricating machines for that country.

Considerable talk continues to be heard in the eastern market regarding the labor situation. While certain sellers state that they are being hard hit by the attitude of some manufacturers in withdrawing from the market until conditions improve, others assert that they are in receipt of a good amount of business, although made up almost entirely of small miscellaneous orders. Sellers generally agree that the present labor trouble will result in a more determined effort among manufacturers to substitute wherever possible, mechanical means for that of labor.

Since the early part of August when the majority of lathe manufacturers advanced their quotations anywhere from 10 to 15 per cent, there have been but few price advances noted. Nevertheless, there is continued evidence of an upward trend in prices, and increases by several manufacturers are expected by the end of this month or early in September.

Considerable second hand equipment is now upon the market, and possibly the largest list to be issued by a private corporation is one involving about 1400 machine tools at the Philadelphia and Utica plants of the Savage Arms Corp. This equipment is being sold through C. A. Calleson, acting sales agent, for the

Savage Arms Corp., and includes a large number of new machines, many of which are of standard type.

New projects to come up during the past week, for which equipment may later be required, include a fabricating shop for the Van Brunt Iron Works, Long Island City, for which a site, 300 x 309 feet, has been purchased. Another project is a ship repair plant for the Morse Dry Dock & Repair Co., to be erected on Staten Island near Fort Wadsworth. The company has not as yet given out the details of this project but it is expected to make some announcement shortly. A water-front of 300 feet has been purchased.

A large list of small jib cranes for the Standard Oil Co. of New Jersey is among the more important inquiries to come out of late in the eastern crane market. This inquiry calls for 20 or more jib cranes of 3500 pounds capacity, and eight or more of 7000 pounds capacity. All are to have an air hoist attachment. The equipment is for Bayway, N. J.

In the locomotive crane market, several orders have been placed. Of these, at least two were awarded to the Brown Hoisting Machinery Co., Cleveland. One called for a 15-ton, electrically operated locomotive crane for the Lehigh & Wilkesbarre Coal Co., Wilkesbarre, Pa., and the other specified a 15-ton steam-operated locomotive crane for the New England Mfg. Co., Boston.

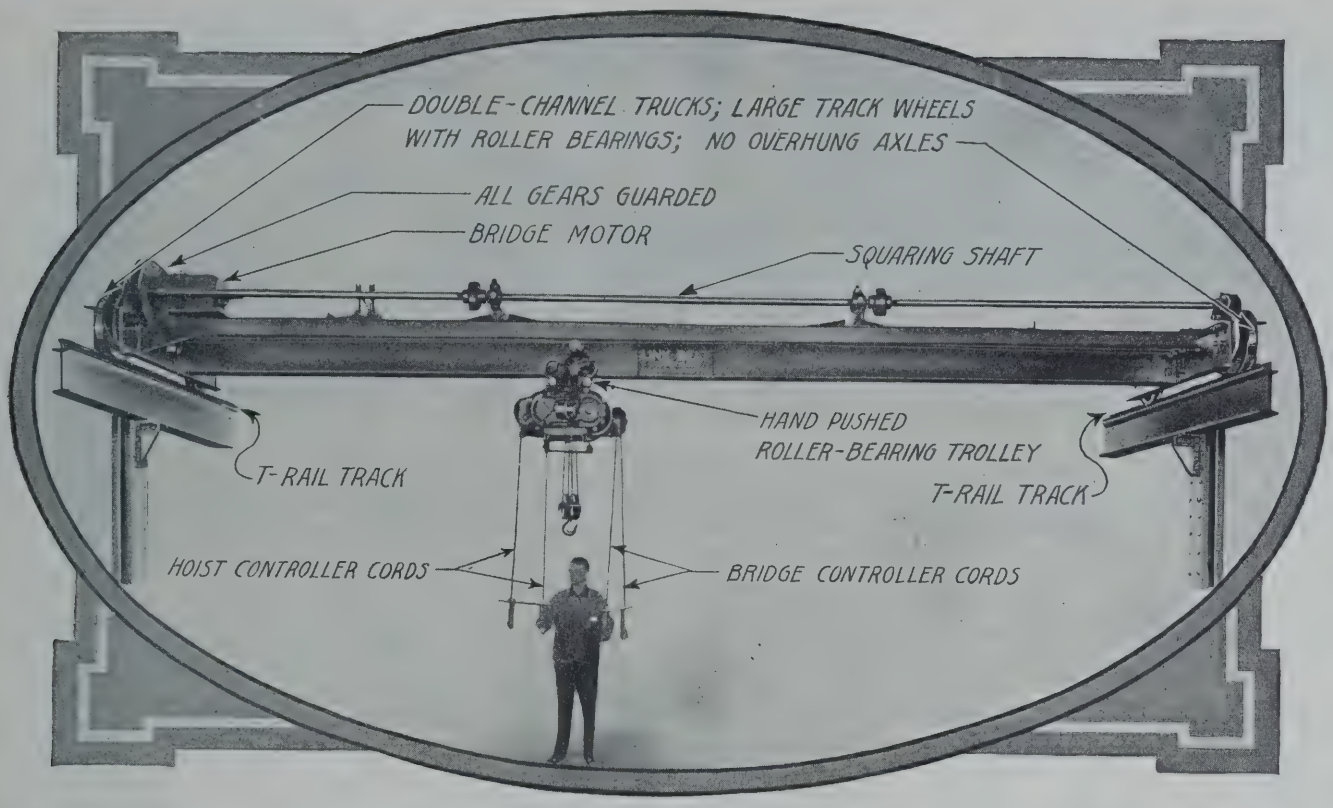
Consistent Demand Maintained in Chicago

DEMAND for machine tools in the Chicago district seems to be keeping up in volume although some sellers believe inquiry is a little less than was the case during June and July. However, in the aggregate no definite falling off is noted, several sellers finding each month producing a larger total than the preceding. As has been the case for some time, this is largely in small purchases and larger lots are rarely called for.

An auction sale will be held Aug. 21 to dispose of machinery valued at $100,000 in the shop of the Donaldson & Fisher Mfg. Co., Chicago, which has been conducting a jobbing machine shop. In the list are included 16 lathes, eight drills, several electric motors and a miscellaneous lot of equipment. Dealers here have been given notice that bids will be received until Aug. 26 by the government for machinery and metals in the Bridgeport, Conn., district. The Barber-Colman Co., Rockford, Ill., is inquiring for three planers, and the Ingersoll Milling Machine Co., of the same city, desires a large horizontal boring, drilling and milling machine. The Mechanics Machine Co., of Rockford, Ill., is seeking five second hand grinders. The Sundstrand Adding Machine Co. of Rockford, is buying considerable equipment for an addition.

Labor difficulties are having considerable effect and are restricting purchases on the part of many institutions. Employes of the Power & Mining Machinery Co., Milwaukee, have struck and caused delay in placing of orders for lathes, boring mills, screw machines and radial drills to equip new plant capacity in the engine department. The Milwaukee Electric Crane & Mfg. Co., also is strikebound. Chicago dealers who have been in Cincinnati recently find that shops there are extremely busy, but are faced by the threat of strikes to enforce the closed shop. Deliveries vary in the several lines from prompt shipment to 90 days.

Demand Recovers from Lull



ACTIVITIES in the Pittsburgh machinery and tool market have recovered considerably from the lull recently noted. Several contracts for cranes have been placed and a number of new inquiries have come out. In

Machinery Exports Increased $2,995,104 in Two Months

PERHAPS in no more graphic way can the increasing exports from the United States of machine tools, machinery, etc., be shown than by the accompanying table, which compares shipments abroad for April and June, this year. While in April they totaled $5,611,461, in June the aggregate was $8,606,565, an increase of $2,995,104. As in April, France was first in June, having exported $2,021,182 worth of equipment; England was second with $1,893,871 worth, and Belgium, third with a total of $993,045. Fourth place, however, while occupied by Japan in April, went to China in June, that country importing $967,417 worth, while Japan imported $752,919 worth. Lathe exports increased from $992,784 in April to $1,712,899 in June; exports of other machine tools were decreased by $352,498; exports of sharpening and grinding machines likewise show a decrease, namely from $607,005 to $555,113, or $51,892; all other metal-working machinery, however, showed a gain of $2,679,379. Most of this increase was contributed by France, England and China. The comparative table follows:

	Lathes		Other Machine Tools		Sharpening and Grinding Machines		All other Metal-Working Machinery		Total	
	April	June	April	June	April	June	April	June	April	May
Belgium	$191,638	$ 377,971	$ 26,719	$ 72,840	$153,642	$ 70,712	$ 416,066	$ 471,522	$ 788,065	$ 993,045

Here's The Ideal Crane for Side Bays

IT'S just the thing for machine shops, foundries, structural shops, mills, etc. The time it will save in a machine shop by quickly and economically serving machine tools with castings, etc., will soon pay for the crane. After that, the saving is "pure velvet".

Important Advantages

1. Crane always ready for service. Any shop hand can operate it. No need for keeping an operator up in a cage.
2. Pull a cord to operate hoist or crane; let go, and it stops. Simple as A, B, C.
3. All operating cords handy, both controllers mounted on hoist—right where the load is being handled.
4. Load is handled with greater precision and safety, than when operator is carried in a cage near ceiling and must depend on signals.
5. Like our mono-rail electric hoist and other Link-Belt products, this crane embodies Quality, Reliability, Accessibility, and High-Efficiency.

Built in 1, 2 and 3 Ton Capacities. Write for data blank. Let us figure on your requirements.

small tools, demands again are on the increase and while few lists are being put out, the individual purchases bulk fairly heavy.

Current tool demands are being met without much trouble from stock, but pipe machines are short in stock and on the larger sizes of motor-driven lathes, some makers are not promising shipments short of six weeks.

The Blaw-Knox Co., Pittsburgh, has closed for a 10-ton Champion crane. The Pittsburgh Crucible Steel Co., which recently closed for a 15-ton cast house Milwaukee crane, has sent out specifications for a bucket crane. The Youngstown Sheet & Tube Co., Youngstown, O., has placed an order for several cranes with the Cleveland Crane & Engineering Co., Wickliffe, O., while four 10-ton cranes for the Youngstown Steel Car Co. have been awarded the Milwaukee Electric Crane Co. The latter company also has taken an order for a bucket crane for the Birmingham (Ala.) Coal & Coke Co. A. Garrison Foundry Co., Pittsburgh, has placed a 25-ton crane, with 5-ton auxiliary with Pawling & Harnischfeger Co., Milwaukee. The Whitaker-Glessner Co., Wheeling, W. Va., is in the market for a 10 and a 25-ton crane, while inquiry for a 75-ton crane is out for the new power plant of the Duquesne Light Co., at Cheswick, Pa.

Aluminum Castings Wants 50 Lathes

MOST propositions now before machinery dealers in Cleveland are those upon which they have been figuring for some time. Perhaps the largest of these is the list of 50 multiple tool lathes for the Cleveland plant of the Aluminum Castings Co., Detroit. Thirty of these are for piston and the remainder for heavy flange work. Experimental machines have been ordered and changes are being made on them by the company's engineers. When these are completed, the special machinery will be ordered. The Aluminum Castings Co., Cleveland, also wants a staybolt drilling machine. Another project which has been hanging fire for some time is that of a tractor building at Akron, O., by the Wellman-Seaver-Morgan Co., Cleveland. This will require a large number of tools, including many multiple spindle drills and dealers' representatives and the company's engineers are spending much time together working out the detailed requirements. A definite list is expected soon and it is believed that a plant will have to be built for production purposes.

Orders continue to be filed by the White Motor Co., Cleveland, and one was expected early this week from the Burke Electric Co., Erie, Pa. The former large list was issued two weeks ago and the latter for six tools was noted last week in this column, with one of 50 from the Foote-Burt Co., Cleveland, on which action has not been taken so far as can be learned.

Despite widespread industrial unrest, a fair sprinkling of inquiries is noted from all parts of the country. Strikes and threats of strikes in various localities are known to be holding up considerable machine tool business; manufacturers hesitate to proceed with expansions until the present crisis is past. In Akron, where machinists are 100 per cent organized, a strike is threatened unless $1 per hour is granted with a 44-hour week. The B. F. Goodrich Co. and the Firestone Steel Products Co., that city, have not as yet closed on all of their requirements noted recently. The International Harvester Co., that city, has been an active buyer of equipment but is also understood to be holding up further tool purchases. Manufacturers state their willingness to meet the wage demand as far as those who earn it are concerned but object to paying that scale to all in the machinist classification whether good or bad.

Elyria, O., is becoming more and more a manufacturing town, and considerable building activity has been noted there recently. The Western Screw Machine Products Co., that city, is among the companies that are looking for equipment. It wants a drill and a shear. The Concrete Engineering Co., Omaha, Neb., is in the market for a few machines. The Electric Auto Lite Corp., Toledo, O., wants two $\frac{3}{16}$-inch riveting machines. The Defiance Machine Works, Defiance, O., which is building a large lot of special machines for the General Motors Corp., Detroit, recently purchased two Milwaukee milling machines among other tools. The Electric Vacuum Cleaner Co., Inc., Cleveland, issued a small inquiry but is understood to have placed its order. The Hydraulic Pressed Steel Co., Cleveland, still is looking for several machines while the Geometric Tool Co., that city, has placed its order for a 70,000-pound Toledo punch press with the Cleveland Duplex Machinery Co. This inquiry was noted in this column Aug. 7. The Canadian Vickers, Ltd., Montreal, Que., wants a double end punch for 1-inch holes through 1-inch plate, with a 30-inch throat and a punch and shear as well, the punch for 1-inch holes through 1-inch plate and the shear with 20-inch gap, both arranged for electrical drive.

Construction and Equipment

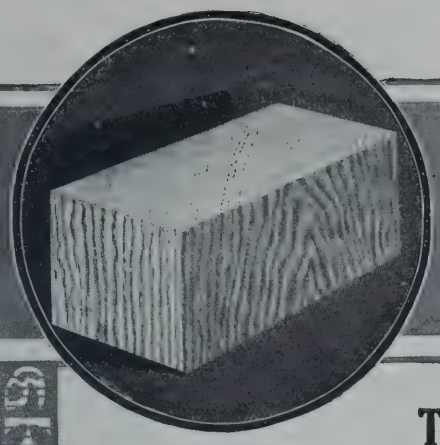
Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

CALAIS, ME.—The Green Butte Copper Co. has been incorporated to deal in fuel, coal, iron ore, etc., with $500,000 capital by H. M. Hall and Harold H. Murchie.

KITTERY, ME.—The Silver Quarter Service has been incorporated to make vending machines with $500,000 capital by Harry W. Foster, George E. Burnham and Elmer J. Burnham.

LEWISTON, ME.—The Chadwick Heel Co. has been incorporated to make tools, machinery, etc., with $50,000 capital by S. A. Chadwick and Michael Brownstein.



BOSTON.—E. D. Codman, 27 Kilby street, has awarded a contract for a machine shop addition.

BOSTON.—The E. N. Thayer Co. has been incorporated to deal in ornamental iron and steel with $10,000 capital by James W. Santry, Elisha N. Thayer, Brookline, Mass., and I. Krop.

FALL RIVER, MASS.—The Fall River Coppersmith Co. has been incorporated with $10,000 capital by Ludwig Golz, Otto A. Waihela and Charles S. Graham.

HAVERHILL, MASS.—The Haverhill Die Co. has been incorporated with $5000 capital by Fred Halloran, Nicholas J. Chapman and A. W. Kennedy.

HOLYOKE, MASS.—G. Haarman & Co., operating a structural steel and iron plant, have acquired

Kreodone EVERLASTING WOOD BLOCK FLOORS

Treated Only With Pure Creosote Oil

OVER twenty years of actual service definitely proves Kreodone wood block floors essential and necessary for economical plant operation.

Our customers are so completely satisfied that they never experiment after installing Kreodone. They specify Kreodone wood blocks for their floors from then on

Let us tell you why

Kreodone wood block floors never wear out; never decay; never bleed tar or smudge; stay where laid; are solid, permanent and sanitary.

Our engineers will tell you

how we can lay Kreodone wood block floors in replacement of old floors without stopping your work. Full information as to cost, method and time, free.

Selected long-leaf yellow pine blocks permanently treated with nothing but pure creosote oil—every bit of their manufacture in charge of experts of long experience—this is what makes Kreodone wood floor blocks superior. Give us a brief description of your plant and working conditions and we will refer you direct to a Kreodone floor in identical service.

property at Willimansett, Mass., on which it is reported planning a branch plant.

HOLYOKE, MASS.—The Cowan Truck Co., Canal street, has awarded a contract for a 2-story plant addition.

LEOMINISTER, MASS.—The Viscaloid Co., 511 Lancaster street, plans a 2-story machine shop, 40 x 60 feet, to cost $15,000.

LYNN, MASS.—The S. M. Hansen Co. has been incorporated to make machinery, parts, electrical equipment, etc., with $25,000 capital by Senius M. Hansen, Edward R. Fallon, Swampscott, Mass., and John Ingram.

SPRINGFIELD, MASS.—The American Bosch Magneto Corp. is building a 1-story, 30 x 100-foot storage building.

TEMPLETON, MASS.—The United States Toy & Novelty Mfg. Co. has been incorporated with $50,000 capital by James P. Clary, James J. Fairbanks, Gardner, Mass., and Charles A. Bryant.

WORCESTER, MASS.—The Osgood Bradley Car Co. will build a 2-story, 90 x 100-foot cabinet shop.

WORCESTER, MASS.—The American Steel & Wire Co. will build a 440 x 24-foot building.

WORCESTER, MASS.—The Leland-Gifford Co., crankshafts, has let the contract for a 2-story, 182 x 102-foot factory addition, to cost $50,000.

WORCESTER, MASS.—The Hobbs Mfg. Co. has let the contract for a 1-story, 35 x 60-foot addition for hardening and tempering lock washers.

PROVIDENCE, R. I.—The Apco Mfg. Co., 702 Eddy street, auto specialties, will build a 1-story addition, 80 x 200 feet.

PROVIDENCE, R. I.—The M. K. M. Chain Co., 862 Broad street, has been organized to manufacture chains, etc., by O. C. Maehnert, 123 Beacon street, Charles E. King, 156 Elm street, and others.

PROVIDENCE, R. I.—The Jewelers' Toolmaking Co., 220 Eddy street, has been organized to manufacture jewelers' tools, by G. J. Lederer, 40 Marion avenue, Carl Geisler, 194 Vinton street, and others.

TAUNTON, MASS.—The L. C. Blanke Twist Drill Co. will build a 1-story addition, 40 x 115 feet, to cost $14,000.

BRIDGEPORT, CONN.—Charles S. Huth, 207 Barnum avenue, has awarded a contract for a 1-story machine shop, 30 x 60 feet, to cost $13,000.

BRIDGEPORT, CONN.—The Bridgeport Hardware Mfg. Co. plans a 2-story addition, 20 x 150 feet, to cost $25,000.

BRIDGEPORT, CONN.—Plans are being made for a 1-story, 150 x 225-foot addition to the casting shop of the Bridgeport Brass Co. to cost $150,000.

BRIDGEPORT, CONN.—Harvey Hubbell, Inc., maker of electrical wiring devices, has let the contracts for a 1-story, 82 x 140-foot storehouse.

FORESTVILLE, CONN.—The Peck & Young Mfg. Co. has let the contract for a 1-story, 200 x 60-foot factory, a 40 x 80-foot garage and a 35 x 25-foot boiler house.

HUNTINGTON, CONN.—The Phillips Time Switch Co. has been incorporated with $50,000 capital by Leslie W. Holmes, C. F. Holmes and William E. Fisher, all of Shelton, Conn.

MERIDEN, CONN.—The M. B. Schenck Co. division of the Bassick Co., caster maker, has let the contract for a 2-story, 64 x 53-foot factory addition.

NEW BRITAIN, CONN.—The Stanley Rule & Level Co. has let the contract for 3 and 6-story factory additions to cost $35,000.

NEW HAVEN, CONN.—The Standard Iron Works, Laurence street, has been organized by S. D. Pardoll and others.

NEW HAVEN, CONN.—The Johnson Machine Works, 11 Orange street, has been organized by F. G. Johnson, T. P. Tonne and others.

NEW HAVEN, CONN.—The New England Iron Works will build a 1-story, 60 x 150-foot steel shop and a brick office building.

NEW HAVEN, CONN.—The Nevergap Co. has been incorporated to manufacture metal clasps, with $50,000 capital, by A. J. Larson, Jules Bango and Peter Torello.

NORWALK, CONN.—The New England General Auto Accessories Corp. has let the contract for a 2 sto.y, 80 x 150-foot factory to cost $65,000.

OAKVILLE, CONN.—The Autoyre Co., wire products, will build a 1-story addition, 60 x 100 feet.

WEST HARTFORD, CONN.—The Whitlock Coil Pipe Co. has let the contract for a 1-story garage and storage building.

WINDHAM, CONN.—The Davis Metal Stamping Co. has been incorporated to make patented metal shingles, etc., with $50,000 capital by S. J. Davis, W. P. Jordan, C. J. Alpaugh, L. A. Nichols, E. P. Chesbro, H. A. Bugbee and W. H. Armstrong, all of Willimantic, Conn.

North Atlantic States

BINGHAMPTON, N. Y.—The Universal Can Co. recently was incorporated with $1,000,000 capital, by J. F. Montgomery, H. C. Hooks and B. E. Austin, 194 Rugby road, Brooklyn, N. Y.

BROOKLYN, N. Y.—The J. Cutter Iron Works, Inc., 247 Norman avenue, plans a 2-story building, 60 x 90 feet, to cost $14,000.

BROOKLYN, N. Y.—The Hygrade Brazier Co. has been incorporated with $10,000 capital, by I. Zinker, B. Cooper and H. Dingberg, 160 Glenmore avenue.

BROOKLYN, N. Y.—The Coyne & Delany Co., 832 Kent avenue, plumbing specialties, plans a 3-story plant, 50 x 120 feet, to cost $70,000.

BROOKLYN, N. Y.—The Barzel Iron Works, Inc., recently was chartered with $5000 capital, by A. Rothman, N. Berson and A. Schultz, 409 Hewes street.

BROOKLYN, N. Y.—The American Can Co. has taken a long term lease on a 6-story, 80 x 460-foot building, on the waterfront. The Can company intends to occupy this building for the manufacture of cans and metal goods.

BROOKLYN, N. Y.—Smith Bros. & Sklar, Inc., has been incorporated to make wagons and auto bodies with $20,000 capital, by J. Sklar, M. and H. Smith, 136 Hall street.

BROOKLYN, N. Y.—The Hero Snap Fastener Co. recently was incorporated with $100,000 capital, by L. Brockner, S. Fink and A. A. Hoffman, White Plains, N. Y.

BUFFALO.—The Donner Union Coke Co. has let the contract for a machine shop.

BUFFALO.—The Pierce-Arrow Motor Car Corp. is reported planning to expand.

BUFFALO.—The Wolff Machine Co. recently was incorporated with $10,000 capital, by W. and E. and L. Wolff.

BUFFALO.—The Bilger Steel Products Corp. recently was incorporated with $50,000 capital, by R. L. O'Brian, 43 Cleveland avenue, E. E. Finck, 602 Ashland avenue and others.

BUFFALO.—The Iroquois Tool & Die Co., Inc., has been incorporated with $10,000 capital, by G. A. Gruber Jr., W. Preiss and W. J. Wagner.

BUFFALO.—The Mighty Mfg. Co., Inc., has been incorporated to make electrical devices with $50,000 capital, by E. Pappas, G. N. Chaltas and E. L. Crabb.

CARTHAGE, N. Y.—The Northwestern Telephone Corp. will erect a 2-story machine shop, 22 x 28 feet, to cost $20,000.

COLONIE, N. Y.—Work on the erection of a $500,000 plant for the Adirondack Steel Foundries Corp. has been started.

DUNKIRK, N. Y.—The American Locomotive Co. has started on a plant addition.

GLENS FALLS, N. Y.—The Arrow Grip Mfg. Co. recntly increased its capital from $100,000 to $500,000 and contemplates the erection of a plant.

HUNTINGTON, L. I., N. Y.—The Collins Motors, Inc., has been incorporated with $400,000 capital, by G. H. Stoll, D. C. Lawrence and R. Mensher, 646 Bushwick avenue, to manufacture automobile motors, etc.

LONG ISLAND CITY, N. Y.—The Van Brunt Iron Works has purchased a 300 x 309-foot site in this city for the erection of a steel fabricating shop.

MONTOUR FALLS, N. Y.—The Montour Aluminum Soldering Corp. recently was incorporated with $200,000 capital, by G. F. Barton, F. A. Hatch and E. W. Livings.

MT. MORRIS, N. Y.—The Mt. Morris Illuminating Co. is reported planning a new electric power plant.

NEW YORK.—The Metals Disintegrating Co., 62 Broadway, is building a new plant at Townley, N. J.

NEW YORK.—The Marvin Stoker Co., Inc., has been incorporated with $35,000 capital, by C. H. Lyons, E. P. Morris, and J. Marvin, Staten Island.

NEW YORK.—The Crane Co., Chicago, has awarded a contract for a 4-story building here, 90 x 200 feet, to cost $175,000.

NEW YORK.—The Morse Dry Dock & Repair Co. has purchased 300 feet along the waterfront in Staten Island for the erection of a ship repair plant.

NEW YORK.—The Eisemann Magneto Corp. has just been organized to take over the business of the Eisemann Magneto Co.

NEW YORK.—About $1,000,000 will be expended by the Standard Oil Co. of New Jersey, 26 Broadway, for two plants at Camden and Trenton, N. J.

NEW YORK.—A group of 5-story factory buildings at 510-553 West Twenty-third street has been sold by the Westinghouse Lamp Co.

NEW YORK.—The Jensen & O'Leskie Co., Inc., hardware and machinery, has been incorporated with $10,000 capital, by C. Jensen, E. A. O'Leskie and E. J. McTike, 321 Eastern Parkway.

NEW YORK.—The Federal Ship & Engine Repair Co., Inc., has been incorporated with $25,000 capital, by F. J. McHugh, J. M. Hannan and J. Harris, 1545 Broadway.

NEW YORK.—The Fastfeed Drill & Tool Corp. has been incorporated with $575,000 active capital by K. Kirk, J. A. Dubel and J. T. Herne, 61 Broadway.

NEW YORK.—G. Danzis Co., Inc., has been incorporated with $40,000 capital to make materials for die sinking, by F. O. Stoltz, P. and G. Danzis, 2015 Grand boulevard.

NEW YORK.—The Sterling Spinning & Stamping Works has been incorporated with $5000 capital, by B. Zinkin, H. Finkelstein and I. Schlepp, 161 Bryant avenue.

NEW YORK.—The Bronx River Iron Works has been chartered with $10,000 capital, by J. F. Ernst, M. Gullubier and F. Welden, 2323 Prospect avenue.

NEW YORK.—The Motorite Corp. has been chartered by C. E. Taoru, S. A. H. Dayton and M. F. Mills, 211 West Eighty-second street, to manufacture

motors and machinery. The company is capitalized at $100,000.

NEW YORK.—The Arrow Brand Tool Corp. has been incorporated with $800,000 capital, by Robert A. Van Voorhiss, W. E. Schells, and Arthur R. Oakley, Pearl River, N. Y.

NEW YORK.—E. Kaufman & Co., iron and steel, has been incorporated with $100,000 capital, by E. Kaufman, P. W. Hatfield, and A. W. D. Hogg, 256 Church street.

NEW YORK.—The Cotton Scutcher Lap Corp. has been incorporated with $50,000 capital, by C. Zabriskie, E. Mehringer and J. H. Griffen, 277 Broadway, to manufacture textile machinery.

PROVIDENCE, R. I.—The Brown & Sharpe Mfg. Co. has been granted a permit to build a 2-story workshop.

SYRACUSE, N. Y.—The M. L. Oberdorfer Brass Co., 804 East Water street, plans a foundry addition to cost about $40,000.

SYRACUSE, N. Y.—The Fisher Body Corp. will issue $5,000,000 worth of bonds, part of the proceeds of which will go into plant improvements.

SYRACUSE, N. Y.—In anticipation of an extended building program early next year the Onondaga Steel Co., Inc., has increased its capital from $150,000 to $1,000,000.

TROY, N. Y.—Reece-Hilton, Inc., tools and implements, has been incorporated with $50,000 capital, by R. Reece, A. L. Reece and R. C. Hilton.

UTICA, N. Y.—The Brunner Mfg. Co., air compressors, has plans for an addition, 1-story, 76 x 140 feet, to cost $15,000.

WATERTOWN, N. Y.—F. G. Hall, 823 Boyd street, plans to establish a machine shop.

WATERTOWN, N. Y.—A machine shop will be erected here by F. G. Hall, 823 Boyd street.

WAYLAND, N. Y.—The Wayland Specialty Co. has been organized to manufacture metal products, by Charles L. Clarke, I. J. Pillsbury and W. N. Thwing.

Central States Activity

CHAMPAIGN, ILL.—The Cushman Auto Tool Co. is building a 2-story, 40 x 70-foot plant addition.

CHICAGO.—The H. Channon Co., contractors' tools, is reported planning to erect a 7-story building.

CHICAGO.—The B. & W. Mfg. Co., automobile accessories, 5235 Ravenswood avenue, is having plans prepared for a 3-story plant, 50 x 125 feet.

CHICAGO.—The Motor Coach Metal Works, Inc. 2909 Indiana avenue, has been organized by Alfred T Kaiser, William E. Fuller and Oscar C. Graff.

CHICAGO.—The Ilg Electric Ventilating Co. will build a 4-story plant costing $750,000. A. S. Aischuler, 28 East Jackson boulevard, is taking bids.

CHICAGO.—The Economy Machine Products Co., 4750 London avenue, will build a plant, 160 x 200 feet, to cost $100,000.

CHICAGO.—E. Edelman & Co., automobile accessories, is reported planning to build a plant at an estimated cost of $250,000.

CHICAGO.—The Dallas Brass & Copper Co. is reported planning to erect a 5-story plant here at an estimated cost of $200,000.

CHICAGO.—The Pollak Steel Co., South Chicago, will build an addition to its drop forge plant, 75 x 141 feet, to cost $225,000.

CHICAGO.—Cribben & Sexton, founders, have let a contract for a plant addition, 88 x 122 feet, to cost $10,000.

CHICAGO.—The Locomotive Lubricator Co., 6 North Michigan avenue, capitalized at $50,000, has been chartered by W. J. Schleks and C. W. Rudolph.

CHICAGO.—The International Radiator Co., capitalized at $12,500, has been chartered by William H. O'Donnell, L. A. O'Donnell, and William H. Dorney.

CHICAGO.—The Locomotive Crane Co. of America, 3609 South Ashland avenue, capitalized at $300,000, has been chartered by Charles Vergan and Robert Vergan.

APPLETON, WIS.—The Appleton Machine Co., Appleton, Wis., is building a 1-story shop addition, 60 x 100 feet, and will equip it for general machine work.

AUGUSTA, WIS.—The Dells Milling Co. is taking bids for the construction of a power dam.

BARTON, WIS.—The Stevenson Mfg. Co., capitalized at $100,000, has been chartered to manufacture hardware specialties by Charles M. Stevenson, J. H. Batenauer and J. J. Fellenz. A plant 80 x 130 feet will be erected at once.

BEAVER DAM, WIS.—Frank Zweck has purchased the sheet metal department of the hardware business of his brother, John V. Zweck, and will re-establish it as a separate business in a 2-story building at 120 South Spring street, conducting it as the Zweck Sheet Metal Works.

FOND DU LAC, WIS.—The Vulcan Mfg. Co. contemplates a plant addition, 100 x 150 feet, which with machinery will cost about $30,000.

FOND DU LAC, WIS.—The Galloway-West Co. is taking bids for the construction of a dairy products plant, power and boiler house, private garage and service shop, L-shaped, 85 x 200 and 52 x 65 feet, costing about $100,000.

GREEN BAY, WIS.—The Conradson Machine Tool Co., Green Bay, Wis., expects to start manufacturing operations in its new plant about Sept. 1.

LADYSMITH, WIS.—A new hydroelectric power plant will be built near here by the Big Falls Power Co.

MADISON, WIS.—The Gisholt Machine Co. has awarded contracts for a machine shop addition to the Worden-Allen Co., Milwaukee.

MADISON, WIS.—The Madison Tool & Stamping Works, capitalized at $10,000, has been chartered to manufacture tools, stampings, metal patterns and dies by G. A. Benson, T. E. Rosten and W. L. Woodward.

MENOMONEE FALLS, WIS.—Architect Frank E. Gray, 86 Michigan street, Milwaukee, has been commissioned to prepare plans for a 1-story building, 137 x 149 feet, to be used as a high and grade school, vocational training institute and auditorium.

MILWAUKEE.—The Pawling & Harnischfeger Co., electric traveling cranes, is increasing its forge shop capacity by a 1-story extension, 80 x 100 feet.

MILWAUKEE.—The Standard Steel Corp., 491 Virginia street, has broken ground for its new plant, which will be 120 x 150 feet.

MILWAUKEE.—The Heil Co., manufacturer of electrically welded tanks, etc., will build a new office building.

MILWAUKEE.—The Titan Motor Truck Co. has started work on a machine shop, assembling floor and tool room, 100 x 158 feet, with a wing 50 x 100 feet.

MILWAUKEE.—The Jaeschke Bros. Foundry Co., Thirty-first and Locusts streets, will start work shortly on plant additions, including a foundry extension, 90 x 150 feet, and a coreroom, 50 x 100 feet.

MILWAUKEE.—The Lederer Machine Co. has been incorporated with a capital of $30,000 to manufacture patented machinery. The incorporators are S. Lederer, T. B. Hirsch and F. G. Katzenstein.

MILWAUKEE.—Robert J. Stahl, Edward A. Tessner and Charles B. Johnson, manufacturing automobile accessories and parts at 3419 Vliet street, have incorporated the business as the Interstate Mfg. Co., capital stock, $15,000.

MILWAUKEE.—Approximately $100,000 will be invested by the Chevrolet Motors Co., Flint, Mich., in the erection and equipment of a distributing headquarters here.

MILWAUKEE.—The Worden-Allen Co. has the contract to fabricate and erect 500 tons of structural shapes for an addition to the open-hearth building and a 600-foot extension to the crane runway, for the Interstate Iron & Steel Co., Chicago.

MILWAUKEE.—The Ogren Motor Car Co., organized in Wisconsin with $500,000 capital by Hugh W. Ogren of Chicago, will open a factory for the manufacture of passenger cars. New machinery is being purchased.

MILWAUKEE.—An increase of 100 per cent in the capacity of the A. E. Martin Foundry Co., 705 Park street, is provided by plans completed for new construction involving an expenditure of $200,000 in buildings and equipment. A new coreroom is being completed and work will begin shortly on a new cupola and molding floor, 80 x 144 feet.

OCONTO, WIS.—The Oconto River Public Service Co. has been incorporated with $250,000 capital to develop water power, by F. F. Becker, Charles H. Hartley and Ralph B. Hartley.

OSHKOSH, WIS.—The Oshkosh Motor Truck Co. is planning to enlarge its present factory or build a new plant.

OSHKOSH, WIS.—A plant for the manufacture of automobile accessories, devices and parts will be opened here by the Auto Specialties Co., which has been incorporated with a capital stock of $25,000 by E. J. Sullivan, Oscar Thelen and William Koeck.

OSHKOSH, WIS.—The Scott Player Action Co., a new $100,000 concern organized to manufacture metal actions and player mechanisms for pianos, is negotiating with the Oshkosh Association of Commerce for the lease of the former car shops controlled by E. A. Lull.

SCHLEISINGERVILLE, WIS.—Architects Backes & Pfaller, M. & M. Bank building, Milwaukee, are preparing plans for a 1-story machine shop addition, 77 x 198 feet, for the Vim Tractor Co.

SHEBOYGAN, WIS.—The machinery repair and welding shop opened some time ago at 816 Erie avenue, has been organized as the Sheboygan Welding & Cutting Co. Some new equipment will be installed.

STOUGHTON, WIS.—The Mandt Wagon Works, Ltd., division of the Moline Plow Co., is erecting a 3-story addition, 64 x 90 feet.

AKRON, O.—The Whitman & Barnes Co., reamers, drills, etc., has plans for a 1-story addition to its Chicago plant.

AKRON, O.—The Akron Cultivator & Mfg. Co., capitalized at $75,000, has been chartered by William C. Keough and others.

CANTON, O.—Contracts for the plant of the Timken Roller Bearing Co. have been awarded to the D. W. McGrath Co. and the Canton Bridge Co. The main building will be 300 x 600 feet.

CINCINNATI.—The Warman Brass & Aluminum Co. has been incorporated with $25,000 capital, by Roy Warman and others.

CLEVELAND.—The F. B. Stearns Co., automobile manufacturer, will enlarge its plant by a 4-story building, 200 x 400 feet.

CLEVELAND.—The L. & M. Axle Co., 247 Colonial arcade, recently was incorporated and will build a plant for the manufacture of axles. H. E. Shimmins is president.

CLEVELAND.—The Induction Furnace Co. has been incorporated with $5000 capital, by W. B. Stewart, Ashley M. Van Duzer, John W. Eckelberry, Walker H. Nye and L. C. Wykoff.

CLEVELAND.—The Auto Bushing Mfg. Co. has been incorporated with $5000 capital, by R. E. Hyde,

1127 Williamson building, A. F. Kotowski, E. C. Scharff, C. C. Hutchins and F. L. Stevens.

CLEVELAND.—The Foote-Burte Co. is reported planning an addition for the manufacture of machine tools.

CLEVELAND.—The Fisher Machine & Stamping Co. has been incorporated with $20,000 capital, by Frank C. Fisher and others.

CLEVELAND.—The Vesuvian Products Co., tools, has been incorporated with $3000 capital, by E. J. Cullen, William A. Becker, Charles E. Stoops, John J. Donovan and others.

CLEVELAND.—The Weeks Sheet Metal Products Co. has been incorporated with $10,000 capital, by W. J. Weeks, F. W. Werner, George Ott, J. E. Pease, P. P. Bethea, F. J. Humel and Victor J. Weeks.

CLEVELAND.—The Hayes Products Co., automotive accessories, metal products, has been incorporated with $50,000 capital, by Oscar Hayes, Fred Bentel, F. A. Lennie, William M. Hahn and Keith Lawrence, 329 Society for Savings building.

CLEVELAND.—A permit has been taken out by the Cleveland Twist Drill Co., Lakeside avenue and East Forty-ninth street, for the erection of an alteration factory, 1-story, 16 x 39 feet.

CLYDE, O.—The Clyde Cutlery Co. is reported planning a large plant addition.

COLUMBUS, O.—The Shilling Foundry Co. is reported contemplating an addition. Clarence Shilling is president.

DAYTON, O.—The Marshall-Smith Tool Co. recently was incorporated with $10,000 capital, by F. L. Smith and others.

DAYTON, O.—The Dayton Metal Body Co. recently was incorporated with $50,000 capital by Wayne F. Lee, Thomas F. Ford and others.

DAYTON, O.—The Globe Tool & Engineering Co. recently was incorporated by Henry Detzel, Alvin E. Shively and others, with $20,000 capital.

Throughout the West

ALGONA, IOWA.—The Harris Loader Co. recently was incorporated with $50,000 capital, by J. W. Harris, L. E. Krantz and A. Matson.

BRITT, IOWA.—The Hawkeye Wire Fence Co., recently incorporated, will commence operations about Sept. 1.

Gross Tons Delivered to Consumer

AXLE TURNINGS

Pittsburgh	$16.50 to 17.50
Eastern Pennsylvania	16.00 to 17.00
Boston (dealers)	11.50 to 12.00
Cleveland	16.50 to 17.50
Buffalo	15.00 to 16.00
Chicago	17.50 to 18.00

STEEL CAR AXLES

Pittsburgh	$26.00 to 27.00
Eastern Pennsylvania	32.00
Cleveland	34 00 to 35.00
St. Louis	31.50 to 32.00
Buffalo	28.00 to 29.00
Chicago	31.50 to 32.00
New York (dealers' price)	24.00 to 25.00
Birmingham	20.00 to 22.00
Boston (dealers)	25.00 to 26.00

SHAFTING

Eastern Pennsylvania	$26.00 to 28.00
St. Louis	28.00 to 28.50
New York (dealers' price)	21.00 to 22.00
Chicago	29.00 to 30.00

Iron Foundry Scrap

Gross Tons Delivered to Consumer

CAR WHEELS

Pittsburgh, iron	$25.00 to 25.50
Pittsburgh, steel	22.50 to 23.00
Chicago, iron	24.50 to 25.00
Eastern Pennsylvania, iron	24.50 to 25.00
Cleveland, Iron	22.75 to 23.00
St. Louis, iron	24.50 to 25.00
Buffalo, iron	22.50 to 23.50
Birmingham, iron	20.00 to 22.00
Birmingham, tram car	20.00 to 22.00
Boston	23.00 to 24.00
Cincinnati	20.50 to 21.00

NO. 1 CAST SCRAP

Pittsburgh, cupola	$24.00 to 25.00
Chicago, cupola	27.50 to 28.00
Eastern Pennsylvania, cupola	25.00 to 26.00
Cleveland, cupola	23.00 to 23.50
New York, cupola (dealers' price)	21.00 to 22.00
Cincinnati, No. 1, cupola	21.00 to 21.50
Birmingham, cupola	24.00 to 25.00
St. Louis, railroad	26.50 to 27.00
St. Louis, agricultural	25.50 to 26.00
Buffalo	24.50 to 25.00
Boston (dealers' price)	27.00 to 28.00
Valleys	23.00 to 23.50

HEAVY CAST

New York (dealers' price)	$20.50 to 21.50
Buffalo	21.00 to 22.00
Pittsburgh	21.00 to 21.50
Cleveland	18.50 to 19.00
Boston	19.00 to 19.50

MALLEABLE

Pittsburgh, railroad	$21.00 to 22.00
Pittsburgh, agricultural	20.00 to 21.00
Chicago, railroad	23.50 to 24.00
Chicago, agricultural	21.50 to 22.50
Eastern Pennsylvania, railroad	20.00 to 21.00
Cleveland, railroad	22.00 to 23.00
Cleveland, agricultural	19.00 to 19.50
St. Louis, railroad	20.00 to 20.50
St. Louis, agricultural	19.50 to 20.00
Cincinnati, railroad	15.00 to 15.50
Cincinnati, agricultural	14.50 to 15.00
Boston	19.50 to 20.50
Buffalo	19.00 to 20.00

Miscellaneous Scrap

Gross Tons Delivered to Consumer

REROLLING RAILS

5 feet and over

Pittsburgh	$25.00 to 26.00
Chicago	29.50 to 30.00
Eastern Pennsylvania	Nominal
Cleveland	26.00 to 27.00
St. Louis	28.50 to 29.00
Birmingham	15.00 to 16.00
Boston (dealers)	18.00 to 18.50

LOCOMOTIVE TIRES

Chicago	$23.50 to 24.00
St. Louis	21.50 to 22.00

BOILER PUNCHINGS

Chicago	$25.00 to 26.00
Eastern Pennsylvania	23.00 to 24.00

Announcement

to Buyers and Sellers of Scrap

Whatever your connection in handling Scrap, you expect these things:

Right Price
Quick Action
Courteous Treatment

Established over five years, with a complete and able staff of experienced Scrap men, our organization is ready to serve you.

— The James S. Miller Co
McCormick Building
Chicago

New Trade Publications

FOUNDRY EQUIPMENT.—Pouring devices, molding machines, squeezers, and jolting machines are described and illustrated in a 4-page circular being distributed by the Arcade Mfg. Co., Freeport, Ill.

POST DRILL.—The Lynd-Farquhar Co., Boston, is circulating to the South American trade two catalogs written in Spanish. One is devoted to a post drill and the other to shapers. Both are well illustrated and contain specifications and other data.

THREAD MILLERS.—A 4-page circular is being distributed by the Smalley General Co., Inc., Bay City, Mich., in which two thread millers are described and illustrated. Brief specifications are given of each machine and the last page contains two typical operation and time studies with both machines.

LATHE CENTER.—A 4-page leaflet is being distributed by Kell, Hock & Co., Newark, N. J., in which a ball-bearing lathe center is described. The center revolves in bearings, which run in a bath of oil. The center turns with the work and, according to the leaflet, by this method, friction between center and work is eliminated.

COAL BREAKER.—The Pennsylvania Crusher Co., Philadelphia, has issued bulletin 1006 in conjunction with bulletin 1004. The former bulletin is devoted to a description of a coal breaker designed for crushing and cleaning bituminous coal. It is of steel frame construction. In operation the breaker crushes coal to a desired size and automatically removes impurities, such as rock, sulphur balls, bony coal, mine timber and tramp iron. Illustrations are given.

COAL CRUSHER.—Bulletin 1004 being distributed by the Pennsylvania Crusher Co., Philadelphia, describes and illustrates a steel frame hammer crusher specialized for the fine crushing of bituminous coal. The frame of the crusher is of fabricated heavy steel plates. The rotor consists of a powerful forged shaft and rolled steel discs carrying from six to ten rows of steel hammers, which turn on ring oiled bearings. The cage is of heavy cast steel frame, carrying perforated rolled steel screen plates, manganese steel grates or bars, as the service demands. Specifications are given.

FOUNDRY FLASKS.—The Truscon Steel Co., Youngstown, O., is distributing a 4-page circular in which pressed steel foundry flasks are described and illustrated. The ribs and flanges of these flasks extend the full depth around the corners without buckling or cutting away the metal. The meeting parts are welded, the pinholders are of malleable iron and are securely riveted to the flask. The flange on the filling side is turned outward so as not to interfere with ramming the molding sand, or hold it when shaken out. The flange on the bottom is turned inward, holding the sand in place when the flask is lifted. One page of the folder describes and illustrates a steel platform for use with lift trucks.

INDUSTRIAL TRANSPORTATION.—An illustrated booklet is being distributed by the Bicycle Manufacturers' association, Hartford, Conn., containing letters from manufacturers in which bicycles as a means of transportation of employes to and from work is endorsed. Practically all of the letters, which are supplemented with views of bicycle sheds erected at the various plants to house these vehicles, point out the advantages of the bicycle as a means of transportation for employes in plants far removed from street car lines, etc. Among the companies mentioned in the booklet are the Underwood Typewriter Co., Hartford, Conn., the Pierce-Arrow Motor Car Co., Buffalo, the National Cash Register Co., Dayton, O., the Bullard Machine Tool Co., Bridgeport, Conn., the American Rolling Mills Co., Middletown, O., and Smith & Wesson, Springfield, Mass.

LOCOMOTIVE CRANE.—The United States Crane Co., Chicago, in bulletin 190, recently published, describes and illustrates its line of locomotive cranes, for grab-bucket, hook-block or magnet service. Some of the specifications of these cranes are: Working weight, 159,000 pounds; shipping weight 120,000 pounds; ballast required 30,000 pounds; lower frame, 18-inch I beams with cast steel brackets for spur gear drive mechanism; rotation gear and roller path; rotation rollers; rotating frame; side housings; engines are of the vertical type, double, 10-inch cylinder diameter with 10-inch stroke; boilers of the vertical type, 54-inch diameter, 9½ feet high, 125 tubes, 2½ inches in diameter; steam pressure 125 pounds to the square inch; water tank capacity, 500 gallons and coal bunker capacity, 2000 pounds. The cranes have a drawbar pull of 9000 pounds maximum, a hoisting speed of 280 feet per minute and has lifting capacities, without track clamps or outriggers, 50 foot boom, of 20 tons at 15-foot radius, and four tons at 50-foot radius.

Opportunities Abroad

Requests for information should be forwarded to district or co-operative office in your district, of the Bureau of Foreign and Domestic Commerce. Each request should be on a separate sheet and be accompanied by the opportunity number

DISTRICT OFFICES

New York, 734 Customhouse; Boston, 1801 Customhouse; Chicago, 504 Federal bldg.; St. Louis, 402 Third Nat'l Bank; New Orleans, Hibernia Bank; Seattle, Henry bldg.; San Francisco, 307 Customhouse

CO-OPERATIVE OFFICES

Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Philadelphia, Chamber of Commerce; Portland, Oreg. Chamber of Commerce; Dayton, Ohio, Chamber of Commerce; Pittsburgh, Chamber of Commerce

The purchase of tin, tin plate, antimony, aluminum, zinc, bronze, brass in bars, tubes, and wire bars; also antifriction metals, nickel, copper and iron and steel in all forms, is desired by a firm in Spain. Correspondence should be in Spanish. Opportunity No. 30109.

The purchase of rubber tire and tube manufacturing machinery, hardware and mill stores, machinery and machine tools of all kinds, is desired by a firm in India. Opportunity No. 30112.

Automatic tin-making machinery and tin plate and solder are needed by a firm in Spain. Opportunity No. 30116.

The purchase of steel tubes, 2 inches and 2¼ inches in diameter, ⅛ or ¼ thickness and 5½ meters in length, in quantities of 100 tubes of each quality, are desired by a firm in Portugal. Quotations should be given c.i.f. if possible. Correspondence should be in Portuguese. Opportunity No. 30067.

The purchase and agency is desired by a firm in Belgium for the sale of electrical appliances, such as switches and sockets; wrought iron and steel tubes and fittings; malleable iron fittings; gun metal and brass fittings for gas, water and steam; copper and brass wire, sheets, bar rods, etc.; merchant iron, steel bars, plates and sheets and tin plates of all sizes. Quotations should be given f.o.b. Liverpool. c.i.f. Antwerp. Correspondence may be in English but catalogs should be in French if possible. Opportunity No. 30069.

A company in England wishes to purchase small grooved rolled iron bars in sizes No. 2 full, 13/32, 15/32, 17/32 and 9/16 inches, to be used in the manufacture of brass-cased, round stair rods. The amount used by this company averages 5 tons per week in assorted size. Quotations should be given f.o.b. Liverpool. Opportunity No. 30070.

A party from New Zealand, now in this country, desires to purchase machinery for distilling alcohol from refuse juice, acetic wood retorts and recovery plant, sulphate or ammonia recovery plant and paper-making plant. Opportunity No. 30167.

The general manager of a commercial corporation in this country is about to leave for the establishing of new agencies in Cuba, Panama, Colombia, Ecuador, Peru, Chile, Argentina, Brazil, Bolivia, Uruguay, Paraguay and Venezuela. He desires to secure direct representation from manufacturrs and exporters for the sale of hardware, machinery, tractors, agricultural implements and plated ware. Opportunity No. 30083.

An agency is desired by a man in Spain for the sale of steel and iron, coal and coke, lubricating oils and waterproof canvas covers for railroad cars. Opportunity No. 30086.

The purchase by a company in Norway of electrical supplies, gas an electric fixtures, iron, steel boilers, various metals, shipbuilding materials, engines, electrical cable-making machinery, flour-mill machinery, etc., is desired. Opportunity No. 29876.

The purchase of asbestos packing, piston rings, drills, files, magnetos, copper connections, wheels, automobiles, tools, parts, tires and accessories, are desired by a firm in Spain. Opportunity No. 29879.

A firm in Italy wishes to purchase or secure an agency for soft steel for making bolts and nuts. Correspondence should be in Italian. Opportunity No. 29880.

A firm in Sweden desires to secure the sole representation in Sweden, Norway, Denmark, Finland, Poland, the Baltic provinces and Ukraine, from manufacturers of agricultural machinery, small household hardware, tools, rails and wagons. Opportunity No. 30103.

A party from Finland, now in this country, desires to purchase building machinery, including concrete mixers, electric motors, etc. Opportunity No. 30106.

A merchant in Mexico desires to be placed in communication with exporters of machinery for making starch and banana flour. Correspondenee should be in Spanish. Opportunity No. 30181.

A firm in Brazil desires to secure the representation of American steamship companies and agencies for the sale of sugar-mill machinery, and other equipment. Opportunity No. 30175.

One new or second-hand sailing vessel, 45 to 50 feet long, equipped with mast for loading and landing cargo, and with gasoline auxiliary power, is required by a merchant in Guadeloupe. Correspondence should be in French. Opportunity No. 30172.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, August 28, 1919 *No. 9*

Strike Threat Fails To Alarm

Iron and Steel Industry Awaits Calmly Approaching Climax in Movement to Force Union Control of Plants—Investigation Shows Only 10 to 15 Per Cent of Men Are Organized—Operations More Normal

STRIKE threats which have overhung the iron and steel industry for several weeks still exercise an inconsequential influence upon trade conditions. The industry in truth welcomes with some show of relief the fact that the decisive stage rapidly is approaching where a demonstration of the claims of strength of the union organizers will be called for. Producers stand firm in their conviction that the great body of their employes, because of the fair treatment of the past and the lack of valid grievances, are not likely to be swayed by any propaganda of discord inspired by professional agitators. A thorough investigation covering the entire industry shows that 10 to 15 per cent of the men, at most, are affiliated with the American Federation of Labor. The voluntary action of representatives of 30,000 employes of the Midvale Steel & Ordnance Co. in formally condemning the movement toward shorter hours and higher pay as tending to prolong the high cost of living is believed to be significant. Furthermore, the President's clear-cut declaration on the present obligation of labor toward national welfare, promises to have timely and disciplinary weight. If a strike actually is called, it is thought it likely will apply more to the various tradecrafts about the plants than to the mill workers themselves and its effect will be limited accordingly. Because of the predominance of foreign and common labor, blast furnace operations may be more exposed to effects from a strike call.

Operations More Normal

The week has witnessed the clearing up of some of the points of disturbance that already have existed. Ore again is moving freely by reason of the return to work of the dockmen at upper lake ports. The loss of shipments sustained through the interruption has not been important because the season's ore demand has been backward and many of the boats were not scheduled to run to the close of navigation. Mill and furnace production in the Chicago district which was affected by the lack of cars and locomotives growing out of the shopmen's walkout, has been restored to about a normal basis. All the plants of the American Steel & Wire Co. at Cleveland, with the exception of the Central group of furnaces, now are operating, though not at full capacity.

New Orders Declined

Increased difficulty of producers in various lines to accommodate new orders more plainly is manifest. Several leading makers of steel bars have withdrawn from the market and will promise deliveries only against regular contracts and these not before an extended date. One large independent company has put its price up $3 or to 2.50c, Pittsburgh, to the outside trade but still applies the old price to regular customers. In sheets much tonnage is going begging. Where certain producers have had their output interrupted by labor disturbances they are seeking to obtain tonnage from other mills. The continuing shortage of sheet bars is a factor. A similar oversold condition obtains in lap-weld pipe. Wiremakers are so filled up as to keep them well occupied to Jan. 1 and despite their care in accepting new business, the tonnage forced upon them is a cause of concern. Consumers of tin plate, it now is clear, have sharply underestimated their needs this year and it is a question how they can be accommodated. Large export inquiries, one for 100,000 boxes and another for a larger amount, probably will have to be surrendered to foreign mills.

Export Sales Holding Up

Despite the sharp slump in general exports in July, foreign business in iron and steel seems to have been affected at a minimum. August sales foot up a heavier total than the preceding month notwithstanding the aggravated exchange situation. A large transaction is about to be closed whereby Chile will place heavy orders for railroad equipment in this country.

Pig iron selling for next year is going on in a desultory way because producers still are inclined to hold it in check. The general volume of sales and inquiry continues lighter. At Chicago two lots of 10,000 tons each of basic have been closed by St. Louis consumers. Most producers are inclined to ask higher prices.

Do Not Fear Labor's Threat

DESPITE threats labor leaders have made as to what they are going to do to the steel industry, steelmakers do not fear anything even remotely resembling a general tieup of their plants either now or in the near future. While strikes are numerous, and may be more so while the cost of living remains high, the percentage of the plants affected, it is confidently believed, will be trifling, because the record of the past shows that not much progress ever has been made by the labor unions in organizing the steel industry. It is regarded as assured by the leaders in the industry that the methods of direct dealing between men and employers, almost universally followed in the steel industry, will continue to be pursued successfully. An encouraging manifestation of the amicable relations between employers and the mass of the employed in the steel industry is the adoption of a sound and sane position by the workmen of the Midvale Steel & Ordnance Co. in deprecating the agitation for a shorter work day and an increased wage.

That the labor situation in the country as a whole is serious, however, cannot be denied. The prostration of the railroads by a general strike would be little short of a disaster. One of these factors of the situation is the great stress laid upon the importance of the worker during the war, and the flood of propaganda which exalted him to such an extent that he has been led to make demands wholly unjustified.

The principal factor, however, is the high cost of living. Present prices on iron and steel, when contrasted with other commodities, compare favorably with those before the war, and the lack of any indications that there are to be early advances of a general character in finished steel prices, reflects the willingness of the industry to refrain from adding to the burden of living. While this attitude toward prices is the correct one at the moment, it is not one that can have more than a slight effect upon the ultimate trend of the economic scale. As a matter of fact, the recent pernicious tendency in labor and the cost of living proceeds from one basic cause. This is the fact that labor is scarce. In few sections of the country are there enough workers to man the industries, and in most there is a decided scarcity. To render the situation more acute, it is estimated by competent authorities that fully 2,000,000 men are planning to leave the country as soon as they can get away. More than 1,000,000 already have made application to the steamship companies for passage and a large percentage of these have made deposits for their transportation.

What is needed to combat the high cost of living is a sufficiency of workers to meet our requirements, and the solution of this problem will prove a most difficult one, and one that only time will completely solve. The solution, however, will be greatly stimulated by such work as is being carried on by the Inter-Racial council in Americanizing the foreign-born element of our population so that it will regard this country as home. But of more importance is our attitude toward immigration. The present situation can be rendered only worse by the carrying out of any radical views which would discourage immigration. What is vitally needed is an intelligently discriminating but liberal immigration policy, which will bring needed workers into this country and by eliminating the shortage of labor, lead to a restoration of easier conditions.

Are More Sheet Mills Needed?

NEW sheet mills are springing up in various parts of the country right along and therefore, it becomes pertinent to inquire if sheets will become a drug on the market because of increased capacity? Present conditions do not point that way. The principal reason for the construction of sheet mills today is found in the demand which has come forth in late years for this product. The farmer not

long ago used wood for roofing and siding his barns, sheds and silos. Along came salesmen who convinced him that galvanized sheets were the most economical material in the long run for his purpose, inasmuch as they are easier to attach, easier and cheaper to keep in repair and are fireproof. The farmer, although skeptical at first, became educated, and is now demanding this commodity in good-sized tonnages. He is helping and will continue to help consume sheets.

The coming of the automobile was another factor which resulted in absorbing a large percentage of the sheet output. The production of automobiles has increased steadily since the beginning of the industry and such heavy demands for highly-finished sheets for making bodies, hoods, etc., have come about within the last three years that many sheet-makers began catering solely to this class of the trade, leaving their old-established customers to forage for their several thousand tons of the common grade sheets yearly. Surely there is room for new mills to take care of this cast-off business. If automobile production should increase as much in the next five years as it has in the past five, it is doubtful whether the mills which specialize on highly-finished sheets will be in a position to meet the demand from this particular class of the trade.

While the automobile industry is perhaps the largest consumer of sheets, makers of office furniture, roofing products, street cars, railroad coaches, tanks, boilers, stoves and enameled ware must not be overlooked. These makers patronize sheet mills regularly and their yearly business at least would pay the interest on the capital required to build several new mills.

Steel Scales Economic Barriers

AN important change in the export trade of the United States is already beginning to show itself. This change has already been officially announced in the statistics for July, during which month the volume of exports declined radically while the total of imports made the greatest gain in the history of the country. It is with satisfaction that the iron and steel industry has observed that the exports of these commodities have not followed the trend of foreign business in general. At the moment there are no indications that these materials will be affected in the same way that other American products are faring in foreign markets.

Exports of iron and steel during July did show a slight decline but they have increased during August. This increase has been in face of the very adverse conditions abroad. The industrial unrest throughout Europe and the radical decline in exchange rates were deterrent factors but the volume of iron and steel exports grew notwithstanding. It would seem that there is such an urgent necessity for such products abroad that the usual laws of international trading have been temporarily set aside in the case of steel.

It would be peculiar indeed were iron and steel sales to be made without regard to the natural law of economics. But this unique position of these particular exports is due to other factors. Europe will harvest a crop of sorts this year, but her industrial rehabilitation will not be complete until factories are restored. The latter require iron and steel products and for this reason the exports of these materials are likely to grow long after our exports of foodstuffs have declined.

Sound Principles are Demanded

THIS is not the only generation to suffer from the cost of living problem but the present problem is probably more nearly world-wide now than ever before. In France, in 1793, the guillotine was used freely to compel compliance with a series of maximum prices. Long before that, in fact, 1600 years ago, Emperor Diocletian of Rome was confronted with a crisis arising from popular unrest over the cost of living. So the emperor, in order to satisfy the desires of the people, fixed maximum prices on commodities, also on skilled and unskilled labor and even fixed the incomes of teachers, lawyers and other professional workers.

It might be mentioned, incidentally, that historians consider this act of Diocletian the beginning of the fall of ancient Rome. Today we hear the government being importuned from every side that it regulate everything. We see agitation for higher wages and shorter hours. Our government is trying to satisfy public clamor with promises of "sweeping investigations." We listen to "be it enacted theories" and put up with the idealistic visions of "ignorant dreamers." Yet all this will never in the wide world reduce the cost of living. In fact, such agitation is as much the cause as the effect of the predominate world issue. If the millenium seekers who are spreading far and wide their pernicious panaceas for all the ills of the masses do not stop somewhere within reason, human progress everywhere will be checked for generations. Increased production and still more production provide the only remedy for the high cost of living. President Wilson in his clear-cut, logical appeal to the public in connection with the demands of the railroad shopmen, to call a truce upon continuing wage contests, gives a cue to the whole country and calls the nation back to sound and elementary principles from which it has been straying dangerously. His message should have a wholesome and salutary effect.

Basic Orders Placed at Chicago

Two St. Louis Consumers Take 10,000 Tons Each and Other Lots are Placed — Furnaces Still Hold Back on 1920 Orders But Increasing Tonnage is Being Urged Upon Them—Prices Tend Upward

Chicago, Aug. 26.—Selling of basic iron after that grade had been unusually quiet for some time has marked the past 10 days in the Chicago district. Two sales of 10,000 tons each to melters in the St. Louis district have been added to by a number of smaller lots, aggregating about 10,000 tons. Included in the latter is one sale of 500 tons to a Milwaukee melter. General inquiry is good, although somewhat less than was the case during the past few weeks, slackness of demnad apparently being the result of labor uncertainty. Many foundrymen feel that their ability to keep their plants going at capacity is somewhat problematical on account of strikes. A recent sale of 1500 tons of foundry iron, silicon 2.25 to 2.75, was made for delivery in five days. A malleable user with large tonnages on contract who could not obtain his iron promptly has bought 1000 tons for immediate delivery from a seller who had it on cars. A Wisconsin foundry recently took 500 tons of foundry iron. The American Steel Foundries is inquiring for standard bessemer and probably will take 1500 to 2000 tons. Most inquiries are for small lots, carloads predominating. Increase in production is being brought about. The Northwestern Iron Co., Mayville, Wis., has blown in its idle stack and the stack under repair at Federal furnace, South Chicago, will become active within a week. One of the Iroquois stacks, South Chicago, being extensively repaired, will be blown in before the end of the year. The other idle stack at this plant has been producing ferromanganese for the Miami Metals Co., but recently has been cold. It will be started on foundry iron in a short time. Silveries are almost unobtainable and a recent inquiry by a Wisconsin melter for 4000 tons has not been placed. This buyer is willing to take the whole tonnage during the present year or have deliveries extended to July 1, 1920. Jackson county producers are entirely out of the market and Red River furnace is out of blast. An accommodation purchase of 35 tons of 10 per cent bessemer ferrosilicon was made recently to meet an emergency, the buyer taking this alloy at $49.75 per ton to use in place of silvery iron which would have cost $44.75 had it been available. Superior charcoal iron makers are practically out of the market for 1919 delivery and only one is known to have opened books for next year. This maker is quoting 1920 delivery at a $2 advance.

Sell 1920 Iron in Boston

Boston, Aug. 25.—Pig iron prices are stiffening. Southern furnaces particularly seem indifferent to new business, and each week sees a higher price tacked on to the schedule. This is due partially to export shipment, but it is mainly the result of complete confidence in higher future prices. One furnace is storing its production as fast as possible, making little attempt to dispose of any iron at present. Virginia furnaces as far as they affect the New England consumers are still out of the market. Some eastern Pennsylvania producers have opened their books for 1920 business and have made sizable sales in New England during the last week. One thousand tons was sold to a Massachusetts consumer and 1200 tons to an eastern Connecticut consumer. Both orders were for first half delivery at $30 at the furnace for No. 2X eastern (2.25 to 2.75 silicon) iron. Five hundred tons of eastern Pennsylvania iron of 3 and over, silicon content, went to a Rhode Island consumer for $32 at the furnace. Small tonnages of Buffalo iron have been placed for balance of the year delivery at prices ranging from $29 to $30 at the furnace for No. 2X eastern (2.25 to 2.75 silicon). Nothing in this latter district is now being sold here for 1920. The furnaces which have in the past few weeks been offering new year deliveries have obtained the desired backlogs and are now holding off for higher prices. It is estimated that 25,000 tons have already been sold for 1920 delivery and as the total New England consumption for the first half is approximately 200,000 tons, it is evident that active buying is not far off. Usually from 25 to 30 per cent of the first half's business is placed before Oct. 1, which means that if the present year is no exception, there are 35,000 or 40,000 tons to be sold during the next month. The estimated total of sales through Boston dealers during the week is 6500 tons.

Limited Selling for 1920

New York, Aug. 25.—Although the eastern pig iron market has been quiet during the past few weeks, the volume of business booked was fairly large. This business was comprised entirely of small lots and there was a lack of spectacular developments. Most of the current bookings were for this year. Sales for 1920 were slightly larger during the past week than in preceding weeks, but on the whole, the business for next year still is on a limited scale. Furnaces generally are unwilling to book 1920 business or are doing so only when urged by regular customers. Prices on foundry iron for first quarter done

during the past week range from $30.25 to $32, eastern Pennsylvania furnace, for 2.25 to 2.75 silicon. The same variation applies to this year. Foundry iron for the remainder of this year may be had at $28.25 to $29.25, eastern Pennsylvania furnace, for 2.25 to 2.75 silicon and $1 less for 1.75 to 2.25 silicon. Comparatively little Buffalo iron is being sold in this district. A Virginia maker, who has been selling high manganese and high silicon at $26.75, furnace, for 1.75 to 2.25 silicon, has withdrawn temporarily. Malleable may be had from an eastern Pennsylvania furnace at $27.75 to $28, furnace. Central Pennsylvania furnaces have participated in the business booked in this district during the past week for both this year and in 1920. Prices on charcoal iron for the remainder of this year and for first quarter are $36.35, Buffalo, for 2.62 per cent silicon and higher; $35.85, Buffalo, for 2.50 silicon, and $35.35, Buffalo, for 2.25 silicon. A western consumer has an inquiry out for a round tonnage of low-phosphorus iron. Export business during the past week includes one lot of 500 tons of hematite and several lots of foundry. Export business continues disappointing.

Bookings Fairly Good

Philadelphia, Aug. 26.—Fairly good bookings characterized the pig iron market here during the past week. The principal business consisted of a purchase of 4000 tons of foundry iron for this and next year by the J. L. Mott Co., Trenton. This order was divided among several furnaces. Numerous lots of 1000 tons and smaller for this year and some for next year have been placed. This business generally was done at prices equivalent to $28.50 to $29.50 delivered Philadelphia for 2 plain (1.75 to 2.25 silicon) for this year with No. 2X (2.25 to 2.75 silicon) $1 higher while first quarter is bringing $1 to $2 higher than this year. A willingness to sell for first quarter still is far from general. In fact only a few makers will sell beyond this year. A fair amount of new inquiry is out. This includes 500 tons of malleable for the rest of the year for Stanley G. Flagg & Son, Pottstown, Pa., 1000 tons of foundry iron 1 to 1.25 silicon for last quarter for the Pennsylvania railroad, 1000 tons of foundry 1.75 to 2.25 silicon for November-December-January for the Niles, Bement Pond Co. and others. The United States Cast Iron Pipe Foundry Co. continues a heavy buyer. Malleable can be had at $27.75, eastern Pennsylvania furnace as minimum although some malleable has been bought by eastern consumers at $29 Buffalo. Eastern buyers of basic are well supplied and there is no inquiry for this grade. An eastern steelmaker who has been a seller of basic lately has decided not to market any more of this grade. Incidentally eastern makers say there is not likely to be much more business at present level for basic because of the high cost. Low phosphorus is featured by some small inquiries including 500 to 1000 tons for a western plant of the American Steel Foundries. For copper-free low phosphorus $37 eastern furnace now is the minimum asking price. There is a fair amount of export pig iron inquiry including one lot 7000 tons of basic but actual sales are small, they include one lot of bessemer and several round tonnages of foundry iron.

A Virginia furnace which has been selling high manganese and high silicon foundry based on $26.75 furnace for 1.75 to 2.25 silicon has gone out of blast temporarily and has withdrawn from the market. No Virginia foundry obtainable here now at less than $28 furnace for No. 2 plain and $29 for No. 2X.

Another Maker Booked Full

Buffalo, Aug. 26.—Another Buffalo maker has retired from the pig iron market for this year's delivery. Quotations are being made on next year's iron only to old customers. This interest probably is oversold on 1919 iron. It closed its 1919 books with the sale of approximately 4000 tons of No. 2X foundry (2.25 to 2.75 silicon) at $28. A price of $29 also was quoted on some No. 2 X iron for this year's delivery. The tonnage of 1920 iron sold by the interest is small as the labor situation is causing furnaces to hesitate booking for the future. The inquiry probably aggregates 10,000 tons, mostly for foundry iron. Another interest which retired earlier is back in the market for a limited tonnage. Available capacity is being rapidy taken up and one transaction included the sale of 1000 tons of No. 2X at $29.50.

Interest Largely in Foundry

Pittsburgh, Aug. 26.—While the inquiries for foundry iron persist and represent a fairly sizable aggregate, the actual turnover in this class is moderate. In the steelmaking grades almost nothing is going on save for the inquiry from the American Steel Foundries for the requirements of its Alliance, O., plant for the last four months of this year. This inquiry calls for from 5000 to 10,000 tons of basic and about 500 tons of bessemer It is reported that a portion of the basic has been placed but no details as to quantity and price are made public. Sales of bessemer iron have been confined almost exclusively to carload lots but such business has been at the full market price of $27.95 furnace. In fact the market is showing firmness notwithstanding the dullness. Among recent sales of foundry was one of 500 tons of No. 2 (1.75 to 2.25 silicon) for last quarter shipment for this district at 27.25 furnace, or at 50c a ton over the market. Several of the recent sales of gray forge also have been at a premium of 50 cents a ton. Strength in the steelmaking grades in the face of the light demand may be explained by the fact that resale tonnages long since have been cleaned up while the danger of competition from steel companies whose producing costs average much lower than those of the merchant furnaces vanished when the demand for steel provided these producers with an outlet for all of their accumulated iron stocks. Demand for low phosphorus iron has tapered along with that for other grades. No changes lately have occurred in the list of active and idle stacks, but at least a couple of merchant stacks which it was expected now would be in blast still are idle due to the fact that the ore shipments have been held up by labor troubles at the upper lake docks. These are the Anna furnace of the Struthers Furnace Co. and the Ella furnace, West Middlesex, Pa., operated by E. W. Mudge & Co., Pittsburgh.

Foundries Need More Iron

Cleveland, Aug. 26. — A good many of the foundries in Cleveland territory apparently are receiving new business at a heavier rate than they had anticipated when they recently closed for their pig iron requirements. As a result, a number of these shops now are coming into the market for additional tonnage ranging from a few hundred to 1000 tons. Inquiries of this kind are quite numerous. In some cases it is apparent that the consumers are seeking to overbuy their needs and carry the surplus into next year. These consumers are finding it difficult to locate much iron on the $26.75 basis for 1.75 to 2.25 silicon. The Cleveland furnaces continue to hold this grade at $27.25 equivalent to $27.65 to $27.75 delivered to Cleveland consumers and have been selling some tonnage on this level. Generally new orders being taken by the furnaces and new inquiries are in much lighter volume. Many producers are comfortably sold against their output to Jan. 1, and are not soliciting or encouraging 1920 business, although they are taking some tonnage for the latter position when it is brought before them by regular customers. One week of foundry and malleable grades interest sold 8000 to 9000 tons in the about equally divided between this year and next and the price in all cases was on the $26.75 basis. A Canton, O., interest which recently was figuring on 5000 to 6000 tons of basic, has made purchases against this requirement. Shipments of iron are going forward freely and furnace stocks continue to fall.

Refuse to Quote for Next Year

Cincinnati, Aug. 25.—Inquiry for foundry iron for first and second quarter shipment is heavy, but so far no quotations have been named for any delivery beyond Dec. 31. Rumors that some sales have been made to favored customers probably originated through requests of some buyers to extend shipments of iron due in the last quarter into next year. Higher prices for next year's delivery appear to be inevitable, according to reports from various sellers. Several inquiries for malleable have come to light, both for shipment during the remainder of the present year and in the first half of next year. It is understood that nearly all the foundry iron offered last week at $26.75, Birmingham, has been sold. Most sales are now on a basis of $27.50 for iron with 1.75 to 2.25 per cent of silicon. Some firms are maintaining a difference of $1 between this grade and the next higher (2.25 to 2.75 silicon), but one house is quoting $1.10 per ton higher.

Still Quotes $26.75 Basis

St. Louis, Aug. 25.—This week has shown an increasing firmness in the market, so far as southern iron is concerned, although at least one furnace is still quoting $26.75, Birming-

ham basis, for 1.75 to 2.25 silicon, for delivery over the balance of this year. Some iron changed hands recently at $27 to $27.50, Birmingham basis, for 1.75 to 2.25 silicon, prompt shipment. Inquiries for both prompt and future shipment are fairly good, although the tonnage involved is limited. It is confidently expected a number of the larger buyers in this territory will be in the market soon, this time to cover for an additional tonnage over what they previously bought for last quarte shipment.

Southern Iron Market Firm

Birmingham, Ala., Aug. 26.—Sales of pig iron are still of the spot class although a little tonnage is taken on occasionally for delivery during the last quarter. No announcements have been made as to prices for 1920, although it is said an increase of $2 might be satisfactory. The market is firm. Sales reported during the past week aggregate more than a month's make. Production in Alabama for August will show a material increase over last month. The make in July was 14,000 tons greater than in June. A further increase will be made in the next two weeks by the blowing in of another of the Sloss-Sheffield Steel & Iron Co.'s furnaces, the Woodstock Iron Co.'s furnace at Anniston, and possibly the furnace of the Woodward Iron Co. at Woodward, now being repaired.

Coke Advance Maintained

Spot Firm at $4.75, Ovens, While Operators Ask $5 for September Shipments — Foundry Coke Selling at $6—Little Done in Contracting

Pittsburgh, Aug. 26.—Recent advances in prices of coke are well maintained, and on standard 48-hour fuel on spot or prompt shipment they have been slightly bettered. A week ago it was possible to pick up supplies at $4.50 and that price was exceeded only in a few instances. Today the market is not quotable below $4.75, ovens, and it is claimed that coke with a high percentage of sulphur is selling at that figure. This is not surprising in view of the fact that general production is barely sufficient to meet the demand. While more merchant ovens are in operation than recently, the increased output easily has been taken care of by the larger contract obligations and spot demands. As high as $5, ovens, is being asked, but as yet that price has not found basis on direct sales from producer to consumer. Little has been done lately in contracts over the remainder of the year and prices are merely nominal. On such business the general asking price is $5.25, ovens, but $5.50 is being quoted by a few operators. On shipments for September operators are asking $5, ovens but thus far they have not been able to book much business at that figure. The market for by-product coal continues to show a good deal of strength, with sales of Connellsville coal being reported as high as $3, and in a few cases higher. While some ovens are coming into operation in the region, the movement is far from general and it is declared that a number are being allowed to remain idle until a $5 market is established. That price would make coke shipments more profitable than $3 coal. Standard foundry coke is selling on spot at about $6, ovens, and a few contracts for the remainder of the year also are reported at that price. More is asked on both spot and contracts by some operators who are not anxious for business, but with some tonnage available as low as $5.50 the market is more fairly quoted at from $5.50 to $6, ovens. Connellsville production for the week ended Aug. 16, is estimated by *The Connellsville Courier* to have been 236,182 tons, as compared with 222,170 tons in the previous week.

Coal Supply Worries Coke Producers

Boston, Aug. 25.—The uncertainty in the supply of coal for by-product coke production, together with the stiffening prices in beehive coke, has resulted in a decided upward tendency in the local coke market. Every indication at present points to a September advance in the existing sliding scale contracts. These contracts have been based on the Connellsville market from month to month, and a $6.50 value in the Connellsville production will probably govern the September rating. The price of coke at present on all new contracts covering balance of the year is $10.40 and on contracts extending through the first quarter is $11.40, though in some cases contracts at $10.90 have been taken for that period. A few contracts have been made for the first half of 1920 at a flat rate of $11.90, and the local producer reports a reluctance to book any considerable tonnage at that figure.

Pay Premium at Cincinnati

Cincinnati, Aug. 25.—Connellsville coke for spot shipment is bringing a slight premium. Some furnace coke has changed hands recently at $4.50, ovens, while foundry coke is bringing from $6 to $6.50. Oven operators are slow in making further sales for next year's shipment until the question of a freight increase is settled.

Market Shows Strength

St. Louis, Aug. 25.—The coke market is strong and the ovens in the Connellsville district are behind with shipments. Spot coke is being quoted all the way from $5.50 to $6.25 at the ovens, for 72-hour foundry grade. Box cars are scarce. Customers in many instances are willing to pay premiums for coke in transit.

Ore Moving Freely Again

Dockmen's Strike Called Off, Boats Now Taking on Larger Tonnages—Market is Dull, But Renewed Buying is Expected

Cleveland, Aug. 25.—With operations resumed at all upper lake ore docks and a free movement of vessels, prospects for a large amount of business this fall are brightening. The present week is one of the dullest of the entire season so far as the selling of ore is concerned, but the dullness is not all due to the fact that furnaces have contracted for their requirements, and ore companies expect a renewal of buying. A peculiar feature of the situation is that while some interests have contracted heavily to protect themselves well into next season's operations, others have not covered their requirements for the balance of this year. The former have been moved largely by the possibility of an increase in the price of ore next spring, while those who are not buying much beyond current requirements say they do not wish to stock up with "high-priced" ore. Ore companies are notifying prospective patrons that they cannot guarantee deliveries on late orders. Although the strike of dockmen held up shipment of more than 5,000,000 tons of ore that loss is not so important in their calculations as the statement that the grain shipment this fall is to be extraordinarily heavy. Also, there is no assurance that railroad men and the railroad administration will be able to arrive at a satisfactory settlement.

Shipments by independent ore interests this year are expected to be considerably below those of 1918, although the total of all ore tonnages shipped from the Lake Superior district will not show a serious falling off from the total of last year. Independent interests declare that the United Steel Corp. has increased its shipments above those of 1918. It is the large volume of the corporation's shipments that is expected to adjust the scale. The corporation dipped heavily into its reserves last year and ever since the season opened has been busily stocking up. Within a few hours of the time the dockmen's strike was called off barges of the Pittsburgh Steamship Co., which had been ordered laid up for an indefinite period were on their way to the head of the lakes.

Practically all of the docks are now operating with full crews, except the Allouez dock, where only one-third of the usual number returned to work Monday. Work was resumed at Escanaba Monday, men at the other docks havings gone back last week. Dock office men at Escanaba are out.

A majority of the ore companies report that the strike did not affect them to any appreciable extent. As a natural consequence of the backward season many boats were coming down loaded to but two-thirds of their capacity. Now they are loading to capacity, and much of the loss is expected to be made up.

Scrap Market Softens

Consumers Show More Marked Indifference and Tighten Inspections—Dealers Still Optimistic—New England Situation More Active

FOR COMPLETE SCRAP PRICES SEE PAGE 604

Pittsburgh, Aug. 26.—Although scrap dealers here continue to take a cheerful view of the situation and to back up their views by purchases, the market is hardly as firm as it has been. Not only are steel manufacturers maintaining an attitude of indifference but a number of them have grown more particular in the matter of inspections. With rejections increasing the offerings seeking an outlet are too large for sales at prices which prevailed recently. The rejection taking place at the plant of a consumer, it is necessary usually for the shipper to reconsign promptly to save demurrage charges, and this is possible only by shading the price. The present turnover is probably the smallest in months and prices are being established on carlot sales. Such business does not provide a safe guide on values of round lots. The fact that dealers are paying $20.50 for heavy melting steel is rather indicative of confidence in an ultimately higher market, for material laid down on the yards at that figure could not be sold at a profit much under $24, since unloading and loading charges amount to in excess of $2 a ton. Sale of 500 tons of plate shearings at $24.50, delivery valley district, recently was made here. No. 1 cupola cast recently sold at $25.50 and dealers are paying as high as $24 for that grade.

Boston Market is Active

Boston, Aug. 25.—Heavy melting steel scrap has swung back after the sharp decline of last week and is now quotable at $16, dealers' paying price. This is in the face of no outside sales, for the large steelmakers have not been buying in New England since the heavy Pittsburgh purchases of two weeks ago. The demand from foundries for No. 1 machinery is strong and it is difficult to find any of this grade coming into the market. The foundries are in many cases buying direct from the source of supply, as fast as the scrap accumulates, and dealers are being forced to pay high prices for their requirements. A price of $28, delivered, is the average on such transactions. Stove plate has been among the grades to follow the general price advance. A Norwood, Mass., consumer bought approximately 500 tons of this grade at $22 delivered and other lots went to Worcester and Connecticut points. An eastern Pennsylvania consumer bought 100 tons of forge scrap at $15 delivered. The local dealers' price in this grade is $10.50 to $11. Toolmakers and special manufacturers have been coming into the scrap market. Eight carloads of wire scrap went to a Worcester consumer at $12.50 delivered. A small tonnage of rerolling rails for a special purpose sold at $20.50 delivered to a Massachusetts consumer. Heavy cast iron scrap has advanced in some cases, and a small tonnage during the week was sold to an Ansonia, Conn., consumer at $21.50 delivered. Several hundred tons of railroad scrap were bought by a Worcester concern at $18.50 delivered. The government ordnance department here awarded several lots of scrap during the week on bids recently received. Of these lots the most notable was that of 1000 tons of steel scrap sold to the Buffalo Bolt Co., Buffalo, at approximately $29 per gross ton f.o.b. Worcester, Mass. Quotations are being asked on 500 tons of cast iron pipe by a Norwich, Conn., concern. Other lots of pipe will soon be scrapped as a result of reconstruction of municipal water works systems.

Buying Volume Improves

New York, Aug. 25.—Demand for iron and steel scrap has shown considerable improvement here during the past week. This betterment was reflected particularly in heavy melting steel. Eastern Pennsylvania consumers who recently bought at $19.50 delivered and then reduced their price to $19, now are paying $18 to $18.50 delivered which makes the market on this grade in New York, $15.35 to $16 per gross ton. Despite this slight decline, the tone of the market is a good deal better, not only because of the business which has been transacted, but because the trade now is less anxious as to the effect of any labor troubles which may be in prospect. Dealers now believe that the danger of labor troubles has been greatly exaggerated and that the present situation is going to be ironed out without any serious consequences. As a result of the withdrawal of the embargo by the New York, New Haven & Hartford railroad, it again is possible to ship scrap in New England. In addition to steel scrap, other grades are active. The foundries are buying liberally of cast scrap and there also is active buying of wrought.

Consumers Lower Offers

Philadelphia, Aug. 26.—Taking advantage of the depressed scrap market in Pittsburgh, some eastern consumers now are offering $18 and $18.50, delivered, for heavy melting steel, but no sales are reported at these figures as the dealers continue to hold for higher levels. Only limited business was transacted in heavy steel during the week. This consisted of further buying by the Lukens Steel Co. The possibility of a railroad tie-up following the President's refusal of the shopmen's wage demand has upset scrap dealers and some of the latter refuse to buy or sell until the present uncertainty is removed. However, the entire trade has accepted the President's action with enthusiastic approval and the expectations expressed that it will have the ultimate effect of straightening out the labor situation. The heavy output of machine shop borings and turnings during the war and the fact that the blast furnaces have become accustomed to use these grades on a large scale now is proving a source of trouble to the regular users, the steel plants and rolling mills. These grades still are in good demand by the blast furnaces at prices which make it difficult for the mills to buy their specifications at less than $15, delivered. All foundry scrap is in good demand.

Mills Are Holding Off

Buffalo, Aug. 26.—All grades of scrap are firm, but there has been little selling. Dealers are well supplied with outside orders, and are not trying to force sales. Mills hesitate to buy scrap and scrap men are just as willing to hold off, because they believe they may get better prices.

New Business Drags

Cleveland, Aug. 26.—So little business is being done in any grade of iron and steel scrap that scarcely a ripple has been created in the market. Heavy melting steel consumers appear to be out of the market for tonnages until the labor situation clears, but it is the belief of dealers here that the mill and furnace strike talk has been given its quietus by the appeal of President Wilson to the railroad shopmen and the logical resolutions of the Midvale Steel & Ordnance Co. employes in convention at Atlantic City. Heavy steel is off a little to $20.25 to $20.50, cast borings to $15 to $15.50 and bundled sheets to $15.50 to $15.75. All wrought scrap quotations are unchanged as this grade is scarce.

Chicago Market Stagnant

Chicago, Aug. 26.—Both buyers and sellers of iron and steel scrap at Chicago are marking time and the market is almost bare of transactions. Consumers apparently believe they will not lose by waiting, and while output of steel and iron products is heavy, there seems to be sufficient scrap in the hands of users to meet their current demands. Dealers, on the other hand, are trying to sell only such scrap as is already on tracks and ready to be moved, holding their yard scrap for the rise they feel certain must come without great delay. The only railroad list at present current in this market is one from the Rock Island offering 300 tons.

Cincinnati Market Dull

Cincinnati, Aug. 25.—The scrap market is slowing down. Melters are not disposed to buy more for future shipment, and sellers seem content to wait until prices regain some of the lost ground. Complaints of a car shortage are general, and many shipments to outside consumers are delayed. Heavy melting steel is still in slack demand, and while prices have not been changed they are very weak. Cast borings and steel turnings are also weak, although the supply of the former is said to be limited. Railroad offerings are light.

Southern Market Slow

Birmingham, Ala., Aug. 26.—Scrap iron and steel dealers in the Birmingham district are waiting for an improvement in the market. The most active grade is No. 1 cast, foundries

still using this product in the place of pig iron. Heavy melting steel is moving slowly, the largest consumer in the territory being unwilling to pay what dealers ask. Country scrap is coming in more freely, and railroads are still offering material. Corporations are not willing to sell at present prices. Inquiries are being received from numerous directions. A car shortage is being felt by the dealers.

More Tonnage

Being Forced on Wire Mills Than Desired—Price Spread Shown

New York, Aug. 25.—As a result of the improved labor situation, reflected in the withdrawal of embargoes on freight in New England and elsewhere, wire makers again are able to ship on a basis that is nearly normal. Due to the extent to which they already have business on their books, however, they continue careful as to new bookings and are accepting orders only from regular customers, for tonnage in proportion to the deliveries to these users in 1917 and 1918. Despite this care in accepting business, however, the mills are concerned with the amount of new tonnage which they find it necessary to take. They now have enough business on their books to keep them occupied through the remainder of the year. Current demands are coming from all sources; both manufacturers and merchants are taking all the tonnage they can get. The leading interest has not yet changed its price and there is no expectation that it will follow the recent advances of independent producers some weeks ago.

Little Free Tonnage

Pittsburgh, Aug. 26.—Prospective production of wire and wire products in the next two months and in some cases even longer, is so thoroughly engaged that comparatively little is available against new inquiries, although most manufacturers are able to supply a little material to meet pressing demands from regular customers. One manufacturer here recently allotted among its several branch offices a small tonnage of nails at $3.50 a keg, Pittsburgh. This company did not follow the advance named by several other manufacturers, and aside from this willingness to take on a little business is still out of the market on third quarter business. Export demand for nails and plain and barbed wire is heavy and the report is current here that the United States Steel Products Co. recently raised its quotation on nails to $3.75, Pittsburgh. Mill operations are averaging about 80 per cent.

Meet Some Shading

Chicago, Aug. 26.—Conditions in the market for wire and wire products remain unchanged with the leading interest holding its schedule of prices at a level below that established by practically all independent makers. In the face of present conditions it has come to light here and there that these higher prices have been shaded but this practice is not general. Inquiry for wire and nails is heavy.

Sheet Orders Go Begging

Mills Booked so Heavily That They Remain Indifferent to New Business—Makers Seek Tonnage to Meet Deficits in Output

Youngstown, O., Aug. 25.—Buyers coming into the market here for sheets are finding it discouraging. Practically no sheets are available. The demand for all grades at present is as heavy as it was when the mills were on a wartime basis and with unsettled labor conditions, makers are showing no tendency to obligate themselves further than the fourth quarter. Many makers are booked with as much business as they can handle until Jan. 1. Plenty of new business is being turned away. Buyers who find producers in their own districts unable to handle their requirements are trying to make connections with mills here. They are not meeting with success, however, for the reason that the majority of sheet-makers here are out of the market. Inquiry for all grades is heavy. An inquiry for 600 tons of blue annealed is out this week. This material is wanted by a broker on the Pacific coast for shipment to Japan. A dealer, who recently contracted for the entire output of a certain mill of blue annealed rolling sheets from 7 to 14 gages, states a good business is being done in this direction. The new mill motor at the De Forest plant of the Republic Iron & Steel Co. is now on its trial run and it is expected the plant will be in operation by next Monday.

Demand is Active

Chicago, Aug. 26.—Consumers of steel sheets are inquiring for heavy tonnages of all grades, but without success in many cases, as most producers have their books well filled. Holders of contracts are specifying strongly, showing that the material is going into manufactured articles without delay. The leading independent in this district is forced by circumstances to refuse much business now being offered and in some cases has asked regular customers to inquire elsewhere to cover their requirements.

Demand Shows No Letup

Pittsburgh, Aug. 26.—Demands upon the makers of sheets show no material decrease; in fact, the contrary is the case with most of them. The American Sheet & Tin Plate Co., has practically all the business it can possibly handle for the remainder of the year without booking an additional ton, while the condition of the independents is equally as strong. Some of the manufacturers whose production is affected by labor troubles, are seeking assistance on their orders from the unaffected manufacturers and a good many buyers, who have been notified of the possible nondelivery against their orders as a result of the labor situation are seeking to place protective orders with other manufacturers. Large tonnages of such business are being turned down by the active producers who have some doubt about being able to meet the requirements of their regular trade. Sheet business is well distributed among the various kinds of stock and substantial export orders are being placed in addition to those from domestic sources. The American Sheet & Tin Plate Co., is running about 92 per cent of capacity with the independents averaging a little less due to the fact that the plants of a few of them are shut down as a result of labor troubles. No cutting of the March 21 prices now is noted, and some manufacturers who were active in this direction up to within a few weeks ago now are asking premiums over the regular market base of from $2 to $5 a ton.

Short Supply

Of Sheet Bars Still in Evidence—10,000 Tons Turned Down

Youngstown, O., Aug. 25.—Demand for semifinished material is running heavy in this district. The sheet bar market is particularly active. Inquiries for this material are not coming alone from local consumers but from users in scattered territories. One producer here turned down an aggregate of 10,000 tons last week, his mill not being in a position to roll any further tonnages until late in December. In some cases consumers are buying billets in fairly heavy lots from mills here and are having them converted into sheet bars at plants having slight gaps in their rolling schedules. A recent sale of 5000 tons of 4 x 4-inch billets was made at $41.50 by a maker in this territory. The leading maker of semifinished material remains out of the market.

Sheet Bar Supplies Inadequate

Pittsburgh, Aug. 26.—Although ingot production has gone forward quite sharply since the settlement of the railroad labor troubles, the situation in sheet bars still is difficult, comparatively few of the sheet mills getting an adequate supply. Few of the manufacturers actually have any sheet bars for sale and a valley maker recently quoted a premium of $8 a ton over the regular market base against an inquiry for 2000 tons for prompt shipment. The inclination of most manufacturers is to seek advances on sheet bars for immediate delivery, or reject the business. The market keeps well sold up on rolling billets and on skelp, but offerings of slabs are quite ample notwithstanding that an increasing tonnage of steel is being diverted from the slabbing mills into the more active channels.

Government Sells Steel

Chicago, Aug. 26.—The ordnance department is taking bids on 1265 tons of blooms and 320 tons of gun forgings, material left over in the hands of manufacturers when war preparations were stopped.

Bar Makers Avoid Sales

Large Producers Withdraw From Market—Independent Asks $3 More of Outside Buyers—Chicago Production Being Restored

Pittsburgh, Aug. 26.—Makers of steel bars are so heavily committed on squares and rounds of 1½ inches and smaller that they hesitate about taking additional orders and some actually have withdrawn from the market. New demand for the smaller sizes, especially for export, are urgent and large. Among recent export orders placed here was one for 2500 tons in which the specifications for each size were sufficient to engage a full turn of the mill. Demand for the larger sizes of rounds still is below normal but the small mill capacity is engaged to the limit and some manufacturers are pleased that current demand for small shapes which are rolled on bar mills are not heavier. The March 21 base is being closely adhered to by all makers while substantial premiums are being asked on those sizes that recent experience has shown cannot be turned out profitably at 2.35c. Just a fair demand exists for concrete reinforcing bars but as makers have some business before them current lack of activity is without effect on prices. Demand for iron bars is steady rather than active, with prices holding at the recent levels.

Chicago Demand Active

Chicago, Aug. 26.—Inquiry for soft steel bars continues strong and mills are booking a large aggregate of tonnage from all sorts of sources. Plants in the vicinity of Chicago which were severely affected by the railway shopmen's strike are getting back into their stride and have begun the present week in fairly good productive condition. During the days that cars were scarce, mills were kept operating as far as was possible and some material was piled in preparation for immediate shipment when cars were available. This material is now moving out readily. In some cases conditions of delivery are such that new business offered mills has been turned away.

Demand for bar iron is slack and consumers apparently are not interested in either prompt or remote deliveries. With the exception of one small mill, which is said to have conceded about $2 per ton, makers here are adhering closely to the prevailing price, 2.62c, Chicago. Demand for hard steel bars rerolled from rails is fairly good, coming from manufacturers only, reinforced concrete builders not seeking this class of material.

Want No Outside Tonnage

Cleveland, Aug. 26.—Several of the leading producers of steel bars now are out of the market, and it is understood one independent producer has advanced steel bars and small shapes $3 a ton to 2.50c, Pittsburgh, to other than his regular customers. The only deliveries that important mills now are promising are those against regular contracts and even these are so extended that they fall well beyond Oct. 1. Specifications are coming into the mills in heavy volume. Reinforcing bars continue in active demand and deliveries have lengthened so that some rerolling mills are not promising under eight weeks. A local construction interest inquired this week for 2000 tons for one job and 600 tons for another and is understood to have placed this business. A job for the American Body & Trimming Co., this city, for 250 tons is up. A bridge at Willoughby, O., taken by the King Bridge Co., will require 3000 tons of reinforcing steel. Reinforcing bars are firm at 2.35c mill, or Pittsburgh. The Franklin, Pa., rolling mill has shut down for repairs.

New Card Brings Complaints

Pittsburgh, Aug. 26.—Introduction by leading manufacturers of cold finished steel bars of a new card quoting a base price with extras, replacing the old list and discount method of quoting, has somewhat interrupted the flow of business from jobbers, many of whom in the East are complaining over the change. In the West, the new method of quoting has been accepted without complaint by the jobbers who are quoting a differential over the mill price, plus freight of $20 a ton on rounds and of $30 a ton on squares and hexagons. The complaint from the eastern jobbers is that the stock they have on hand must be written off to conform in price with the slight average reduction which the new card brought about, but the chief trouble seems to be that the jobbers were able to secure a wider margin under the old arrangement than is possible by the new card. New demands for cold finished steel bars steadily are increasing and come from a greater number of sources than was the case a few weeks ago. Some mills are running only about 60 per cent but the average is well above that mark.

Have Little to Sell

Philadelphia, Aug. 26.—Steel barmakers by reason of their mill schedules continue out of market excepting for tonnage which they are forced to take care of for old customers. Iron bars continue to be obtainable at 2.35c, Pittsburgh, although the usual price is 2.50c.

Bolt Market Strong

Chicago, Aug. 26.—Consumers of bolts and nuts are besieging makers with inquiries and with specifications on existing contracts. Most of this business is in moderate tonnages, as large users for the most part are well covered.

New Business is Lighter

Cleveland, Aug. 26.—Makers of nuts, bolts and rivets are busy on old business which has been under contract for some time. New business, however, is somewhat curtailed as are inquiries and an explanation is found in the general unrest in labor circles. Contributory to the attitude of uncertainty which prevails among manufacturers is the delay in effecting final peace. A few export inquiries continue to be received and orders from abroad reach makers from time to time. Much of the business now going through the shops of one maker consists of track bolts for the Cleveland Electric Railway Co., and other railroads, steam and electric. Several departments of one of the large plants are operating on a 24-hour day basis, with three 8-hour shifts. Some little difficulty still is being experienced in obtaining wire and bars.

Fleet Places Bolt Orders

Philadelphia, Aug. 26.—The new discount of 50 and 5 for machine bolts with hot pressed nuts larger and longer than ⅜ by 4 inches apparently is being maintained although low prices are being brought out by large lots for the Emergency Fleet corporation. More than 200,000 pounds of galvanized bolts and nuts have been awarded to the Pittsburgh Screw and Bolt Co. which was the low bidder with flat price of 4.85c Pittsburgh. From this figure the bids ranged up to 7.95c New York. On another lot of 43,000 pounds, for the Emergency Fleet corporation, the low bidders were Jos. P. Cattie & Bros., Philadelphia, at 5.15c Philadelphia and American Equipment Co., Morristown, Pa., at 5.25c Pittsburgh for machine and cariage bolts and 4.75c Pittsburgh for drive bolts.

Plenty of Business Booked

Pittsburgh, Aug. 26.—Makers of nuts, bolts and rivets are well provided with business for the present quarter and where labor conditions do not interfere, 100 per cent operations are the rule at the plants. Although prices have been revised upward considerably in the past month or so, expectations of further advances are held and makers have not yet opened their books to the jobbers for last quarter delivery.

Demand Fairly Good

Pittsburgh, Aug. 26.—Fairly good demands are coming to the makers of chain and while considerable room for improvement exists, production is somewhat curtailed by labor trouble at some of the plants and prices are holding steady at the decline announced late last month.

Higher Prices

On Cast Pipe Upheld in East—Larger Sizes Cut in West

New York, Aug. 25.—The advance in prices on cast iron pipe which became effective last Wednesday has become general and is being maintained. The market now is $54.30, New York, on 6-inch pipe, Class B or heavier and $57.30, New York, on 4-inch, Class B or heavier. A feature of the advance which was made last week was an increase in the differential between Class B and Class A pipe. Class A pipe and light gas pipe now are held at $2 per ton higher than Class B, and heavier sizes. Although there are no big tonnages to report, demand for

cast iron pipe continues of fair-sized proportions, being made up of numerous small orders. It is only in the export direction that the demand is disappointing.

No Special Change Noted

Pittsburgh, Aug. 26.—The situation here in tubular goods remains very much as it has been for several weeks past. Possibly new inquiries for lap-weld pipe are not quite so frequent nor so heavy as they were a short time ago, but this condition may be ascribed as much to a realization on the part of buyers of the futility of trying to interest manufacturers in taking quick-shipment business as to any tapering off in probable requirements. A number of small oil pipe line inquiries are on the market. Demands for buttweld pipe are growing steadily and depletion of warehouse stocks finds reflection in fuller operation of capacity producing smaller size pipe.

Large Sizes Weaker

Chicago, Aug. 26.—Cast iron pipe shops are overloaded with orders for small sizes, while larger sizes are not in much demand. Some quotations on the larger pipe have been shaded somewhat from the prevailing price. However, this has not resulted in much additional business and shops continue to be much out of balance, with comparatively little work for the pits in which larger pipe is produced. The United States Cast Iron Pipe & Foundry Co. has been awarded 1700 tons by the city of Chicago. It is probable that 3080 tons on which Detroit recently took bids will be divided between two makers. Bids will be opened Aug. 27 at Hamilton, O., on 1800 tons and on Aug. 29 at Spirit Lake, Iowa, on 370 tons for a contractor.

Plants Working Overtime

Birmingham, Ala., Aug. 26.—Cast iron pipe plants in the Birmingham district are starting up all pits that are in shape. Specifications continue coming in more freely, recent advances in prices apparently not having retarded business. Sanitary pipe plants are working overtime to supply the demand caused by building operations throughout the South and Southwest. Shipbuilding also affects the sanitary pipe market, not a little of the products of these plants going into ships. The melt of pig iron at cast iron and sanitary pipe plants is assuming proportions equal to what it was a few years ago.

Want Hog Island

New York, Aug. 26.—The Consolidated Steel Corp. is reported to be desirous of purchasing a part of Hog island for a shipping terminal. It is reported that the shipping board has requested the company to draft a definite proposal of purchase. The land is owned by the American International Shipbuilding Corp., but the government has an option to purchase until the shipbuilding contracts are completed. It is also said that the Drexel interests are anxious to obtain the whole island for a terminal, but no definite proposal has been made by them as yet.

Plate Orders Growing

Chicago Mills Now Well Booked to End of Year—Ship Awards to Lake Yards—Prices Show Softness

Chicago, Aug. 26.—Plate mills have booked sufficient business to take care of almost their entire output for the remainder of the year, the leading independent being especially well provided in this respect. General demand for plates remains good and some export inquiry is being received. One just under consideration calls for 5000 tons of ship plates for Japan. The McDougall-Duluth Co. has taken a contract for two ships of the Norwegian type, requiring 2500 tons of plates and about 1000 tons of shapes, the business being placed with an eastern maker. The Manitowoc Shipbuilding Co. has taken a contract for two fruit steamers for use on the Atlantic, involving 2000 tons of steel, mostly plates, which has been placed with a Chicago mill. The government is taking figures on 945 tons of steel plates, including some circles, the material having been left over in the hands of manufacturers at the time of the armistice.

Greater Activity in Boston

Boston, Aug. 25.—After a lull of several months in the plate market the trading during the past week has showed greater activity. Part of this increased business has been caused by a recent flurry in export sales, but by far the greatest effect has been caused by healthy conditions at ship building plants, at local car repair shops and among locomotive builders.

Prices Are Rather Soft

Pittsburgh, Aug. 26.—While 2.65c, base, Pittsburgh, still is the price asked by most makers of plates, on export business a price of 2.55c has been made by more than one company. The fact that the Carnegie Steel Co. bid 2.50c on the plates required for battleships Nos. 49 and 50, also pulls away some of the support of the March 21 base. It is doubtful if more than 2.60c, base, could be obtained on any sizable tonnages. That price is the maximum bid of exporters, and few domestic consumers are in such urgent need of supplies as to be willing to pay it. Much steel is being diverted from the plate mills into more active channels, but production is quite ample. The best demand still is from the tank and oil refinery equipment manufacturers. Fifty per cent of capacity is probably a liberal estimate of current mill operations.

Business Lacks Volume

Philadelphia, Aug. 26.—A somewhat improved demand for plates is noted and fair sized orders are being placed by oil companies boiler makers and other user. The business still lacks volume, however, and eastern plate mills not operating more than 50 to 55 per cent.

Completing New Stack

Rebuilding of the A-stack of the Toledo Furnace Co., Toledo, O., is proceeding rapidly and it is expected that the enlarged unit will be in operation around Oct. 1. A complete new stack and new foundations are being constructed and when these are completed the output of the furnace will be increased from about 400 tons to 500 to 550 tons daily. The location of the stack has been moved slightly. Relining of the stoves also is being done.

Tin Plate Demand

Growing to Great Proportions—Mills Running 95 Per Cent Full

Pittsburgh, Aug. 26.—A tremendous business is before the manufacturers of tin plate, whose problem now is to keep themselves from becoming oversold. Makers of perishable food containers in this country seriously underestimated the season's requirements and it is probable in consequence that they will go out of the present season quite barren of both tin plate and manufactured cans. Not only was the Pacific coast crop yield greatly in excess of early estimates, but the same error of judgment also was made with regard to the pack of salmon on the Pacific coast. Tin plate manufacturers under the circumstances are finding it extremely difficult to keep buyers from anticipating requirements, and in the meantime some huge export inquiries are coming out. One of these is for 100,000 base boxes, and while details are not made public it is understood that an even larger tonnage has been offered by one large interest. This latter inquiry cannot be handled by any of the smaller American companies and since the leading interest already is booked for the remainder of the year and does not care to be committed into next year, it is probable this demand will be filled abroad. Japan is the heaviest buyer in this country at present but a fair business is coming in from Canada and there are orders from South America, Scandinavia, South Africa, the West Indies and from every other consuming country, except Australia. Export prices in tin plate are considerably firmer than they have been. On small tonnages $7.10 to $7.25 per base box, Pittsburgh, has been done and while larger transactions continue at $6.75, this is a net cash price and actually is equal to $6.90. Stock tin plate has grown extremely scarce with practically all manufacturers, and a manufacturer who was short on an export order for 3000 boxes of 14 x 20 stock had considerable difficulty in obtaining it. On domestic business, $7 per base box, Pittsburgh, is extremely well founded on sales. Tin plate mill operations are averaging close to 95 per cent and enough business is in sight to insure this rate pretty well over this year.

Big Shape Job Appears

Cleveland Building Requiring 18,000 Tons in Preliminary Negotiation —More Awards Held Back—Chicago Market Active

Cleveland, Aug. 26.—One of the largest structural contracts to appear in recent months, involving 18,000 tons, is up for consideration this week by the Citizens Savings & Trust Co. and the Union Commerce National bank, which jointly are to build an extensive bank and office structure. While the work of clearing the site is proceeding, the companies are undecided as to whether to place the steel immediately or wait until the material is actually required.

Current lettings are of a very limited character, a half dozen large jobs figured during the past few weeks still being held up. The only contract let involving a good tonnage calls for 870 tons for the Firestone Steel Products Co., Akron, O. The commissioners of Lake county decided to build the high level viaduct over the Chagrin river at Willoughby of concrete instead of steel, and the contract calling for 3000 tons of reinforcing bars was let to the King Bridge Co. A building permit has been issued for the foundation of a 13-story apartment house to cost $3,000,000, but the steel contract involving 4000 tons has not been let. It is reported that the Foote-Burte Co., which recently took bids on a fair size tonnage for a new building has withdrawn its plans. Contracts for two new buildings for the Cleveland Tractor Co. on which bids have been taken also are being held up. A bond issue voted two years ago for the construction of a public library in Cleveland has been found to be too small to cover the present cost and as a supplementary issue will have to be voted on this project has been indefinitely delayed. Notwithstanding the temporary absence of demand for good tonnages, fabricators are booking a great number of small jobs.

New England Awards Less

Boston, Aug. 26.—Awards in structural steel work fell off noticeably during the last week. The various Boston structural companies report a reduction of over 25 per cent in the tonnage awarded as compared with the previous week. It is pointed out, however, that this does not indicate any serious turn in the market for the week is too short a period to take as a criterion. It is significant that more work is now being figured upon than has been at any time during August, and the jobs although individually small, will represent a sizeable total if a normal proportion of their materialize. New work has been repeatedly turned down after bids have been submitted, on account of the excessively high cost of materials and labor.

Pittsburgh Market is Quiet

Pittsburgh, Aug. 26.—A few fair size orders from domestic sources for angles and beams and some tonnages for export, one being for 800, have been booked, but in general the market for shapes is quiet. Fabricating interests are not being pressed with business, structural lettings running small in comparison with tonnages upon which bids have been asked. While some shops are busier, 50 per cent of capacity is probably a fair average of the present operations. Shapes and plain material prices are holding around the March 21 levels, but competition on new projects is too keen for the market to be other than in buyers' favor on fabricated steel.

New Hangar Bids Asked

Philadelphia, Aug. 26.—Bids are to be opened Aug. 28 on revised plans for a dirigible hangar at Lakehurst, N. J., involving about 6000 tons of steel. Otherwise the structural market is quiet here. Demand for plain shapes keeps up well but very few large tonnages are involved.

Active in West

Chicago, Aug. 26.—Demand for structural shapes and fabricated material continues brisk in the Chicago district in spite of the strike and lockout of building trades in this city. Most of the new business comes from industrial concerns, but during the past week three theater projects have been closed, while the fourth is pending. For the most part inquiries and purchases are for small tonnages. Several hotel projects and a bank building in Chicago promise some large tonnages and await completion of plans.

CONTRACTS AWARDED

Building for T. & E. Dickinson, 100 tons; to Buffalo Structural Steel Co.

Motion picture theater, Johnston City, N. Y., 265 tons; to Lackawanna Bridge Co.

New candy and biscuit factory for Robert A. Johnston Co., Milwaukee, 200 tons; to A. F. Wagner Iron Works, Milwaukee.

Concentrating plant for Phelps-Dodge Corp., near Bisbee, Ariz., 2200 tons; to Wisconsin Bridge & Iron Co.

Machine shop and assembling floor for Standard Steel Corp., Milwaukee, 100 tons; to Northwestern Bridge & Iron Co.

Addition to the plant of the Central Tube Co., Economy, Pa., 300 tons, to the Jones & Laughlin Steel Co.

New shop and erecting runway for the Pennsylvania railroad, Lines West, Columbus, O., 1200 tons, to the American Bridge Co.

Building for Firestone Steel Products Co., Akron, O., 870 tons; to McClintic-Marshall Co.

Viaduct at Willoughby, O., 3000 tons of reinforcing bars; to King Bridge Co.

Office building and alterations to theater for the United Theatres Co., Cincinnati, Ohio, 271 tons, to Wendnagel & Co.

Theater building for the Robinson Theater Co., Peoria, Ill., 213 tons, to A. Lucas & Son, Peoria, Ill.

Blackstone theater, South Bend, Ind., 192 tons, to Wendnagel & Co.

Copper Smelter at Bisbee, Ariz., 2500 tons, to Wisconsin Bridge & Iron Co.

Addition to military prison at Leavenworth, Kans., 260 tons, Ingalls Iron Works, Birmingham, Ala., low bidder.

CONTRACTS PENDING

Extension to plant of Tonawanda Board & Paper Co., 200 tons; bids being taken by Beaverboard Co., Buffalo.

Hull theater, Peoria, Ill., 250 tons. Bids being taken.

Warehouse at St. Louis for J. I. Case Plow Co., Racine, Wis., 250 tons.

Lyndale avenue bridge, 300 tons, and Franklin avenue bridge, 400 tons, for the city of Minneapolis.

West end power station, Cincinnati, 500 tons. Bids being taken by Sargent & Lundy, Chicago.

Ore bins and threstle for Belfont Iron Works Co., Ironton, O., 500 tons. Bids being taken by Freyn, Brassert & Co., Chicago.

Steel for bridge repairs in Chicago for the Chicago & Northwestern railroad, 200 tons. Bids being taken.

Machinery storage house for the Watertown, Mass., Arsenal—100 tons, bids being taken.

Manufacturing building for the What Cheer Beef Co., Providence, R. I.—100 tons, bids being taken.

Stoker Builders Will Meet in November

At its fall meeting to be held at French Lick, Ind., Nov. 3 to 5, the Stoker Manufacturers' association will hear some important committee reports. These committees have been in session during the past year and reports of the mechanical stoker situation throughout the country will be presented.

As a preliminary to the meeting of the general organization, on Sept. 4 at Chicago, a meeting will be held of the commercial committee, which consists of P. A. Poppenhusen, Green Engineering Co., chairman; S. A. Armstrong, Underfeed Stoker Co. of America; S. L. Nicholson, Westinghouse Electric & Mfg. Co.; F. B. Bigelow, Murphy Iron Works; W. R. Rea, Detroit Stoker Co., and R. C. Beadle, ex-officio, Combustion Engineering Corp. At that time likewise a meeting will take place of the engineering committee, which consists of F. H. Daniels, Sanford Riley Co., chairman; T. A. Marsh, Green Engineering Co.; Edwin Fitts, Detroit Stoker Co.; George L. Bouton, Murphy Iron Works; H. F. Lawrence, American Engineering Co.; F. F. Espenschied, Combustion Engineering Corp.; J. G. Worker, Westinghouse Electric & Mfg. Co., and R. C. Beadle, Corp. Mr. Beadle is chairman of ex-officio, Combustion Engineering the publicity committee.

A feature of the convention at French Lick will be an address by S. L. Nicholson, assistant to the vice president of the Westinghouse Electric & Mfg. Co., treating of the future of the stoker business in the United States, a subject which he handled at the meeting held in Detroit last June.

Jobbers Adopt Change

Chicago, Aug. 26.—Warehouse prices on steel products from Chicago store remain unchanged except that the new plan of quoting steel shafting by actual price rather than by discounts has been adopted. The new price is $4.90 on rounds and $5.40 on squares, hexagons and flats. This is exactly the same price as prevailed before the change, the former

price being 2 per cent off a $5 base for rounds.

Warehouse Sales Increase

Boston, Aug. 25.—The trading in sheets has been favorable throughout the summer, and so far August has been a record breaking month for New England warehousemen. The export trade during the month through New England points has taken an increased quantity of sheets in manufactured articles. The manufacture of automobile parts has furnished a steady demand for hundreds of tons of standard sheet steel. The price while remaining the same here has advanced in other sections and an early jump is looked for in New England.

Sell by the Pound

Cincinnati, Aug. 25.—Local jobbing houses have adopted the new method of selling cold rolled shafting by the pound, and have today set 5c per pound base, plus the usual extras. The Pittsburgh mill price is 3.60c per pound base.

Small Lots

Of Rails Being Placed Steadily Help Mills—Car Orders Few

Chicago, Aug. 26.—Although railroads are not in the market for standard steel rails, good general demand is being met by mills, lots of 500 to 1000 tons being fairly common, with smaller tonnages more numerous. These are being taken by industrial plants and for lumber roads and by manufacturers of frogs and switches. Light rails are active and the past 10 days has brought more business than any similar period during the present year. Most of this demand comes from coal mines.

Car buying continues to be practically absent except for tank cars, and a recent inquiry for 1000 of this type is being considered. A number of small purchases of this type of car have been made recently by oil and refining companies in Oklahoma, the American Car & Foundry Co. having taken about 300 of this type.

Not Much Activity Noted

Pittsburgh, Aug. 26.—Makers of standard rails here have yet to hear from the railroad administration in connection with a reported inquiry for 100,000 tons. Meanwhile rail mill capacity is only partly engaged as only moderate export orders are being placed and domestic requirements are confined entirely to small tonnages necessary for repair work. At the Edgar Thomson works of the Carnegie Steel Co. more capacity is engaged at the moment in rolling sheet bars than in rails. A good many inquiries are coming out for light rails but bookings as a general rule involve only moderate sized tonnages. Makers of spikes are sold up practically to the end of the year on sizes running ⅝-inch and smaller and are quoting anywhere from 3.85c to 4c base, Pittsburgh, against new inquiries. Standard spikes remain at 3.35c base and are extremely slow of sale with makers in a position to make prompt shipment against all inquiries.

Ferro Market Dragging

Carload Sales of English Metal at $105—Italy Wants More Spiegel—Ferrovanadium Advances Sharply—Tungsten Stronger

New York, Aug. 25.—Some carload business in English ferromanganese has been entered during the past week at $105, c.i.f. Atlantic tidewater. These sales did not represent a test of the market, however, which on the basis of what has been done, still may be quoted at $100 to $105, c.i.f. tidewater. It is reported that a western consumer offered to pay $95, c.i.f. tidewater, for English ferromanganese and was refused, but this cannot be verified. It is known, however, that importers would go to the trouble of cabling such an offer for the consideration of their English principals, if the tonnage involved were considerable. In general, there is a lack of interest on the part of consumers. Domestic ferromanganese continues to be quoted at $110, delivered, for 78 to 82 per cent. Some off quality metal recently has gone at lower than this figure.

Some export inquiry for spiegeleisen is reported. Italy is reported out for 2000 tons. Italy and Belgium bought several thousand tons recently, as reported at the time. The price is unchanged at $33 to $35 for 18 to 22 per cent.

Ferrovanadium has advanced sharply, due to insufficient supplies. Whereas 35 to 40 per cent went at less than $7 a pound contained recently, sales have just been reported at $8 and higher, while $9 is being asked in some quarters. The recent purchase of the Peru and Pittsburgh properties of the American Vanadium Co. by Charles M. Schwab and J. Leonard Replogle is believed by some to explain the advance in ferrovanadium based on the assumption that Bethlehem Steel Co. will contract for the major part of the output of the Vanadium company.

Tungsten has been stronger, due to expectation that congress will pass the Timberlake bill imposing a $10 a unit duty on tungsten ores, equal to $1 a unit on imported ferrotungsten.

The leading maker of ferrochrome is reported to have reduced its price on wholesale lots from 38c to 28c a pound contained, 4 to 6 per cent carbon. The ferrochrome market has been irregular, some offerings of French ferrochrome being reported at as low as 20c, c.i.f. New York, duty paid.

Ferro Offerings Disappear

Philadelphia, Aug. 26.—Eighty per cent ferromanganese has practically disappeared from the market temporarily and there will be no more to offer until the furnaces make more. In the meantime dometsic makers are countering on inquiries with offers on off-grade metal generally around 75 per cent. On 75 per cent the market may be quoted around $105 to $108 deliveerd. Current inquiry involves principally carloads. The Lavino Furnace Co., which blew in the Oriskany furnace, Lynchburg, Va., three weeks ago on ferromanganese, also has blown in the Marietta furnace on this metal. It now is installing a skip hoist at its Sheridan furnace. English ferromanganese guaranteed 76 per cent continues to be obtainable at $100 to $105 tidewater. Some carload business in spiegeleisen was done the past week at $35 furnace for 18 to 20 per cent.

Demands Still Limited

Pittsburgh, Aug. 26.—Demand for all kinds of ferroalloys still is of extremely limited proportions and prices largely are nominal in the lack of any important transactions. If prices have a definite tendency in either direction, it is in favor of consumers who are considerably less eager to buy than sellers are to secure orders. The house here which recently circularized the trade on 50 per cent ferrosilicon, naming a price of $80, furnace, freight allowed, has secured little or no business on this effort, while the fact that buyers had knowledge that supplies could be had at that figure has tended to discourage purchases at higher quotations named by other sellers. Although some makers are quoting $90 on 50 per cent ferrosilicon, such a quotation is more of an asking than a selling price, in view of the lower offerings which are before buyers. Almost nothing has been done recently in ferromanganese and while quotations show no material change, it is believed they would be lower on sales. It is intimated that a firm bid of $100 on 76 to 80 per cent alloy would not be refused, although the last sales reported of this grade were at $105, delivered.

Strip Demand

Continues to Grow and Valley Mills Run Double Turn

Pittsburgh, Aug. 26.—In contrast with the condition of a few weeks ago when orders were not sufficient to insure higher than 80 per cent operations, makers of strip steel today have enough business in sight to run practically full to the end of the present quarter. Not much eagerness is noted on the part of manufacturers to take business for the fourth quarter at current prices and it is intimated higher prices will be sought for the last quarter. The weight of orders no longer is much heavier in hot rolled strip steel than in cold rolled strip.

Cold Rolled Demand Grows

Youngstown, O., Aug. 25.—Demand for hot and cold rolled strip steel is still on the upgrade with but little tonnage to be had from mills in this territory. Mills are working double turn. A large per cent of the output is going to automobile makers. The demand from this source is extremely active. An inquiry for 600 tons of cold rolled welding stock is before one seller here for shipment over the last quarter.

Export Sales in August Larger

European Business, However, is Slumping Off Rapidly — Chilean Railways to Let Contracts Next Month—Profitable Trade With Orient and Scandinavian Countries — Labor Unrest Affects Deliveries

NEW YORK, Aug. 25.—European sales of iron and steel are increasingly difficult because of the exchange situation. Bankers, however, still are delaying action to see what the administration at Washington will do. During the past week sterling reached a new low level. The franc broke again and the lire sold to a new low level. The rate on Brussells broke in sympathy with the other allied countries. There was later a temporary recovery but the situation is reaching a critical stage. On the other hand the mark was merely weak while the rate on Austria was steady. Sales are being negotiated with Germany but there is not much this country can sell there just now. Germany did purchase some copper in the United States during the past week, but trading with the erstwhile enemy proceeds upon fragile bonds of sympathy and no little suspicion. Some German inquiries for tin plate have been received.

Reports were current last week that the French government has been sounding American bankers with a view to arranging a credit to stabilize franc exchange. Such a credit would be for at least $100,000,000 and perhaps twice that amount. It would run for five years, during which time the French hope to recoup themselves industrially. The distressing condition in France has been brought about because the country has not been producing. The Belgians have made a much better start, and it is anticipated that the new alignment of the iron and steel industry on the European continent will before very long be in working order.

Iron and steel exports during August will exceed the tonnage exported during July and will at least equal the record made during June, according to opinions held by some of the largest agencies. Some satisfaction is had in this fact and for that reason iron and steel men are not nearly so apprehensive over the general foreign trade outlook as persons in other lines. There is a special demand for such goods and even though Europe stops purchasing it is believed that other markets will grow.

Chilean Project to go Through

One of the most important deals pending is the Chilean railway project. It has been reported that the Chileans are ready to purchase some $50,000,000 worth of rails and rolling equipment in the United States. The deal has been held up on account of difficulties of being financed. It was learned, however, that the deal will be closed by Sept. 5, and by that time the specifications for rails and other needed equipment will be turned over to the proper American agents upon which quotations in detail can be made.

South American business at present is only fair and not so good as it was some time ago. The demand of Europe for credits naturally hampers the opportunities Americans may have in developing South American projects. In regular merchant lines Chile still is stocked up. South America has been buying galvanized sheets at a constant rate. One house reported sales averaging at the rate of 1500 tons a month.

The Orient is a good market. India has been inquiring freely. That country is asking for all lines of steel products, having found it difficult to obtain anything like her requirements in England. The inquiry for 20,000 tons of structural steel, made some time ago by the Tata Iron & Steel Co., has not yet gone through. It is understood that new negotiations are now under way. India has purchased 200 tons of wire.

The Orient is purchasing tin plate and sheets from the two large houses freely. Japan is a heavy purchaser, having returned to the American market with the volume of inquiries which were not filled earlier. Japan is buying heavily of tin plate and ship plates. One house reported the sale of 1000 tons of plates, 3000 tons of sheets and 2000 kegs of nails. This is not unprecedented by any means and other exporters are said to be doing equally as well. Japan has sent in a new inquiry for 7500 tons of ship plates. The inquiry for 80,000 tons of plates is still hanging fire owing to the difficulty of financing the transaction. China has been sending in many inquiries for wire shorts and scrap. The inquiries vary in size from 100 to 500 tons each.

England has purchased billets and sheet bars in the usual quantities. England has been buying steadily of finished products, but would purchase more were not the exchange rate so low. A sale of 200 tons of bars to England is noted. There are a number of English inquiries in the market for bars. A sale of 3000 tons of galvanized sheets to Holland, upon which American producers bid, was consummated by England on account of the disparity in exchange rates.

Italy has been buying pig iron but it is said to be doubtful whether the inquiry for 20,000 tons of hematite can be filled in this country. The Scandinavian countries have been purchasing heavily of ship plates, and have sent in inquiries for wire rods, plates, shapes, tin plate, and sheets. One of the recent inquiries was for approximately 8000 tons of commodities in all.

The greater percentage of the business has been taken up by the United States Steel Products Co. and the Consolidated Steel Corp. The Consolidated, it is said, has been allotted 10 per cent of the output of its constituent companies, and while it is not known how large a percentage of the output of the United States Steel Corp. is allotted to the Steel Products Co., independent sellers are anticipating that soon these companies will be sold up to capacity so that they can step in and get a larger volume of export business. At the present time the Consolidated is sold out of bars and sheets. It is purchasing tin plate for export from producers outside its organization.

These two companies have exercised a supervision over the business of the independent exporters. Where the independents have been compelled to go to either the Consolidatd or Steel Products companies for a commodity, they are compelled to disclose the name of the country buying and often the name of the purchaser. Tin plate quoted at $7 for domestic use has been sold abroad for $6.50 although it is now selling at about $6.75. This is a price which independent export agents find it difficult to duplicate.

Whether or not the American mills will be able to take care of the business offered is at present a problem. Exporters declare that the threatened labor troubles are already delaying deliveries. Should domestic trouble develop to any serious proportions, curtailment in production will be coincident with the reduction in export demand. Such a situation would, at least, tend to keep prices constant.

Several hundred employes of the Alan Wood Iron & Steel Co., Ivy Rock plant at Conshohocken, Pa., who went on strike for eight hours work with 10 hours' pay decided after being out a week to return to avert an indefinite shutdown.

Unrest Restricting British Trade

Markets Disorganized by Strikes, Lockouts and High Wage Awards—Many Large Companies Threaten to Shut Down Mills and Furnaces—American Material in Greater Demand—All Import Restrictions May be Lifted

Bureau of The Iron Trade Review.
Prince's Chambers, Corporation Street,
BIRMINGHAM, ENG., Aug. 8.

ALL pig iron markets are disorganized as a result either of the Sankey award which has served to increase wage demands of iron ore miners for inclusion in its concessions, or of the large increase in wages under an award by the Midland iron and steel wages board which gives the workmen, including blast furnacemen, a raise of 27½ per cent.

The confusion is intensified by the Yorkshire coal strike, which has reduced or stopped altogether production of blast furnace coke. In the western part of England it is probable that iron ore miners will strike soon. To do this they require the support of the miners federation, and they now are conferring with the miners' association of Cumberland with a view to getting its support. It is possible action may be taken even without the federation's sanction.

In the Cleveland district price questions are under consideration, but makers are inclined to maintain present quotations, with the provision that sales are subject to any increase which may be made during delivery. So many iron and steel works are shut down for the bank holidays that the blast furnaces will accumulate some stocks of pig iron, especially as consumers are not coming into the market with orders. A good deal of iron is wanted for shipment, but continental buyers object to the reservation as to prices, and as neither the French nor Americans insist on this condition, the latter have more opportunities for successful foreign competition. Owing to small consumption in the Midlands, fairly large quantities of hematite are available for export to the allies. Shipping facilities have greatly improved, and there is more disposition to issue the requisite permits. Neutrals are not buying extensively at present.

The decision at Cleveland not to put up prices has had an influence in other districts, Northampton and Derbyshire, both of which districts compete with Cleveland, delaying action as long as possible. Production at all furnaces is small, chiefly because of difficulty in obtaining coal, but the reduction in consumption, both by forges and engineering works, exceeds the decrease in output.

Midland districts which serve Birmingham are far from uniform in their policies. Staffordshire, which made substantial increases recently, is content now with a rise of 5s ($1.20). Northampton does not consider 20s ($4.80) excessive on contracts made before July 21; but 15s ($3.60) is added to prices quoted subsequently. The price of basic iron has been increased £1, the present selling price being £9 ($43.20).

Several makers prefer to postpone price revisions until the situation is clearer. Those smelters who are either stopped for lack of coke or who are looking forward to an early stoppage have not troubled themselves to alter prices, their sales being insignificant.

There is a remarkable lack of uniformity in regard to the conditional clause as some Northamptonshire makers do not demand that increases in cost during the progress of a contract be paid by customers. Practically no one is buying pig iron at present, although when finished iron works resume next week it is thought possible a few inquiries will be brought out. Two large blast furnaces were blown out this week by the Ebbw Vale Steel Works because of labor dispute, and this will reduce output considerably. Production of pig iron also will be reduced by the stoppage of iron works at Cyfarthfa, although that is a smaller concern.

In justice to himself, the ironmaster should add to the price the equivalent of the 27½ per cent addition to wages. What he wants to know is how he can do this with American iron coming into this country at anything from 30s ($7.20) to 60s ($14.40) below the home prices. Pig iron costs him more and he has to face the 6s ($1.44) rise in coal with corresponding additions at every stage of manufacture. This figure of £22 10s ($108) compares with £6 10s ($31.20) before the war, and while the puddler at that time earned 9s 6d ($2.28) per ton, the last advance has brought his rate to 34s 1d ($8.18).

The British ironmaster knows that any equivalent addition to the selling price not only makes his position hopeless in the world's markets, but will carry with it a big increase on the next bimonthly ascertainment by the wages board.

There is a strong feeling among ironmasters that the time has come when workmen should be asked to make some reciprocal concessions. The latter are likely to be told soon that they must chose between lower wages and a period of idleness. The first sign of this is the shutting down of the Cyfarthfa Iron Works, at Merthyr Tydvil, in South Wales, owned by Guest, Keen & Nettlefords, Ltd., by which 400 men have been thrown out of work. The employers find it impossible with the present cost of production to compete with America. The blowing out of two blast furnaces by the Ebbw Vale company will throw out of work for at least six months about 4000 steelworkers. The stoppage was due to a demand by mechanics and fitters for a large increase in wages. The steelworkers were not associated with the movement.

Coal supplies, apart from the Yorkshire strike, are deficient. That strike already has deprived the country of millions of tons of coal and coke. The coal controller issued an appeal to the miners throughout the kingdom to limit their holidays to one day this week, but three days were taken. At numerous collieries where preparations were made to start on the third day serious loss was incurred because only a small number of men reported for work.

A rumor is prevalent that the government proposes to remove all restrictions upon importations of American material in September. This would give great satisfaction to many consumers.

There is an idea here that with the progressive improvement in the American iron trade the formidable competition emanating from transatlantic steel works will taper off at no distant period.

As a result of the Sheffield coal strike great Sheffield works, such as those of Henry Bessemer & Co., and the Brown, Bayley's Steel Works, are closed down, and many similar concerns are operating only partially with an early prospect of complete stoppage.

Steel Awards

By Navy and Railroad Administration Are Expected Soon

Washington, Aug. 26.—The railroad administration and the navy department have not yet awarded contracts for their respective orders of 100,000 tons of rails and 28,000 tons of plates, shapes and bars, on which bids were received ten days ago. Director General Hines is expected to act soon now that railroad wage and rate decisions have been made. With the navy, the delay is said to be one of minor details as to sizes, etc. The Carnegie Steel Co. is expected to be given the contract for the plates and shapes because the prices it submitted were 15 and 5 cents, respectively, under bids of its competitors.

The navy will open bids next Tuesday for 384 tons of nickel steel forgings, 96 tons each for the battleships Montana, North Carolina and Nos. 49 and 50. This steel for the named ships is for roller turrets while for the numbered vessels, it is to be used in hull division work. Deliveries are for periods ending late in 1920. The navy also is in market for approximately 4300 tons of plates and 1500 of shapes for the construction of destroyer tender Dobbin being built at the Philadelphia navy yard. Bids will be opened here Sept. 9 with deliveries to commence within 30 days after award of contract. On Sept. 16 the navy will receive bids for 100 tons of soft steel bars for shop use at the Boston navy yard.

Gary Refuses to Receive Union's Committee

New York, Aug. 26.—A committee of labor men composed of John Fitzpatrick, chairman, William Z. Foster, D. J. Davis, assistant president of the Amalgamated Association of Iron, Steel and Tin Workers, and William Hannon, member of the executive board of the International Association of Machinists, called at the office of Chairman E. H. Gary of the Steel corporation this afternoon in an effort to see him. After they had been refused a personal interview, in reply to a question as to whether he had arranged for a meeting, Judge Gary said:

"When informed by my secretary that a committee of a labor organization had requested to see me I sent word to them through my secretary that I did not care to have a personal interview, but if they had any statement or request to make and would reduce the same to a written letter it would be read and consideerd by our officials, who would then determine what, if any, answer should be made. Nothing further has passed between us. I think it is better for those gentlemen and for me to leave no chance for misunderstanding in regard to what has been or shall be said. I have intended no personal discourtesy."

Following attempt to see Judge Gary, Fitzpatrick in answer to a question by a reporter expressed himself confidently that he would have a talk with Gary soon. Fitzpatrick also said that the visit to Gary's office had been preceded by talk with Gompers on the subject of the visit.

Made Sales Assistant

A. R. Williard has been made assistant manager of sales for the Carnegie Steel Co. in the Cleveland district, as the successor of Roland S. Le Barre, who recently resigned to become general sales manager of the alloy steel department of the Interstate Iron & Steel Co., Chicago. Mr. Williard has been identified with the Carnegie Steel Co.'s organization for a number of years and has been connected with the Cleveland sales office since March 1. He served as a captain in the ordnance department during the war and before that was connected with the armor plant and alloy steel department of the company at Pittsburgh.

Open Sheet Books

Pittsburgh, Aug. 27.—It is understood that some of the independent sheet manufacturers have opened their books for first half of 1920 business and while actual facts are not disclosed it is believed that an advance of about $5 per ton over the present basis is being quoted. The leading interest has not opened his books and probably will not do so until about the middle of October. In general manufacturers are not much inclined to talk business beyond the end of the present year and it is known that two or three of the larger independents have not yet opened their books for fourth quarter business.

Operations Resumed

All plants of the American Steel & Wire Co., at Cleveland, are now in operation, except the Central blast furnace group, which is still idle owing to labor trouble. Operations at the mills are not yet on a normal basis, but are gradually improving. The Newburgh steel works which was idle because of inability to obtain hot metal have started up, although not working at capacity.

The Nonferrous Metals

	‡Copper	Future Straits N. Y.*	†Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony
Aug. 20	23.50	54.00	6.00	7.75	33.00	8.875
Aug. 21	23.50	53.50	6.00	7.65	33.00	8.875
Aug. 22	23.50	52.50	6.00	7.65	33.00	8.75
Aug. 25	23.50	52.25	6.00	7.60	33.00	8.75
Aug. 26	23.50	52.12½	6.00	7.55	33.00	8.75

* July shipment from Singapore, c.i.f. New York, but changed to August past 3 days.
† American Smelting & Refining Co.'s price.
‡ Producers' price. Outside market down from 23.50c to 21.75c.

NEW YORK, Aug. 26.—The nonferrous metal trade took a gloomy view of the labor situation last week, especially as consumers in many cases were inclined to go slow on purchases, pending a turn one way or another. The action of Midvale Steel & Ordnance Co. employes in deploring the persistent demands of labor was received with great satisfaction as an indication that some sanity still exists in the ranks of labor.

Despite the current low prices of the mark and franc, measured in our currency, both France and Germany bought copper through the Copper Export association last week.

The copper producers did a good business as compared with previous weeks, brass mills and general manufacturing consumers taking large tonnages in the aggregate. The lifting of the embargo on the New Haven railroad, with the return of striking workmen to their jobs enabled the resumption of shipments to several of the New England mills. But today the outside market was very weak, going to 21.75c for prompt, while producers held at $23.50c.

The market for pig lead is reflected more and more the strong position which has been evident in this metal for some time. Sellers of bonded lead have sold up for August and September and there is now some inquiry for domestic lead, which costs the foreign buyer considerably more money.

The zinc market has been rather weak, due to the light inquiry and the inability to do much export business, owing to the exchange rate decline. Second sellers have made the market, producers refusing to do business at less than 8c, while dealers have quoted to 7.55c and 7.60c, East St. Louis.

The decline in exchange rates has been watched with as much interest in the tin trade as the action of the London market. A decline of 1c in sterling is equal to a drop of ⅛c a pound in the cost of tin. A decline of £1 10s in the Singapore market is equal to the same drop in the price of tin. September-October-November shipment from Singapore sold as low as 51.50c, recently, while August was quoted down to 52.25c. Spot Straits tin is quoted 56.25c to 56.50c; spot 99 per cent 54.25c to 54.50c.

Modernize English Steel Plants

Many Obsolete Cogging Units Have Been Replaced by the Latest-Type Rolling-Mill and Auxiliary Machinery — Steel Production Shows Increase — Description of Typical British Steel-Plant Equipment

BRITISH steel production is now about 12,000,000 tons per year as compared with 7,500,000 tons before the war. This increase was achieved, not only by the erection of new rolling mills and by the extension of old rolling mills but by increasing the efficiency of the machinery installed. The urgent requirements of the war compelled the scrapping of considerable obsolete machinery, and the introduction of numerous mechanical improvements which were already overdue. In other words, patriotism did for the British steel trade what commercial enterprise and technical progress failed to achieve in peace time.

It is frankly admitted by British engineers that prior to the war, mill machinery had reached a higher development in America and certain Continental countries than in Great Britain. It is only fair to say, however, that the British steel trade, owing to what is believed to be unfair competition, due to the incidence of tariffs, bounties, etc., experienced a strong sense of discouragement which undoubtedly militated against the vigorous enterprise that otherwise might have been displayed. However, the movement of salvaging old machinery and installing up-to-date machinery in its place, is showing remarkable results in the improvement of the output of individual mills.

Generally speaking, the progress has been in four directions, namely, the installation of heavier rolling mills, of which the 40-inch cogging mill is probably the best example; the enormous extension of the use of electrical driving and manipulating equipment; the adoption of hydraulic intensifiers, hydraulic pumps, etc., which have given accelerated speed and a remarkable increase of power; and additional heating capacity. The general effect of these improvements has been to give better results in quality through the greater command over the operations, as well as to greatly increase the output. The designers have had the necessity of continuity of operation in mind, and this has been secured by improved construction and a keener appreciation of the importance of selecting the most suitable materials for the particular requirement.

With the exception of certain works where blast-furnace gas is available for efficient use in internal combustion engines, the steam turbine now is universally used, the tendency being to centralize power generators in increasingly large units. The numerous improvements in the generation and application of electrical energy, as well as in the construction of motors and control gearing, has enabled this power to be employed for duties for which only a short time ago it would have been considered unsuitable. The use of steam for power purposes is rapidly being discarded.

Closely related to increased output is the larger size of the cogging mills which have been built recently by Davy Brothers, Ltd., Sheffield, England. Several cogging mills equipped with 40 x 30-inch rolls which,

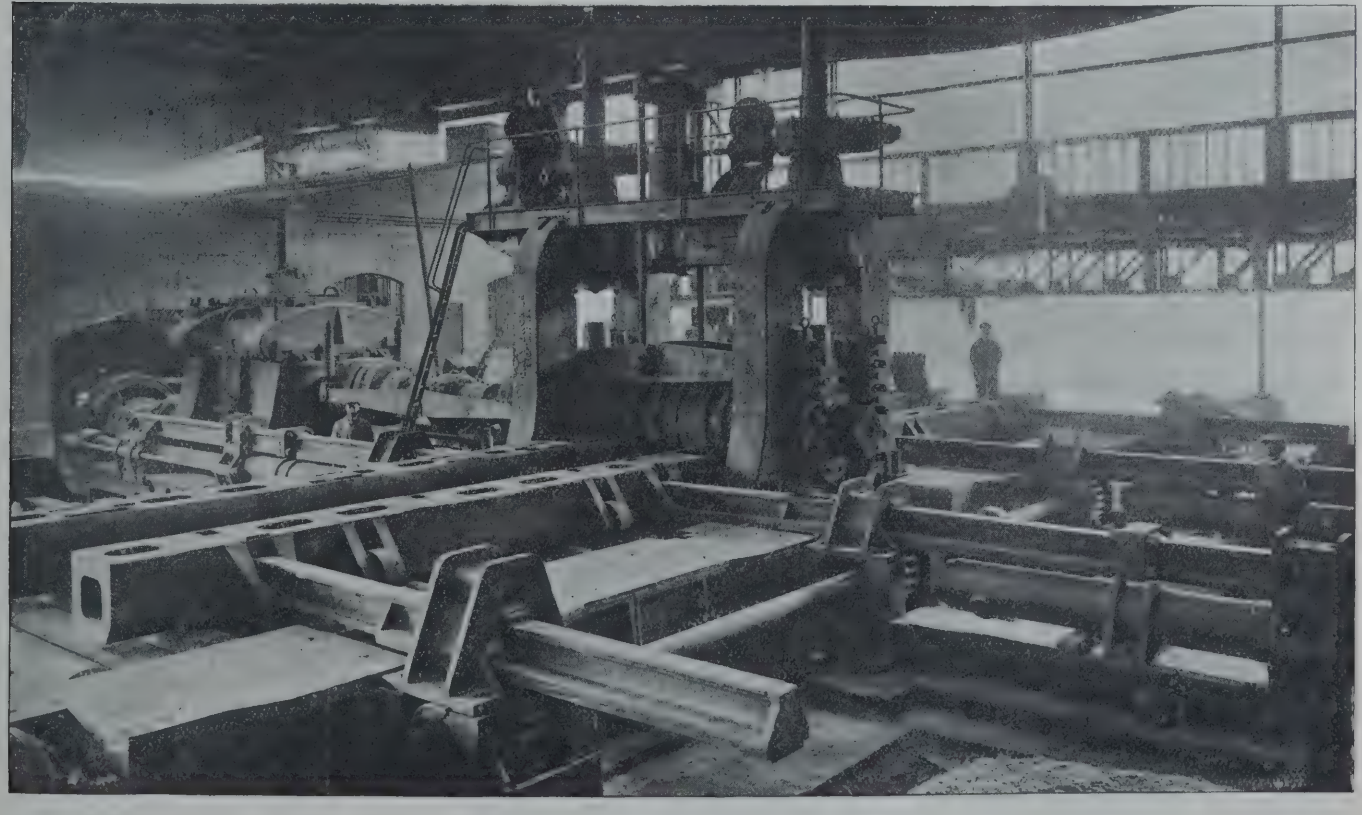

FIG. 1—TOP ROLL OF THIS 40-INCH COGGING MILL IS BALANCED HYDRAULICALLY AND IS RAISED OR LOWERED BY ELECTRICALLY-DRIVEN SCREWDOWNS. FRONT AND REAR MANIPULATORS ARE OPERATED SIMULTANEOUSLY THROUGH RACKS AND PINIONS BY MEANS OF HYDRAULIC PRESSURE

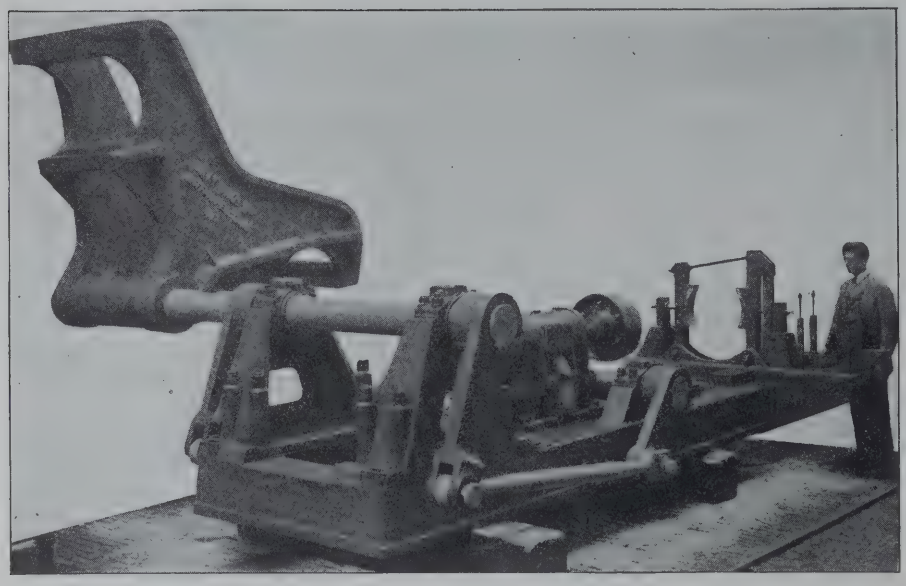

FIG. 2—ELECTICALLY-OPERATED TILTING CHAIR WHICH DELIVERS THE INGOTS ONTO THE MILL-APPROACH TABLES

it is claimed, represent the latest British practice in up-to-date rolling mill work, have been installed at various steel plants throughout England. The main coupling is of the fluted type with machine-cut teeth. The heavier revolving parts are carried in a heavy metal-lined cradle, and gears and hydraulic ram cylinders are provided for disengaging the couplings. The pinions are made of forged-steel shafts with nickel-chrome steel rims, having machine-cut teeth. The pinions are enclosed. They operate in an oil bath, the oil being supplied by means of motor-driven pumps. Forged steel is used for the mill spindles, these being machined throughout to eliminate backlash. The top spindle is fitted with universal-joint couplings. The roll housing are of cast steel, with wide openings arranged for the removal of chocks and rolls endwise. The gear for balancing both top roll and top spindle is of the compensating-lever type, having a single hydraulic cylinder arranged above the housing. The screw-down gear is totally enclosed and fitted with a safety slipping clutch to prevent any injury to the motor. The framing on the gearing side of the roller tables are made with double webbs. The mitre gears are housed in a trough which is equipped with dust-proof covers. All bearings are arranged for ring lubrication. The breast rollers in the housings are fitted with friction drives, so that in the event of the piece striking the rollers or inadvertently running in the wrong direction during the passage through the rolls, no damage will result to the driving gear. The ingot tilter is of U-trough construction and may be revolved in order to deliver the ingot to the roller table either with the small or the large end first.

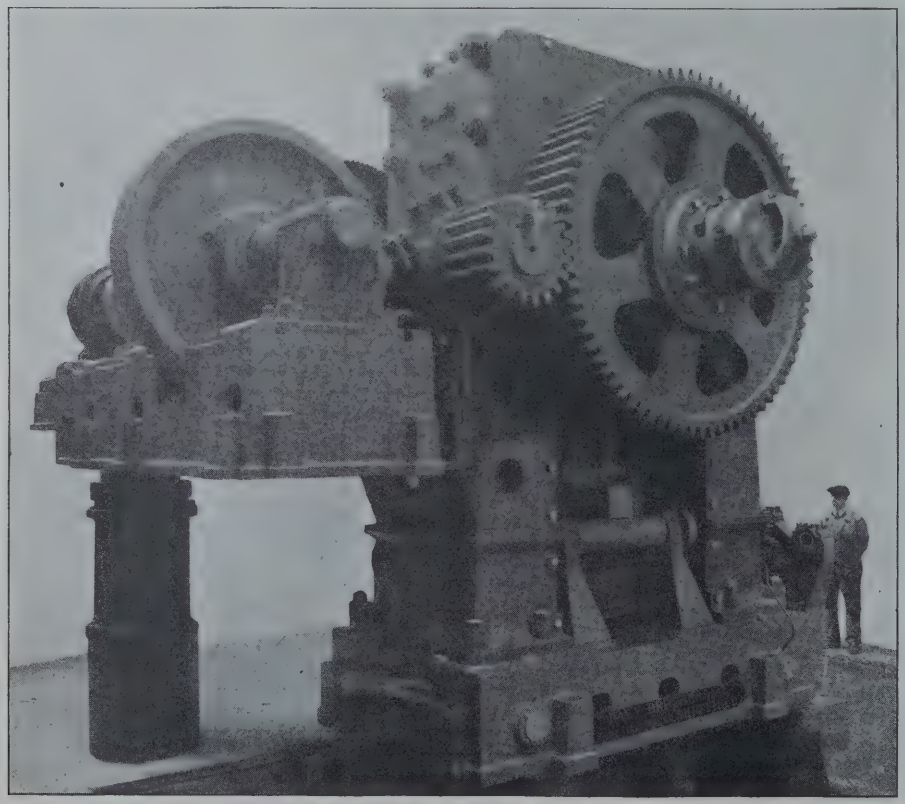

FIG. 3—ELECTRICALLY-DRIVEN VERTICAL UPCUT SHEAR WHICH WILL CUT BLOOMS 10 INCHES SQUARE

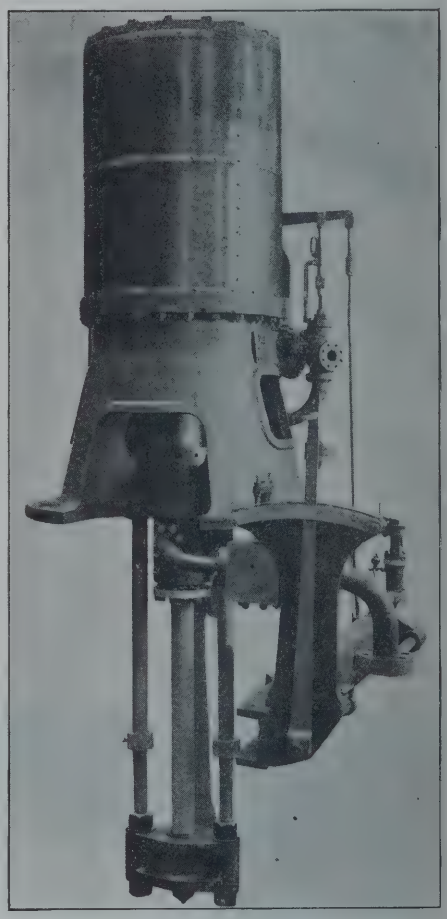

FIG. 4—STEAM-HYDRAULIC INTENSIFIER WITH THE UPWARD WORKING RAM CONNECTED TO THE STEAM PISTON BY TWO SIDE RODS AND A BOTTOM CROSSHEAD

The manipulator heads receive their motion by means of racks and pinions as shown in Fig. 1. Each head is 19 feet 8 inches long and is fitted with a renewable wearing face, 23½ feet long. The manipulators on one side of the rolls are connected to the corresponding heads on the other side by means of a long shaft which carries the operating pinions. By means of this construction the re-

ceiving pair of manipulators on the outgoing side are always in a corresponding position to those on the receiving side of the mills. This tends to prevent the piece from striking the head of a manipulator and buckling. The heads can be used also for straightening any piece which may have been bent through careless handling. All parts of the manipulator are above the floor level and the heads run on wheels, thus dispensing with lubricative surfaces around the rollers. One of the heads is fitted with a set of tilting fingers, which are operated by means of an electric motor through worm and crank drive.

A few years ago a hydraulic press was rather rare in British steel works, but for intensive production, time-saving, economy of fuel, etc., all of the greatest importance during the war, probably no machinery played a more important part. Such presses were used for the production of all classes of forgings including airplane parts, guns of the largest calibre, etc. The first applications of the intensifier carried a certain vibration, resulting from the placing of the hydraulic cylinder above the steam cylinder. It was found that the vibration from the forging press was transmitted to the intensifier. To meet these objections, a new type of inverted steam intensifier was designed. In this type the hydraulic cylinder is mounted on a stool below the steam cylinder and the upwardly working ram is connected to the steam piston by means of two side rods and a bottom cross head. The abolition of overhead pipes gives the enormous advantage of better access to the cranes around the press.

The latest type intensifier built by Davy Brothers is a tandem compound unit. The intensifier shown in Fig. 4 will handle up to three-fifths of full load on the compound system; beyond this high-pressure steam is automatically admitted to the low-pressure cylinder, which then operates in the ordinary manner as an ordinary intensifier. The power obtainable from the compound arrangement will, generally speaking, cover two-thirds of the total press demands, and it is anticipated that the steam required for operation of the intensifier will be reduced by at least 25 per cent. It has been found possible also to introduce special control gears which accelerate the descent of the steam piston.

One of the latest steel works to be built in the North of England will comprise eight 60-ton open-hearth furnaces, two 400-ton mixers, soaking pits, a 40-inch cogging mill, a light-section mill, and a large mill for heavy sections and rails. Waste-heat boilers are installed on all melting furnaces, mixers and soaking pits and the mills will be electrically operated throughout. It is anticipated that the weekly maximum output of this plant will be 5000 tons of ingots which will pass through the 40-inch cogging mill. In this plant, the ingots are cast on cars and conveyed on trucks to the soaking pits at the end of the mill buildings. It is expected that 45 tons of 4-inch billets will be rolled per hour. When rolling 6-inch blooms, an output of 10,000 tons per week is considered to be well within the capacity of the mill.

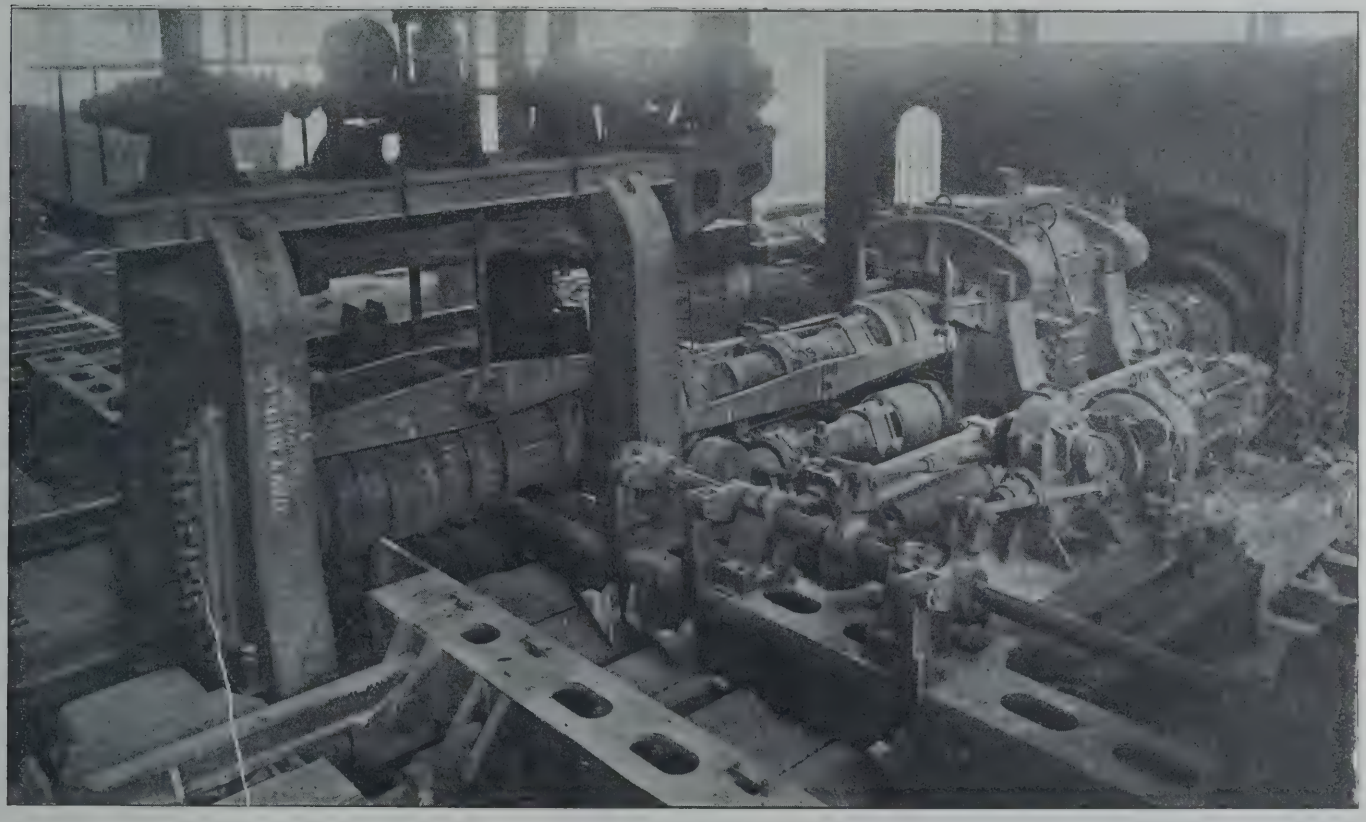

FIG. 5—40-INCH COGGING MILL BUILT BY DAVY BROTHERS, SHEFFIELD, ENGLAND. THE MILL IS DRIVEN BY MEANS OF A 13,700-HORSEPOWER REVERSING MOTOR. THE TILTING FINGERS ARE PART OF THE RIGHT-HAND MANIPULATOR AND THEIR METHOD OF OPERATION IS CLEARLY SHOWN

The electrically-operated tilting chair, shown in Fig. 2, is somewhat different to the type most commonly used. In this the operating motor is coupled directly to the worm shaft. The advantage of this method of construction is the automatic retardation derived from the crank motion. The chair frame is so designed that either the large or the small end of the ingot may be presented to the rolls by turning the chair to the left or right as required. The electrical equipment of the plant includes a Westinghouse reversing mill motor of 13,700-horsepower, three 1500-kilowatt generators, and an induction motor of 2700 horsepower.

The electrically-driven vertical up-cutting shears are of a somewhat novel design and were recently con-

structed for the Caen works in Norway, where a large cogging mill has been installed for rolling 10,000 tons of ingots per week. A similar shear is being installed in Great Britain. The 10 x 10-inch up-cutting shear shown in Fig. 3 is equipped with fixed roller tables and is so constructed that as the clutch is engaged, the preliminary motion of the camshaft lowers the top blade which then acts as a hold down. Further rotation of the camshaft lifts the bottom knife to effect the cut. The clutch is automatically disengaged on reaching the top position in readiness for the next cut. The shear is operated at the rate of 15 strokes per minute by a 200-horsepower continuously-running motor and will cut 10-inch square blooms. For certain sections the vertical-type shear is considered most suitable.

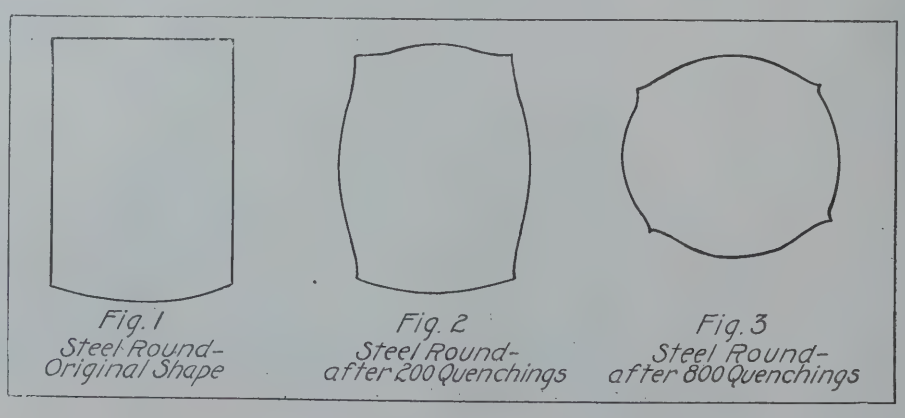
Specifications in Spanish

The bureau of foreign and domestic commerce, department of commerce, Washington, is issuing a series of pamphlets containing copies of the standard specifications of the American Society for Testing Materials, translated into Spanish. The English originals are given in each case on facing pages. These pamphlets are distributed by the bureau of foreign and domestic commerce at a nominal price. Recently specifications for the following materials have been translated: Malleable-iron castings, cast-iron car wheels, cast-iron locomotive cylinders, structural steel for cars, carbon-steel car and tender axles, iron and steel chain, and extra-high-carbon steel splice bars.

Quenching of Steel Causes Warping

BY J. H. WHITELY

DURING the course of a discussion of Dr. Carpenter's paper on "The Growth of Cast Iron After Repeated Heatings," presented at a meeting of the British Iron & Steel institute, Dr. Stead referred to the effect of repeated cooling in water on some large steel tongs which became red-hot each time they were used. He remarked that the result of the continued heating and cooling is to cause a material contraction in the length. The envelope contracts when being cooled, while the portions below are more plastic than the chilled outer layers. The effect is that the more plastic central portion is forced or "jumped" down, causing contraction in length and bulging of the sides. There probably is no decrease in the actual volume, but only a change in the position of the steel.



In order to warm a small tank of water used for molding purposes at the shop of Robert Roger & Co., Stockton, a piece of iron, weighing several pounds, is heated over a coke-breeze fire from 700 to 850 degrees Cent. It is then gripped with a pair of tongs and moved about under the water until it is nearly cold. Some years ago a cylindrical piece of soft steel, similar in shape to that shown in Fig. 1, was cut from a round bar about 3½ inches diameter and used solely for this purpose. The analysis of the steel was as follows: Carbon, 0.05 per cent; silicon, 0.01 per cent; phosphorus, 0.08 per cent; sulphur, 0.05 per cent; manganese, 0.45 per cent.

About 200 heatings and quenchings were given during a year, and in the course of four years of this treatment the cylindrical piece had gradually become nearly spherical in shape. An intermediate stage in the transformation of the bar after it had been subjected to about 200 quenchings is shown in Fig. 2. Dr. Stead's remarks are clearly illustrated by these examples, the pressure on the hotter internal metal due to the more rapid contraction of the chilled outer layers having ultimately caused the piece to assume a globular shape. The circular edges of the cylinder can still be seen, however, and it is probable that if the metal had been somewhat harder in quality these edges would have flaked off, as they were the parts most rapidly cooled in quenching.

Measurements taken indicated that, after 800 quenchings, the cylinder had contracted in length about 0.75-inch and had also increased in width by a corresponding amount. In order to obtain some idea of the way in which the metal had flowed, the ball was cut in two. The lateral expansion was clearly shown and it was also noticed that just below the top and bottom surfaces the metal appeared to have contracted, since the two heavy sulphide lines there bent inward. Sections of this sample were examined under the microscope, and several interesting features were observed. Two in particular, which are described below, seemed to have been brought about by the numerous quenchings to which the metal had been subjected.

1.—The shapes of many of the elongated particles of manganese sulphide present in the highly segregated bands strongly suggested that these particles had been twisted and contorted by the repeated quenching. Several instances were observed in which the particle had been bent almost through a right angle without breaking. In other parts of the steel the shapes of the particles appeared to differ in no respect from the straight or slightly sinuous forms usually found in rolled sections. Exactly how the quenching had brought about the marked distortion of the particles in the segregated areas is not easy to say, but it would seem as though the rates of movement of adjacent parts of the bands had sometimes varied considerably. The composite particle of slag and sulphide sheared in two and evidently one-half moved across the other.

2.—Cupric etching reagents showed the dark sulphide bands to be also rich in phosphorus. The ferrite grains in these areas were found to be much larger than those in other parts of the steel. Some segregated areas were undoubtedly richer in phosphorus than others, and it was noted that the largest grain-growth had occurred in the most highly phosphoric portions, the volumes of the grains throughout being from 10 to 100 times greater than those in others.

EVOLUTION OF A CYLINDRICAL PIECE OF STEEL INTO A BALL CAUSED BY REPEATED HEATING AND QUENCHING

Discussion of a paper presented at the annual meeting of the British Iron and Steel institute.

Develop Huge Explosive Industry

American Manufacturers' Co-Operation in War Described by War Department— Many Millions Invested in New By-Product Coke Ovens — Fifty-Three Munition Plants Undertaken With Government Support

IN the 19 months the United States participated in the war American manufacturers produced 632,504,000 pounds of propellants, the powder loaded into small-arms cartridges or packed into big guns behind the projectiles to send them against the army. In the same time France produced 343,950,000 pounds and Great Britain 294,290,000, the American production being equal to that of England and France combined.

This is one of the points brought out in the war department's forthcoming book reviewing the department's work during the conflict with Germany. The great expansion of the American explosive industry further is described as follows:

"In those 19 months we produced 379,762,000 pounds of high explosives for loading into shell. In the same 19 months England produced 771,122,000 pounds of high explosives and France 701,438,000 pounds. America was below both France and England in total output, but in monthly rate of output America had reached 39,121,000 pounds as against France's 23,154,000 pounds and England's 29,122,000 pounds. Our rate of manufacturing propellants at the end of the fighting was up to 43,046,000 pounds as against France's 17,084,000 and England's 10,824,000.

Increasing Supply of Toluol

"In the production of artillery ammunition a comparison with France and Great Britain shows that our monthly rate in turning out unfilled rounds of ammunition at the end of the war was 7,044,000 rounds, as against 7,748,000 rounds for Great Britain and 6,661,000 rounds for France. In producing complete rounds of artillery ammunition, our monthly rate at the signing of the armistice was 2,429,000 rounds while that of Great Britain was 7,347,000 rounds; and that of France 7,638,000 rounds.

"In the 19 months of our participation in the war our production of unfilled rounds in ammunition was 38,623,000 rounds, while that of France was 156,170,000 rounds and that of Great Britain 138,357,000 rounds. In that time we had produced 17,260,000 complete rounds, while France had produced 149,827,000 rounds, and Great Britain 121,739,000 complete rounds."

While all the existing plants devoted to the manufacture of explosive were working at full capacity when the United States entered the war, it is stated, the problem of the ordnance department when the United States entered the war was to expand the facilities and distribute the trained personnel in such a way as to insure maximum production. Fifty-three new plants for making explosive and propellants and loading these were undertaken at a cost of approximately $360,000,000. When the armistice was signed a large part of this construction work was completed and in an efficient state of operation.

"How to increase the supply of toluol, the basic raw material from which T.N.T. is made, was the greatest and most pressing of all problems in regard to the existing raw materials," the review proceeds. "Before the war the sole source of this ingredient was from by-product coke ovens. The monthly capacity of these ovens in 1914 was, approximately, 700,000 pounds. By April, 1917, when we stepped into the conflict, this capacity had been increased to 6,000,000 pounds a month.

"By the time the armistice was signed our efforts for greater production had been carried on so successfully that the supply had been increased to 12,000,000 pounds a month, and the average cost of this was only 21 cents a pound. This tremendous increase of production not only took care of all demands for commercial purposes and permitted the shipment of about 11,000,000 pounds to the allied governments, but was more than ample to take care of our own entire explosives program, leaving a large stock on hand Dec. 1, 1918.

"Three general sources existed from which toluol was obtained: First, from the by-product recovery coke ovens; second, by the stripping or absorbing of toluol from carbureted water and coal gas; and third, by the cracking or breaking down of oils.

"In augmenting the supply of toluol through the first process, construction of additional by-product coke ovens by the following big steel companies was arranged: Jones & Laughlin Steel Co., Pittsburgh, to have a capacity of 5,770,160 pounds a year; the Sloss-Sheffield Co., Birmingham, Ala., 2,019,556; United States Steel Corp., Clairton, Pa., 2,308,064; International Harvester Co., Chicago, 1,586,794; United States Steel Corp., Birmingham, Ala., 2,019,556; Rainey-Wood Co., Swedeland, Pa., 2,163,810; Seaboard By-Product Co., Jersey City, N. J., 1,081,905; Pittsburgh Crucible Steel Co., Midland, Pa., 2,019,556.

"The total cost of these additional ovens was about $30,000,000, which was met by private capital after contracts for the purchase of the product had been made, insuring a secure return on the investment. Production was to begin in 1919.

"In addition to this there was arranged construction for 320 additional ovens at the following places: Donner Steel Co., Buffalo, to cost $6,000,000; Birmingham Coke Co., Birmingham, Ala., $2,500,000; Domestic Coke Corp., Fairmont, W. Va., $2,700,000; Domestic Coke Corp., Cleveland, $1,500,000; International Coal Products Corp., Clinchfield, Va., $2,000,000. From these sources the monthly production of toluol in 1920 would have been increased by 600,000 pounds a month.

Supply Was Short at Outset

"When we entered the war the quantity of field artillery ammunition on hand was considerably less than a single month's supply, basing our rate of expenditure on the estimated rate for November, 1918. Besides there were no facilities of any degree of magnitude available to take care of our projected program for filling the high explosive shell necessary for use by our overseas forces.

"Consequently it became necessary at once to plan and to develop the resources of the country for the production of metallic parts such as the shell proper, the fuse, boosters and adapters, as well as to design and build entirely new plants and to train completely new forces for the loading of the shell with the high explosives.

"Our high explosive shell used in our principal field gun, the 3-inch caliber weapon, was of the so-called base-fused type of low capacity. The point-fused type with a higher explosive capacity was the kind most used at that time by all other na-

tions. It was considered more effective than the low capacity shell we were then using. We almost at once decided to adopt the point-fused type of shell that has a relatively large bursting charge.

"To prevent confusion and loss of time because of the scramble for steel forgings and other raw materials it was decided that the government would purchase all raw materials as well as furnish components for ammunition.

"How successful we were in getting into quantity production on ammunition after the numerous and large obstacles in the early months of the war can be indicated best by the fact that of the 11,616,156 high-explosive shell for 75-millimeter guns machined up to Nov. 1, no less than 2,893,367 passed inspection in October; while of the 7,345,366 adapters and boosters for 75-millimeter guns that had been machined up to Nov. 1, 2,758,397 passed inspection in October."

Germany Loses 80 Electric Steel Plants

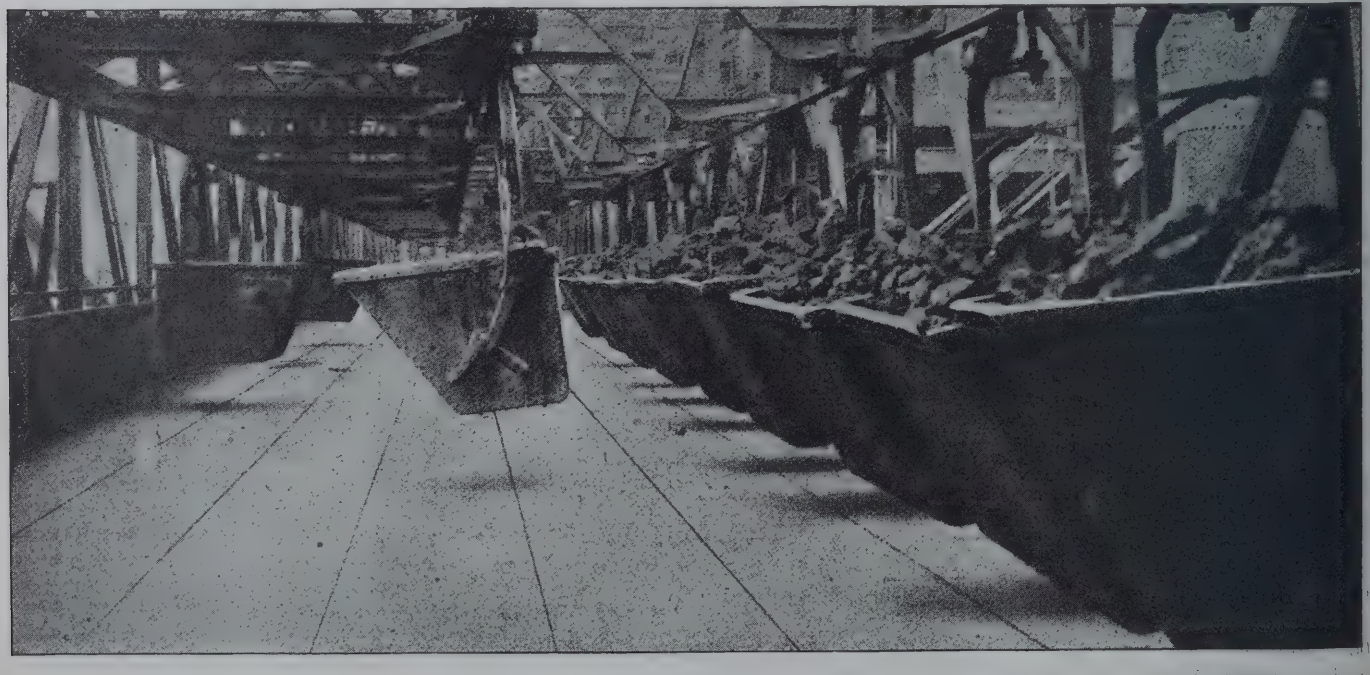
WITH the occupation of the left bank of the Rhine by the allies the Germans have lost some of their most important electric steel plants, including the Thyssen works at Hagondange in Lorraine. Here are two heroult electric furnaces of 8 tons capacity and one heroult furnace of 2 tons capacity. At Rombas there is one heroult furnace with a capacity of 2 tons. In the Saar basin are the following: Roechling Works at Voelklingen with five Roechberg-Rodenhausen electric furnaces, and the Stumm works at Neuenkirchen with one Nathusius furnace. It is estimated that in all 80 modern electric furnace plants have passed from German state control forever.

* * *

Coke of ordinary quality sold at $11.54 per metric ton in Paris, July 1, while "second choice" quality sold at $10.77, and washed coke was quoted at $15.39, all prices f.o.b. No. 1 pig iron (2.25 to 3.25 per cent silicon) made in the Longwy district, was quoted at $39.23; No. 2, of the same analysis, $39.85 and No. 3, same analysis, $37.70, per metric ton. Pig iron with less than 2.25 per cent silicon sold from $36.16 to $37.70, and that with more than 3.25 per cent, at $40.77.

The following quotations prevail on scrap: Ordinary scrap iron, $1.84, per 220 pounds; axles, rails and wheels, $2.77; lathe turnings, $1.08; brake shoes, $3.23; gray iron castings, $2.77; scrap tin, 46c.

The base price of plates was $10.46 per 220 pounds. Cast iron stuffing boxes for railroads were $6.46, and cast iron brake shoes $7.69, per 220 pounds.



Some of the leading Belgian quotations were as follows: Rails, bars and beams, 500 Belgian francs; plates, 600 Belgian francs, the Belgian franc being worth but 95 per cent of par on the Paris market.

* * *

Aside from the free importation at standard tariffs, the following articles are free to be imported without restriction on the basis of a supplemenary import tax as noted:

	Standard tariff per 220 lbs.	Plus the following surtax, based on the ad valorem (Per cent)
Automobile axles of iron or steel, rough	$2.46	10
Automobile axles of iron or steel, finished	3.38	10
Steel balls for bearings	3.84 to 27.70	10
Machine tools	1.54 to 7.70	10
Steel springs for automobiles, wagons and locomotives	1.77 to 3.84	15
Pressed steel automobile frames	7.70	10
Auto rims, iron	1.84	10
Auto rims, steel	3.08	10
Agricultural machinery parts, without motors	1.92 to 2.31	10
Internal combustion motors	1.92 to 101.54	15

Other items subject to the surtax in addition to the regular tariff tax are: Tool steel 8 per cent; tin plate 15; copper sheets 5; lead in sheets 10; tubes 15; screws, bolts and nuts 15; wire netting, iron 5; other wire netting 15; blast furnace and steel mill material 10; rolls for rolling mills 15; cast and turned machine parts 15; forged or pressed machine parts 10; locomotives 15; hydraulic machinery 10; perforated sheets 15; boilers 10; tanks and cisterns 15.

CHARGING BUCKETS IN USE AT ROECHLING ELECTRIC STEEL WORKS

Golden Rule Best Labor Plan

Some New Systems and Methods for Fostering Industrial Morale Can't Compare With Age-Old Principle — Too Much "Democracy" as Bad as too Little — Loyalty Result of Honest Purpose and Common-Sense Action

BY W. A. GRIEVES

THERE is a conception in industry today that morale is something that can be bought, that it can be picked from the shelf somewhere and placed where it is desired and—presto, everything is lovely. But a little thought must soon tell us that morale is never in itself wholly a cause, it is most always an effect. a result of right thoughts, right actions, and wholesome environment.

It is a popular thing today to appear to be alarmed at what possibly may happen, but I for one refuse to be stampeded. It has taken this good old country of ours two or three centuries to get to the high position which she now holds; and the forces that have been at work all through these centuries are not ethereal. They are not going to be thrown aside and destroyed by a few hot-headed Bolshevists. While the jolt which jarred the slide-rule of industry in 1914 was a big one, it did not remove the lines of foundation and principle upon which our country has been built.

Let us be sane. Let us have just as much of this so-called industrial democracy as we can assimilate, and no more. All great and permanent things are not created in a day. It has taken this old world many centuries to come up to its present status, and even the most pessimistic will have to admit that the job thus far has been along the lines of progress. We can't go back and we don't want to go back; but it's going to be just as difficult, just as disastrous, to attempt too rapid development as it is to try to return wholly to past methods and practices.

Danger in Too Much Democracy

Today, as always, we have the extremists, those who are reactionary and those who would "bust" the whole machine in a mad endeavor to bring the millenium. Industrial democracy, whatever may be meant by that popular phrase, sounds good; but before we build too high hopes of its being a solution of all our industrial ills let's not forget the past.

The human race seems to be so constitued as to be only able to assimilate slowly. There's just as much danger in too much democracy as in too little. Look at Russia: A very pronounced example of too much of an apparently good thing. Let's not overlook the stern fact that the average man is quite willing to "let George do it." We, as Americans, like to make ourselves believe that we really represent ourselves, when the cold truth is that we much prefer to be represented.

The plea for a larger part in management is not so large or incessant as is the desire or knowledge of knowing that we can have it if we want it.

My many years of working with and dealing with men has convinced me of the intense honesty, the fairness, of the average man; and while I am for the broadest kind of industrial democracy consistent with safety, I cannot overlook the teachings of experience. We, as Americans, think we want much which, when secured, seems to be appreciated little, or, if appreciated, is not manifestly taken advantage of. Take for example the question of the primary. We howled against the old apparently autocratic political convention. And we continued to howl until we got the primary. And what has been the result? Some of our most advanced writers are advocating the return of the political convention and this is indicative of the trend of action and a clear demonstration of the fact that it is only the few after all who are willing to assume responsibility.

I know that this sounds like the rankest kind of reaction. But is it not true? So-called industrial democracy is not an entirely new play. It is true that some of the acts and scenes have been transposed and the stage settings perhaps made somewhat more elaborate; but the plot or theme is well known and has been on the boards for many years. Many fine industrial institutions in this country have been securing as good results for nearly 20 years as those plants are now securing which have just recently taken on these phases of co-operative activity and who think something really new has been discovered. Let us take for example, some of the co-operative activities of our own plant. We have our employes' building and loan, co-operative stores, bakery, shop paper, restaurant, dairy farm, slaughter house, etc., doing on an average of more than $1,000,000 business each year, all of which is managed by employes; but how many? About 2 per cent. Now, this does not indicate real indifference, but it does show that about 2 per cent of any crowd runs it. We have, for example, some 1600 stockholders in our employes' building and loan organization. There are 12 directors, four of whom are elected annually. And how many of these 1600 attend the annual election? About 200.

Two Fundamentals

This whole question of morale resolves itself into one or two very fundamental propositions, namely, confidence and the square deal. To create an atmosphere of real desirability in any organization it is not necessary to start a revolution. In order to secure the best bread, the baker does not indiscriminately use an unnecessary supply of yeast. The proper amount of leaven, intelligently used, finds its way through the whole setting and the results desired are secured. And just as it takes proper time, temperature and conditions for the bread to rise in all its richness, so does it take time, right conditions and hard work to bring about a desirable state of morale in any organization. Sounds a bit academic and platitudinous, but there's very little that's new. I'm ready to move a special vote of thanks to the man who brings us one really original idea.

Every now and then some of us fellows think we get hold of a new idea. We exploit it and chase it around over the country before chambers of commerce, employers' executive clubs, ad clubs and lots of other clubs, when all of a sudden we wake up to find that someone long ago exploited the same idea, even finding that its progenitor could be traced back to the golden age of

From a paper presented at the recent convention of National Association of Employment Managers, Cleveland. The author is assistant secretary of the Jeffrey Mfg. Co., Columbus, O.

Pericles, which age had the privilege of sitting at the feet of a Socrates and a Plato.

The average worker thinks. He may seem at times to waver in his thinking and acting; but in 95 cases out of 100 he can be counted on to think sanely and act constructively. It is only a few weeks ago that a crowd of 2000 or 3000 people gathered to witness the departure of Eugene Debbs to the federal prison. This incident was heralded over the country as an example of the attitude of our people; and certain yellow mediums which thrive in the business of being sensational, tried to leave the impression that this was representative America. But was it? We know it was not.

Problem Still Unsolved

There can never be any infallible recipe for building up morale. Confidence is the foundation stone upon which it must be built. And this confidence is not merely a question between management and employes, it must have as a fundamental also an expression of confidence between employes themselves. This is frequently overlooked. It has been said time and again that employes are often employes' worsts enemies. Note the attitude of the man newly promoted. Is it always as broad and sympathetic as that of the real boss? I'm afraid not. It hasn't yet been tempered with the spirit of justice. The arrogance of man in his earlier stages manifests itself. It's only after the broader viewpoint has been attained that the larger sympathies are evident.

Very few things in this life are greater than the influences creating them; and back of every great idea is the heart of a great person. It's as impossible to build morale in an organization without the spirit of the square deal as it is to organize a league of nations that will prevent war without first having nations infused with the spirit of justice and equity. Show me an organization of men and women where the spirit of justice and equity prevails, and I will show you an organization where there is little desire for the so-called industrial democracy with all the good that it holds.

Whatever chasm exists between management and employes in any organization can only be bridged through the practice of the golden rule. It all goes back to this fundamental. It matters but little about our methods. These change over night. But principles are eternal. What I might think the best method for my little trouble might not suit yours. There isn't any beaten path. No one scheme of industrial democracy is going to be a solution. Any one plan that succeeds well can largely be traced to the personality of some man with a big heart and a big brain controlled by big sympathies.

The heart and real desires of the rank and file of any industrial group can no more be wholly expressed in the constitutional form of representation than the real voice of the people of our country is reflected in the acts of our congress.

We must dig deeper than any one scheme, no matter how cleverly devised and applied. Any organization that hopes to build up morale by fighting agencies brought into being as a result of its own selfishness and unwillingness to deal fairly, has already greased the runways to its disaster. And morale cannot be built by taking advantage of another's misfortune. A fine example of this was brought to my attention the other day. A man about 60 years of age was sent to me for a job. He presented a letter from a friend of mine. He was one hand short due to an accident in early youth. He had come to our city over a year ago to be near his children. He applied for work at a neighboring factory and secured a job as night watchman. In addition to his duties as watchman he had to perform an almost continuous operation connected with an enameling oven. The temperature of the workroom was hot and the hours of work were 12 each night and seven nights a week.

His reason for coming to me for a job was not that he did not like the work he was doing. He wanted more pay. He was being paid the unjust sum of $2 for 12 hours of the hardest kind of work. His employers admitted that the pay was not enough, but gave him his choice of that amount or quitting, something they were pretty certain he would not do, as he had to have work. I cite this not because it is so very unusual, but to illustrate some of the causes of our industrial unrest. Maybe some plan of industrial democracy would take care of such abuse; but that does not get to the bottom of things.

Coercion for either management or employes can never be a permanent cure. We cannot build morale in an effort to substitute the counterfeit for the real thing. Every man is entitled to the best pay consistent with his ability to produce. And highest wages with corresponding good conditions are not necessarily a guarantee against discontent.

The whole question of building morale simply resolves itself into one of common sense. It has justice as its foundation. There are a thousand ways in which it may be brought about. Each one of us may think that our methods are the very best; and they may be for us. The man or woman has not yet been born who has worked out a perfect plan.

Absurd Claims Made

Personally I am afraid of any plan that claims to bring an industrial Utopia. The following advertisement which appeared recently is an example of much that is appearing these days:

"Mr. Blank tells how he has completely done away with strikes—how he has entirely eliminated antagonism and dissatisfaction and changed the whole relation between employer and employed. By the workings of his unique method, Mr. Blank does away entirely with the ill-will and antagonism of labor. He does away with the time killing tactics. He completely settles the hiring and firing problems—thus doing away for all time with labor turnover."

I would like to believe this, just as I would like to believe that Marxian socialism would be an international panacea for the diseases of our industrial and political order. But those of us who have been up against the game for 20 years or more, know that, with all respect for all plans that have as their aim the bettering of conditions, they are not going to bring in an industrial millenium. They will all do their bit, but to say that any one scheme will do away for all time with the festering spots of industrial misunderstanding, is making a claim far beyond the bounds of reason.

There's a stupendous scramble these days in an endeavor to inject morale into industry, but it can't be done by the hypodermic route. There's no use in fooling ourselves into believing that we can get in a few weeks or months what naturally requires years to obtain. We're having some splendid examples of the foolishness of this method right now.

The biggest wages, the best working conditions, and an honest effort to divide the profits 50-50 won't even satisfy. The whole question has a more fundamental element. It goes deeper than any one or a thousand methods. It has as its rock bed, confidence. It has as its superstructure a combination of all those factors that make for good will. And these cannot be cataloged. They are found in the hearts of men who have learned to play the game fairly. They are nurtured in the atmosphere of harmony, which, in turn, is nothing but the culture bed of efficiency.

Molding Machine Throws Sand

Description of a Device in Which the Projectile Principle is Employed for Ramming Sand — Sand Thrown by Rapidly Revolving Head— Stationary and Tractor Types Designed

BY PAT DWYER

WHEN an experienced molder wants to ram a deep pocket in a pattern, he throws the sand in place, a handful at a time. It needs no further ramming. This principle has been applied in an unusually interesting type of molding machine invented by E. O. Beardsley, 747 Irving Park boulevard, Chicago, and W. F. Piper, 538 South Oak Park avenue, Oak Park, Ill. A number of these machines have been in operation several months in various Chicago foundries, including the plants of the International Harvester Co. and the American Brake Shoe & Foundry Co. and rather unusual results have been achieved.

The Beardsley & Piper machine represents a radical departure in molding machine design, although it may be said to be a development of the gravity type. But instead of depending on the latter force for correct ramming, the sand is thrown into the mold at high speed by mechanical means. It follows naturally that a large quantity of sand can be handled per unit of time and that under suitable conditions finished molds should be turned out with extraordinary rapidity. It also is relatively easy to regulate the density of ramming.

In a measure at least the original features of this machine probably result from the fact that the inventors tackled their problem without preconceived ideas, and based their efforts on their practical foundry experience rather than on any precedents in the field of machine design. If machines of the jolt-ramming and squeezer types have endowed the molder with a giant's strength, the invention of Messrs. Beardsley & Piper, capable as it is of ramming seven cubic feet of sand per minute, may be said to have the effect of equipping him with seven league boots.

Since the first machine of this type was constructed in a small California foundry, a great deal of experimental work has been done with the result that the latest types embody a number of ideas based on actual operating experience. The development of the machine to its present state has been gradual. Two standard types have been developed; one, the tractor type, is an evolution from the other, the stationary type. The former style is illustrated in Fig. 1 and the latter in Fig. 4. The original features of both types of machines are clearly shown in these illustrations.

In either case the essential elements of the machine include a suitable sand handling mechanism which discharges the prepared sand into an inclined chute leading to the sand throwing head, which is so mounted on a double-jointed arm that it may be swung into any convenient position over the mold being rammed. The tractor type of machine, in addition, is mounted on wheels and, as shown in Fig. 3, is provided with a screw conveyor and bucket elevator for handling the sand together with suitable mechanism for moving the machine along the floor. When this kind of machine is employed the sand is arranged in a long windrow on the floor through which the machine moves as the work progresses laying down finished molds in its wake. For this purpose the sand should preferably be prepared by a portable machine of the auto type such as that built by the Sand Mixing Machine Co., New York.

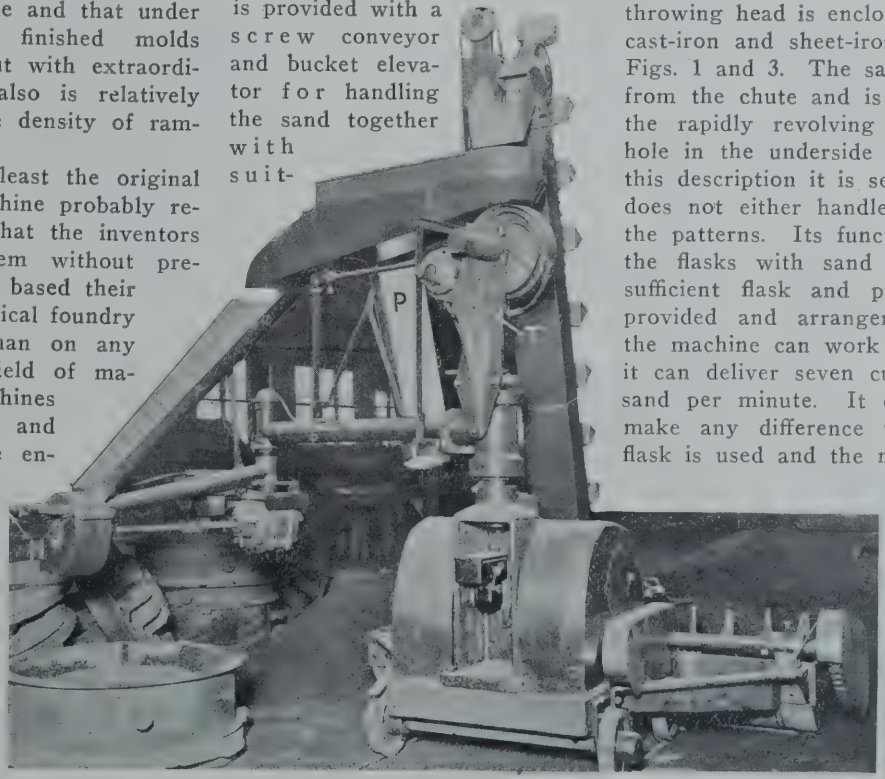


FIG. 1—THIS MACHINE RAMS SAND BY THROWING IT IN MUCH THE SAME MANNER AS A MOLDER THROWS IT INTO DEEP POCKETS AROUND PATTERNS BY HAND

The heart of the machine is the ramming head by means of which the sand is thrown into the molds. It is shown in detail in Fig. 2. The head is connected by a shaft to an electric motor which runs at high speed. The head itself consists of a small drum cast with three arms, on one side of which is a pair of brackets to which the impeller *A*, Fig. 2, is bolted. The impeller is so fastened that it may be adjusted to varying clearances. It is also made detachable so it can be renewed when it is worn out without scrapping the whole head. When in use, the entire sand-throwing head is enclosed in a combination cast-iron and sheet-iron hood as shown in Figs. 1 and 3. The sand enters at the top from the chute and is violently ejected by the rapidly revolving impeller through a hole in the underside of the hood. From this description it is seen that the machine does not either handle the flasks or draw the patterns. Its function is simply to fill the flasks with sand and ram them. If sufficient flask and pattern equipment is provided and arrangements are made so the machine can work steadily, it is stated it can deliver seven cubic feet of rammed sand per minute. It does not, of course, make any difference what shape or size flask is used and the nature of the pattern is of no consequence. The actual volume of output which may be obtained is dependent in a large measure on the organization of the shop and the facilities available for handling flasks and patterns to and from the machine. This same

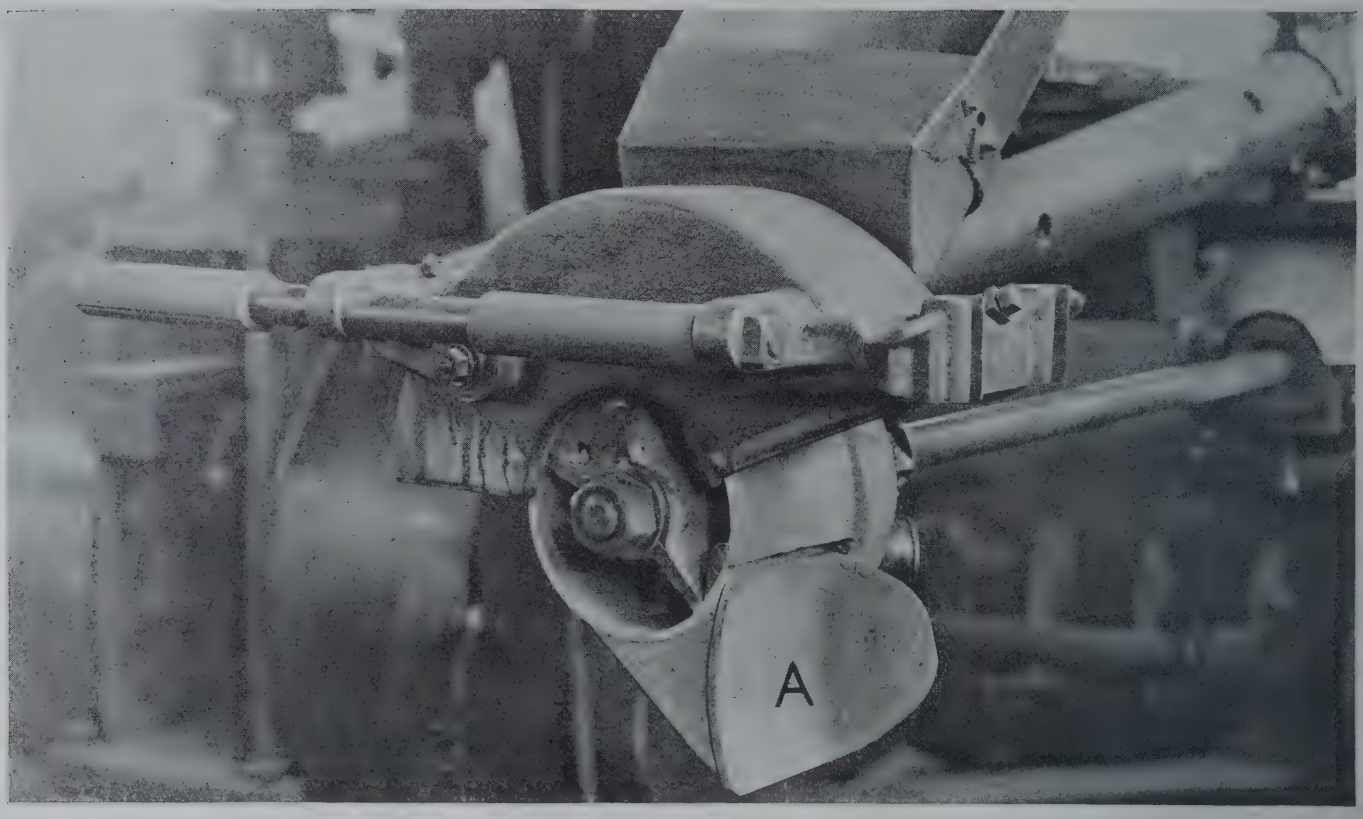

FIG. 2—RAMMING-HEAD OF SAND THROWING MACHINE WITH LOWER PART OF HOOD REMOVED TO ILLUSTRATE DETAILS OF CONSTRUCTION

limiting condition is encountered in the operation of most other types of molding machines.

For ordinary gray-iron work, the inventors have found that the ramming head should run at a speed from 1200 to 1400 revolutions per minute. This speed will ram the sand to the proper density. If necessary, the sand may be rammed at varying densities over the different parts of the pattern and this is one of the principal advantages of the machine. The variation in density is accomplished by passing the ramming head slowly or quickly over the pattern, the slower it is passed the softer the ram. By properly directing the stream, it is a comparatively simple matter to obtain any desired density of ramming up to the maximum pos-

FIG. 3—REAR VIEW OF TRACTOR-TYPE MACHINE SHOWING SCREW CONVEYOR AND ELEVATOR FOR HANDLING SAND. FIG. 4—STATIONARY TYPE MACHINE WHICH HAS A RANGE OF 360 DEGREES AND A RADIUS OF 7 FEET. FIG. 5—DRAG MOLD FOR A TRACTOR BRAKE WHEEL

sible with any given impeller speed. For making molds for steel castings an impeller speed of 1800 revolutions per minute has been found suitable.

Experiments also have demonstrated the fact that one impeller gives the best results. Heads were tried with two, four and six impellers, but it was found that the density of ramming decreased in proportion to the number of blades.

Ramming sand with this machine is as simple as filling a tub with water from a hose. The operator swings the throwing head into the proper positions by means of the handle *H*, Fig. 1. A constant stream of prepared sand comes down the chute and as it passes through the throwing head the revolving paddle strikes it and drives it into the mold at the proper speed to pack it firmly.

A fairly common job in this country is a sewer ring. Three molds a day, or one every two hours represents a good average output for one man by hand. It is claimed with this machine a man can turn out a complete mold in 10 minutes. This assumes, of course, that proper facilities are available for handling the flasks, etc., and that the shop is working under practically ideal conditions which do not always prevail under ordinary circumstances.

Figs. 4, 5 and 6 illustrate clearly what this machine can do. The molds shown are for 30-inch brake wheels for tractors. Five men, it is stated, regularly put up 300 of these molds every day. They have on several occasions made a complete mold in a minute. The machine on which these molds are made is of the stationary type and the sand is supplied from an overhead conveyor system. The floor is served by an air hoist which carries the molds away from the machine and puts the copes and drags together. The hoist is also used for shaking out the molds. Pouring goes on continuously. The molds are shaken-out over a grating in the floor near the molding machine. The sand drops through to the basement, where it is picked up, reconditioned and returned to the machine by means of a sand handling and preparing system of the ordinary continuously-operating type. The machine shown in Fig. 4 is so designed that the arm carrying the sand-throwing head can swing in a complete circle. The swing of the arm on the tractor type machine, on account of the sand elevator, is limited to 220 degrees which has proved ample for ordinary requirements.

Three motors are provided for operating the various parts of the mechanism of the tractor type machine. The entire control is concentrated in the handle *H*, Fig. 1, which is mounted on the sand-throwing head. This control is similar to that provided on a motorcycle. The functions of the motor connected to the sand-throwing head have already been explained. One of the other two motors is located in the large enclosed hood which surrounds the pedestal of the machine, as shown in Fig. 1. This motor furnishes the power for pulling the machine along the floor and for operating the screw conveyor and sand elevator. The riddle is oscillated by a third motor shown in Fig. 1.

The motor connected to the ramming-head is controlled independently of the other two. It is started by giving the control handle a quarter turn; if the handle is turned half way around all three motors are set to work. This simple interlocking arrangement makes it certain that the sand-throwing head is always in motion when the remainder of the machine is in operation.

The articulated arm which carries the sand-throwing head swings from two pivotal points which are provided with Timken roller bearings. This makes it possible to move the throwing head very easily in any direction in a horizontal plane. In fact, the operation of the machine is said to be quite within the capability of a one-armed man.

The tractor-type machine is pulled along the floor by means of a cable which is shown clearly in Fig. 3. This cable winds around a drum which is housed under the large hood at the base of the machine. The drum shaft also projects and carries the ratchet wheel *Q*, Fig. 3. Immediately over the ratchet wheel is a pawl with its fixed end attached to a pin mounted on an eccentric and its free end resting on the periphery of the wheel. As the eccentric revolves, the free end of the pawl

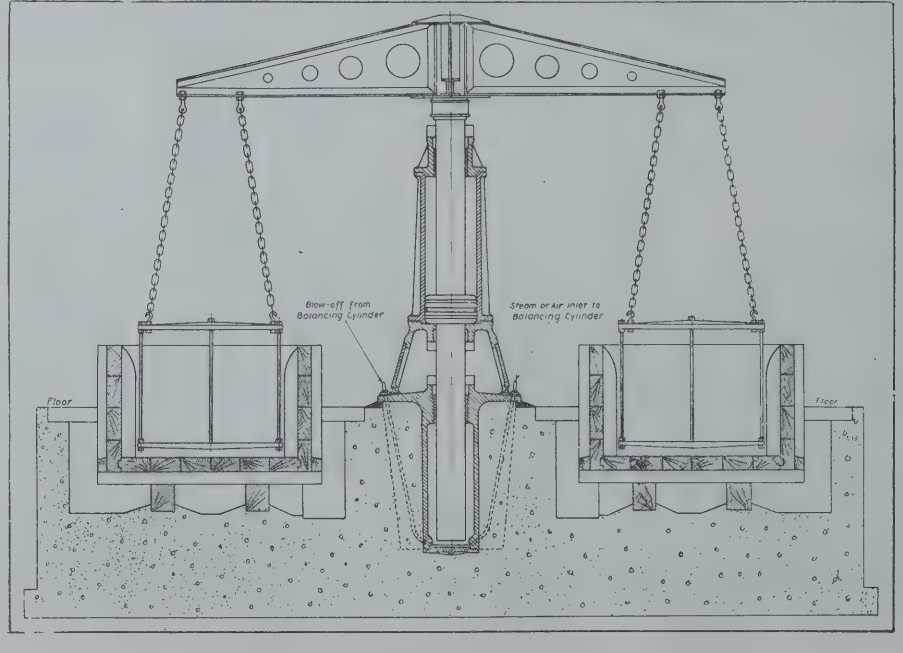
FIG. 6—A PORTION OF A FLOOR OF TRACTOR BRAKE-WHEEL MOLDS MADE WITH THE SAND-THROWING MACHINE—FIVE MEN MAKE 300 MOLDS A DAY

is alternately drawn back and pushed ahead. The result is that the drum carrying the cable is rotated a fraction of a revolution at each stroke of the eccentric. This arrangement of ratchet and pawl is similar to that in use on machine tools for regulating the feed and carriage travel.

The free end of the cable is attached to some suitable anchor at the far end of the floor before commencing operations. Therefore, when the machine is put in motion it gradually winds up the cable and pulls itself along the floor, consuming the sand heap as it moves. The rate of travel is regulated by adjusting the sizes of the gears in the pawl mechanism.

The screw conveyors used for bringing the sand to the bucket elevator are clearly shown in Fig. 3. Even if the sand is not thoroughly mixed in the heap it does not make a great deal of difference because it is turned over 32 times and then riddled before it reaches the mold. The riddle is of the oscillating type and is motor-driven as previously explained. There is a gap in one side of the riddle through which pieces of scrap, etc., are automatically ejected. They fall down the chute *T*, Fig. 1, and are collected in a box carried by the machine.

Designs Air-Operated Pickling Machine



Pickling machines consist of a vertical reciprocating plunger with a spider of three or four arms carrying crates which move up and down in the pickling and rinsing baths. Steam exhausted from these machines is used for heating the pickling bath. The steam consumption of a pickling machine such as built by the Mesta Machine Co., Pittsburgh, is 1000 pounds per hour.

Among the companies which recently have installed the Mesta-type machine is the Consolidated Expanded Metal Co., Braddock, Pa. The officials of the company selected compressed air as a driving medium in preference to steam because of their power supply and layout of their plant. At the works in question, all power is purchased in the form of electrical energy and such steam as is generated is low pressure for heating purposes only.

In designing the air-operated machine, shown in the accompanying illustration, changes were made in the parts and valves to preserve the quick action. The cross-sectional area of the bottom piston rod has been used to float the deadweight of the plunger with its piston, together with a large part of the weight of the spider on compressed air. The steel casing which surrounds the bottom piston rod is buried in concrete and holds the whole machine rigidly even if no foundation bolts are used.

In order to test the economy of operation of a machine of this type, a test was made to determine the air consumption for various loads on the machine. When operated with two loaded crates, the machine used 20.7 cubic feet of compressed air per minute while running 32 strokes per minute. While loaded with one crate, the machine used 19.6 cubic feet of compressed air per minute while running 30 strokes per minute. In the former case, the air gage pressure at the machine was 87.1 pounds per square inch, whereas in the latter case it was 82 pounds per square inch.

The United States bureau of mines is distributing a booklet which compares the present status of the Belgian zinc industry to its prewar condition. For many years Belgium was the leading zinc producing country of the world but the war made a disastrous check on the industry, decreasing the production from 204,220 tons in 1913 to the small figure of 8000 tons in 1918. For the 10 years preceding 1914, 21.6 per cent of the world's output of zinc was produced in Belgium,

PICKLING MACHINE OPERATING ON COMPRESSED AIR

Need Box Cars in Valley

Statistics show the box car supply in the Mahoning valley to be at the lowest ebb since the termination of hostilities, last week closing with about 20 per cent of the normal box car equipment available. A steel company in the Youngstown district, which asked for 15 cars last week was told there were only a few available and that only a small percentage of the order could be furnished. Steel manufacturers are using gondolas covered with canvas to a limited extent to piece out the number of box cars arriving in Youngstown and nearby stations. Should the experiment work out satisfactorily it is expected a considerable number of such cars will be used.

Coal Tar Fuel for Diesel Engines

A writer in *Journal für Gasbeleuchtung,* discusses a method of filtering coal tar for use in diesel engines which is said to be both simple and effective.

The tar is pumped into a receptacle of about 3 cubic meters capacity. In this holder it is heated up to 60 degrees Cent., for 4 hours, and then left to stand for 10 hours to allow the pitch and other impurities to settle down. Then one-third of the contents of the holder is run from the top and forced through three filters, the latter being heated to 40 degrees Cent. The product is then conveyed to the holder for the purified material, from which it is led directly to the engines. The tar is warmed up to 40 degrees Cent, before being introduced into the engine. This is effected by means of a gas heating device below the tar pipe. To obtain the best results, it is pointed out that the piston of the engine should be cleaned once in four months.

Profit-Sharing Promotes Thrift

Employes Deposit 5 Per Cent of Wages, Company Donates 5 Per Cent of Net Earnings, Fund Being Saved and Drawing Interest at 5 Per Cent for Workers — Succeeds in $100,000,000 Enterprise

BY RALPH H. BUTZ

EVERY employer is aware that there are many profit-sharing plans which have failed to accomplish that which their originators claimed for them. One after another plans have been tried out in various establishments throughout the country and abandoned because they did not produce expected results. In some instances the employer attempted to give more than he could afford, in others the plan was merely a scheme to induce employes to invest part of their earning in the business to increase working capital.

There is, however, one plan which has withstood the test of time, and which is proving satisfactory to both the employer and employe. This plan may eventually be adopted by a large number of employers. The plan has been in operation for a number of years in some of the smaller establishments, and it is said to have produced satisfactory results in every instance. One corporation whose business is in excess of $100,000,000 a year adopted this plan July 1, 1916, and the results have exceeded expectation.

Participation Voluntary

The plan was unfolded to the employes in a circular letter, in which the following explanation was presented:

"In order that employes may share in the profits of this business, and to encourage the habit of saving, the company has decided to contribute annually a sum equal to 5 per cent of its net earnings (without deduction of dividends to stockholder), as shown by the annual audit of its books, to an employes' savings and profit-sharing fund.

"It is intended that this plan will furnish to those who remain in the employ of the company until they reach the age when they retire from active service, a sum sufficient to provide for them thereafter, and that even those who achieve a long service record but who may not remain with the company all of their business life will have accumulated a substantial sum. This savings and profit-sharing fund will enable an employe to secure an income for himself after the close of his active business career, or in case of death, for his family."

Each employe who has been in the company's service three years is entitled to participate. The fact that participation is voluntary is no doubt one of the reasons for its popularty and success.

Some employers have attempted to make participation in their profit-sharing plans compulsory on the part of the employes, and this policy is said to have resulted in dissatisfaction among employes.

The operation of the profit-sharing plan is simple. The employe who wants to participate is required to deposit in the fund 5 per cent of his salary, and no employe is allowed to deposit more. Further, no employe is allowed to deposit more than $150 per annum. This is to prevent higher-salaried employes from obtaining too large a participation.

The company will deposit to the fund each year a sum equal to 5 per cent of the net income for the year. The contribution is then credited pro rata to the participating members of the fund. Thus, if all the participating employes paid into the fund $100,000 during the year, and the contribution made by the company amounted to $300,000, each depositor would have credited to his account an additional $3 for each dollar paid in. This can be illustrated further by assuming that an employe deposited $150 during the year. After the company's contribution to the fund was credited he would have a total credit to his account of $600, plus 5 per cent interest, compounded semiannually.

The part of the plan providing for withdrawals from the fund has an influence in causing him to remain with the company. The average employe will not leave his position without giving due consideration to the loss it will mean to him.

After a depositor has completed 10 years of active service he is entitled to withdraw from the fund the entire amount to his credit. This includes, of course, the company's contributions and the interest on his account. If a depositor has not completed 10 years of service, he is entitled to withdraw only the amounts he has deposited, plus interest at 5 per cent, compounded semiannually. Thus if a depositor should withdraw before having served 10 years he would still receive more than if he had deposited his money in a savings bank.

There are several exceptions to the foregoing rule. A woman depositor who leaves to become married, after five years' service, is entitled to her full share of the fund. In case of death of a depositor while in the service of the company his estate is entitled to receive the full share credited to his account. Another condition is that when a depositor ceases to be an employe he is required to withdraw the amount due him.

Bonus Too Often Squandered

That this plan is popular with the employes is vouched for by the fact that more than 92 per cent of the eligible employes are participating. It not only teaches them to save, but it is a means of making ample provision for the future.

The plan has this feature of interest over the method of paying a bonus once a year. The employe who has not acquired the saving habit spends his bonus and has nothing left to show that he received a share of the company's profit. But when his share of the profit is placed on deposit, bearing interest, it will increase. Without making any special sacrifices he will acquire a modest fortune in the course of a number of years.

The money paid into this fund is largely invested in the stocks of the company, which are excellent securities and pay liberal dividends. In this manner the employes participate to the fullest extent in the profits of the company.

The latest report of the trustees for the fund shows that the company has paid into the fund every year an average of almost $4 for every dollar deposited by the employes.

The president of the company recently said: "We are very happy over the results of this profit sharing, not only by reason of its obvious success, but because of the independent position which it gives to the employe."

Planning Industrial Laboratory

Experimentation in the Plant is Costly and Demoralizing—The Authors Show the Tremendous Importance and Necessity of an Adequate Research Laboratory, and Outline Their Conception of an Ideal Unit

BY A. D. LITTLE AND H. E. HOWE

PREVIOUS to the war there were about 375 industrial research laboratories in the United States, including those maintained by manufacturers for their own benefit, and commercial laboratories prepared to render similar service. At the present time there are no figures available regarding the number of new laboratories established as a result of the war, but there is no doubt but that the war created a deeper interest in industrial research, and the application of science to manufacturing processes.

Broadly stated, the aims of a research organization should be: To find, develop and train men; to create such a background in the public mind as shall insure support for research and the industrial utilization of research results; to secure co-operation between different branches of science, as, for example, between chemists and mathematicians; to avoid repetition and duplication of effort, first by rendering present knowledge readily available to research workers, second by applying clearing-house methods to research projects; to stimulate research by emphasizing the importance of specific problems, making special grants, rendering material and facilities as generally available as possible; to furnish a general staff for research which shall work out the plan of attack for major problems, assign the several lines to competent workers and co-ordinate and focus the whole; to bring home to manufacturers the advantages of research with the view of promoting the establishment of private, corporation, and group laboratories; to make and publish a census of available research facilities in men and equipment; to survey the natural resources of the nation and direct research toward their development, and to appraise our great industrial wastes and develop plans and methods for turning them to profitable use.

In any research laboratory, it is obvious that it is the personal factor which determines performance and this is preeminently true of the laboratory director. Sir Humphrey Davy truly said that his greatest discovery was Michael Farady, and coincidentally no greater problem is likely to confront a research laboratory than that involved in the discovery of a director. Successful laboratory directors may be of several types, but a militant optimism, contagious enthusiasm, controlled imagination and quick human sympathy are common to them all. Such a man will naturally in selecting his subordinates look for these personal qualities almost as carefully as he will weigh specialized scientific training, and having been thus guided in his selections will find it relatively easy to inspire throughout his organization those relations of good fellowship and that *esprit de corps* which multiply enormously the effectiveness of any working force.

The Divisions of the Laboratory

Within such a laboratory there are two distinct sets of duties which may be designated as scientific or technical, and commercial or financial. These two divisions have at least two points in contact, one being through a service manager, and the other the department charged with obtaining new business for the organization.

The fundamental duty of the scientific division is to interpret the results of pure science in the terms of industry. While the work of the commercial laboratory is of the same order as that done in any laboratory even where the dollar is never discussed, it must be conducted with full recognition of the fact that many industrial problems are as intimately concerned with economic questions as with scientific. The technical work should be in charge of the president, under whom various departments should be organized, so that each phase of a given problem may have the attention of a specialist, provided with adequate equipment to facilitate the work.

In this connection it may be emphasized that it pays to provide congenial, inspiring surroundings for the laboratory worker. The laboratory can be made attractive without being ornate, or involving unreasonable expense, and every effort should be made to have the workers reasonably happy. Under no other condition can the best work be expected, and it must be remembered that the heaviest investment is in the time of these workers, the salary cost being much greater than that for equipment or material maintenance. Rewards other than monetary for faithful service also play an important part.

The departments into which the technical division are divided will naturally differ in each laboratory, but a fairly definite line can be drawn between research, engineering and standardized or routine work.

The research department should be organized for both laboratory and small-factory-scale work. Engineering will embody plant inspection, design, construction and operation, and although much of its work will be in the field, many phases of its problems will be worked out concurrently in the laboratory. The analytical department will be subdivided under such headings as textiles, fuels, food, metallurgy, chemical microscopy, lubricants, etc.

Nothing is more expensive or demoralizing than experimentation in the plant. An industrial research laboratory should therefore be adequately provided with equipment of semicommercial size. Infant mortality among processes is high in any case and the most critical period in their young lives is that covering the transition from the laboratory to the plant. They require and the research laboratory should provide a nursery to protect and foster them during this period of their development. Even when no such provision appears feasible, it is, nevertheless, highly desirable to have the industrial research laboratory actually engaged in some small scale, highly specialized, commercial manufacture, preferably of some product which it has itself originated.

It is easy to visualize the organization chart for such a laboratory, and a brief description of how a new piece of work will be handled may therefore convey a better idea of the method of management. The authorization will go to the service manager, who sees all incoming mail, and to it will be attached any correspondence or data bearing on the case, all of which will be given a case number for identification. This number will be entered in a case register, which will indicate the name of the client, the subject of the problem, the date the authorization is received and the date when the work shall have been completed. The service manager, who must be familiar with the ability

---

Excerpt of a paper presented at the spring meeting of the American Society of Mechanical Engineers, June, 1919, at Detroit. A. D. Little is president, Arthur D. Little, Inc., Boston, and H. E. Howe is affiliated with the National Research Council.

of each member of the staff, as well as with the work in hand, will assign the case to the division which can render the best service. Conferences will then be called, into which any member of the organization who can contribute anything to the solution of the problem in hand will be drawn, and outside associates or independent consultants may be included.

At the completion of the work the report, varying in extent from a single printed form to a bound volume of several hundred pages, will pass through the hands of all concerned, and will thus be distinctly the report of the organization and not of an individual in the organization.

Writing a report requires skill, for it must be comprehensive. It should begin with a clear statement of the problem, followed by the conclusion reached as a result of the work, which may then be described in detail. Patents, cost data, graphs, photographs and samples should be dealt with in an appendix, and in some instances descriptions of apparatus should be included. The whole must be carefully indexed, and a copy sent to the library to be bound and kept as confidential information in locked cases, but as part of the library it should be carded for the library card index.

This brings up the question of the library, which may easily be considered the backbone of the industrial laboratory. Its extent will depend upon other library material available in the community but there are few things which obstruct research more seriously than the absence of easily accessible proper library facilities. A few dollars spent in books and literature frequently saves as many hundreds otherwise spent in work of duplication. The useful periodicals must be provided, elaborate indexes will be found a good investment, also abstracts and patents; in short, every means for quickly locating literature references should be at hand. The current literature, with articles of interest indicated on an attached slip, should be circulated among the members of the staff whose names are checked on this slip, and someone, preferably a chemist, should have assigned to him the task of constantly reading the literature in order that no scrap of information shall escape.

British Labor Refuses Directorship

Some interesting details with regard to the progress of operations of the Ebbw Vale Steel, Iron & Coal Co., Ltd., accompanied by a protest against organized labor's obstructionism, were presented at the recent annual meeting of the company in London. John Windham Baynon, deputy chairman, presided.

In connection with the appointment of a new director, Sir Leonard Llewellyn, Mr. Baynon said the directors were disappointed in being unable to introduce another colleague. They invited one of the great trade unions to nominate one of their number to occupy a seat on the board, but it declined.

"Labor has long proclaimed its ability to take its share in the administration of industry; it has maintained that much of the industrial unrest was due to the ignorance of men managing great industrial companies," said the chairman. "We felt that the presence of a representative of labor on the board, with all the privileges and all the responsibilities of an ordinary director, would give him the opportunity of realizing the many difficulties which confront those men.

"We felt that in realizing and appreciating our difficulties he might possibly be able to take a broader view of many questions which have to be settled between capital and labor. We felt that the presence of a representative of labor on this board would give an opportunity to myself and my colleagues to learn the views of labor at first hand. We realized we were taking a bold step, and we were confident our action would be justified.

"I regret to say our invitation to labor has been refused; not that I am surprised, but I am considerably disappointed. If labor seeks to control industry, then labor should be prepared to serve its apprenticeship side by side with men who have made it their life-long study."

The speaker declared that during the past year the blast furnaces were damped down a number of times as a result of strikes. The company also had difficulty in operating its coke ovens owing to a strike of clerks at the Ebbw Vale collieries. At present it is having great difficulties with electricians and craftsmen which may compel it to close its iron and steel works.

"Today the company owns 3300 acres of land, and with its subsidiary companies it has, in addition, some 11,000 acres of leasehold property," he continued. "It has under construction two large modern blast furnaces which, when completed, will make nine furnaces in all, with a production of 450,000 tons of pig iron per annum. It has a large battery of modern by-product ovens and 150 ovens are now working. They will produce 575,000 tons of coke per annum, which not only will give us an ample supply of coke for our blast furnaces, but also will provide a large amount of fertilizer for agriculturalists.

"In addition to its iron and steel works, the company has a fine, modern galvanized sheet works, besides many subsidiary industries; a magnificent power station, producing electrical energy from the waste gases of the blast furnaces and by-product ovens at a minimum of cost.

"Ebbw Vale, with its subsidiary companies, last year produced 3,400,000 tons of coal; it employed over 20,000 men and it paid in wages £3,739,000 ($17,947,200)."

French Revise Ship Steel Specifications

Bureau Veritas, the French classification society, is now making an extensive revision to their existing specifications as covering the manufacture of various steel and iron products used in ship construction. This has become necessary, owing to the fact that American steel manufacturers, as a general rule, have been adverse to accepting orders when Bureau Veritas specifications are used.

Unusual conditions due to the war have been the cause of delaying such revisions until now. This work is well in hand and new copies of their rules should be ready for distribution by January, 1920. Pending the issuance of these revisions Bureau Veritas has issued formal notification that any orders for ship structural steel, boiler steel (including plates, tubes, stays and rivets), castings, forgings, etc., which might be received and which specified Bureau Veritas tests, inspection or specifications, are acceptable to them when fabricated in accordance with the various 1918 specifications of the American Society for Testing Materials and as hereinafter designated, provided, of course, that such tests are performed in the presence of a duly authorized representative of the Bureau Veritas.

The revisions are intended to cover any materials manufactured in United States or Canada for either export or local consumption. The specifications of the American Society for Testing Materials have been decided upon by the Bureau Veritas as being satisfactory and are believed to be most readily adaptable and agreeable to American practice and are so widely known that the mills can work to same without requesting special instructions.

In many cases, and especially with boiler material (plates, stays and rivets), it will be found that order designates the physical properties. In such an instance, order must be conformed to with balance of inspection in accordance with A. S. T. M. specification applying. Should the designated physical requirements so vary from the A. S. T. M. as to affect the chemical analysis set forth in such A. S. T. M. specification, the analysis may be altered, with their permission, as to come within the range of the physical properties.

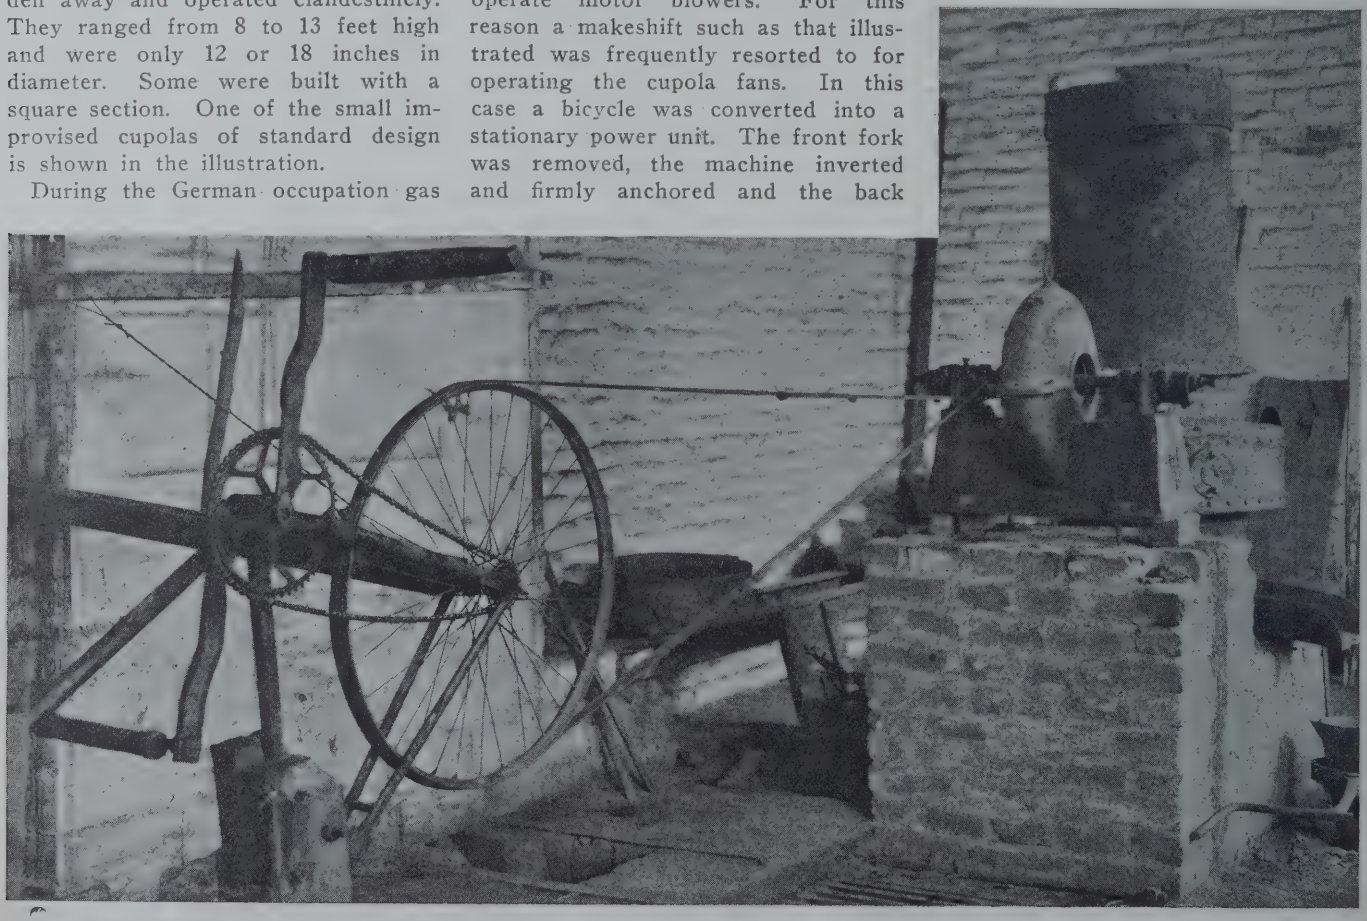
Foundrymen Outwitted Germans

Though Faced by a Continuous and Increasing Shortage of Raw Materials, and Limited by Restrictions on Gas and Electricity, the Foundrymen of Occupied Belgium Found Opportunity to Produce Castings

BY IVAN LAMOUREUX

Sheer audacity characterized many of the activities of the Belgian people during the period of occupation. That perky little paper, which periodically jabbed the stolid German authorities and defied all efforts to trace, capture and punish its publishers, is well known. Similar in many ways to the spirit which actuated La Libre Belgique was that which prompted Belgian foundrymen to improvise and scheme to trick the Germans, by operating clandestine foundries under the very eyes of military authority. M. Ivan Lamoureux, in this article, which was written for the interesting new publication Revue de Fonderie, *tells how this was accomplished.*

MOST of the foundries in the Liege district in Belgium had to stop work in 1916 by order of the German authorities. Among those which remained inactive were some of which the invader was unaware, some whose production was needed for useful public work, and finally those that involuntarily or otherwise assisted in the foundry work required for the support of the German army.



Despite the complete stoppage of large industries and the absence of raw materials, other than those which were to be found in Belgium, and which had escaped the enemy requisitions, small iron foundries continued secretly to cast small machine parts and all kinds of hardware.

Foundries which were prevented from operating their regular shops built small improvised cupolas from materials at hand. These were hidden away and operated clandestinely. They ranged from 8 to 13 feet high and were only 12 or 18 inches in diameter. Some were built with a square section. One of the small improvised cupolas of standard design is shown in the illustration.

During the German occupation gas and electricity were strictly limited. It was impossible to secure current to operate motor blowers. For this reason a makeshift such as that illustrated was frequently resorted to for operating the cupola fans. In this case a bicycle was converted into a stationary power unit. The front fork was removed, the machine inverted and firmly anchored and the back wheel was belted to the drive pulley of the blower. The cranks to which the pedals had been fastened were extended to double the former length and wooden handles replaced the pedals.

Two men turned this power unit, three shifts of two men each taking turns in turning the cranks to operate the blower. The melting period of the small cupola was two hours with a fan speed of as high as 2000 revolutions per minute. In ordinary practice a one horsepower motor served to drive a blower of the type in question.

These small hidden foundries operated practically during the entire war, making door hardware, furnace grates, small coffee and flour mills and other mechanical devices and hardware products which at that time were in great demand.

SMALL IMPROVISED CUPOLA BLOWN BY A HOME-MADE HUMAN MOTOR WHICH WAS USED IN A FOUNDRY CLANDESTINELY OPERATED IN OCCUPIED BELGIAN

Assembly Plants

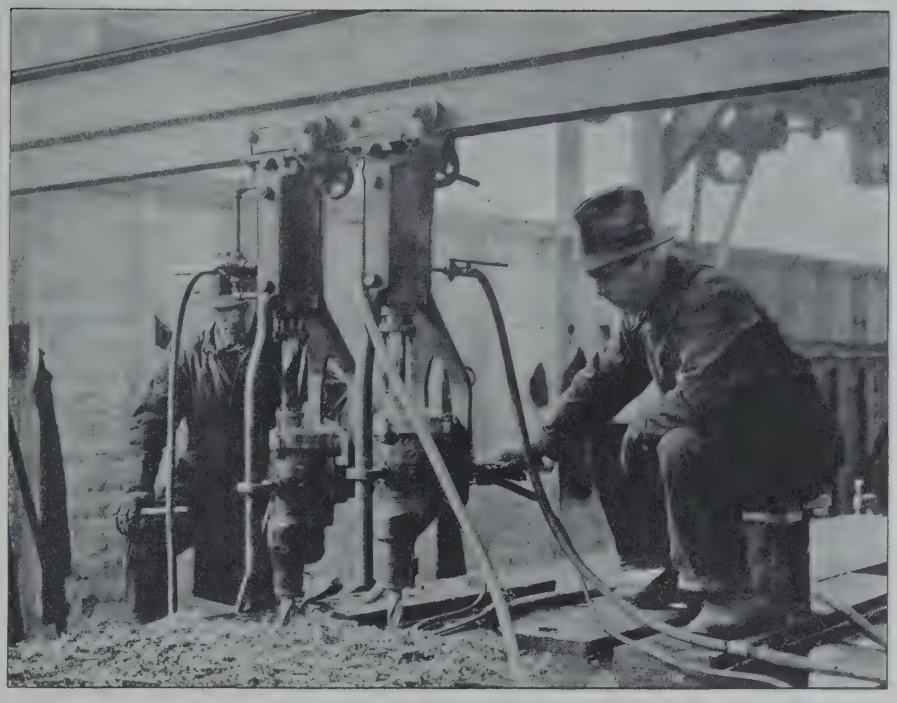
For Buick and Chevrolet Companies Will Contain Novel Equipment

The buildings to be erected by the General Motors Corp. at Union avenue and Natural Bridge road, St. Louis, as recently announced in these columns, are designed to house assembling plants and offices of the Buick and Chevrolet Motor companies. The proposed buildings, docks and trackage will cover approximately 12 acres of ground. All buildings are to be three stories high and will have a combined floor space of approximately 20 acres.

According to the plans, the main buildings are of U shape design and will have a frontage of 680 feet on Union avenue and 760 feet on Natural Bridge road. An inner court, 140 x 660 feet, in each building, is intended to accommodate all incoming and outgoing freight and is well fitted with docks, trackage and a supply building. The office building connects the assembly plants and measures 40 x 120 feet.

The assembly buildings will be of fireproof construction of the reinforced concrete flat slab type. The office will be of reinforced concrete and tile. The exterior finishes are to be concrete and brick with stone trim, arranged so as to give the whole a pleasing yet not elaborate appearance, appropriate to buildings of this character.

A model heating and ventilating system is planned for all of the buildings, consisting of forced circulation of pure washed air through air ducts on the roof and down through the columns panels on each floor of the plant. Low pressure steam will be furnished from an outside source and will be introduced into the heating system for the proper tempering of the circulated air. No piping or radiation on work floors will be required with this system. Modern steel sash windows, extending from the ceiling to within 3 feet of the floor, will insure adequate lighting in day time.



The plant was designed for the assembling of automobiles from parts manufactured in remote manufacturing plants. The assembly will begin with the erection of the door frames of the body, which will take place on the second floor of the right wing of the assembly shop. Side panels, body sills, under bodies, shrouds, windshield brackets, rear seats, top irons, and door hangers and other details of body assembly will receive attention in this department.

On the third floor, bodies will be prepared for painting by being sand blasted. The painting, involving more than a score of distinct operations, requires an elaborate system of paint spraying devices, overhead trolleys for conveying the bodies, and many drying ovens.

After the body has been painted, it will be equipped with electrical instruments. Sheet metal parts, including side aprons, fenders, etc., after being enameled, will be fastened to the body. In the meantime the tops and upholstered equipment will be in the course of completion in other departments.

In assembling the chassis, the frame will travel on a conveyor moving at a rate of about six feet per minute. The grease cups, motor, carburetor, vacuum tank and other parts will be attached as the frame passes various stations. After this preliminary assembly, the chassis will be placed on another conveyor, and after it has been painted, the storage battery, wheels, running boards will be assembled, followed by the body, which will be lowered through a hole from the body department.

With the exception of electric motors, elevators and sewing machines, all machinery and equipment for the new plants has been designed in the works engineer's office of the Buick Motor Co., Flint, Mich.

PORTABLE ELECTRIC DRILLS SUSPENDED FROM A MONORAIL ARE USED FOR DRILLING HOLES THROUGH THREE THICKNESSES OF 1 3/16-INCH BOILER PLATE

A Drill Press Substitute

A practical rigging, which is used in connection with portable electric drills for drilling boiler-shell plate, was devised recently at the Puget Sound Machinery Depot, Seattle. One to four electric drills are suspended from an H-beam which serves as a monorail for the side travel of the drills. Two monorails are provided. Each beam is supported by end girders which travel on standard-gage rails. By means of this arrangement holes may be drilled in any part of a plate by from one to four machines. When four drills are operating simultaneously it is advisable to strengthen the monorails near the top of the span by means of a truss.

The feed is provided by hydraulic pressure and is controlled by means of a 4-way valve. The spent water is discharged underneath the plates. The pressure maintained is about 85 pounds per square inch. The accompanying illustration shows two drills which were built by the Van Dorn Electric Tool Co., Cleveland, drilling through three thicknesses of 1 3/16-inch boiler-shell plate. It requires about eight minutes to drill a hole 1 3/16-inch in diameter.

New Company Organizes

The Vibrating Machinery Co., capitalized at $50,000, has been organized and chartered at Chicago, and has taken over the entire business of the Schroeter Engineering Co. A plant and office has been established at 546 West Jackson boulevard. Julius Schroeter is president of the new concern, F. Von Schlagell is treasurer and Mrs. J. C. Miller secretary. The company manufactures an oscillating foundry riddle and a gas unit for welding and cutting. The latter device is just being put on the market and is designed to use natural or city gas in connection with oxygen, doing away with the necessity of employing hydrogen and acetylene, which much reduces cost.

Tungsten Tariff Bill in Doubt

House Passes Timberlake Measure, but Senate and President are Reported to be Opposed to It—Views Seem Changed on Protecting War-born Industries—Kitchen Charges Tungsten Producers Were Supreme among Profiteers

WASHINGTON, Aug. 26.—While Republicans in the house last Thursday afternoon succeeded in passing the Timberlake tungsten tariff bill over the solid and vigorous protest of the Democrats, extreme doubt exists that it will ever become a law under prevailing conditions in its present form.

It probably will be some time before it reaches the senate floor, and its passage by that branch of congress without modification is questionable in view of the fact that the Republicans have a majority of only eight and a number of these are so-called Progressives, who in the past have favored a low tariff or no tariff, and on this issue have a record more like that of the Democratic party than that of the regular Republicans. Moreover, the measure passed by the house, even if it should succeed in passing the senate without change, may face an insurmountable obstacle in a veto by the President, in which event a two-thirds vote, impossible to obtain, would be required for its enactment.

Although the President in his recent message to congress said industries stimulated during the war, of which tungsten ore production is one, should be protected, it is not believed the rates in the Timberlake measure will be approved by him. Democrats insist that they are so high there is not the slightest chance they will be sanctioned by the President. Some Republicans, however, profess to think this will be done.

Attitude is Doubtful

What has been said of the possible attitude of the senate and the President on the tungsten bill is equally applicable to other pending special tariff bills, such as the one relating to manganese ore and ferromanganese. While Republicans in the house have submitted arguments in favor of the levies included in the Timberlake measure in order to stimulate and adequately protect the domestic tungsten ore industry, low-tariff Progressive-Republicans and the President, as well as the Democrats in both branches of congress, seem to be far from changing their minds in favor of high duties, although the President has conceded industries stimulated under war conditions should be encouraged by protection.

The vote on the Timberlake bill was in strict accordance with party lines, 171 to 132. The bill passed as devised by the Republicans of the committee on ways and means, with one amendment, introduced by Representative Green, Republican, of Iowa. This amendment provides that imported stocks of tungsten ores and concentrates now held in the United States shall be taxed the difference between their cost and $17 a unit, the latter figure being the estimated cost of mining in this country. The bill fixes a duty of $10 a unit on crude tungsten ores and concentrates and $1 a pound on its manufactured products, including ferrotungsten. A unit is defined as 1 per cent of a short ton of 2000 pounds, or 20 pounds of tungstic trioxide.

Representative Green said the purpose of his amendment was to meet an objection made against the bill by Representative Kitchin, Democrat. Mr. Kitchin, who led the fight against the bill, claimed that if passed it would at once give four firms of importers in New York "who now have, according to the evidence, 4500 tons of imported ore stored there, $2,700,000 as a clear bonus by enhancing the value of such ore that amount, and would give the producers here, who have stored 1500 tons, a clear bonus of $900,000 by advancing their price to that extent, or a total gift to those who are hoarding these 6000 tons of ore of $3,600,000."

His statement was denied by Chairman Fordney of the committee on ways and means, who led the fight for the bill, and other Republicans, but Representative Green said that in any event his amendment would take care of the situation.

It was further explained by Mr. Green that ore is coming to the United States, or at least offered for sale, at the rate of about $7 or $8, and that it is reported it has been offered in New York at as low as $6 per unit of tungsten trioxide laid down in New York. The effect of the bill, he said, as the committee intended it, will be to bring the price up to about $17 per unit, which was declared to be the lowest price, according to testimony before the committee, at which the American operators could produce it.

Under his amendment, said Mr. Green, those who have large stocks on hand if they bought it for less than $17 per unit will be compelled to pay a tax on the difference between what they paid for it and $17, and there will be no object in trying to ship in, "as doubtless otherwise there would be imported large quantities of the ore at somewhere from $6 to $8 a unit, with the hope of making the difference between that and the rate in this bill during the time the bill was pending."

Kitchin Charges Profiteering

Mr. Kitchin charged "that of all the profiteers during this war, of all the thousands of industries in this country that made immense profits out of the people and out of the government during this war, the tungsten industry stands in a class by itself. I say it has made 100 per cent more profit than any other industry in this country."

He said producers, after paying every cent of operating expenses, including overhead charges, taxes and insurance, and even allowance for depreciation, made enough profit to take every cent of capital they put into the business and put it back into their pockets, "and then, after getting back their capital have remaining as further profits over $10,000,000 or 150 per cent more than the total capital put in, with the capital already in their pockets." It was claimed by Mr. Kitchin that the production in 1916 was 5900 tons, which were sold for $24,780,000, with a capital investment at that time of only $5,000,000.

Representative Timberlake said that, according to statistics it is thought it will be necessary for the next three years at least to import into this country from 3000 to 4000 tons to supply requirements. The tariff proposed, he stated, would result in the discovery of new fields and the development of others, so that within two, three or four years the industry would be so extended in the United States as to provide for its needs. It was pointed out by Mr. Timberlake that there has not been a mine operating in this country since a few days after the armistice was

signed, because of the importation of the Chinese and Bermuda ores at a price against which domestic producers could not compete. He said the $1 a pound duty on ferrotungsten, etc., will be equal to about $1 per ton on the finished product, machined steel, of a value from $500 to $2500 per ton.

Revise Pacific-Far East Commodity Rate

WASHINGTON, Aug. 26.—Effective Aug. 15, the shipping board has issued a tariff carrying new Pacific-Far East commodity rates. The rates apply from United States Pacific coast ports to Hongkong and Shanghai, China; Kobe and Yokohama, Japan, and Manila, P. I. Among the rates are:

Band iron, bars, billets, blooms, bolts, hoops, ingots, pig iron, plates, including boiler plates bent; rails, not exceeding 33 feet in length; fastenings, rods, sheets, slabs, structural steel not fabricated, 60 cents per 100 pounds; set-up boilers on skids, ship's option, $1 per 100 pounds or 50 cents per cubic foot; castings, ship's option, $1 per 100 pounds or 50 cents per cubic foot; nails in kegs, 60 cents per 100 pounds; pipe not over 6 inches in diameter, 60 cents per 100 pounds; pipe over 6 inches in diameter, 46 cents per cubic foot; structural steel fabricated, ship's option, $1 per 100 pounds or 50 cents per cubic foot; wire in packages, ship's option, $1 per 100 pounds or 50 cents per cubic foot; pig lead and lead goods in packages, $1 per 100 pounds; machinery and machines not otherwise specified, 80 cents per 100 pounds or 40 cents per cubic foot; plows knocked down in boxes, 60 cents per 100 pounds; railroad equipment including cars and locomotives, special contract railroad supplies including axles, car wheels and equipment in packages; cattle guards in packages; signal apparatus in packages; car sills knocked down; underframes knocked down, car wheels, ship's option, 60 cents per 100 pounds or 30 cents per cubic foot; wire rope in reels, 60 cents per 100 pounds; safes and vaults, and parts thereof, ship's option, $1 per 100 pounds or 50 cents per cubic foot; spelter, 60 cents per 100 pounds; tin plates in boxes, 60 cents per 100 pounds; wire fencings in rolls, 45 cents per cubic foot; zinc plates and slabs and sheet zinc in packages, 60 cents per 100 pounds; agricultural implements not otherwise specified, in packages, 43¾ cents per 100 pounds; freight automobiles boxed, 30 cents per cubic foot; passenger automobiles boxed, 35 cents per cubic foot; clay products including fire brick in crates, fire clay in crates and common brick in crates, $1 per 100 pounds or 50 cents per cubic foot; copper bars and ingots and sheet copper, $1 per 100 pounds; hardware in packages, ship's option, 62½ cents per 100 pounds or 31¼ cents per cubic foot; hoes, complete, in boxes, bundles or crates, 42½ cents per cubic foot.

The shipping board also has announced new rates from Atlantic and gulf ports to South America, iron and steel articles being excepted in all instances aside from to Bahia Blanca and Port Madryn, Argentine, where the new rates on these articles are $30 and $35 per ton landed, respectively.

Offers Manganese Ore

Washington, Aug. 26.—Sealed proposals for the purchase of 239,656 pounds of ground manganese ore, located at New Cumberland, Pa., held by the surplus property division of the office of the quartermaster general of

Government's List of 1036 Tools Fixes Selling Prices

WASHINGTON, Aug. 26.—Approximately $1,500,000 worth of machine tools are listed in the inventory of 1036 machines available Aug. 8, just issued by the war department. The inventory is most complete, giving name of tool, maker, type, size, drive, quantity, where located, whether being disposed of by air service, ordnance, signal corps or the M. & E. M. surplus property, zone supply, P. S. & T. division; service value and selling price, ascertained by the use of the chart, described on page 349 of THE IRON TRADE REVIEW of Aug. 7. The price paid by the government for each tool also is given. Prospective purchasers are requested to communicate direct with their nearest bureau district office. The following indicates the number of different tools which are being sold:

the army, will be opened by the surplus property office, zone supply office, Twenty-first street and Oregon avenue, Philadelphia, at 10 a. m., Sept. 12. This material is in two lots, the first consisting of 179,878 pounds, packed in bags of 195 pounds each. The second lot consists of 59,778 pounds, packed in barrels holding about 875 pounds. The analysis of the ore is approximately as follows: Manganese, 53.90 per cent; iron, 1 per cent; silica, 4.72 per cent; phosphorus, 0.104 per cent; sulphur, 0.01 per cent.

Liquidation Completed in 20,685 Contract Cases

Washington, Aug. 26.—Uncompleted portions of suspended contracts to the value of $1,763,845,000, or 47 per cent of the total value of suspensions as reported to Aug. 2, had been liquidated by the war department. Liquidation had been effected in the case of 20,685 contracts and claims, or 82.8 per cent of the total number suspended. The status of contract liquidation is summarized as follows:

	July 26 to Aug. 2	Total to Aug. 2
Number of contracts liquidated	334	20,685
Value of uncompleted portions	$32,133,000	$1,763,845,000
Paid to contractors in settlement	$ 5,986,000	$ 244,840,000
Saving effected	$26,147,000	$1,519,005,000
Per cent saved	81.4	86.1

Suspended contracts awaiting liquidation amount to $1,987,591,000. Assuming that future liquidation in each bureau can be effected at the same rate as in the past, the saving by liquidation of these contracts will amount to $1,648,017,000.

Government to Organize Armor Plant Force

That the organization of the government's new naval ordnance plant at South Charleston, W. Va., is about to be effected, is indicated by a recent announcement by the United States Civil Service commission, to the effect the plant is in need of men for positions which are to be filled in the supervisory and subordinate forces. Two salaried positions of $5000 a year are open and other positions range from $14.40 to $8 per day. The salaried positions are superintendent of forge shops and superintendent of melting shops. Other positions to be filled include, foremen of heat treatment of armor plate; foremen of heat treatment of large guns; foremen of 14,000-ton presses; foremen of small guns and foremen of heat treatment of projectiles. Applicants for these positions will not be given scholastic tests but will be rated on their training and experience, which will be rated at 90 per cent, while their physical condition will be rated at 10 per cent. Detailed information can be obtained from the commission's headquarters at Washington.

The manufacture of armor plate and forgings for guns of large caliber, entirely new lines of work for the government, is about to be inaugurated. It is estimated that eventually the plant will have an annual capacity of 50,000 tons of armor plate, projectiles, guns, miscellaneous ordnance forgings, etc.

Gold Exports Decline

Two months after the removal of restrictions on the exportation of gold from the United States shipments of the metal out of the country for exchange purposes has practically ceased. During the period that has elapsed since the embargo was lifted gold coin and bars aggregating $128,787,500 have left this country. The most extensive shipments have gone to South America, the total being $57,200,700. Asia has been a close second, taking $30,832,000 for Japan, $20,423,000 for China and $500,000 for India, making an aggregate of $51,755,000.

The prediction of bankers two months ago that shipments would approximate $100,000,000 for exchange purposes has proved true. After deduction of the amount sent to China, which will not be used directly for exchange purposes but will be worked up, it is found that approximately $108,000,000 is the extent of the gold movement. Small shipments will probably continue to South America and to the Far East for a time yet, but the major movement appears to be practically over for the time being.

Industrial Training Urged to Meet Living Cost

Col. Arthur Woods, assistant secretary of war, is uring 20,000 factory owners and industrial corporations throughout the country to undertake industrial training for their workers at the same time that they pay them a sufficient living wage during the period of their apprenticeship. Colonel Wood says:

"With the cost of living soaring, the question of efficiency in production and manufacture has come to the front as the issue of most fundamental importance in the solution of the living problem. It is becoming clear that some remedy must be found for a situation in which thousands of American workers, earnest, respectable men who are doing their best every working day of the week, are nevertheless attaining an output of not over 35 per cent of their best human capacity.

"In aggravation of the high cost of living, the entire question has been brought to a head just now by the large numbers of soldiers returning to civilian life from the military service. Many of these men went to war unskilled workers, but because of their experience have come back with greater ambitions and larger vision.

"They have the psychological start for better things. They have the desire to improve their condition and their earning power. But they have neither the skill, nor the means for developing the skill, without which their ambitions cannot possibly be realized. They must have industrial training immediately and on a sufficiently large scale to offer an opportunity for advancement to every man who wants one and deserves it.

"These men must earn a living wage while they are learning, and must be taught intensively enough so that in a short time they will be able to realize their ambitions and to increase their earning powers. That greater production means lower prices is axiomatic."

Salaried Employes Granted Representation

Employe representation has been extended to salaried employes of the Colorado Fuel & Iron Co. The company attained such a marked degree of success with the plan as applied to its wage earners four years ago that is has decided to permit all other employes to enjoy its advantages. Directors, executives and officers, as well as all general and special officials, doctors, superintendents and the like will be excluded, as representatives of the management. The company's announcement explains the operation of the plan in regard to salaried employes as follows:

"The representatives of the salaried employes from each county shall constitute a general committee. There shall be a joint general committee for each county composed of the general committee of representatives of the salaried employes and a like number of representatives of the management who shall be named by the management. Each general committee may consider the following or any other subjects: Employment and working conditions; direction of working forces and equipment improvements; works and office practice, methods and production; recreation and information; economy, thrift, insurance and investments; a square deal, one purpose, cooperation and success."

Uncertainty as to the future cost of materials and the steadily increasing cost of labor, are said to have caused the total abandonment of the project of the Ritz-Carlton Co. to build a huge new hotel in Atlantic City. The cost of the site and building was placed at $2,275,000.

New Company

To Develop Canadian Iron Ore Deposits on Extensive Scale

Toronto, Aug. 23.—The Consolidated Iron & Steel Corp. Ltd., a new company with authorized capital of $8,000,000, in which Toronto and Detroit capital is invested, has opened an office at 20 King Street East Toronto and will proceed to develop two large iron ore deposits on an extensive scale. It has opened a large hematite mine at Furnace Falls in Leeds county, 25 miles north of Brockville, where it owns 1500 acres. The other property of the company is located at Mileage 182 on the Algonia Central railway, where diamond drilling has been carried on since November, 1917, proving up large deposits of ore to a depth of 500 feet. Engineers reports estimate the available ore tonnage at a very large figure. Work on both properties is being actively carried on and at Furnace Falls there are thousands of tons piled up ready for shipment.

H. H. Macrae, managing director of the Steel & Radiation, Ltd., Toronto, who recently returned from England, has announced that negotiations have been started with a British firm for joint operations in Canada in a manufacturing line founded upon British patents and processes. Efforts are being made by the company to secure orders in Belgium and Siberia.

The well known firm of Baldwins, Ltd., of Swansea, Wales, one of the largest syndicates in the British iron and steel industry, has acquired the plant of the British Forgings Co., Toronto, for the manufacture of steel by the electric process. It was announced here that 2300 men will be employed. At the annual meeting of Baldwins, Ltd., in Swansea recently, the chairman said to the stockholders.

"We have in Canada trade which will require further enterprise on our part if it is to be maintained and increased. For this reason we desire to utilize our special knowledge and facilities in order that we may actually manufacture on a considerable scale in Canada. We have several other projects in view upon which it would be premature to speak."

The chairman announced that the company's profit for the past year, after providing for excess profit duty, was $2,214,500. Further capital was authorized by the creation of 3,000,000 "B" preference shares at $4.80 each.

As a result of the lack of orders the Dominion Iron & Steel Co., closed down its plant at Sydney, N. S., Aug. 23, for an indefinite period. This announcement was made by a leading official of the company who declared that the plant had been kept in operation for another week in view of an order for 15,000 tons of billets, which the company received a short time ago. The original plan was to close down Aug. 16, but this recent order kept several of the departments working for another week. He further stated that every man employed at the works would be given employment during the shut-down, or until the company received further orders. Most of these men will be taken on at the plate mill which is now being rushed to completion, while others will be used in repair work to be started in other departments. "At the present time we have no orders to keep the plant in operation," declared the official. "However, we are angling for business and perhaps within a short time will receive sufficient orders to reopen."

The recent decisions of the British government that motor cars entering Britain from Canada must be of Canadian manufacture to the value of 60 per cent will seriously affect the motor industry. A considerable portion of increasing export trade in automobiles has been with Britain. Canadian motor manufacturers regard the restriction as too stringent in view of the fact that under the imperial preference on imports other goods are included which are 25 per cent British in value.

Starts Supply Business

On Sept. 1, James T. Winterly & Co., mill, mine and contractors' supplies, will start business in the Conestoga building, Pittsburgh. The president of this company is James T. Winterly who is a graduate engineer and architect and has been in the contracting business in Pittsburgh for several years. He will take personal charge of the service department of the company in giving assistance to industrial concerns and contractors on technical matters. J. L. McConaghy, who has been with the firm of James H. Matthews & Co., Pittsburgh, for the past three years and who previously was engaged in engineering work for the city of Pittsburgh, is vice president of the company, and C. W. Elton, secretary and treasurer, for the past seven years has been with James H. Matthews & Co. in charge of sales of steel dies for a number of years and latterly as purchasing agent of that company. The new company will have the exclusive agency in this district for the Wilmington Fibre Specialty Co., the Aborn Steel Co., the Philadelphia Belting Co., the Holyoke Truck Co., the Cyclone Fence Co., the Acme Waste Co., and the Forest City Paint & Varnish Co.

Business Problems

To be Discussed at Conference Called By Illinois Manufacturers

The problems of business, brought on by post-war and industrial developments, will be discussed at a national conference to be held in Chicago, Sept. 8 and 9, under the auspices of the Illinois Manufacturers' association. The sessions will be held at the Congress hotel. Trade and industrial associations in every line of business have been invited to send representatives.

Leaders of organized labor are among those invited to speak and are expected to state where the demands of the workers will stop. Some of the subjects to be discussed are: Participation in private business on the part of the federal government; nationalization of industry; influence of exports on prices and production; possibilities for increasing production; the relation of the United States to the rehabilitation of industry in Europe; stabilization and guarantee of contracts; definition of profiteering; the attitude of employing farmers and manufacturers toward labor; adjustment between property rights and community interests; participation of labor in the management of industry; increasing the purchasing power of the dollar; distribution of the war debt; governmental price fixing; the Plumb plan and the solidarity of farming and business interests.

Stack Has High Record

A production of 864,234 gross tons of pig iron in four years, three months and four days was the record of No. 2 blast furnace of the Pittsburgh Steel Co., at Monessen, Pa., which was blown out Aug. 22 for relining after being in continuous operation since June 14, 1915. The rated capacity of this furnace is 15,000 tons a month, but for the 51 months that it was in operation it averaged 16,495 tons a month and the actual production for the period exceeded theoretical capacity by close to 100,000 tons, for on a monthly capacity of 15,000 tons, the output would have been exactly 767,000 tons.

Both stacks of the Pittsburgh Steel Co. were built in 1912-13 and were blown in in August, 1913. No. 2 stack went in Aug. 13, 1913, but was blown out on Oct. 1 of the same year and remained inactive until June 14, 1915. No. 1 stack had a longer continuous run on one lining than did No. 2, being in blast from Aug. 5, 1913, until May 1, 1919, a period of five years, eight mnths and 26 days, during which time it produced 1,176,627 gross tons of pig iron.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

BY PURCHASE, the Reading Iron Co. has acquired the plant of the George B. Lessig Co., Pottstown, Pa., maker of muck bar, shovel, tack, nail plate and cut nails. The purchase was made to give the Reading company a greater output of puddle bars; it formerly made extensive purchases of puddle bars from the Lessig company. By manufacturing them itself, the Reading company will control the quality of all material entering into the manufacture of its pipe.

The plant comprises two puddle mills, having a total of 22 double furnaces equipped with waste heat boilers and three 2-high puddle mill trains and 22-inch 3-high 3-stand rolling mill for nail plate and skelp, as well as the necessary heating furnaces, gas producers, etc. The nail factory contains 105 cut nail machines, together with heating furnaces, rumblers, packers, etc. The plant, which is on a 12-acre site, is complete with warehouses, machine, blacksmith, cooperage and carpenter shops and is located on the Philadelphia & Reading and Pennsylvania railroads. Its annual capacity is 30,000 tons of muck bar and 300,000 kegs of cut nails.

The Reading company plans to place the puddling mill in operation as soon as possible after necessary repairs are made and work at the nail factory will commence a little later. The plant now is being thoroughly overhauled.

* * *

THE Koehring Machine Co., Milwaukee, and the Waterloo Construction Co., Waterloo, Iowa, are to open southern headquarters at Atlanta, Ga., as soon as suitable buildings can be secured. Both concerns are extensive manufacturers of machinery for laying concrete. The Koehring company specializes in manufacturing machinery for concrete paving. The Waterloo company also makes machinery for the erection of concrete and is one of the largest companies in the United States.

* * *

THE Tennessee Coal, Iron & Railroad Co. is installing a manhoist at its mine at Sequatchie, Tenn., to convey the miners up the incline to work, the arrangement calling for an expenditure of $14,000. The apparatus will comprise four passenger cars, two of which will be attached to each end of a wire cable capable of withstanding a tension of 150 tons, the cars being hauled by a special engine installed at the top. Thirty miners will be hauled in each car. It now requires 45 minutes for a miner to climb the mountain to his work.

* * *

THE Watson Frye Co., Ltd., of Bath, Me., has just started work in its new foundry which was recently completed by the Austin Co. The foundry building proper is 58 x 195 feet and has adjacent to it a room 76 x 80 feet, which is used for cleaning castings. Above this cleaning room is a machine shop of approximately the same dimensions. A separate building, 26 x 60 feet, is used for a pattern shop. The entire plant is modern in every respect. The buildings are of brick and equipped in accordance with the latest foundry practice.

* * *

THE recently formed Slick-Knox Steel Co., has organized by the election of the following officers: Chairman, E. E. Slick; president, L. L. Knox; vice presidents, C. K. Strausbaugh and William McIntyre; secretary and treasurer, A. R. McGill; directors, Parke Bachman, Edwin Hodge Jr., Mont Murray, James Scott, W. H. Schoen and George W. Short. Work on the reconstruction of the old Blaw-Knox plant at Wheatland, Pa., which was taken over by the Slick-Knox company is progressing rapidly and the company expects to begin shipments of some of its products around the middle of September.

* * *

ARRANGEMENTS have just been completed by the General Combustion Co., Monadnock building, Chicago, for the organization of a Canadian company, with offices in the New Birks building, Montreal, Que. This company has been formed for the purpose of manufacturing and selling industrial furnaces and equipment. The officers are as follows: President, Dr. Milton L. Hersey; vice president, William T. Dean; vice president, Max Sklovsky, who holds patents on the furnaces produced by the company; secretary and treasurer, P. J. Woolf, and managing director, Norman M. Campbell.

* * *

CHUSE Engine & Mfg. Co., Mattoon, Ill., has shipped to Tsingtau, China, via New York and Shanghai, a 600-horsepower, cross compound, rope drive engine to be installed in a cotton mill wrecked by the Japanese, when the Shantung peninsula was taken from the Germans. The engine was ordered through Gaston, Williams & Wigmore, New York exporters. The Chuse company contracted to ship the engine from Mattoon to Tsingtau in five weeks, agreeing on a $50 a day forfeiture and bonus clause. The five weeks were not entirely consumed and the company received a bonus of $100.

* * *

TO solve industrial problems which require the services of mathematical specialists, the firm of Dantzig, Pfeiffer & Ritt, 500 West 116th street, New York City, consulting mathematicians, has been formed. It consists of T. Dantzig, G. A. Pfeiffer and J. F. Ritt and each member of the firm has been engaged in work of this nature for some time privately. Dr. Dantzig is a graduate of the University of Paris and of the Ecole Superieure d'Aeronautique et de Construction Mecanique. He has taught at Indiana university and at Columbia. During the war he was in charge of mathematical work of the instrument section of the United States ordnance. Dr. Pfeiffer received the degree of mechanical engineer from the Stevens institute of technology and the degree of doctor of philosophy from Columbia university. He has taught mathematics at Harvard, Princeton and Columbia. He is an associate editor of the *Annals of Mathematics*. Dr. Ritt took the degree of Ph.D. at Columbia. For three years he was at the naval observatory and since has taught mathematics at Columbia. During the war he was one of the chief ballisticians in the United States ordnance department.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE Coppus Engineering & Equipment Co., Worcester, Mass., maker of blowers and power plant equipment, has called a special meeting of the common stockholders for Aug. 20, for the purpose of increasing the capital stock from $50,000 to $130,000, all preferred. The proceeds are to be used for enlarging the brass foundry properly to accommodate the increasing business, and to create a further reserve or preferred stock which can be issued from time to time to finance such further developments of the business as shall become necessary. The new building will be of brick and steel construction, with monitor roof, giving perfect light distribution and ventilation. There will not be a single post or column, the steel trusses being designed to carry a traveling crane so that the total floor space is available for molding.

* * *

PLANS and specifications have been completed in New York for the new West Virginia Metal Products Co. brass mill at Fairmont, W. Va.

* * *

THE Summers, Fitler & Todd Co., Pittsburgh, has been appointed exclusive agents for western Pennsylvania, eastern Ohio and northern West Virginia for the Rivett Lathe & Grinder Co., Boston.

* * *

IN order to provide for increased business the H. C. Cook Co., of Ansonia, Conn., manufacturers of brass novelties, will enlarge their plant to nearly double its present capacity. Work is expected to start at once.

* * *

THE Continental Steel & Supply Co., Pittsburgh, has installed 29 new nail machines at its plant at Ellwood City, Pa. Cement coated nails are the principal product of this plant.

* * *

THE Bethlehem Fabricators, Inc., Bethlehem, Pa., have completed a new fabricating shop, 60 x 280 feet which when completely equipped, will give employment to 150 additional men. At the present time, the company's force numbers 200.

* * *

RECENT orders taken by the Electric Furnace Construction Co., Finance building, Philadelphia, include one for a 3-ton furnace from the Hammond Steel Co., Syracuse, N. Y., for the manufacture of high grade tool steels and one from the Hong Kong Steel Foundry Co., China.

* * *

THE Dickey Steel Co., Inc., Woolworth building, New York City, recently was appointed sales representative for New York and Philadelphia district, for the Worcester Pressed Steel Co., Worcester, Mass., manufacturer of hot and cold rolled strip steel and light and heavy metal stampings.

* * *

THE Indiana Silo Co., Pendleton, Ind., and the Star Tractor Co., of Findlay, O., have consolidated as the Indiana Silo & Tractor Co. Capitalization is to be $1,000,000. A new plant will be built there to manufacture tractors, and the Findlay plant will be enlarged. W. H. Swain, of Pendleton, is president.

* * *

THE Chinese government has just closed contracts for purchase in the United States of 18,000 cars to be delivered within the next two years. Closing of the contract is confirmed by the officials of the American Car & Foundry Co., New York. The order will provide steady employment for a force of 2000 men for a period of at least two years.

* * *

WHILE the contract has not yet actually been signed, the negotiations for 150 locomotives to be built at a cost of about $7,000,000 for the Polish government by the Baldwin Locomotive Works, practically have been completed, according to Samuel Vauclain, president of the company. The terms of payment have not been made public.

* * *

THE Empire Steel & Iron Co. has decided to rebuild its blast furnace at Oxford, N. J., and has retained Freyn, Brassert & Co., Chicago, as consulting and supervising engineers. Plans are now being prepared which call for an entire new furnace shell, new blowing engines, additional boilers and enlargement of the present stove capacity, which will give the plant an output of 400 tons of basic iron daily. It will be equipped with a top of the double-bell design and hopper extension, skip incline, bins, etc. A pig-casting machine and other modern appliances will also be installed. The company ownes mines which supply practically all the ore used at the plant.

* * *

GROUND has been broken by Frank D. Chase, Inc., Chicago, industrial engineer, for a new foundry at Janesville, Wis. This foundry will produce tractor castings for the Samson Tractor Co. division of the General Motors Corp. The foundry group will include a gray iron foundry, core room, sand storage building and pattern shop and will cover an area of 530 x 330 feet. In addition there will be a material yard, 80 x 530 feet and a casting storage yard, 70 x 330 feet. These will be served by traveling cranes. The foundry will be equipped with complete conveying machinery and material handling systems. Buildings and equipment will cost in excess of $1,000,000.

* * *

IN ACCORDANCE with the expansion policy adopted by the Fruehauf Trailer Co., Detroit, and in order properly to care for increased demands for the company's products, announcement recently was made of the purchase of a new 5-acre factory site. On it a modern manufacturing plant will be erected, and this with the installation of new machinery and equipment, will provide manufacturing facilities which will enable the company to turn out its products on a greatly enlarged scale. Other plans call for an increase in the capitalization of the company from $150,000 to $250,000. Officers of the company are: President, A. C. Fruehauf; vice president and general manager, H. C. Fruehauf, and secretary and sales manager, E. L. Vosler.

Total Wages Drop 8.4 Per Cent

Labor Department's Bureau of Statistics Makes Comparison Between Amounts Paid in April and May by 115 Companies in Iron and Steel Industry—Number Employed Shows Reduction of but 4.6 Per Cent

WASHINGTON, Aug. 26.—The first reductions of any consequence in the volume of wages paid in the iron and steel industry are shown in the May report of the labor department's bureau of statistics. These figures disclose that in the plants of 115 producers in May the payrolls aggregated $10,744,379, or 8.4 per cent less than the $11,734,362 paid out in April. As compared with May, 1918, the aggregate of wages paid in the mills and furnaces of 114 companies, $10,614,879, is 17.4 per cent under the $12,851,528 payroll reported a year ago.

These totals in themselves have less significance than when consideration is given to the number of men employed in the same plants during the comparative periods. In this connection it is shown that last May 178,022 employes were carried on the payrolls of the 115 establishments, while in April the number was 186,525. This is a reduction of 4.6 per cent, as compared with a decrease of 8.4 per cent in the volume of wages paid. May this year, however, was 18.3 per cent lower than May a year ago in the number of workmen, the 175,970 employed by the 114 companies reporting for the two periods being 39,406 fewer than in 1918. This employment decrease compares with the fall of 17.4 per cent in the wage totals.

In commenting on the changes in wage rates, not only in the iron and steel industry but in others as well, the bureau remarks that "a number of decreases were reported in iron and steel, many of which were in accordance with the rules of the Amalgamated Association of Iron and Steel Workers." Continuing, the bureau says:

"The entire force in two plants was decreased 25 per cent. The rolling mill piece-work rates in one plant were reduced 18 per cent. About one-third of the employes in one plant and 15 per cent of the force in another plant were reduced 17½ per cent. The 65 per cent bonus, affecting all of the employes in one mill with the exception of the bar mill workers, was reduced to 40 per cent. A decrease of approximately 14 per cent, affecting about 50 per cent of the employes, was reported by one plant.

"About 45 per cent of the employes in one plant received a decrease of about 12 per cent; and a reduction in rates, averaging 11 per cent and affecting 40 per cent of the men, was made by another plant; while a third plant reported a decrease of about 11 per cent, affecting approximately 50 per cent of the employes. A 10 per cent decrease, which affected three-eighths of the employes, was made by one concern, and about 1 per cent of the force in one plant were decreased approximately 9 per cent. Three plants reported percentage decreases of six, five and three, affecting 33, 10 and 50 per cent of the employes, respectively."

The bureau of labor statistics also published the March report of the New York state industrial commission which gave the average weekly wage in March, 1915-1919, inclusive, in the blast furnace and rolling mill industry. The figures given were $33.52 in 1919; $27.95 in 1918; $23.53 in 1917; $18.93 in 1916; and $15.37 in 1915. The weekly average for all industries was $22.20 in 1919; $18.71 in 1918; $15.79 in 1917; $13.96 in 1916; and $12.65 in 1915.

The May employment report of the bureau, however, discloses that, as compared with April, iron and steel, carbuilding and repairing, cigar manufacturing and paper making industries are the only ones in which there has been a decrease in the number of employes, and, except cigar manufacturing, the only ones in which there has been a reduction in the amount of wages paid. The automobile, boots and shoes, men's clothing, cotton finishing, cotton manufacturing, hosiery and underwear, leather manufacturing, silk, and woolen industries all showed increases in employes and wages as compared with the month previous.

As compared with May a year ago, the majority of the selected industries show decreases which, it is pointed out, is natural, in view of the pressure brought to bear to increase wages in 1918 when the war was at its height. The automobile manufacturing, cotton manufacturing, leather manufacturing, and silk industries are the only ones credited with more employes now than in May, 1919, while the automobile, boots and shoes, cigar, cotton manufacturing, leather, and silk industries are the only ones which paid more wages in May this year than last year.

Steel Workers Call Halt to Demands

REPRESENTATIVES of employes of the Midvale Steel & Ordnance Co., at their joint meeting with representatives of the company in Atlantic City, N. J., Aug. 22 and 23 took a firm stand against "profiteering" by labor. They declared in resolutions they adopted that inordinate wage demands cannot solve the problem of the high cost of living. This expression from the elected delegates of a large body of employes was considered as evidence that workers in the iron and steel industry are doing some sane thinking, regardless of efforts now being made to force them into an antagonistic position against their employers.

The Midvale Steel & Ordnance Co., and its subsidiaries were among the first of the large companies in the iron and steel industry to adopt employe representation. In conformity with the constitution, representatives of the employes and those of the company, composing the collective bargaining committees and the general committees, held a joint session at Atlantic City, this central point being chosen because representatives came from a number of plants variously distributed. Many matters of importance were discussed, including efforts now being made to force down prices of food, housing, co-operation and benefit organizations.

The resolutions as adopted follow:

"Whereas, the high cost of living needs to be abated by diligent, efficient and conscientious labor, by thrift and by avoidance of waste and extravagance; and

"Whereas, the price of commodities is regulated by the day's labor of a man and the real unit of value or the unit of compensation is not a dollar but the purchasing price of a dollar and that the price of all things, meaning the average price of everything we use and consume which is

commonly referred to as the average price of commodities, is fixed, regulated, raised or lowered by the average compensation received for one hour's work by every man and every woman; and

"Whereas, we believe the only sure remedy for the high cost of living is increased production and the stabilization of prices in conformity with wages now being paid; and

"Whereas, we believe any workman who demands a greater proportionate return for his labor than his fellow workmen in other lines are getting is as guilty of profiteering as a grocer who charges exorbitant prices for the necessities of life, and that increases of wages paid to certain classes of workmen by the government or others will result in higher prices being set by the profiteers for the necessities of living to all purchasers alike. It is therefore

"Resolved, that persistent and unceasing demand of workmen employed in all classes and kinds of industries for a shorter day's work and an increased wage in order to meet the present high cost of living is uneconomic and unwise and should not be encouraged.

"Resolved further, that private monopolies should be controlled and profits restricted to a rate that shall be fair to the consumer.

"Resolved, further, that unnecessary exports of food and clothing be restricted and that all stores of hoarded supplies be uncovered and placed in the open market.

"Resolved, further, that copies of this resolution be forwarded to the President of United States, to the senators in congress from Pennsylvania and to the congressmen of the various districts in which are located the various plants of the Midvale Steel & Ordnance Co. and to the state and municipal authorities, to the end that they may, by all the powers and means to them available, endeavor to bring about normal conditions, with special privileges to none but justice to all and sure and swift retribution for those who may attempt to profiteer in the necessaries of life."

Shops Close as Protest Against Demands

TWO large manufacturing plants in Connecticut have been closed for an indefinite period following action of employes in making wage demands that employers declare are unreasonable. All foundries in Belleville, Ill., have been closed for a similar reason. As previously noted, a number of other plants have been shut down by their owners, who preferred to take this course rather than to experience trouble with trade union organizers. In England this step is being taken frequently by large companies, one company having first offered to give a trade union representation on its directorate, only to have its tender spurned. Talk of capital going on a "strike" is heard not infrequently in this country, although the number of plants which have been closed as a protest against excessive demands is not so large as to suggest a movement in this direction.

Following a strike, the entire factory of the Underwood Typewriter Co., at Hartford, Conn., except nonproducing departments, was ordered closed Aug. 11 by John Underwood, president of the company. Just prior to the announcement, Charles D. Rice, factory manager, notified the striking aligners that he would talk with them. It is reported that Mr. Rice explained why the company could not grant the men's demands and continue to operate, but the men refused to accept his explanation. Hundreds of the employes have left Hartford for other cities. Union leaders claimed that an automobile company of Flint, Mich., imported 65 of the machinists and toolmakers.

The plant of the Columbia Graphophone Co. closed Aug. 14, when striking workmen refused to return, has not been reopened. According to the management the plant has been closed indefinitely and new works will be established elsewhere in this country.

Foundry laborers in Belleville, Ill., are asking for an increase in wages from 45 to 60 cents an hour. The employers refused to grant the demands, stating that they had a contract under which the men agreed to work for 45 cents an hour until Jan. 1, 1920. The men claim there is a clause in the contract which gives them the right to ask for an increase at any time.

Machinists and electricians in Louisville, Ky., are on a strike, in company with street car motormen and conductors. Shopmen employed by the Louisville & Nashville railroad in Louisville remained at work. The company is now taking back all shopmen laid off in June by order of the railroad administration.

Union to Demand Hearing With Judge Gary

The committee representing the American Federation of Labor in canvassing the "strike vote" of iron and steel workers announced in Youngstown last week that 98 per cent of those who voted favored the proposition of making demands on the employers and backing those demands with a strike ultimatum. The committee, however, refused to disclose the number of workers who voted.

The leaders went through the formality of requesting that committees representing various branches of the trade formulate demands, although those demands had already been prepared for them by the leaders, and included one in particuar requiring that the employers deduct from their employes' wages the amounts to be paid as dues to the unions.

It was decided that the committee should first demand a hearing with E. H. Gary, chairman of the United States Steel Corp., and in the event this is refused to call a strike at the corporation's plants.

The committee went to New York Aug. 25, where it awaited the arrival from Europe of Samuel Gompers, who is expected to assume charge of the committee's efforts to obtain an audience with Judge Gary. Gompers was due to arrive Aug. 26. The committee claims it has until Aug. 30 to obtain the hearing or call a strike.

LABOR NOTES

The first fall meeting of the New England Foundrymen's association will be held at Boston, Sept. 10, at which time, A. O. Backert, president of the American Foundrymen's association will present a paper.

* * *

Nearly 200 members of the New England Foundrymen's association attended a summer festival at the Pomham club, Providence, R. I., on Aug. 13. In the evening the foundrymen were taken to the West Side club, where further entertainment and refreshments were provided. Clarence Corbin, Corbin Foundry Co., Providence, was in charge of the entertainment features of the day.

* * *

American consuls abroad have been instructed that it is no longer necessary to require evidence of the issuance of an import license, before certifying an invoice covering the shipment of any commodity, notwithstanding such commodity may be one whose importation is still subject to control by individual license, according to a recent announcement to importers by the war trade section of the state department.

Discount Method Dropped

New Extra Card for Cold Rolled Finished Steel and Shafting Puts Quotations on Flat Basis—Full List is Given

THE new extras on cold rolled finished steel and shafting which were adopted by the manufacturers, Aug. 18, as announced in the Aug. 21 issue of THE IRON TRADE REVIEW, differ substantially from the method of quoting previously in effect. Under the new schedule, extras are put on a flat per pound basis. The old plan of naming discounts off the base price according to size and form, has been dropped, in the interest of simplication and the avoidance of more or less confusion. In the new card, the base size is made from 2¼ to 3 inches, instead of 2 to 3 inches in the card previously in effect. The base price remains unchanged at 3.60c Pittsburgh. Quantity differentials have been materially increased by the new card. The effect of the new classification is to produce a slight lowering of prices on the average.

The complete new extra card upon which the manufacturers of cold rolled finished steel and shafting now are shown in the accompanying table.

Three hundred machinists and helpers at the Hampton roundhouse of the Delaware, Lackawanna & Western railroad, Scranton, Pa., have voted to strike until fellow workers are reinstated and the practice of laying off men is discontinued. The men say laying off workers to curtail expenses is not warranted.

Take New Bids on Hangar

Washington, Aug. 26.—Bids are to be opened by the navy department Sept. 8 for the construction of a dirigible hangar at Lakehurst, N. J. This is the same project for which bids were received and opened Aug. 6, but because of necessary changes in plans and specifications those bids were rejected. The project requires between 6000 and 7000 tons of steel, mostly structurals.

Adopted Aug. 18, 1919

EXTRA FOR ODD AND INTERMEDIATE SIZES:—

The following sizes in rounds, hexagons and squares shall be considered standard:

By 64th to 1", inclusive.
By 32nds, 1 1/32" to 1 31/32", inclusive.
By 16th, 2" to maker's limit.

All odd and intermediate sizes, (excepting those allowing a total tolerance of .008" and such specifications shall be for not less than 2000 pounds of a size), not less than 25c per 100 pounds net extra, in addition to the usual extras for accuracy, etc.

EXTRAS FOR CHAMFERING (For Automatic Screw Machine Use Only).

	Rounds Per 100 Pounds Net	Hexagons and Squares Per 100 Pounds Net
7/16" to 5/8"	$0.13	$0.15
11/16" to 15/16"	.10	.13
1" to 2"	.065	.115
2 1/16" and larger	.04	.10

These extras apply on lengths 10 ft. and longer and one end bar only. For sizes smaller than 7/16" and bars shorter than 10 ft., special prices will be quoted.

BOXING AND BURLAPPING:—

Boxing (minimum 50c), Domestic Shipment, $0.40 per 100 pounds net
Boxing (minimum 50c), Export Shipment.. .50 " 100 " "
Burlapping (minimum 25c), full length..... .25 " 100 " "
Burlapping (minimum 25c), ends only..... .10 " 100 " "

PISTON ROD STEEL:—

Uniformity to size and carefully selected surface finish—50c per 100 pounds net extra, in addition to usual extras for accuracy and short and long lengths.

ROLLER BEARING STEEL:—

Special analysis and finish (For special accuracy, regular extras will apply).....$1.00 per 100 pounds net extra.

EXTRAS FOR ACCURACY—ROUNDS:—

For accuracy from exact size to .0015" under, sizes 3" diameter and smaller.....25c per 100 pounds net.

For accuracy from exact size to .001" under, or from exact size to not more than .001" either way, sizes 2½" diameter and smaller, 50c per 100 pounds net.

For accuracy within .0005" either way and from exact to .001" over size, sizes 2" diameter and smaller, (standard sizes only) $1.00 per 100 pounds net.

For accuracy .001" either way or from exact size to .001" over, or from exact size to .001" under—sizes 2" diameter and smaller (odd and intermediate sizes) $1.00 per 100 pounds net.

—SQUARES, HEXAGONS AND FLATS—double above extras.

FOR ACCURACY, CARBON .31% AND OVER—double above extras.

EXTRAS FOR SPECIAL AND HIGH CARBON OPEN HEARTH STEELS:—

Specified Analysis—Carbon .30% and less.....25c per 100 pounds net.
Specified Analysis—Carbon, 30% and less, sulphur guaranteed .05% and under.....50c " 100 " "
Special Analysis—Carbon .31% to .50%.....50c " 100 " "

QUANTITY DIFFERENTIALS:—

All specifications for less than 2000 pounds of a size will be subject to the following extras, the total weight of a size ordered to determine the extra, regardless of length and regardless of the exact quantity actually shipped:

1000 to 1999 pounds.....$0.15 per 100 pounds net.
Less than 1000 pounds..... .35 " 100 " "

EXTRAS FOR LONG AND SHORT LENGTHS. Per 100 Pounds Net.

	Rounds	Squares	Hexagons	Flats
3" to 5 15/16"	$1.50	$1.50	$1.50	$3.00
6" to 11 15/16"	.75	.75	.75	1.50
12" to 23 15/16"	.30	.60	.30	.75
24" to 59 15/16"	.15	.30	.15	.40

Lengths longer than 24 ft. and less than 30 ft..$0.50 per 100 pounds net.
30 ft. and less than 35 ft..... 1.00 " 100 " "
35 ft. and less than 40 ft..... 1.50 " 100 " "
40 ft. and less than 45 ft..... 2.00 " 100 " "
45 ft. and longer..... 2.50 " 100 " "

Extras for long lengths apply on Rounds, Squares, Hexagons and Flats.

FREIGHT ALLOWANCES AND DELIVERY:—

The price quoted is base, Pittsburgh. If shipment is made from a point other than Pittsburgh (or Pittsburgh district), the freight from Pittsburgh to destination will be added, and the freight from shipping point to destination deducted. No freight to be allowed or paid by shipper on car blocking.

Obituaries

ALVAH S. CHISHOLM, widely known business man and philanthropist of Cleveland, assistant to the president of the American Steel & Wire Co., that city, died on Aug. 20 at St. Luke's hospital, following a sudden attack of heart trouble, superinduced by over-exertion during a game of tennis. Had he lived until Nov. 18. Mr. Chisholm would have been 48 years old; he was born at Chicago in 1871.

Mr. Chisholm had a widespread acquaintance in the steel industry, with which he had been prominently identified for many years. His father, William Chisholm, was a native of Montreal, Que., his ancestors having come from Scotland. In 1850, William Chisholm removed to Cleveland and established the firm of Chisholm, Jones & Co., which later became the Cleveland Rolling Mills Co. His son, Alvah S. Chisholm, received his early education in Cleveland's public schools and was graduated from Yale in 1893, with the degree of A B. After his collegiate course, he toured Europe extensively and soon after his return to America, entered the employ of the Cleveland Rolling Mills Co. He commenced his business career at the bottom, starting in the shops and workrooms of the rolling mill to learn all the details of the industry. He remained in the plant about two years and then was promoted to the city office as general clerk. Within a few years he became an important factor in steel circles and when the Cleveland Rolling Mills Co. was taken over as a part of the American Steel & Wire Co., Mr. Chisholm was retained as assistant to President William P. Palmer. In this capacity, which he filled until his death, he was an active operating executive of the company.

In addition to his steel interests, Mr. Chisholm was identified with many other industries, chiefly of a shipping and commercial nature. He was vice president and treasurer of the Newburg & South Shore railroad, a director of the Kelly Island Lime & Transport Co., the Lake Erie Dock Co., the Cleveland & Buffalo Transit Co., the Pennsylvania & Lake Erie Dock Co., the Jackson Transit Co., and the Standard Land Co.

With banking in Cleveland he was identified as a director of the National Bank of Commerce and the Citizens Saving & Trust Co.

He was interested, also, in many Cleveland civic organizations and philanthropies. His philanthropies were accomplished largely through the Red Cross and the Associated Charities, in which he was an active worker.

With him at the time of his death were his daughter and son-in-law, Mr. and Mrs. Howard P. Eells Jr. His widow, two sons, William and Corning, and a daughter, Helen, were at Bar Harbor, Me., at the time of his death.

ALVAH S. CHISHOLM

Edward P. Bates, president of Edward P. Bates Co., Inc., 228-230 West Water street, Syracuse, N. Y., died recently in that city.

John F. Merrill, for many years a director and general manager of the Laconia Electric Lighting Co., Laconia, N. H., died at his home in that city, Aug. 18, aged 86 years.

Arthur M. Rowles, Toronto, Ont., aged 68, died on Aug. 7, following a prolonged illness. For 15 years, he had been employed by the Canadian Shipbuilding Co., latterly being manager of its boiler department.

George Elmer Miles, secretary and treasurer of the Newport News Shipbuilding & Drydock Co., died Aug. 19 at his home at the Sherman Square hotel, New York City, following an illness of more than one year. Mr. Miles at one time was private secretary to the late Collis P. Huntingington, and was with the Huntington interests for more than 35 years.

J. J. Ulley, who for several years was proprietor of the Montreal Wire Works, Montreal, Que., died recently after a protracted illness at the age of 71. He retired from active business in 1917 and was succeeded by his son, A. S. Ulley.

Henry G. Hay Sr. of New York, assistant treasurer of the United States Steel Corp., who, as noted last week, died of heart failure at the home of his son, Henry G. Hay Jr., at Gary, Ind., on Aug. 18, was born in Indianapolis, Oct. 31, 1847, and went west to Wyoming in his youth, remaining there 33 years as rancher, banker, politician and surveyor general. He laid out the state lines of Wyoming. He was a commissioner to the world's fair in Chicago in 1892 and a member of the committee granting equal suffrage to women in Wyoming.

Stephen E. French, past president of the New England Foundrymen's association and one of the two honorary members of that organization, was killed Aug. 16, in an automobile accident in Boston. Mr. French was born in Orange, Mass., where he had made his home with few interruptions ever since. Nearly all of his business career was spent with the Athol Machine Co. He was treasurer and general manager of that company at the time he resigned a year ago, and since then had been associated with Geo. F. Blake Mfg. Co., East Cambridge, Mass.

Theodore Cooper, prominent consulting engineer and an authority on iron and steel construction, died of pneumonia Aug. 24 at his home, 353 West Fifty-seventh street, New York, aged 81. He was formerly superintendent of both the Delaware and Keystone Bridge companies, also assistant engineer in charge of the construction of the first elevated railroads in New York City, and one of the five expert engineers selected to determine the Hudson river bridge span. Mr. Cooper was a member of the board of experts on the Manhattan bridge plan in 1903. He was a lifelong member of the American Society of Civil Engineers.

Safety Work

In Metal Industries to be Described at October Conference

The program for the three sessions of the metals section of the National Safety council at Hotel Statler, Cleveland, Thursday, Friday and Saturday mornings, Oct. 2-4, has been announced. J. A. Oartel, director of safety, Carnegie Steel Co., Pittsburgh, is chairman; Homer J. Weeks, American Steel & Wire Co., Cleveland, is vice chairman, and W. E. Watters, National Malleable Castings Co., Melrose Park, Ill., is secretary. The program follows:

THURSDAY: "Accident Prevention in a Malleable Iron Foundry," H. L. Church, Rockford Malleable Iron Works, Rockford, Ill.; "The Personal Element in a Safety Program for the Foundry," M. F. Grantland, Marion Gray Iron Foundry, Marion, Ind.; general discussion, questions and answers.

FRIDAY: "Consider the Crane," C. C. Rausch, assistant director, Safety Institute of America, New York; discussion, O. J. Lewis, McKinney Steel Co., Cleveland; "New Ways to Put Safety Across in a Steel Plant," H. P. Heyne, United Alloy Steel Corp., Canton, O.; "Practical Demonstration of Investigating Accidents," court of inquiry staged by H. J. Weeks, with employes of the American Steel & Wire Co.; general discussion, questions and answers.

SATURDAY: "How the Foreman Cut Lost-Time Accidents," James F. Belford, acting secretary of labor, safety and welfare, American Smelting & Refining Co., New York city; E. E. Judd, American Smelting & Refining Co., Omaha, Neb.; "Humanizing a Steel Plant," Philip Stremmel, superintendent, National Enameling & Stamping Co., Granite City, Ill.; discussion, Raymond G. Adair, American Rolling Mills Co., Middletown, O.; "Practical Demonstration of Welding and Cutting," J. Schleicher, the Alexander Milburn Co., Baltimore; general discussion, questions and answers.

Start Work on Big Tube Plant at Detroit

Construction of a $3,000,000 plant on a 60-acre site has been started by the Detroit Seamless Steel Tubes Co., Detroit. The first unit of the plant will cost $1,000,000 and it is expected that it will be completed by Jan. 1, 1920. Plans call for a structure of steel and glass with brick and concrete facing and the plant proper will occupy a space, 350 x 700 feet. It will consist of three bays for manufacturing units, 90 x 700 and 550 x 45 feet high, to permit the use of traveling cranes; a separate heating plant and a 2-story administration building. The interior layout and special tube mill machinery were designed under the direction of C. A. Ross, consulting mechanical engineer, and C. L. Stafford, mill superintendent.

All the latest types of labor-saving devices and machines are to be installed and a powdered coal system will be used for heating and annealing processes. The total capacity of the first unit will be 2500 tons of seamless steel tubing monthly in sizes from ½ to 6 inches outside diameter of No. 13 gage stock and heavier. Cold drawn seamless steel boiler tubes and locomotive flues will be manufactured as well as mechanical tubing, used in the manufacture of automobiles, tractors and trucks. A complete forming department equipped to make practically any shape tube desired, will be installed.

Tracks of the Detroit Terminal railroad will run through the plant, bringing in raw material on one side and carrying away the finished product on the other. Motor trucks will serve the local customers in Detroit, and for these a loading platform will be provided. A spur of the new Pennsylvania railroad to Detroit, also will enter the plant.

Institute of Metals Will Meet in Sheffield

The British Institute of Metals held all its meetings in London during the war, the last outside meeting having been held in Ghent in 1913. The practice of meeting in various cities now has been resumed, and an elaborate program has been arranged for the autumn conference in Sheffield, Sept. 24 and 25. Hundreds of engineers and metallurgists are expected to attend. A special feature will be visits to industrial plants, and there also is to be a motor excursion through the Peak district, a distance of 50 miles, taking in Haddon Hall and Chatsworth House. Among the plants which will be open for inspection will be those of John Brown & Co., Ltd., Thos. Firth & Sons and Vickers, Ltd. The lord mayor will receive the guests and the master cutler will entertain them at lunch. Among the papers to be read are "Molding Sands for Nonferrous Foundry Work," "Observations on a Typical Bearing Metal," and "Seasonal Cracking of Brass."

Quotations on French Iron and Steel

Pig iron made in France, with a content of less than 2.25 per cent silicon, was quoted in Paris, Aug. 1, at from $32.20 to $33.56. That with content of from 2.25 to 3.25 per cent was quoted at from $33.56 to $34.93, and that with more than 3.25 per cent was quoted at $36.31. The exchange rate was 7.3 francs to the dollar. First quality hematite was quoted at $45.20; second, $43.83, and third, $45.20.

Controlled prices fixed by the ministry of industrial reconstruction for manufacturers in the northern and eastern departments follow: Refined pig iron, per ton, $38.36; blooms and billets, 220 pounds, $6.18; U and T shapes, 220 pounds, $10.96; merchant steel, 220 pounds, $8.22; plates, 2.1 to 2.9 millimeters thick, 220 pounds, $10.63; plates, 3 to 4 millimeters, 220 pounds, $9.59, plates, 5 or more millimeters, 220 pounds, $9.32.

By-Products

In Good Demand, Despite Fact Large Stocks Are in Storage

New York, Aug. 23.—While the makers of coal-tar products still are confronted with problems due to the fact that big stocks are on hand, the market situation continues to improve materially. Millions of pounds of naphthalin and large blocks of other coal-tar products, particularly phenol, are in storage. Government supplies of phenol are expected to be available before long, but at a government price, so the trade looks for a stable market in this product.

Demand for benzol, in mixture with other coal tar products, continues in active demand for use as motor fuel. Demand for all kinds of coal-tar products by the dyestuffs industry is keeping up well. Producers regard the American dyestuffs industry as a healthy one and say that with reasonable protection it will grow. Other industries which are buying on a satisfactory scale, particularly benzol, are the paint and rubber manufacturers. The advance in prices of benzol and toluol, which was made about 10 days ago, is being maintained. On the new basis, pure benzol is quoted at 25 to 29 cents per gallon at producers' plants. Toluol is quoted at 26 to 30 cents a gallon, while on high-grade material the prices are higher. Solvent naphtha is quoted at 22 to 27 cents per gallon. Demand for this product is relatively small, but production also is small. Although the drug season is at an end, producers are finding a partial outlet for naphthalin in the dyestuffs industry and in the export market. Considerable additional contracting for sulphate of ammonia for delivery over the year beginning July 1 has been done during the past week.

Coke Oven By-Products

Spot

Per Gallon at Producers' Plant

Pure benzol	$0.25 to .29
Toluol	.26 to .35
Solvent naphtha	.22 to .27

Per Pound at Producers' Plants

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

E. J. LUSTER, who as announced in the Aug. 14 issue of THE IRON TRADE REVIEW is head of the Luster Machinery Co., Widener building, Philadelphia, representing in that territory more than 78 manufacturers, is a graduate mechanical engineer. After serving his apprenticeship in a railroad shop he became a draftsman and designer for several large machine tool manufacturers. Subsequently he became affiliated with an exporting machine tool house and traveled extensively in foreign countries, selling American machine tools. At the outbreak of the war in 1914, Mr. Luster joined the sales force of the Sherrit & Stoer Co., and after a period of five months became receiver for the Jordan Machinery Co., organizing the Luster-Jordan Co., with Messrs. Sherrit and Stoer as partners and served as vice president and general manager. After the production was increased more than fivefold, Mr. Luster sold his interest to the Sherrit & Stoer Co. and organized the Luster Machinery Co. to sell machine tools, with offices in Philadelphia and Baltimore. A large modern showroom will be opened shortly in Philadelphia where the tools of the manufacturers represented by the Luster Machinery Co., exclusively, will be displayed.

E. R. Frederick resigned recently as president of the Allied Machinery Co. de France. He intends to remain in Paris for the present.

C. Ernest Canfield, Peterboro, Ont., an electrical engineer, has taken a position at the Pittsfield, Mass., works of the General Electric Co.

F. E. Knapp, recently returned from overseas, who prior to his enlistment had been engaged in the motor business for 10 years, has been appointed sales manager of the Lexington Motor Sales, Ltd., which has been organized to take over the distribution of the Lexington company's automobiles in Quebec province, with headquarters in Montreal.

Benjamin O. Anderson, Portland, Conn., for several years manager of the San Francisco branch of the Hendee Mfg. Co., Springfield, Mass., has gone to Rochester, N. Y., to take charge of the sales office of the S. K. F. Ball Bearing Co., Hartford, Conn., for the territory of northern New York state.

Tell Berna has been appointed sales engineer for the G. A. Gray Co., Cincinnati, O., manufacturer of planers. He formerly was Cincinnati district manager for the Cutler-Hammer Mfg. Co., Milwaukee.

E. J. LUSTER

E. B. Gould has been appointed to have charge of the Detroit office to be opened Sept. 1 in the Dime Bank building by the Goulds Mfg. Co., Seneca Falls, N. Y., manufacturer of pumps.

K. B. Segall, formerly works manager of the Michigan Stamping Co., Detroit, now is president of the American Equipment Co., that city, organized to deal in machinery and tools.

S. R. Willock, who has been assistant supply manager of the Emergency Fleet corporation, resigned recently to become associated with the Woodard Machine Co., Wooster, O., as sales manager.

Alfred J. Saxe has been placed in charge of the branch office, established at 231 Insurance Exchange building, Chicago, by the Automatic Furnace Co., Dayton, O., manufacturer of automatic smokeless furnaces, chain grates, engines, etc.

W. Bruce Pirnie, a salesman on the staff of the Worcester, Mass., branch of the Pierce, Butler & Pierce Mfg. Corp., Syracuse, N. Y., has been appointed manager of the Boston sales office of the corporation.

Frederick H. Payne, first vice president of the Greenfield Tap & Dye Corp., Greenfield, Mass., has been admitted as a general partner in the firm of Tucker, Anthony & Co., Boston.

W. W. Tangeman, who recently was discharged as a major in the ordnance department of the United States army in France, has resumed his connection with the Cincinnati Milling Machine Co., Cincinnati, O., as sales engineer.

James M. Monroe has resigned as southern representative of the Hunt-Spiller Mfg. Corp., Boston, and has been elected vice president of the Harry Vissering Co., Chicago, and the Charles R. Long Co., Louisville, Ky.

Byron F. Stowell, who for several years was master mechanic and mechanical engineer for the Hendee Mfg. Co., Springfield, Mass., has become affiliated with the Napier Saw Works, Inc., Springfield.

Daniel H. Hunter recently was appointed sales manager for the Sullivan Machinery Co., Chicago, in Louisiana, Texas, except the southwestern section and the oil fields of Oklahoma and Kansas. His headquarters are in Dallas, Tex.

Frederick G. Platt, president of the New Britain Machine Co., New Britain, Conn., has been elected president of the Hardware City Loan Corp., a new Connecticut corporation to encourage building operations in New Britain.

Philip C. Wentworth, for 12 years with the sales department of the Draper Corp., Hopedale, Mass., has been appointed treasurer and general manager of the National Ring Traveler Co., Providence, R. I. He succeeds the late A. Chase, one of the founders of the company, who was its treasurer and general manager for 26 years.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

HARVEY P. BARNARD has been made works manager of Midland, Pa., plant of the Pittsburgh Crucible Steel Co. For the past few months he has filled the position of production manager and prior to becoming associated with the Pittsburgh Crucible Steel Co. he was superintendent of plant B of the United Alloy Steel Corp., Canton, O. Robert W. McDonald, who has been acting works manager of the plant, has resumed his former position as superintendent of the Crescent works of the Crucible Steel Co. of America, the parent company of the Pittsburgh Crucible Steel Co.

A. C. Lorian recently became purchasing agent for the Clinton-Wright Wire Co., Worcester, Mass.

W. D. Truesdale was elected treasurer of the Inland Steel Co., Chicago, at an adjourned quarterly meeting of the board of directors, held recently.

George D. Dutton, Boston, has been elected president of the American Brick Co., which has a plant in Medfield, Mass.

George Foraker, formerly assistant general superintendent of the Pacific Coast Steel Co., San Francisco, has been made general superintendent to succeed C. E. Duncan, who resigned recently on account of poor health.

J. O. Griggs has resigned as foreman in the open hearth department of the Sharon Steel Hoop Co., Sharon, Pa., and has been made senior melting foreman with the Brier Hill Steel Co., Youngstown, O.

Alexander Chapman, assistant district sales manager for the Rail Joint Co., with headquarters in Chicago, has been made district sales manager, succeeding George C. Isbester, resigned.

Alonzo Tweedale, auditor for the District of Columbia, has resigned, effective Sept. 1, to become treasurer of the shipping board and the Emergency Fleet corporation. For 24 years Mr. Tweedale has been an employe of the district government.

Edward R. Bardgett, port agent at Toledo and traveling representative for the Great Lakes ore and coal exchange for the past two seasons, resigned yesterday to accept a position with the Cunard Steamship Co. He will be located in Cleveland.

William H. Bruce, for many years connected with Mark Mfg. Co., Chicago, as sales manager at Seattle and Minneapolis, has been appointed southern sales manager for the Steel & Tube Co. of America and Mark Mfg. Co., with offices at New Orleans.

Charles A. Lynch, of Philadelphia, formerly connected with the Pittsburgh district ordnance office as chief operator, carriage division, in charge of inspection and manufacture of gun carriage components, has become affiliated with the Fort Pitt Steel Casting Co., McKeesport, Pa., in its sales department.

Charles P. Derleth has been appointed St. Louis representative for the Celite Products Co., New York City. Prior to his enlistment, 14 months ago in the chemical warfare service division, Mr. Derleth was sales representative of the J. B. Ford Co., at Wyandotte, Mich. He is a graduate of the University of Illinois.

Thomas S. Disler, formerly traffic manager and purchasing agent of the Fort Pitt Steel Casting Co., McKeesport, Pa., recently resigned that position to become assistant secretary in charge of traffic and sales of the Kendall Lumber Co., Oliver building, Pittsburgh. Frank T. Taylor succeeds Mr. Disler at the Fort Pitt Steel Casting Co.

R. P. Rowe, vice president of the National Lead Co.; J. R. Wettstein, president of the United Lead Co. and a director of the National Lead Co., and Evands McCarthy, general manager of the United Lead Co., sailed for Europe on the steamer ADRIATIC recently. They will study business conditions in England and on the continent.

Edward R. Cardinal has been appointed district sales manager of the Tacony Steel Co., Tacony, Philadelphia. Mr. Cardinal is well known in the steel trade, having been district sales manager for the Carpenter Steel Co. in Philadelphia, later a member of the Carlin Steel Products Co., Philadelphia, and, more recently, president of the Cardinal Tool Co., Philadelphia.

Joseph J. Becker, who has been superintendent of the Oriskany plant at Reusens, Va., of the Lavino Furnace Co., Lynchburg, Va., since March 1, has been transferred to Sheridan, Pa., to take up similar duties at the furnace plant there operated by the same company. The Sheridan furnace is out of blast and Mr. Becker will supervise its overhauling, having accomplished a similar task at Reusens.

Walter Smith Oglesby sailed for Santiago de Chile on Aug. 22 to represent the Pennsylvania Steel Export Co. of Philadelphia. Stephen J. Carroll, secretary of the company, left on Aug. 24 for Buenos Aires, where he will spend a short time establishing closer relations with the Argentine office of that company. Stephen B. Carr, another officer of the company, left recently on a similar errand for Kobe, Japan.

W. C. Epstein has been made general superintendent of works operated by the Duff Mfg. Co., Pittsburgh. Mr. Epstein until recently was in charge of the production engineering division of the bureau of aircraft production, New York City. Prior to entering the government's service, he was with the American Brake Shoe & Foundry Co., Chicago, assisting the vice president in charge of operation. He was graduated from the University of Wisconsin in 1913.

George A. Bartle, who has been appointed plant superintendent for the Great Falls Iron Works, Great Falls, Mont., was graduated from the engineering department of the University of Minnesota. Since that time, he has held responsible positions with the Minneapolis Steel & Machinery Co., which he now is leaving; the Flour City Ornamental Iron Co.; the Emerson-Brantingham Co., and others, all of Minneapolis. Houghton A. Duncan has been made office manager for the Great Falls Iron Works, succeeding E. K. Keuzarder, who resigned to enter business.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

STANLEY H. McKEE has been appointed chief engineer of the Republic Iron & Steel Co., as the result of the resignation of J. C. Shackleford to become consulting engineer. Mr. McKee formerly was assistant chief engineer, and R. H. Crevoisie succeeds him. Mr. Crevoisie has been affiliated with the Republic company for 15 years, having removed to Youngstown when the company's offices were removed there from Pittsburgh.

W. J. Harvey of Cleveland, has been elected president and general manager of the Harvey Steel Products Corp., Jackson, Tenn., successor to the Southern Engine & Boiler Works, that city.

H. N. Taylor, president of N. & G. Taylor Co., Inc., Philadelphia, manufacturer of tin plate, who also is president of the Drop Forge Supply association, is absent on a two-week motor trip through New England.

Thomas J. Atkinson, who recently resigned as sales manager of the Reilly-Peabody Fuel Co., with which he was identified since its organization in 1916, on Aug. 25 assumed his new duties as manager of the coke department of the Superba Coal & Coke Co., 302 Frick building, Pittsburgh.

Alvin R. Whitehead, who recently resigned as purchasing agent for the American Condenser & Engineering Corp., Plattsburg, N. Y., has been appointed sales manager for the Sun Machinery Co., 150 Nassau street, New York City, with headquarters at 278 Washington street, Newark, N. J., recently established.

John F. Duffy, now associated with Walter-Wallingford & Co., in its Pittsburgh office, on Sept. 1 will join the John Eichleay Jr. Co. in its iron and steel scrap department. Before joining Walter-Wallingford & Co., Mr. Duffy was Pittsburgh district representative of the *Daily Metal Reporter* for several years and takes with him to his new position a wide experience as well as a large acquaintance among the steel, scrap and metals trade.

William H. Hundt, for 10 years associated with the New York office of Luria Bros. & Co., Inc., has been placed in charge of a new branch office of this company in Boston, to be opened on Sept. 1. The Boston office is to be located in the Board of Trade building, 131 State street. Mr. Hundt is well known in the New England district. Mr. Capstick, for a number of years in the Lebanon office of Luria Bros. & Co., Inc., will serve as assistant to Mr. Hundt.

Louis E. Strothman has been elected vice president and general manager of the Richardson-Phenix Co., Milwaukee, manufacturer of mechanical lubricating devices. Until Aug. 15, he was manager of the steam turbine and pumping engine department of the Allis-Chalmers Mfg. Co., Milwaukee, having joined that organization in 1902.

L. J. Webster has become affiliated with the sales force of the Cleveland-Duplex Machinery Co., Cleveland, to assist in developing a new sales plan which that company is inaugurating. Mr. Webster was recently discharged from service with the 135th field artillery and had resumed his position in the plant of the Columbia Axle Co., Cleveland, which he occupied before entering military service.

Eugene F. Ball, who was re-elected president of the National Association of Pattern Manufacturers at its second annual convention, held at the Hotel Statler, Buffalo, Aug. 16-17, is general manager of the Newark Stamping & Foundry Co., Newark, O. Mr. Ball has served the organization ever since it was formed and filled the same office in its forerunner the Inter-State Association of Pattern Manufacturers, which became the National association in 1918. It was at the suggestion of Mr. Ball and E. O. Melvin, of Columbus, O., that an organization of this character was started and in the past year its membership has grown from 28 to over 200.

Charles McKay has been placed in charge of the appraisal division of L. V. Estes, Inc., 202 South State street, Chicago, industrial engineer. Mr. McKay is well known in both industrial and public utility fields. He is the author of "Valuing Industrial Properties," published last year, and "Telephone Rates and Values," which will be published by the Cornhill Co., Boston, about Sept. 1. He also has written in excess of 100 articles for technical and trade journals on the general subject of valuation. He is a member of the advisory council of the Industrial Extension institute and during the past year has supervised the appraisement of nearly $40,000,000 worth of industrial and public utility properties.

J. F. Blank, who enlisted in the chemical warfare service division in September, 1917, and who was discharged as a lieutenant in January, 1918, to accept a position with the bureau of mines, doing experimental work in connection with the extraction of helium from natural gas for use in balloons, resigned from the latter position recently to become identified with the Wilson Foundry & Machine Co., Pontiac, Mich. His work now consists of assisting the foundry engineer in general foundry methods and in doing general foundry efficiency work. Prior to his enlistment, he was connected with the methods department of the Western Electric Co., Hawthorne station, Chicago, having charge of the methods and efficiency work in its foundries.

Charles E. Gradwell, of the firm of Gradwell & Phelis, Birmingham, Eng,. agents for the Hofmann-Sproul Co., Widener building, Philadelphia, dealer in iron, steel, scrap, etc., sailed for England recently, after a business visit to Philadelphia. After placing certain contracts in England, he will leave for China, where he has been appointed special buyer of scrap for the Hofmann-Sproul Co. E. R. Doud, E. R. Campbell and Walter Maccallum have become affiliated with the Hofmann-Sproul organization at Philadelphia, handling scrap, new materials, second hand specialties, chemical products, etc. Mr. Doud was formerly with the Tioga Steel & Iron Co., and before that with the Bethlehem Steel Co. Mr. Campbell formerly was with the American Steel Foundries and Mr. Maccallum is a chemical engineer and a graduate of Lehigh university.

Exports Show a Drastic Decline

Foreign Trade Report for July Indicates Radical Change in Commerce Tendencies as Exports Excess is Cut Down and Upset Exchange Gets Some Relief —General Financial and Industrial News

BY JOHN W. HILL, FINANCIAL EDITOR

SOME months ago when European exchanges, influenced by the tremendous adverse trade balance against the late belligerent nations, began to decline precipitately in the American market, close observers of the situation predicted the result would be a decrease in exports from the United States and an increase in imports unless some plan of financing was devised to equalize the exchanges. Although the credit plan is still pending it was not until the month of July that there was any indication that such a prophecy was to be borne out by the facts.

For that month the department of commerce reports a decided and even startling change in the trend of the country's foreign trade. Exports totaling $570,000,000 declined $348,000,000 from the preceding month, while imports standing at $345,000,000 topped the June record by $52,000,000. Imports for the month reached the highest figure for any month in the history of the country.

The July showing was all the more striking in view of the unprecedented exports of June which reached the grand figure of $918,000,000. June closed with a favorable balance of trade for the United States of approximately $400,000,000 for the month. The excess of exports over imports in July had shrunk to $225,000,000 the smallest figure since the embargoes of February, 1917, and smaller than any month prior to that since April, 1916, when prices were so much lower as to make comparisons almost out of the question.

As a consequence of this development European exchanges have grown firmer and the pound sterling has recovered somewhat from the low record of $4.14, touched last week. The situation is still far from being stabilized, however, as the seven months excess of exports stands at the unprecented total of $2,663,092,000.

What does this July exhibit mean? Are the unsettled trade balances and the upset exchanges in the process of being righted by the operation of the natural law of international trade which sways exports and imports according to the exchange barometer? Seemingly this is true. However, until the detailed report of the destination of the exports and the source of the imports is made available no certain conclusion can be drawn from the totals. It is only if the imports from Europe have increased and the exports to Europe have been curtailed that the movement will be significant in its effect upon the exchanges. The fact that in June Europe got $644,000,000 of goods and the rest of the world only $273,000,000 would indicate that the bulk of the $348,000,000 decline in exports represents a drop in the shipments to Europe. How much of the gain in imports is due to increased buying in Europe as a result of the exchange rates, is also uncertain. Probably Europe has not much surplus to export as yet.

August Buying Further Curtailed

During August buying by Europeans has been further curtailed, even foods being effected. How the exchange rates affect the situation may be illustrated by the example of an English deal. With exchange at par a British merchant would have to get $486,000 plus freight and profits for £100,000 worth of machinery sold in the New York market, but with exchange at $4.12 he could sell the goods on the basis of $412,000 and still realise in London this £100,000. Were he buying the machinery from the United States, however, he would have to pay £115,000, or in other words a sufficient quantity of pounds to make $558,000 on the basis of normal exchange, but representing only $486,000 in New York at the depreciated rates. The excess represents the evaporation of values through the exchanges.

Thus it is evident that the only thing preventing imports from England and other European nations by Americans is the lack of exportable goods by those countries. They are selling bonds and other securities held over during the war, however, and this is assisting in correcting the situation.

American financiers have pounded home the theory that unless huge credits were raised and extended to Europe, these countries might fly into bolshevism from lack of food and the materials with which to get back to work. Moreover it was pointed out that American industries needed the export business to maintain prosperity and prevent unemployment. This theory has been generally accepted. Little support has been forthcoming, however, for the financing plan, with the result that the exchanges are low and European buying apparently is decreasing. Now what is going to happen?

As for the United States no one disputes its export trade is vitally important, yet the great scarcity of goods of every description in this country and the labor shortage, indicates the domestic consumption power is sufficient to absorb a tremendous volume of goods at something near prevailing prices for months to come. Possibly, if food exports did not materialize in the degree anticipated, food values might break, a development that would help ease the labor tension.

Lloyd George's speech last week indicated that the exchange situation was agreeable rather than otherwise, in that it would bring home to England the necessity of curtailing in consumption and of increasing production. If Europe cannot buy and is not anxious for credits in order to buy, this country's only foreign trade salvation is the development of markets in other parts of the world, a slower process perhaps, but one that would lay the foundation for permanent trade. As for Europe it is hardly to be doubted but that a way will be found to provide it with the things imperative to save its nations from collapse.

Colorado Fuel & Iron Gain in Earnings

A substantial gain in earnings and surplus for the second quarter of 1919 as compared with the first quarter, is reported by the Colorado Fuel & Iron Co. Surplus after charges, taxes, sinking fund, etc., was $627,154, equivalent, after preferred dividend, to $1.71 a share on the $34,235,000 common stock as compared with a surplus of $401,384 or $1.05 a share for the quarter ended

March 31. In comparison with the same period last year the quarter's earnings show a drastic decline. Although gross receipts were more than $2,000,000 less than in 1918 the operating expenses were only slightly more than $1,000,000 smaller. The comparative income account follows:

	1919	1918
Gross receipts	$10,529,415	$12,812,003
Operating expenses	9,385,099	10,474,161
Net earnings	$1,144,316	$2,337,842
Other income	132,815	128,124
Gross income	$1,277,131	$2,465,966
Int., tax, etc.	649,977	765,796
Surplus	$627,154	$1,700,170

Agree on Equipment Trust Financing Plan

At a meeting held Aug. 23 in New York between bankers, railroad executives and representatives of the railroad administration, complete agreement was reached on the financial interests and road officials to float an equipment trust of $280,000,000 to finance the railroad administration's purchase of equipment. The total value of the equipment involved is $400,000,000, but it will be necessary to dispose of only $280,000,000 of the trusts under the plan. A committee of lawyers was appointed to work out the details and the new issue should be ready for consideration of investors before the close of September. The financing of the equipment purchases will place the finances of the roads in better shape for the return of private ownership, which is scheduled for the first of the year.

Denies Taking Option

The Bethlehem Steel Co. officially denies a published report that it has taken an option on the mills, blast furnaces and steel plants of the Kelly Nail & Iron Co. and the Belfont Iron Works, of Ironton, O., and the Ashland Steel Co., Ashland, Ky. The properties are represented by two blast furnaces at Ironton, wire and nail plants at Ironton, and a steel plant, billet and blooming and rod mills at Ashland, Ky.

Iron Company Organizes

The Canopus Iron Corp. recently incorporated under the laws of New York state with an authorized capital of $1,000,000, has organized with the following officers: President, Henry S. Predmore of the Anglo-American Talc Corp., Ltd., Madoc, Canada, and president of Gilchrist & Predmore, dealers in semiprecious ores and minerals, New York City; vice president, Roy I. Guthman; secretary, John G. Pearse, and treasurer J. Hamilton Mather, president, Freight & Cargo Warehouses, Inc., Jersey City, N. J. town, N. Y. The company has executive offices at Garrison, N. Y., which is about 49 miles north of Grand Central terminal, New York, and has a magnetic iron ore property of 140 acres at Phillipstown, Putnam county, New York, the mine being about three miles distant from tidewater in the Hudson river. The ore body has been developed by an incline shaft to a vertical depth of 165 feet and it is estimated that there is a width of ore of not less than 75 feet. The new mine is directly east of the Forest of Dean mine which is open to a depth of 1100 feet and which has been shipping ore since before the Revolution. Laidlaw, Kelley & Co., Inc., 14 Platt street, New York, have purchased 100,000 tons of ore from the Canopus Iron Corp., deliveries to begin within four months at the rate of 300 tons per day and the former company also will handle the output over and above this quantity as it is produced.

Business is Improved

At the postponed annual meeting of the Savage Mountain Fire Brick Co., Frostburg, Md., the following officers were elected for the balance of the year: Chairman of the board, Charles C. Gorsuch; president, John A. Caldwell; secretary, W. F. Caldwell; superintendent, G. A. Shuckhart; and assistant secretary, G. R. Harvey. The company reports that business was below normal during the first six months of 1919, due to the fact that all of its customers, being on the preferential list, laid in large stocks during the last half of 1918. Business during the last 30 days, however, has shown marked recovery and officials expect a good volume during the last half of the year.

Vote to Recapitalize

Although not assented to by all the stockholders, it is understood that a sufficient number of shares of the Wheeling Mold & Foundry Co., Wheeling, W. Va., have been recorded in favor of the proposed recapitalization of the company to carry the plan through. Herbert E. Field, president of the company, recently sent out to stockholders a circular requesting authority to organize a corporation for the sole purpose of purchasing the assets and continuing the business of the Wheeling Mold & Foundry Co., the new corporation to be capitalized as follows: $1,000,000 in 10-year serial or sinking fund 7 per cent notes, $1,200,000 of 7 per cent cumulative, non-voting preferred stock and 50,000 shares of common stock of no par value.

In the event of this plan becoming operative, it is proposed to pay $60, in cash, for each share of the present preferred stock of the Wheeling Mold & Foundry Co., and for each share of the present common stock, $50 in cash, $60 in 7 per cent preferred stock and one-half share of the new common stock, of the new corporation.

Glass Approves Edge Bill

Secretary of the Treasury Glass has sent a letter to Senator Edge of New Jersey, approving the senator's bill authorizing the creation of corporations for financing American export trade to Europe. It is expected that the bill will be presented to the senate for action within a few days. Secretary Glass wrote that he entertains "none of the misgivings of those who hesitate to support the measure, but on the contrary feels confident that its prompt enactment into law will afford an effective and altogether desirable means of greatly improving our foreign banking facilities and expanding our markets for export trade."

Financial Crop Ends

The Pettigrew Foundry Co., Harvey, Ill., has increased its capitalization from $75,000 to $125,000.

* * *

The George H. Bishop Co., Lawrenceburg, Ind., saw manufacturer, and the James Ohian & Sons Saw Mfg. Co., Columbus, O., have been merged.

* * *

A. R. Erskine, president of the Studebaker Corp., is authority for the statement that earnings in the first six months of the year ran 100 per cent ahead of one year ago.

* * *

The Harvey Steel Products Corp. has succeeded the Southern Engine & Boiler Works at Jackson, Tenn. W. J. Harvey, of Cleveland, is president and general manager. The Southern Engine & Boiler Co. was capitalized at $300,000.

* * *

Among recent capitalization increases filed in Michigan were the Stroh Castings Co., Detroit, $250,000 to $500,000; Briscoe Devices Co., Jackson, $25,000 to $40,000; Mott Wheel Works, Jackson, $250,000 to $350,000; Buhl Sons Co., hardware, Detroit, $1,00,000 to $2,000,000.

* * *

The Indiana Silo Co., Pendleton, Ind., and the Star Tractor Co., Findlay, O., have consolidated as the Indiana Silo & Tractor Co., with a capital stock of $1,000,000. A new plant will be built to manufacture tractors. W. H. Swain, of Pendleton, is president.

Tool Bookings are Fairly Good

Eastern Market More Affected by Labor Disturbances Than Other Districts—Chicago Dealers Enjoying Banner Month—Export Business on Wane Because of Present Unfavorable Exchange Situation—No Large Inquiries are Current

WHILE the continued labor difficulties are exercising a disturbing influence in some directions, many sellers of machine tools declare their sales sheets continue satisfactory. It is in the East where the present unsettled economic situation is having the most effect upon business. There, several lists of tools and cranes have been tabled and action upon these probably will not be taken until the difficulties have been ironed out. This is true of a list of four cranes for the Sligo Iron Co., Connellsville, Pa., and one of eight for the United States Cast Iron Pipe & Foundry Co., although the latter is understood to have bought three cranes. Recent purchasers of tools in the East include the Pathe Freres Phonograph Co., Bridgeport, Conn., and the Worthington Pump & Machinery Corp. Inquiries are out from the West Troy Foundry & Machine Co., Troy, N. Y., the E. W. Bliss Co., Brooklyn, N. Y., the Nyap Machine & Engineering Co., Pittsburgh, the Corn Products Refining Co., Chicago, and the Parish & Bingham Co., Cleveland.

Buying by the railroads is confined chiefly to replacement tools although the Cumberland Valley railroad recently purchased two electric traveling cranes and a half dozen machine tools. The Pennsylvania is asking for revised bids on inquiries for shop equipment which was issued early in the year, and on which action was delayed due to the lack of funds.

Chicago dealers claim that the rate of buying now being sustained will make August a banner month if it continues. This is true in a reduced measure in Cleveland, where bookings for tools from a varied line of industrial activities have been received. This business is without lists and is made up of small sales. In the latter territory the White Motor Co., Cleveland, continues to buy and in both Chicago and Cleveland, sizable sales have been made to concrete mixer manufacturers, whose business has increased due to widespread activity in road buiiding. Some fair-sized orders have come from automobile accessory manufacturers.

Proof that manufacturers are filling up with business is found in the offered deliveries which are growing more remote from week to week. In Chicago, they now average 90 days but labor difficulties are expected to send them further into the future. In Pittsburgh and sections further east, deliveries are not guaranteed short of six weeks and in some cases 10 to 12 weeks is required. New England manufacturers are unable to offer attractive delivery dates.

Reductions in export business are particularly marked in the East. It is claimed that this is resulting from the present foreign exchange situation. Requirements of Belgium, France and other countries are known to be large but with exchange rates at present levels, premiums as high as 60 per cent have to be paid by the French for Amerian-made mahine tools. Germany is taking advantage of the situation and is selling considerable machinery in Scandinavian countries.

Equipment Lists Tabled During Labor Trouble

EXPORT business in machine tools is almost at a standstill, as a result of the existing foreign exchange situation. Requirements of Belgium, France and other countries of continental Europe are extremely large, but with exchange rates at current levels France would be compelled to pay a premium of approximately 60 per cent for goods purchased here and much the same is true of other countries of Europe. Germany is becoming more active in the European markets, according to advices received by New York builders from their Swedish correspondents. Taking advantage of the exchange situation, Germany is placing considerable machinery in Scandinavian countries, the goods being paid for in marks at much lower figures than would have been the case in dollars. Japan has bought all classes of machine tools in the American market in past months but has not been purchasing of late. South America is buying very little machinery.

Transactions in the domestic market are scattered and of a miscellaneous character. Railroad buying is confined to absolutely necessary replacement tools. The shipyards are well equipped. The navy department is not buying, pending an appropriation for the current fiscal year. Demand for machines for general manufacturing purposes is being partly held in abeyance by the unsettled economic situation. Thus several lists of machines and cranes have been tabled temporarily, pending the outcome of the present steel and railroad labor-situation. Oil field requirements are of considerable importance, in the aggregate, principally for hammers and small lathes. Manufacturers of phonographs have been important buyers of automatic machinery. The only railroad business noted the past week was some shop equipment placed by the Cumberland Valley railroad, comprising two electric travelling cranes and about half a dozen machine tools. Other current inquiries for tools include a list of two shapers, two lathes and two radial drills for the E. W. Bliss Co., New York. The West Troy Foundry & Machine Co., West Troy, N. Y., formerly the West End Foundry & Machine Co., is inquiring for two lathes and

Chisel Steel

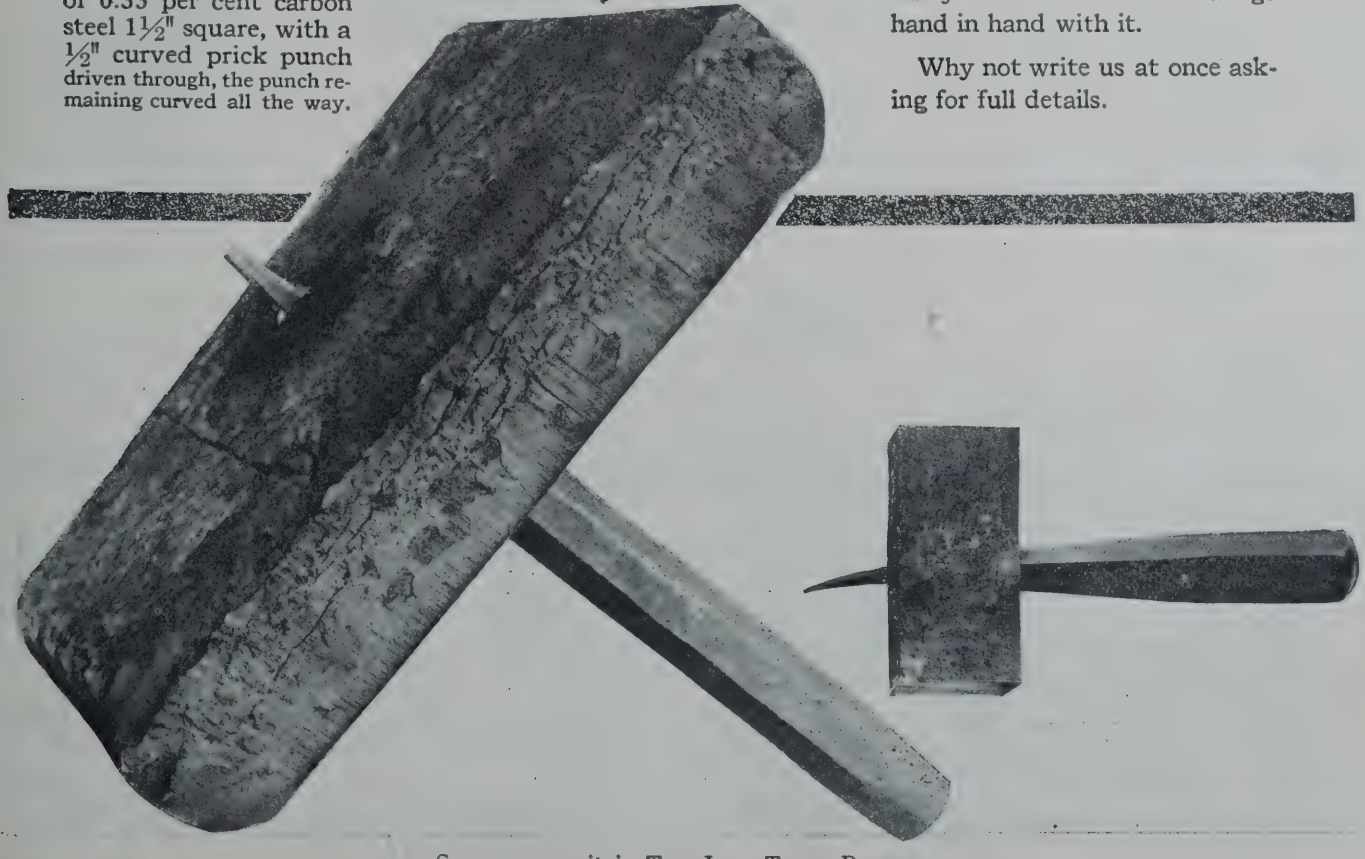
READ THIS TEST

Seminole Steel was developed by us for the production of impact tools that would be foolproof in heat-treatment, but would not fail in use. Chisels made of Seminole Steel will cut armor plate, nickel rivets and alloy steel billets—and yet, if hammered carefully they may be bent over the edge of an anvil! In fact, they will withstand any usage to which they may be subjected in actual service.

If you use impact tools it will pay you to investigate our Seminole Steel at once.

Ludlum Steel Company

Gereral Offices and Works:
WATERVLIET, N. Y.



Branch Offices:
New York City Philadelphia Cambridge, Mass. Cleveland
Pittsburgh Cincinnati Detroit Chicago Buffalo

The larger illustration shows a ¾" octagon chisel driven through a block of 0.35 per cent carbon steel 2½" thick. Both punch and chisel are file hard.

The smaller illustration shows a block of 0.35 per cent carbon steel 1½" square, with a ½" curved prick punch driven through, the punch remaining curved all the way.

Tools made of Seminole Steel will effect an immense saving for you in reduction of forging costs alone—to say nothing of the many other economies that go hand in hand with it.

Why not write us at once asking for full details.

two drills. The Pathe-Freres Phonograph Co., Brooklyn, has bought a number of tools and remains in the market for automatic lathes and other machines. The Worthington Pump & Machinery Corp. bought two pipe bending machines.

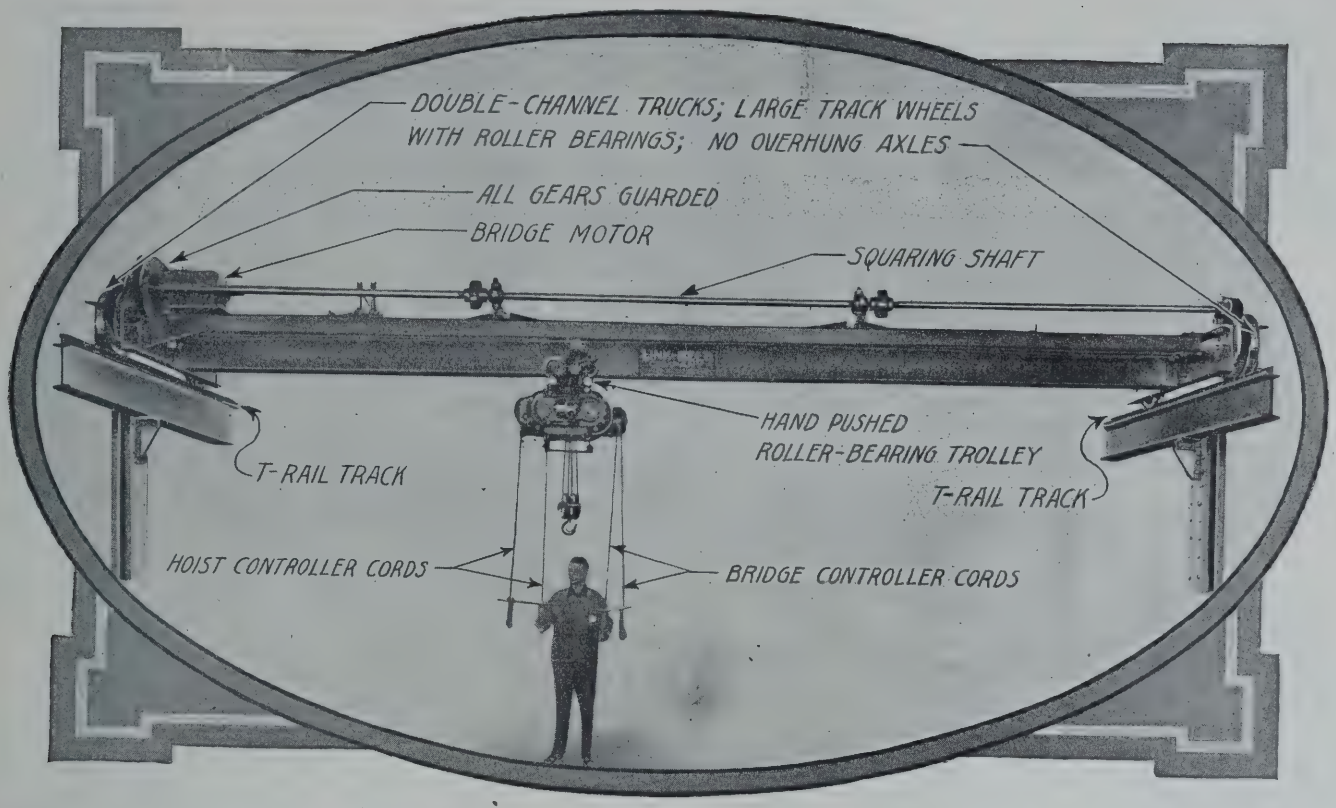
The American Locomotive Co. has not yet closed on its list of 15 cranes, previously reported, including three for Montreal, three for Schenectady and nine for its Chester, Pa., plants. The Standard Oil Co. continues a buyer of one or two cranes almost every day, the current financing by this company paving the way for extensive improvements. Financing by the Atlantic Refining Co. also is expected. This company's inquiry for four cranes has been tabled. The Bethlehem Shipbuilding Corp. bought a 5-ton crane. The Sligo Iron Co., Connellsville, Pa., has postponed temporarily buying seven overhead and one locomotive crane. The United States Cast Iron Pipe & Foundry Co. is understood to have closed on its inquiry for cranes, including one 30-ton, 60-foot span, one 5-ton auxiliary hoist, and one 5-ton 25-foot span. A Cleveland contractor has received the general contract for a steel foundry for the Adirondack Steel Foundries Co., recently organized to operate a steel foundry near Watervliet, N. Y.

Labor Unrest Holds Up Pittsburgh Trading

PROSPECTIVE business in machinery and tools in the Pittsburgh district is good, but the labor unrest apparently is creating some hesitancy among buyers in closing. While there is a tendency in most directions to regard the feeling of unsettlement among workmen as something that will pass in time, few expect a restoration of normal relations between employer and employe without a struggle of some sort, during which a fairly general suspension of plant activities is possible. Under the circumstances, the tendency for buyers is to go slowly. Last month's activities have provided a number of the builders of cranes and other heavy equipment with a fair backlog of business and that the makers of light machinery and tools are well committed is evident from the fact that in a number of lines deliveries now are not being guaranteed short of six weeks and in some instances 10 and 12 weeks are the shortest dates. New England tool manufacturers seem less able to cope with quick shipment business than those in the Middle West.

W. N. Kratzer & Co., Pittsburgh, recently took an order from the Standard Sanitary Mfg. Co. for two cranes. It is expected that the Carnegie Steel Co. will close shortly on four cranes for its Edgar Thomson works; this business is expected to go to one of the Alliance, O., manufacturers. Revised bids are being asked on a number of inquiries put out early in the year by the Pennsylvania railroad, lines west, for shop equipment. Higher prices are likely in the new bids, especially on motor-driven tools, due to the higher prices now being asked by the builders of motors. The Nyap Machine & Engineering Co., Pittsburgh, which recently absorbed the Riflaw Wrench Co., is taking bids on equipment for making wrenches.

Brisk Tool Business Done in Cleveland



USERS of machine tools who are reached by Cleveland sellers in part are unaffected by the present labor troubles which are exerting a disturbing influence in many directions. A brisk market continues and orders as well as inquiries are frequent, coming from practically every line of industrial production with the automotive industry leading. No large list is current at the present time, but the small orders received represent a comfortable aggregate. A few conservative manufacturers are holding back their purchases and these probably will not buy until order is restored in the present economic situation. The Blomquist-Eck Machine Co., Cleveland, manufacturer of boring mills, reports that even without more orders, it has sufficient business on hand to keep it operating full until Jan. 1, 1920.

Additional buying has been done by the White Motor Co., Cleveland, one Cleveland dealer receiving orders the latter part of last week for $18,000 worth of tools. On inquiries aggregating approximately $20,000 worth of equipment, the Parish & Bingham Co., Cleveland, has bought two 24-inch Gould & Eberhardt shapers, some radial drills and other tools, but orders for some other equipment still remain unplaced. The G. A. Kelly Plow Co., Longview, Tex., was in the market for an engine lathe and is understood to have placed its order. The Standard Equipment Co., 3170 West 106th street, Cleveland, is reported to have closed upon its tool requirements for a new factory to cost $25,000. The North Baltimore Tractor & Machine Co., North Baltimore, O., is understood to be buying gear cutters. The Shaw Electric Crane Co., Muskegon, Mich., recently was looking for a 42 x 48-inch x 20-foot Ingersoll slab miller. The Gramm-

British Tool Seller Sees Small Market in Belgium

ACCORDING to the statement of a Belgian representative of a machine tool manufacturer of Birmingham, Eng., the outlook for the sale of both British and American tools in Belgium is decidedly gloomy. This sales agent recently made a survey of the situation in Belgium and the results are given in an article under the caption: "Machine Tools in Belgium," which appeared in a recent issue of *The Ironmonger,* published in London. This article follows:

The Belgium agent for a Birmingham firm of machine-tool makers sends a gloomy account of the trade prospects in that country, as a result of his first look around. He says that Belgian manufacturers may be divided into two classes—those who were working during the German occupation, their plants having been requisitioned by the enemy, and those whose plants have been wholly or partly taken away. The former are getting to work again, though with reduced staffs owing to the shortage of materials, and the rest will start as soon as they can reinstate their plants. This will present difficulties, because under the scheme of reconstruction adopted by the allies, instead of receiving immediate and full indemnification, they will receive in cash only 50 per cent of the 1914 value, and the remainder as it is collected from the enemy. That puts out of the market firms which are not able to finance new purchases. The agent is afraid that conditions created by the peace terms, coupled with the fact that there is still a large amount of German paper money in the country, will push Belgium commercially into the arms of Germany again, and that consequently the outlook for British and American machine tools in that country is less promising than it might have been.

Here's The Ideal Crane for Side Bays

IT'S just the thing for machine shops, foundries, structural shops, mills, etc. The time it will save in a machine shop by quickly and economically serving machine tools with castings, etc., will soon pay for the crane. After that, the saving is "pure velvet".

Important Advantages

1. Crane always ready for service. Any shop hand can operate it. No need for keeping an operator up in a cage.
2. Pull a cord to operate hoist or crane; let go, and it stops. Simple as A, B, C.
3. All operating cords handy, both controllers mounted on hoist—right where the load is being handled.
4. Load is handled with greater precision and safety, than when operator is carried in a cage near ceiling and must depend on signals.
5. Like our mono-rail electric hoist and other Link-Belt products, this crane embodies Quality, Reliability, Accessibility, and High-Efficiency.

Built in 1, 2 and 3 Ton Capacities. Write for data blank. Let us figure on your requirements.

Place X in Square

Bernstein Motor Truck Co., Lima, O., is taking quotations on multiple spindle drills and prefers one with 36 spindles. The Miller Rubber Co., Akron, O., is in the market for a 300-750 kilowatt ampere, 2300 volt, 60-cycle 3-phase generator with exciter, 3600 revolutions per minute, with noncondensing steam turbine for operating on 125 to 140-pound steam pressure. The Strong, Carlisle, Hammond Co., Cleveland, has inquiries from London and Liverpool, Eng., for special machinery and it expects to receive the business.

Several lists of secondhand equipment are being offered by concerns which operated during the war on munitions, etc. One of the latest to appear is that of Foos Gas Engine Co., Springfield, O., which is endeavoring to dispose of a large number of machines. A fair sized list of machines available for sale, is issued by the United Engineering & Foundry Co., Pittsburgh. These tools are located in the various plants controlled by this company. An auction sale of 1150 metalworking tools is advertised by the American Can Co., 120 Broadway, New York City. The sale will be held Sept. 3, at River street, Edgewater, N. J. The list comprises 400 engine lathes, 75 power presses, 150 grinders, 350 turret hand screw machines, 75 drill presses, 25 milling machines and complete shellmaking equipment.

Building activities on the part of several companies, presage an early announcement of some interesting tool requirements. The Automotive Corp., Toledo, O., is building a 1-story plant, 90 x 300 feet. The American Radiator Co., Springfield, O., has plans for a 1-story machine shop, 100 x 126 feet, and the Thompson Grinder Co., that city is to erect two buildings, 34 x 60 and 50 x 200 feet, respectively. The Indiana Silo Co., Pendleton, Ind., and the Star Tractor Co., Findlay, O., now are combined as the Indiana Silo & Tractor Co., with $1,000,000 capital. It will build a tractor plant at Pendleton. Lathes and automatics, etc., will be required in all probability, by the Lorimer Mfg. Co., Troy, O., which is incorporated at $200,000 to manufacture talking machines and auto parts. A list of metalworking equipment is expected from the Noble Heater Co., Kendallville, Ind., which has been organized with a capital of $400,000 to manufacture automobile and other heaters. L. G. Williams, Box 50, Hopkinsville, Ky., is organizing a company to manufacture a special line of farm and mining machinery in a new town in Oklahoma. He will build a foundry, brass foundry, forge shop, etc., and will require some woodworking machinery for patternmaking.

Flood of Buying in Chicago

MOST machine tool dealers in the Chicago market find August bringing a flood of buying, which promises now to make it a banner month. The condition has not changed from one in which the total is made up almost entirely of small lots, heavy inquiries being practically absent. The exception to this rule is rare. The effect of continuous buying is being noted in deliveries, which have been growing more remote, and now average about 90 days. With labor troubles coming up here and there, this condition probably will grow worse as time passes. Prices are not being advanced generally, but one lathe dealer making a line of light machines has announced an advance of 20 per cent.

The Corn Products Refining Co. is inquiring for two lathes, a milling machine, shaper, saw, drill, chucks and other minor equipment. Manufacturers of concrete mixers find heavy demand for their products on account of large roadbuilding campaigns and are taking considerable machine tool equipment. Recent sales above the general level of the market include two, amounting to about $30,000 each, of equipment for shops operating for maintenance of manufacturing plant equipment. Several automobile accessory manufacturers in Chicago are enlarging their plants and adding machinery.

The Kane Shock Absorber Co., at Centralia, Wash., will build a machine shop and a foundry. The Walla Walla Tool & Wrench Co., Walla Walla, Wash., will build a manufacturing plant.

Construction and Equipment

Concise and Timely Business Building Opportunities from the Field of Industry

Among New England Plants

MILFORD, N. H.—Fire recently damaged the boiler and engine house of the Page & Cote Mills here.

BOSTON.—Scott & Williams have let a contract for a boiler house, 1-story, to cost $20,000.

BOSTON.—The power house of the Edison Electric Illuminating Co. recently was damaged by fire.

BOSTON.—The General Steel & Rubber Stamp Co. has been incorporated with $12,000 capital by Ernest E. Purbeck, Robert A. Leon and Dudley B. Purbeck.

CAMBRIDGE, MASS.—The Newman Welding Co. has been incorporated with $10,000 capital by Anthony L. Piva, John F. Newman and Chester Piva.

GARDNER, MASS.—The pattern shop of the Gardner General Foundry Co. recently was damaged by fire. The loss was estimated at $10,000.

MEDFORD, MASS.—The Thomann Bronze & Brass Foundry, Inc., has been incorporated with $10,000 capital by Charles E. Thomann, William Klingenberger and Albert H. Thomann.

Salem, Mass.—The American Auto Radiator & Lamp Works, Inc., has been incorporated with $3000 capital by Justin W. Dowst, Morris Sherin and Abraham Glovsky.

SPRINGFIELD, MASS.—The Duckworth Chain & Mfg. Co. plans an addition.

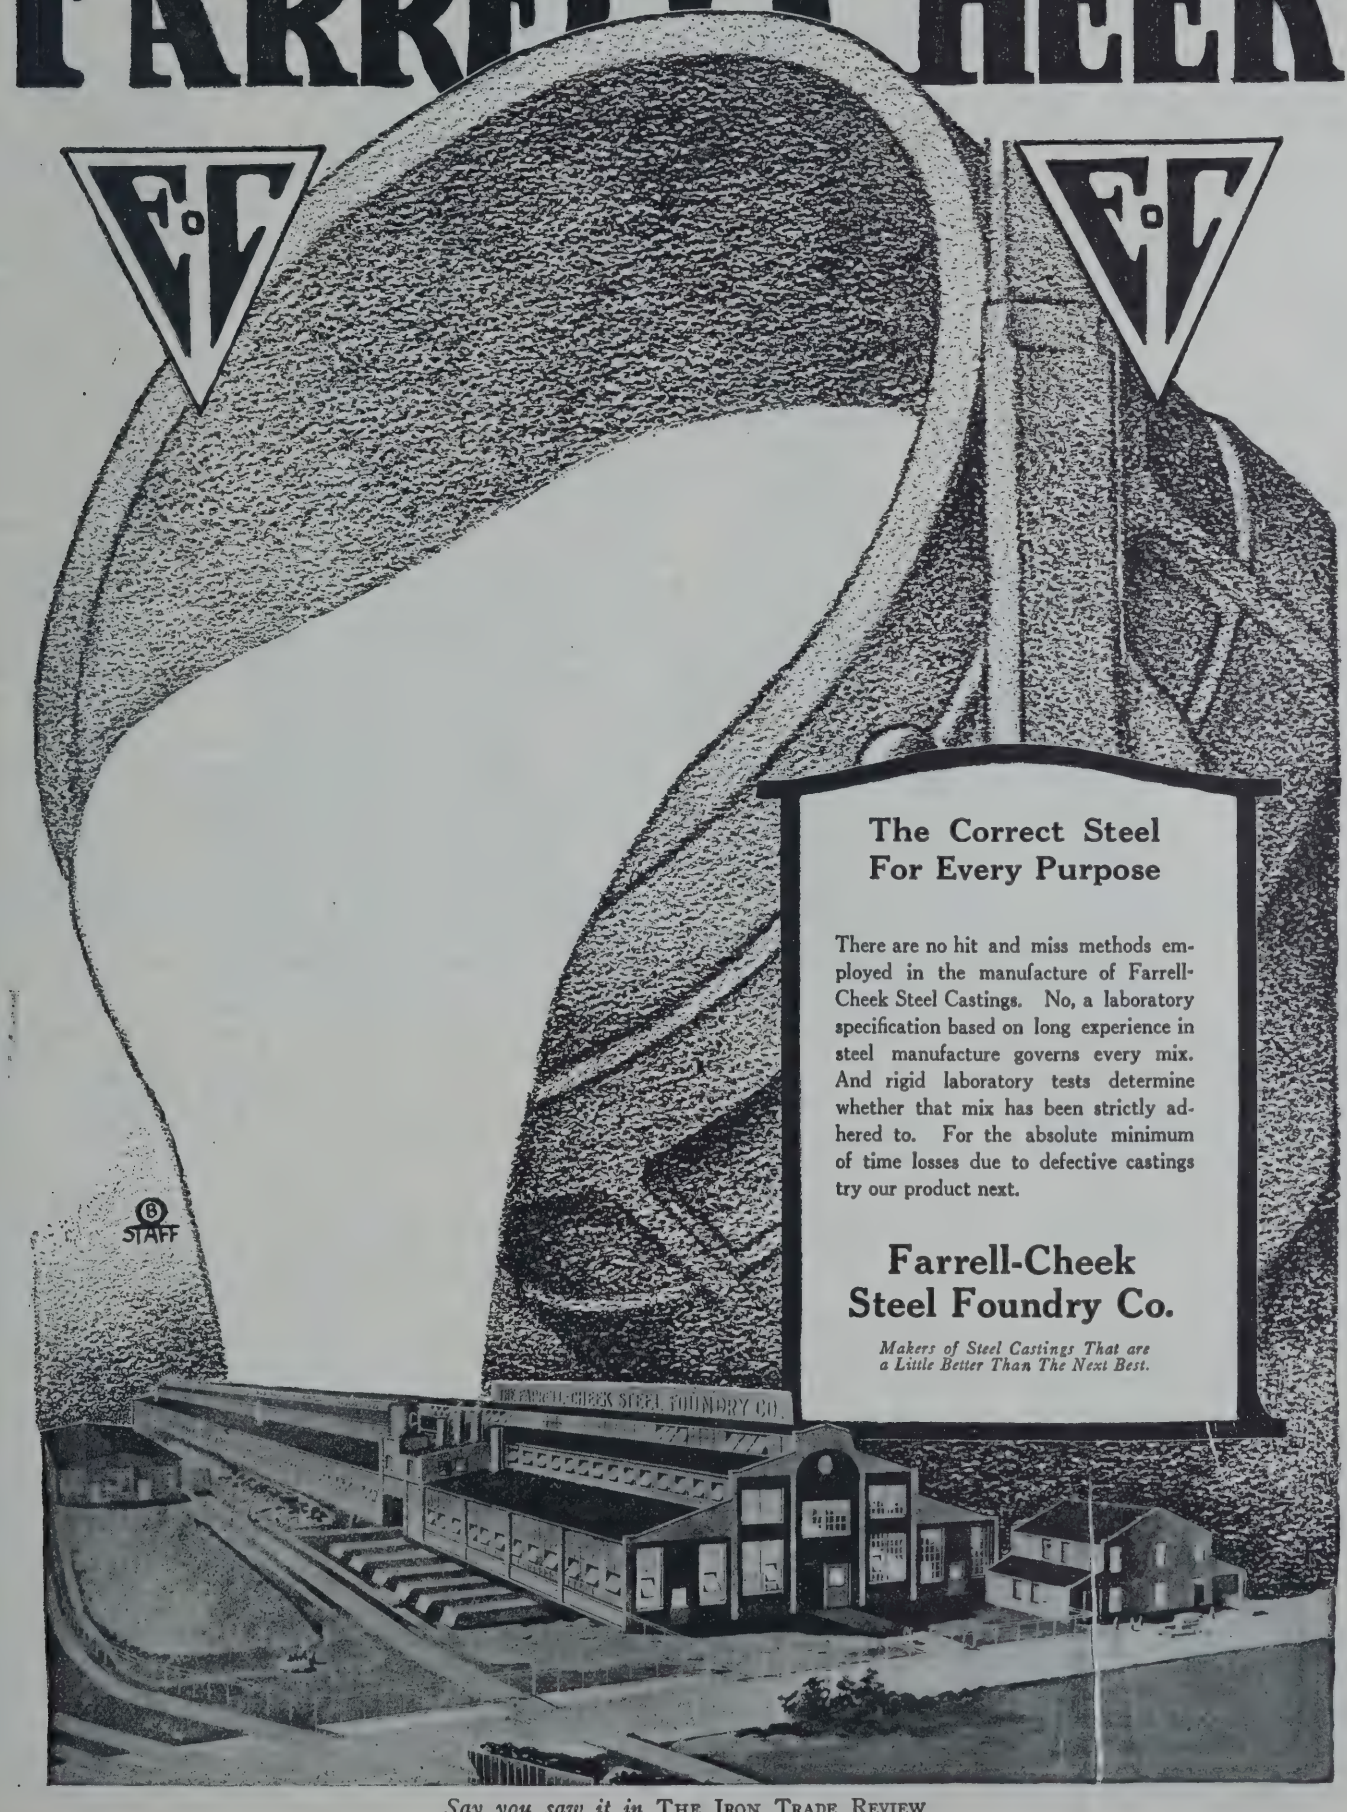
SPRINGFIELD, MASS.—The Boston & Albany railroad has let the contract for a 1-story, 63 x 75-foot machine shop and garage.

SPRINGFIELD, MASS.—The Forging Service Corp. has been incorporated with $25,000 capital, by J. Howard Jones, Noyes C. French and Walter H. McCarthy.

STONEHAM, MASS.—The American Glue Co. has plans for a pump house according to a current report.

UPTON, MASS.—The Upton Mfg. Co. plans to build a 2-story plant addition at a cost of $30,000.

WATERTOWN, MASS.—Bids close August 29 for a 78 x 500-foot building for the storage of machinery at the United States Arsenal.



WORCESTER, MASS.—The Hobbs Mfg. Co. has awarded a contract for a hardening building, 1-story, 35 x 60 feet.

WORCESTER, MASS.—Plans are being revised for the proposed $300,000 plant for the Walden-Worcester, Inc., manufacturer of wrenches.

WORCESTER, MASS.—Plans are being drawn for a 1-story, 55 x 180-foot extension to the foundry of the Coppus Engineering & Equipment Co.

WORCESTER, MASS.—The Worcester Auto Body & Welding Co. has been incorporated with $50,000

FARRELL CHEEK

The Correct Steel For Every Purpose

There are no hit and miss methods employed in the manufacture of Farrell-Cheek Steel Castings. No, a laboratory specification based on long experience in steel manufacture governs every mix. And rigid laboratory tests determine whether that mix has been strictly adhered to. For the absolute minimum of time losses due to defective castings try our product next.

Farrell-Cheek Steel Foundry Co.

Makers of Steel Castings That are a Little Better Than The Next Best.

Say you saw it in THE IRON TRADE REVIEW

capital by Jacob Salo, Arvid Kaarto, Vaino Jarvinen and Karlo W. Aarnio.

WORCESTER, MASS.—The Bluebird Co. of New England has been incorporated to deal in machinery, electrical appliances, etc., with $150,000 capital, by John P. Coghlin, David B. Ker and G. Walter Jones, Brookline, Mass.

ANSONIA, CONN.—The H. C. Cook Co., brass goods, has let the contract for a 60 x 250-foot plant.

BRIDGEPORT, CONN.—The Bryant Electric Co. has let a contract for a 4-story, 60 x 218-foot addition.

BRIDGEPORT, CONN.—The Bridgeport Castings Co. has been incorporated with $100,000 capital by Harry B. Houghton, Edward P. Quinn, Torrington, Conn., Thomas R. Good and Wiliam H. Monagan, Waterbury, Conn.

HARTFORD, CONN.—The Arrow Electric Co., 99 Hawthorne street, has let contracts for a plant addition to cost $45,000.

HARTFORD, CONN.—The Safe-Seal Mfg. Co. has been incorporated to make elctric heating devices, etc., with $10,100 capital by C. E. Holland, New York, Richard Arnold, Brooklyn, N. Y., Richard Arnold Jr., New York, E. A. Backus, Thompson, Conn., and E. W. Putnam.

LITCHFIELD, CONN.—The Bantam Anti-Friction Co. will build a 2-story, 50 x 500-foot addition.

North Atlantic States

ALBANY, N. Y.—The Thacher Propeller & Machine Co. has plans for alterations to its blacksmith shop.

BROOKLYN, N. Y.—The R. H. Comey Co., 73 Nineteenth street, plans alterations to its boiler house.

BROOKLYN, N. Y.—Fred Blattner, 233 Maujer street, recently awarded a contract for a machine shop, 1-story, 50 x 174 feet.

BROOKLYN, N. Y.—The Sleepwell Metal Bed Co. has been incorporated with $5000 capital, by L. Weiner, I. and H. Weldt, 72 Graham avenue.

BROOKLYN, N. Y.—Al M. Ender, Inc., shipbuilding and stevedoring, has been incorporated with $10,000 capital, by C. D. Strang, M. E. and A. M. Ender, 15 Scoville's Walk, Brooklyn, N. Y.

BUFFALO.—The O. K. Lock Co. has been incorporated with $5000 capital, by F. J. Offerman, J. F. Koebel and L. C. Wilkie.

BUFFALO.—The New Departure Coaster Brake Corp. has been incorporated with $200,000 capital, by F. A. Gaynor, B. Lockwood and E. H. Kelly, 43 Cedar street.

BUFFALO.—The Elbridge Automotive Corp. has been incorporated with $500,000 capital, by F. C. Owen, 26 Courtland street, H. E. McComber, 1777 Broadway, New York and D. B. McCarriagher, 318 Erie County Bank building, Buffalo.

ELMIRA, N. Y.—The Willys-Morrow Co. contemplates a foundry.

GOUVERNEUR, N. Y.—The Hygrade Limestone Co. has been incorporated with $6000 capital, by F. D. and F. H. and F. J. Porter.

KATONAH, N. Y.—Kellogg & Lawrence, Inc., have been incorporated to manufacture hardware, etc., with $50,000 capital, by H. W. Kellogg, A. Elliot and C. Fayette Lawrence.

LOCKPORT, N. Y.—This city is considering building a municipal light plant.

NEWBURGH, N. Y.—The Alberger Pump & Condenser Co., 140 Cedar street, New York, has awarded contracts for a plant addition.

NEW YORK.—The Wire Wheel Repair Co., 146 West Fifty-fifth street, is reported planning to enlarge its plant.

NEW YORK.—The Rhythmk Shock Absorber Corp. recently was incorporated with $25,000 capital, by V. Lindsley and B. H. Trask, 25 Broad street.

NEW YORK.—The Steel Piston Ring Co. recently was incorporated with $50,000 capital, by A. Gluck, A. J. H. Kuhsiek and A. Mayer, 131 Riverside drive.

NEW YORK.—The Resta Motors, Inc., motors, has been incorporated with $25,000 capital, by E. L. Smallwood, D. Resta and T. J. Whalen, 340 West Eighty-sixth street.

NEW YORK.—The S. & S. Razor Corp. recently was incorporated with $21,000 capital, by A. E. Shepard, H. and D. Schaefer, 35 West 125th street.

NEW YORK.—Hardite Metals, Inc., has been incorporated with $350,000 capital, by I. B. and M. J. Rosencrantz and M. H. Hoffman, 54 Lenox avenue.

NEW YORK.—The Mercury Iron Works, Inc., has been incorporated with $6000 capital, by M. Chiger, I. Kemelblatt and S. M. Waldstein, 506 West 178th street.

NEW YORK.—The Marvin Stoker Co., Inc., has been incorporated to manufacture metal products with $35,000 capital, by J. Marvin, 125 Wilman street, and others.

NEW YORK.—The Copp Auto Body Co., Inc., has been incorporated with $25,000 capital, by Carl J. Austrian, Arthur Ofner and Helen Schechter, 45 Cedar street.

NEW YORK.—The Eris Stamping & Mfg. Co. recently was incorporated with $30,000 capital, by M. Brandt, M. Sparrow and S. Friedman, 855 Tremont avenue.

NEW YORK.—The Allen-Waring Auto Corp. recently was incorporated with $300,000 capital, by W. C. Allen, 105 Fifty-fifth street, A. D. Waring and others.

NEW YORK.—L. Sence & Sons has been incorporated to make electrical devices with $20,000 capital, by A. E. Bringle, A. L. Naze, and A. McMahon, 1400 Broadway.

NEW YORK.—The U. S. Automatic Steam Iron Corp. has been incorporated with $10,000 capital, by S. G. Buskard, L. Lichtman and N. Kemow, 414 West Broadway.

CONNELLSVILLE, PA.—The Wendel Aircraft Corp. has broken ground for a plant.

CONSHOHOCKEN, PA.—The American Metallurgical Corp. will make alterations to its plant.

DINSMORE, PA.—Breensburgh & Connellsville Coal & Coke Co. is having plans drawn for a coal tipple and power house to cost $100,000.

EDGELY, PA.—The William Woodhouse Chain Mfg. Co. has been incorporated with $20,000 capital, by W. C. Woodhouse, A. D. Woodhouse, William Woodhouse and Henry A. James, Doylestown, Pa.,

ERIE, PA.—The Auto Equipment Co. has been incorporated with $10,000 capital, by G. J. Miller, E. M. Miller, Albert E. Richards and others.

ERIE, PA.—The Ball Engine Co., Twelfth and Cranberry streets, is having plans prepared by the Osborne Engineering Co., Cleveland, for a $65,000 plant, 115 x 185 feet.

FRANKLIN, PA.—The Citizens Traction Co. proposes to build a power plant here.

GROVE CITY, PA.—It is proposed to build a municipal electric light plant here.

HAZLETON, PA.—The main building of the Freeland Foundry Co. recently was damaged by fire.

HAZLETON, PA.—The Duplan Silk Co. will erect a 2-story boiler plant, 90 x 100 feet.

JOHNSTOWN, PA.—The Van Dyke Silica Brick Co., capital $500,000, has been incorporated by F. D. Phillips and others.

JOHNSTOWN, PA.—The New Idea Miners' Tool & Machine Co. recently was incorporated with $10,000 capital, by J. P. Dunky and others.

LANCASTER, PA.—The Lancaster Steel Products Co. has awarded a contract for a bar mill to be 50 x 310 feet, with an extension, 50 x 70 feet.

LATROBE, PA.—John W. Ward, East Main street, and others, have organized the Ward Tool & Forging Co. which will build a plant here.

MARION, PA.—The American Safety Elevator & Mine Cage Co. has been incorporated with $200,000 capital, by John Hoffer, Blaine Wise and G. P. Gates.

MEADVILLE, PA.—The Phoenix Iron Works has awarded a contract for a 1-story machine shop, to cost $75,000.

MIDLAND, PA.—The Pittsburgh Crucible Steel Co. is reported planning to erect a new office building and 28 houses for its employes.

MILLERSBURG, PA.—F. K. Trenker & Co. is building a machine shop extension.

OIL CITY, PA.—Day & Zimmerman, Philadelphia, have the contract for power house here.

PHILADELPHIA.—Patrick Grant plans a public garage and machine shop.

PHILADELPHIA.—James D. Hadik will build a machine shop addition at 2434 North Fairhill street.

PHILADELPHIA.—The A. Schoenhutt Co. has awarded a contract for a saw mill and boiler house.

PHILADELPHIA.—Ballinger & Perrot, architects, are taking bids on a factory and boiler house for Scheonhut & Co.

PHILADELPHIA.—The Dodge Steel Co. recently was incorporated with $300,000 capital, by R. M. Carrington and others.

PHILADELPHIA.—The Philadelphia Drawing Machinery Co. will construct a 1-story plant addition to cost $22,000.

PHILADELPHIA.—The Philadelphia Engineering & Machine Co. has been incorporated with $15,000 capital, by Edward J. Squires and others.

PHILADELPHIA.—The Diamond Expansion Bolt Co. recently was incorporated with $5000 capital, by Lawrence M. Post and others.

PHILADELPHIA.—Connery & Co., Second and Luzerne streets, manufacturer of boilers, has plans for a 1-story addition, 75 x 90 feet.

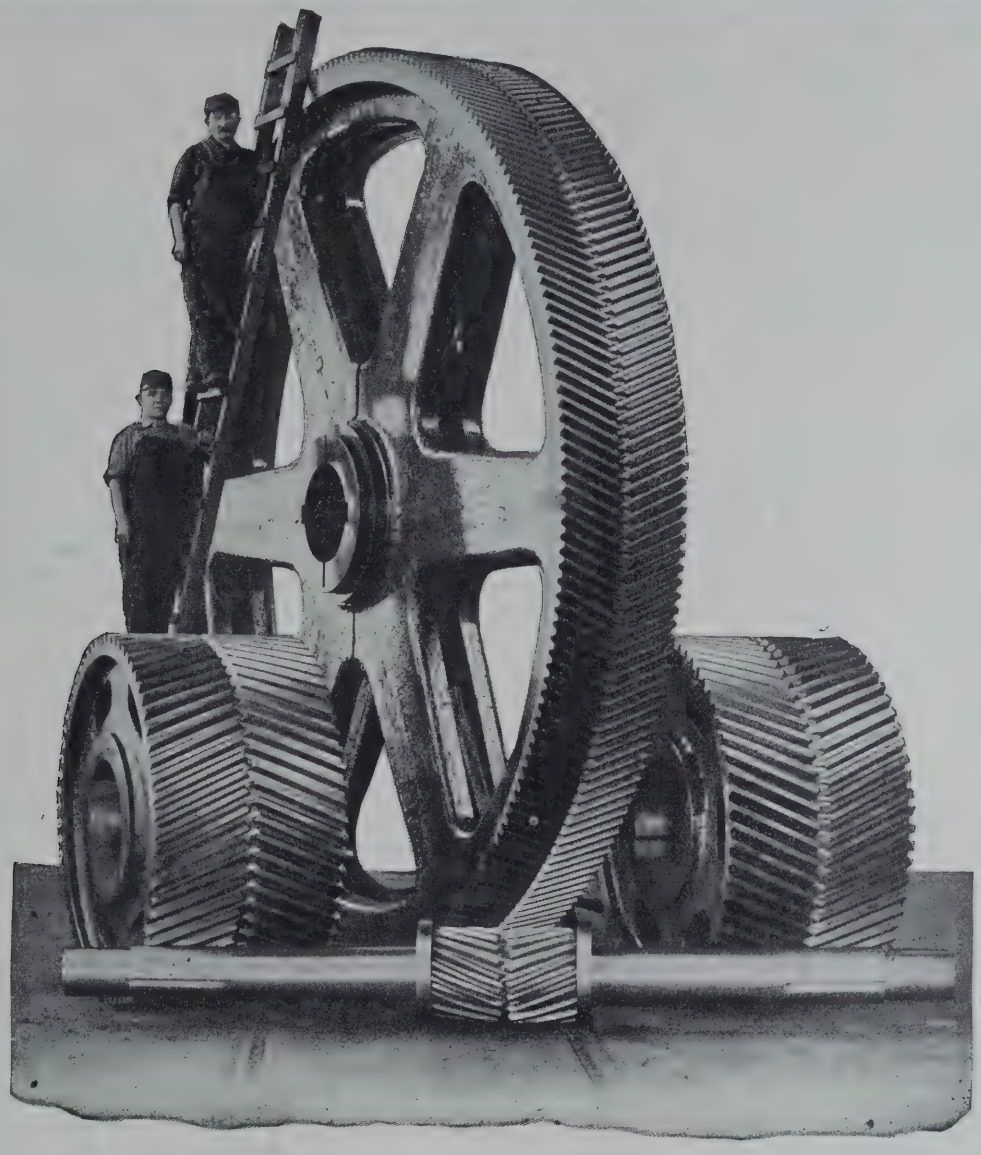
PHILADELPHIA.—Plans are being prepared by the Bernstein Mfg. Co. for a 3-story factory building, 52 x 152 feet.

PHILADELPHIA.—Plans are being prepared for a 2-story factory building, 60 x 160 feet, for Collins & Aiken.

PHILADELPHIA.—William Steele & Sons, Sixteenth and Parkway streets, is having plans drawn for a plant, two stories, 60 x 160 feet, to cost $25,000.

PHILADELPHIA.—Plans are being drawn by the Keystone Wagon Works for a 3-story factory building, 75 x 109 feet, with a wing 60 x 64 feet. Frank V. Nichols is architect.

READING, PA.—Dick Bros., Inc., 20 Penn street, will equip a foundry.



BLOOMFIELD, N. J.—A $30,000 plant will be erected by J. Brockie & Co., 8 Railroad place, Newark, N. J.

BLOOMFIELD, N. J.—The Sprague Electric Works of the General Electric Co. contemplates a plant addition to cost $15,000.

CAMDEN, N. J.—The Penn Shipyards Corp., 419 Market street, recently was incorporated with $4,000,000 capital.

CAMDEN, N. J.—The Penn State Automobile Co. has been chartered with $25,000 capital, by F. R. Hansall, L. C. Clow and J. A. MacPeak.

CAMDEN, N. J.—The general contract has been awarded to the George Kessler Construction Co. for

Falk Herringbone Gears

Illustration shows a complete set of hobbed herringbone gears, furnished to the United States Aluminum Company for a double duo hot mill drive in their new plant at Edgewater, N. J. The largest gear is 16' in diameter I. D. P. 36" face. All three are made from extra high carbon steel castings, annealed by our special process.

The motor pinion in the foreground is made from a high carbon steel forging, in one piece with the shaft, with a ratio of about 12 to 1 to the large gear. Forged steel shrouds are fitted at the ends of the pinion teeth. Two Fly Wheels are mounted on the pinion shaft and the drive is designed to carry peak loads about 3000 Hp., with speed reduction from 345 to 28 R. P. M. The two small gears transmit about one-third of this power to a second line of rolls at 28 R. P. M.

All castings for large steel gears of this description are made in our own open hearth steel foundry. We furnish steel castings for all purposes from 1 lb. to 100,000 lbs.

Write for interesting Falk literature.

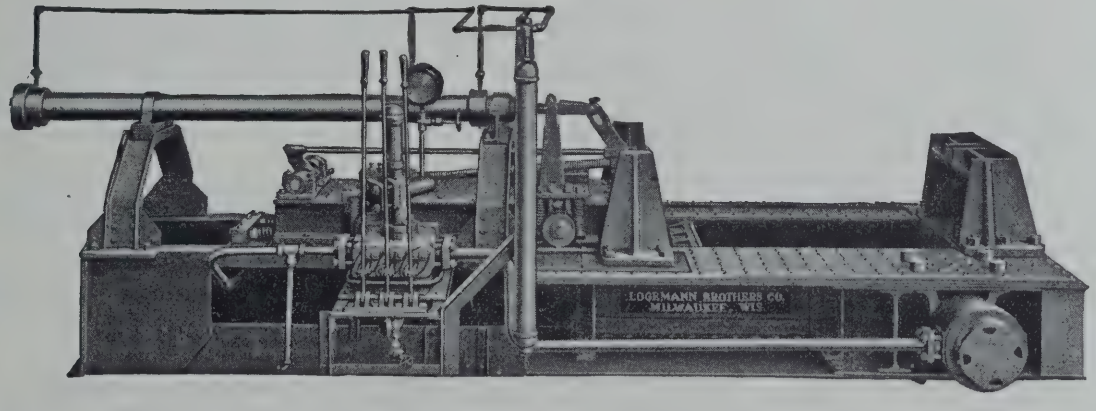
When the Scrap Market Is Dull

While seeking a more favorable market the best form in which to hold your sheet scrap, etc., and the form that always commands the best prices is the dense hydraulically compressed bundle.

Thus less storage space is required—under roof to prevent loss from corrosion; and because of greater car tonnage under minimum car rate, you add from 25% to 50% freight savings to your profits.



For greatest compression, largest daily output, at lowest operating cost, use

LOGEMANN Double Ram Hydraulic Scrap Metal PRESSES

You can enjoy the advantage of the accumulated experience from hundreds of Logemann scrap bundling presses now in use.

They embody a simplified mechanism that requires no special skill to operate rapidly. Press and pump are so designed that all the motive power applied is utilized, thus reducing power cost.

Powerfully built, all working parts constructed to resist the severest strains—selected material, first class workmanship—all minimize upkeep cost and insure lasting efficiency.

A medium sized press is shown; there are smaller and larger sizes in standard models.

Advise character and daily tonnage of your scrap and let us suggest press best suited to your requirements.

Logemann Brothers Co.

Milwaukee, Wis.

Builders of Baling Presses and Hydraulic Machinery

New Trade Publications

SHOP EQUIPMENT.—Bolts, nuts, clamps, washers, wedges, blocks, etc., are described and illustrated in a 6-page folder being distributed by the Standard Shop Equipment Co., Inc., Philadelphia. Each unit is fully described and specifications are given. A post card is attached to the folder.

PRODUCTION RECORD.—The Pelton Steel Co., Milwaukee, has published a 16-page booklet in which a number of colored charts showing the company's production records during 1916, 1917 and 1918 are given. During 1916 daily production averaged 2.34 tons, while its shipments totaled 2.30 tons. This jumped in 1918 to 11.72 tons average production and 11.71 tons average shipments.

RAILS.—Bulletin No. 266 issued by the Walter A. Zelnicker Supply Co., St. Louis, contains a list of rails, portable track angle and splice bars, switches, crossings, frogs, ties, spikes, new and used lockwashers, track bolts, street railway turnouts, etc., on stock at the company's East St. Louis, Ill., works and at various other points throughout the country.

STRIP STEEL.—The construction, equipment, design and operation of the strip steel mill at the plant of the National Pressed Steel Co., Massillon, O., are treated in a 14-page booklet being circulated by the company. The descriptions of the various installations are given in a general and brief form and should prove interesting, and are supplemented with a number of illustrations.

PIPE CUTTER.—A 4-page leaflet is being distributed by the Fox Machine Co., Jackson, Mich., in which the company's No. 10 pipe cutting machine is fully described and illustrated. The machine occupies a floor space of 29 x 38 inches; is 28 inches high; with belt drive weighs 1500 pounds and with motor drive 1650 pounds; the cutter shaft has a speed of 100 revolutions per minute and the cutter disc is 6 inches in diameter.

BOILER CLEANING.—An 8-page booklet is being distributed by the Vulcan Soot Cleaner Co., Du Bois, Pa., in which it describes and illustrates a diagonal method for removing soot from the tubes of horizontal water tube boilers. The description of the method is thorough and is supplemented with a number of illustrations including a line drawing showing the general layout of the soot cleaner in a horizontal water tube boiler.

STEEL CONSTRUCTION.—The National Pressed Steel Co., Massillon, O., recently published a cloth bound reference handbook for the use of engineers and architects in designing various types of buildings. The data given covers a system of construction in metal lumber with structural steel and kindred materials. Complete specifications on steel construction, properties of sections, tables of safe loads, construction details and other designing data are clearly illustrated and described.

STEAM APPLIANCE.—The Ayer Steam Appliance Co., Springfield, Mass., has issued a 10-page booklet in which it describes and illustrates an appliance for producing steam in gas producer power plants. The booklet does not go into details, but gives a general outline of the use of gas producers in industry as compared with other power systems, and points out the use of the steam appliance, upon which the company holds the basic patent. The booklet should prove interesting to gas producer users.

CALCULATING MACHINE.—An attractive 24-page booklet has been issued by the Monroe Calculating Machine Co., New York, in which a calculating machine which adds, multiplies, divides and subtracts is described and illustrated. Illustrations given show these machines being used in the offices of many large companies throughout the country, which include the Standard Parts Co., Cleveland, and the Thomas A. Edison Co., Orange, N. J. The booklet should prove of interest to office accountants and managers.

LOCOMOTIVE CRANES.—Bulletin No. 5 issued by the Edward F. Terry Mfg. Co., New York, is devoted to describing and illustrating cranes manufactured by the company. A number of actual installations are illustrated. The cranes can be driven by steam, electric motor or internal combustion engines. Among the various cranes described are those of the standard 8-wheel type; 8-wheel type for general work; 4-wheel type with bucket; tractor-wheel type with bucket; centipedal traction type and tower type. The latter can be mounted on steel towers where travel is required, or on timber, concrete or steel towers where a fixed unit is desired. Specifications and other data are given.

STEEL WINDOWS.—The Truscon Steel Co., Youngstown, O., is circulating a handbook in which steel window sash is fully described and illustrated. The book is divided into three sections, the first of which deals with pivoted windows, which are generally used in industrial and commercial buildings. The various stock units of these windows are illustrated, and complete tables, diagrams, etc., are given. The second section is devoted to continuous steel sash, generally used in monitors and sawtooth roofs. Full details are given. Counterbalanced types of steel windows are treated in the third section. In this section all types of sliding sash are shown and are accompanied with illustrations and descriptions of window hardware. The booklet should be of especial value to those interested in the designing and erection of modern structures.

CUTTING MACHINE.—A cutting machine designed for beveling the edges of boiler heads, combustion chamber heads, flue sheets and other steel parts that require trimming after the flanging operation and beveling to the calking angle, is described and illustrated in an 8-page booklet being circulated by the Davis-Bournonville Co., Jersey City, N. J. According to the booklet, this machine trims the sheets with a cutting torch to the required length and bevels them in the one operation. It is comprised of a motor-driven carriage supported on a radial arm, which is of light construction, consisting of two cold-rolled parallel round steel bars, firmly tied together and supported by a truss rod. The torch is mounted on the carriage beneath the radial arm and the tip may be directed at any angle required to cut to the desired calking angle. An adjusment provides for setting the tip to all angles from the vertical to the horizontal. Other details are given and are supplemented by a number of line drawings.

Opportunities Abroad

Requests for information should be forwarded to district or co-operative office in your district, of the Bureau of Foreign and Domestic Commerce. Each request should be on a separate sheet and be accompanied by the opportunity number

A manufacturers' agent in Italy wishes to secure an agency for the sale of metallurgical and chemical products, and industrial supplies. Opportunity No. 30165.

The purchase of a single-hand 35 to 50-foot yacht, with auxiliary engine, is desired by a man in Jamaica. Opportunity No. 30161.

An agency and the purchase of general hardware, tubing in general, iron and metals, lumber, etc., are desired by a man in Italy. Opportunity No. 30158.

Catalogs of cigar and cigarette-making machinery are desired by a firm in Paraguay, which is planning to enlarge its plant and install modern equipment. Opportuity No. 30225.

The purchase of staves and articles pertaining to cooperage, and metal or iron strips for barrel and box making, is desired by a firm in Spain. Correspondence should be in Spanish. Opportunity No. 30229.

Printing machines, linotype machines and types, and also rebuilt linotypes are required by a company in the British West Indies. Opportunity No. 30234.

A man in the British West Indies desires to secure an agency for the sale of paints and oils, enamelware, glassware, plain and galvanized corrugated iron, nails, etc. Opportunity No. 30352.

Quotations are desired by a firm in Greece on 100 tons of lead in pigs. Opportunity No. 30236.

The establishment of a water distillery for a city in Mexico is proposed and catalogs and quotations of machinery for distilling water are requested. Opportunity No. 30354.

A commercial agent in Argentina desires to purchase cigarette machinery, automobile accessories, mechanical specialties, etc. Correspondence should be in Spanish. Opportunity No. 30355.

A party from Australia now in this country, wishes to secure an agency for the sale of electric fittings, hardware in general, tools, etc. Opportunity No. 30329.

A merchant in France desires to represent firms for the sale of hardware, wood and iron working tools, agricultural implements, automobile accessories, construction materials, locks, etc. Correspondence should be in French. Opportunity No. 30343.

Iron plates for electrical machinery, tinned steel wire and other materials are required by a firm in Belgium. Opportunity No. 30361.

An agency is desired by a party in Switzerland for the sale of measurement apparatus for heating and ventilating, long distance thermometers, thermostats, anemometers and automatic temperature regulators. Opportunity No. 30362.

The purchase of nails, corrugated iron, expanded metals for reinforced concrete, crosscut saws, tractors, logging machinery, woodworking machinery, etc., is desired by a company in India. Opportunity No. 30382.

THE IRON TRADE REVIEW

Vol. LXV Cleveland, September 4, 1919 No. 10

Labor Cloud Rises From Industry

Developments of Week Make Steel Strike Disturbances Improbable — Business Goes Forward on Growing Scale — Shipyard Work Comes Out More Freely—August Keeps Up Gain in Pig Iron Output

DIMINISHED importance is ascribed to the labor factor in iron and steel trade conditions as the result of the week's developments. While at no time has the rank and file of producers or consumers permitted themselves to entertain serious misgivings over the general strike threats, the acute stage for even partial dislocation of output is believed to have been passed. Manifestly the more radical elements in union circles have been forced to yield to wiser counsel, after having attempted to paint for public consumption some absurd and untruthful pictures of working conditions in the industry. Plant operations as respects labor disturbances are more nearly normal than they have been in weeks. Producers, nevertheless, are being bothered in some degree by a shortage in working forces which renders it impossible to obtain capacity yields demanded by current orders.

Ship Work Appearing

Plant operations continue to average around 70 to 80 per cent, being held down by the sluggish market in railroad materials and plates. There is considerable evidence of improvement, however, in these latter lines. New shipbuilding work especially is coming out more freely. In the East 10,000 tons are involved in four vessels about to be let, and 17,000 tons of ship steel are wanted for export. A southern yard is buying 6000 to 7000 tons for two colliers. Lake builders are figuring on more new work than for a number of weeks and 6000 to 7000 tons of steel for this purpose are pending at Cleveland. The navy has awarded the Carnegie Steel Co. 25,500 tons of plates, shapes and bars for two battleships at the reduced prices recently submitted and 2500 tons of shapes to the Phoenix Iron Works. A new navy inquiry calls for 4200 tons.

The Pennsylvania railroad has placed about 5000 tons of plates for repair work at a reported concession in the price. Other railroad repair work is coming out. Miscellaneous car awards are more numerous. Leading independent makers report the tonnages of plates and shapes booked the past week as the heaviest since the armistice. Eastern shape mills in August averaged 80 per cent operations.

Sales Are Shut off

Selling has been shut off more sharply in various mill lines because of the heavy obligations of producers and the receding deliveries. Tin plate mills in August received the heaviest tonnage of orders of any similar month in history and are assured of higher operations than are usual in the last quarter of the year. The export demand is heavy. Wire and nail consumers are pressing makers more urgently for material, but it is impossible to accommodate them in the degree desired because of the curtailed output due to a shortage of certain classes of mill labor. One or two sheet producers are willing to entertain 1920 orders since all makers of this character are well booked to the year end. Labor troubles are responsible for some enforced idleness, notably 28 mills at one Kentucky and 21 mills at an Ohio plant. The independent interest which advanced steel bars $3 a week ago to the outside trade as reported, is understood to have made some domestic sales at the higher figure. This price also has been done for export. The demand for shafting and cold finished steel has been the best in weeks. A similar situation obtains in light rails.

Iron Output Growing

August has continued the progressive improvement in pig iron operations and production shown in July and June. The month just past recorded a further gain of 23 furnaces in the active list and of 302,369 tons in the total output, representing about 12.5 per cent. The number of stacks in blast was raised to 263 and production to 2,726,581 tons. The tonnage increase would have been greater had it not been for the temporary suspension of various furnaces due to labor difficulties or to the lack of cars growing out of the railway shopmen's strike, notably in the Cleveland and Chicago districts. August's showing was the best since March.

Exchange Raises Trade Bar

REMOVAL by Great Britain of the war time import restrictions on Sept. 1 was an event without far-reaching significance for the export trade of the United States. Lifting of the ban, it is said, created hardly a ripple of enthusiasm among American importers in London. With pound sterling fluctuating between a 12 and 15 per cent discount in the American foreign exchange markets, there is in practice a more formidable barrier to imports than any tariff or governmental edict.

All of the embargoes in force during the war with the exception of 16 commodities have been removed. The exceptions include coal, tar, derivatives of dyes, synthetic drugs, perfumes, flavorings, photographic chemicals, opticals, optical glass, gas mantels, magnetoes, hosiery and certain chemicals. American automobiles, steel rails and other necessities may now enter Great Britain, providing British buyers choose to pay the price.

The only remedy for the exchange situation, of course is a comprehensive plan of export financing, enabling American sellers to advance European buyers ample long-time credits. International financial arrangements of this character are hardly possible on a grand scale, however, so long as uncertainty respecting the treaty of peace overhangs the horizon.

England however is not seeking an improvement in the exchange situation. The humiliation of a depreciated pound sterling in America is amply compensated for by the encouragement given thereby to exports to America and the repression of imports from the same country. The one hope of England now is to increase exports and decrease imports and the trade records of recent months indicate progress is being made in this direction.

It is interesting to note that in discussions of the probable effects of the new import policy English journals waste no space worrying about competition of American imports with home products. Their chief concern is connected with a probable influx of German goods, since the depreciation of the German mark will attract the spending of British money in that country. Furthermore it is only by the acceptance of German imports that the English may expect to collect any part of the huge indemnity assessed against the enemy.

Need Trained Consular Agents

ONCE industrial conditions of the world have returned to a normal basis, competition for trade among the various nations may be expected to be extremely keen. Despite the dominating position of the United States in a business sense, its industries not only will have to be conducted ably by their owners if they are to build up and maintain enlarged foreign markets, but more encouragement must be given to them in the future by the government than they have received in the past. One source of support that should be strengthened relates to the United States consular service.

The government should change its present system and see that selections for this important work consist of men trained specifically for that purpose, a policy that is followed by Great Britain and one which has more than justified itself. There is not the slightest desire to grant anything but the greatest respect to our consular agents, who have shown high zeal in their efforts to aid in the expansion of foreign markets for American industries, but it is an unfortunate fact that, for the most part, their training has been devoid of specialization in such an important undertaking. When this is considered, it really is surprising that American consulates have been as successful as their records indicate.

Now is an excellent time to change the system, so that especially trained agents may be sent abroad. In doing this the government should abolish its present policy of allowing these representatives only a shamefully small salary, and should substitute respectable remuneration. They deserve no less and the great nation they represent can well afford to pay it.

Helping the Homebuilder

DESPITE the fact that the United States is said to be in need of at least 1,000,000 homes, the workingman is given little encouragement by the government toward building. Keeping pace with the high cost of living, rentals have increased time and again until they are almost prohibitive in some sections. This condition is most pronounced in industrial communities to which great numbers of people moved from smaller localities during the war.

Some corporations have made it possible with loan systems for their employes to build homes, and other corporations have constructed homes and rented them to employes at reasonable rates, but it is only the largest of corporations which are able to do this. The employe of the smaller company is at a disadvantage due to no fault of his or the company. What appears to be needed is a system whereby every workingman in the country has an equal chance to build and own a home. Two bills at present are pending in congress, one creating a home loan banking system similar to the farm loan system and the other exempting from federal taxation the income of mortgages held by individuals. These bills might remedy the situation despite the fact that building material has advanced 110 per cent and labor something less since 1915, but financial encouragement is lacking. Congress could assist the workingman at this time by passing bills framed along this line and carrying sufficiently liberal appropriations to make the plan widely effective.

Underlying Conditions Sound

THAT the absorptive power of the United States for steel and its products is immense is proved by the present unexpected situation of the mills. In the past the railroads always have been considered as consumers of something less than one-half of the total production, perhaps about a third of the output of the mills. Pressure for increased tonnage during the war caused great additions to be built to plants and it was feared the return to peace would result in this additional capacity becoming idle as the need for steel was not expected to equal the rated output of all plants.

A surprise, however, awaited the steel world. Railroads, the largest users, have been consistently out of the market for months, yet despite their absence mills have been increasing their bookings until they are approaching or have reached the saturation point.

This unexpected situation has come about in the face of prices far higher than prevailed before the war and under the deterring influence of unexampled labor unrest.

The situation is so unexpected that it gives food for much thought relative to the increased use of steel. That it would be sufficient to overcome the handicap of railroad abstinence and yet be able practically to take up the additional tonnage provided by enlarged production was not considered possible.

Basing Question is National

AS the arguments for and against the present system of basing iron and steel products at Pittsburgh have been advanced more freely under the inquiry being conducted by the federal trade commission, the far-reaching character of the question has been brought more clearly into view. It is manifest that only the most exhaustive and painstaking inquiry will insure a judicious settlement of this controversy and one that will properly weigh the best interests not only of producers or consumers in one section, but in accordance with the advantage and due of the whole country. Because of the wide distribution of iron and steel consumption in this country and its fundamental importance to industrial activity and prosperity, the question has become essentially a national one. Practically every community in degrees of greater or lesser importance has a direct and very substantial concern in a thoroughly equitable settlement of the point at issue.

A notable addition to the arguments and claims which the federal trade commission will weigh in formulating a decision on this matter, is the formal answer by the Inland Steel Co. to the petition of the western steel consumers which is published in full in this issue. This statement may be considered as summing up the case for the producers particularly those in the west. It delineates many aspects of the situation which tend to proclaim the complicated character and the wide application of the problem. This document together with the application of the western organization of consumers and the various individual declarations which have been received, have brought before the commission a complete exhibit of thoughtful reasoning on this subject from diverse points of view. It is gratifying that this is true since it insures that the matter at issue will be thoroughly reviewed from all its various angles and that the outcome will be in terms of genuine, national interest. The federal trade commission has before it no more important proceeding affecting the internal industrial welfare of the country than the basing point controversy and it is to be expected that it will give to it the deep and judicious consideration which the scope of the question warrants.

Much has been claimed in support of or in opposition to the theory of a single basing point in recent years. The opportunity now is presented where the subject can be dispassionately analyzed in all its various aspects and an intelligent judgment passed which should lay this cause of difference at rest for all time.

Iron and Steel Prices

More Difficult to Buy 1920 Iron

Producers Continue to Hold Next Year's Business in Check—Eastern Makers, However, Sell 15,000 to 20,000 Tons at $1.50 and $2 Advance—New Business and Inquiry Generally Lighter

Philadelphia, Sept. 2.—The supply of pig iron is no longer so free here as it was. Of three furnaces which have been the largest takers of business lately, one last week advanced to $29 furnace for No. 2 plain (1.75 to 2.25 silicon), and $30 furnace for No. 2X (2.25 to 2.75 silicon) and since has withdrawn entirely with exception of tonnages on which quotations were outstanding. Another has advanced to a level which amounts practically to a retirement from the market while a third although not having changed its prices to any extent has refused to quote merchants thus indicating a lack of eagerness to sell although showing stiffer tendency. As already noted foundry iron delivered Philadelphia continues to be quoted $29.50 to $30.50 for No. 2 (2.25 to 2.75 silicon), $1 less for No. 2 plain (1.75 to 2.25 silicon). The volume of business is small; in fact there is a lull in buying. Most inquiries noted last week still are open. Virginia furnaces report that western consumers are unable to get ferrosilicon from usual sources because of labor troubles at Jackson county, O. Blast furnaces are turning to high silicon iron from Virginia as a substitute. A number of such sales were made the past week. No Virginia furnace as far as known now is selling any No. 2 plain (1.75 to 2.25 silicon). Only one stack is selling No. 2X (2.25 to 2.75 silicon), its price being $29, furnace. While other Virginia iron is being sold and in one case on basis of $26.75 furnace for No. 2 plain (1.75 to 2.25 silicon) only high silicon or high manganese iron is involved so that selling price generally is in excess of $30. Sales of the week include 500 tons of copper-bearing low phosphorus at $35, furnace. While the low phosphorus market is devoid of actual inquiry sellers say there are some feelers out which promise some buying before long. The Standish furnace the only remaining eastern maker of copper-free low phosphorus went out of blast last week. Sales of week included 500 tons of bessemer by eastern maker. No sales or inquiries for basic are reported.

Harder to Get 1920 Iron

Boston, Sept. 2.—The 1920 pig iron market in New England is becoming decidedly tighter. Furnaces which a week ago were selling for first half and first quarter have now withdrawn except for delivery during the remainder of this year. The few furnaces which are offering 1920 iron are finding ready buyers from all districts. The bulk of the tonnage sold here during the week went to these makers and it is estimated that nearly 6000 tons of new year business was placed. Several orders of 1000 tons or more were received from Massachusetts consumers, and many smaller orders were scattered throughout foundries in the eastern part of New England. All of the first half business has been placed at figures somewhat above the general market for the last quarter, although the premium in some instances has not been large. A price of $31.90 delivered for 2.25 to 2.75 silicon iron was reported on several of the larger contracts. One lot of 500 tons of No. 2X iron (2.25 to 2.75 silicon) was sold at $31 eastern Pennsylvania furnace or $33.90 delivered. The price on last quarter and spot delivery has held at about $29 Buffalo for No. 2X (2.25 to 2.75 silicon). Some central and eastern Pennsylvania iron of the same grade has sold for the same price at the furnace making the delivered price lower. Only special silicon iron has been sold from the Vigrinia district the past week. Southern iron continues unusually high in comparison with the northern iron prices. As high as $29 has been quoted for No. 2 foundry (1.75 to 2.25 silicon) and this with the $8 freight rate entirely prohibits the entrance of southern iron into New England in any sizable tonnages. Interest in first half delivery is keen throughout the foundry field. A large number of inquiries of a somewhat indefinate nature are circulating. Many dealers report orders already placed for first half, even though furnaces have not made any prices as yet. The total of sales to Boston dealers during the past week is estimated at 7500 tons.

Price Tendency High

New York, Aug. 30.—The principal feature of the pig iron market in this district during the past week has been the placing of considerable tonnage for the first quarter of 1920. Altogether, the sales of foundry iron for first quarter in this district during this period aggregated considerably more than 15,000 tons and probably as much as 20,000. The larger portion of this business was of single tonnages not in excess of 1000 tons, and the prices which were done were mostly $1.50 to $2 above those for this year. A considerable percentage of the 1920 business, however, was booked at an advance of only $1. Of the inquiry which has come out during the past two days, the major portion involves 1920 foundry iron. Out of 3000 tons of new domestic inquiries which one interest now has on hand, only about 500 tons are for delivery this year. In most cases

the furnaces are not anxious to sell for first quarter or first half, and in several cases they will not even book 1920 iron for old customers. Some of the furnaces which booked some of the 1920 business placed during the past week now are out of the market on this position having taken large tonnages in other districts as well as this. Prices which are being quoted have not changed during the past week, but it now is easy to get 25 to 50 cents higher than a few weeks ago. The foundry iron market delivered at New Jersey points for the remainder of 1919 still may be represented by a spread of $28.35 to $29.85 for 1.75 to 2.25 silicon, while the range on 2.25 to 2.75 silicon is $1 higher. Malleable iron can be had at $27.75 to $28, eastern Pennsylvania furnace. Some malleable has been sold for export. Little Buffalo iron is being sold in this district at this time, due to the extent to which the stacks there are booked ahead. A large amount of export inquiry continues to feature the market, but the orders placed are small.

Market Dull and Featureless

Pittsburgh, Sept. 2.—Dealings in pig iron have been on an extremely restricted scale during the past week with only a few sales of size worthy of note. One lot of 2000 tons of No. 2 foundry was sold for delivery in this district at $26.75 valley, furnace, while the transfer of 1000 tons of bessemer iron is noted at $27.95 valley, furnace, for the Alliance, O., plant of the American Steel Foundries. This latter sale represents a slight concession as iron running below the standard requirements in phosphorus is to be delivered at this price. A Pittsburgh district maker of ingot molds is inquiring for 1000 tons of bessemer. The market in basic pig iron is virtually dormant with nothing more than carload lots moving and inquiries few and far between. It is doubtful if the trade has experienced a quieter week this year than the past one and this condition has not been without some attraction upon prices. In the sale of 2000 tons of No. 2 foundry previously referred to, the price was at least 50 cents a ton below what most of the producers recently have been asking. Averages compiled by W. P. Snyder & Co., Pittsburgh, on valley sales in August show the same prices as during July, or $25.75 for basic and $27.95 for bessemer. It is doubtful if the average price on basic in this calculation is founded on other than shipments on old contracts. The Carnegie Steel Co. now has 49 of its 59 stacks in operation. The Anna furnace of the Struthers Furnace Co. probably will be lighted this week. This furnace will run on foundry iron for about six weeks.

Refuse to Quote on 1920 Iron

Buffalo, Aug. 30.—Buffalo furnaces uniformly are declining to quote on 1920 iron. Customers have been vainly trying to buy in this district for some time, but the ore situation is preventing furnaces from going actively into the market. The slowness with which ore is arriving is but a temporary condition, producers believe. Iron orders are not as large as they were, but they have been coming in good volume, and there has been a marked increase in the number of foundries calling for immediate shipment. Buffalo Union A furnace has been blown in again, after being banked since November.

New Business Falls Off

Cleveland, Sept. 2.—New business in pig iron has dropped away sharply and the turnover during the past week was the lightest in some time. One large selling interest reports about 2500 tons booked for this year and first half in foundry grades upon which the $26.75 furnace price of 1.75 to 2.25 silicon has applied. Other producers have entered business in a corresponding way. The reason for the contraction of buying is the fact that consumers are well covered on their requirements for the rest of the year, and the furnaces, with a few exceptions, still are unwilling to entertain orders for delivery after Jan. 1, at this time. This situation also is reflected in new inquiries where the buyers finding that the makers would not quote for next year, are withholding their requests until a later date. New inquiry of the past week has been exceedingly light. Shipments are going forward very favorably causing furnace stocks to be further reduced and there is continuing evidence that consumers in their recent purchases underestimated rather than overstated their requirements. The result is the placing of a number of small tonnages to fill in.

Several sales of basic pig iron in small tonnages have been made at slight concessions which went to the brokers as commissions, the consumers ultimately paying the market price. It is known that a 1000-ton lot went at the full rate of $25.75, valley furnace. However basic inquiry today appears to be nil and new buying has not appeared at any time in volume. It is understood the American Steel Foundries has purchased 10,000 tons for its Alliance, O., works. The Struthers Furnace Co. today relighted its stack and will operate on foundry iron for some weeks.

Demand Holds Well

Chicago, Sept. 2.—Although practically all large users of pig iron in the Chicago district have covered their requirements for the remainder of this year, some who bought conservatively at first having entered the market a second time, inquiry continues excellent. Naturally at present this is mostly for small tonnages to fill in unexpected demand or to cover purchases by small foundries which had not covered previously. Northern producers continue to book a fair aggregate of business, but are nearly sold out for their entire production to the first of next year. Every effort is being made to produce as heavy a tonnage as possible to meet the heavy demand. An important seller has increased the silicon differential $1, making the premium for 2.25 to 2.75 silicon $2.25 instead of $1.25, as provided in the schedule, with the same increase of $1 on each successive step. No increase has been made on the base grade, and it seems probable now that the year will close without a rise in prices except for this added premium on silicon. Silvery irons continue in demand and in addition to the inquiry for 4000 tons, mentioned last week, smaller inquiries aggregate more than 3000 tons. One large consumer of various grades of pig iron with plants located both east and west is seeking 1000 tons of low phosphorus iron and 1500 tons of standard bessemer. Southern iron continues quiet in this market with prices $1 higher than prevailed at the middle of the year. Information reaching Chicago is that costs in the Birmingham district have increased more rapidly than in the north and that southern makers have great difficulty in breaking even at present prices. Lake Superior charcoal iron producers have practically nothing more to sell for this year, and that grade is quiet.

Contract for 1920 Malleable

Cincinnati, Sept. 2.—No foundry iron for next year is being offered either in the south or in the Ironton district. There are numerous inquiries in hand, but furnaces are still waiting to see what their operating costs will be after Dec. 31. It is reported that some malleable iron for first quarter shipment, or at least with shipments extending into that period, has been contracted for, but at an advance in price, the exact amount not having been stated. It is understood, however, that the advance was about $2 per ton. Sales of foundry iron for the last quarter are scattered, depending mostly on the ability of the furnaces to deliver the metal. No one now questions $27.50 as being the minimum for either Birmingham or Ironton iron for the delivery named, and some furnaces are able to obtain $27.75 and $28. The situation in Jackson county is still unchanged and consumers of silvery iron have had to turn elsewhere for a supply. The south has practically disposed of all its iron of 4 per cent or more of silicon. Lake Superior charcoal iron is in moderate demand. The car shortage is still a vexing question in all iron producing districts.

Upward Tendency in South

St. Louis, Aug. 30.—Buying of pig iron in small lots continues in this territory, both for prompt delivery and shipment over the balance of the year. Prices on southern grades continue strong, with a tendency to reach the new schedule of $27.75, Birmingham, for silicon 1.75 to 2.25. Some of the furnaces are quoting $27.75 for this grade and maintaining the regular silicon differentials, but a few companies are quoting $27.50 and are shading the differentials on the higher silicons. Business pending amounts to probably 3000 or 4000 tons, one inquiry being for 1000 tons, for delivery before Jan. 1, and the balance being made up of smaller lots, prompt and future. There is one inquiry out for 250 tons of southern iron for delivery over the first half of 1920.

Slight Advance Made in South

Birmingham, Ala., Sept. 2.—The southern pig iron market has gained in strength and a slight advance in prices is noted, with most sales being made for fourth quarter, spot sales have been made on the basis of $28

for No. 2 foundry (1.75 to 2.25 silicon). While no announcements have been made as to transactions for 1920, there are indications of such sales being closed. Production is being increased steadily, 26 furnaces now being in operation, one on charcoal iron, one on ferromanganese, eight on basic and the others on foundry iron. The Sloss-Sheffield Steel & Iron Co. now has four furnaces in operation, and the Woodstock Co.'s furnace at Anniston is making iron. Purchasers are taking delivery on contracts freely. The car shortage is delaying the reduction of accumulated furnace stocks of iron although there is not a great quantity on yards in this district. Inquiries are being received steadily for 1920 iron, but most of the furnaces are not yet opening their books for that period.

Nails at $3.50

Are Being Sold Freely—Wire Consumers Urging Faster Deliveries

Pittsburgh, Sept. 2.—An independent wire manufacturer here who recently offered a moderate tonnage of nails to be made up and shipped at his convenience at $3.50 a keg found no trouble in disposing of the allotment. This is typical, for while the American Steel & Wire Co. continues to quote $3.25, it is practically out of the market on new business, and other makers who have been quoting $3.50 find their chief problem in giving all buyers some tonnage. Good demand is noted for coated nails and makers find that in all except the Chicago district, sales readily are made at $3.10 per count keg, Pittsburgh. Most companies are well booked over the remainder of the year on wire, both plain and barbed. Current mill operations range from 75 to 80 per cent full, with production still falling behind shipping directions.

Mills Filled Up

Philadelphia, Sept. 2.—Dealers are finding it difficult to get nails since all mills have so much business on hand they can take practically no more. All makers excepting leading interests now have minimum nail price of $3.50 Pittsburgh. The mills also are filled up on other wire products but not to so marked an extent as on nails. Independent mills who recently advanced wire prices say there is no difficulty about making sales on the higher level.

Buyers Urge Speed

Chicago, Sept. 2.—Wire producers are receiving many requests from consumers to hasten their shipments, which it is difficult to do because of the general shortage of cars. The latter is attributed to the grain movement. Inquiry continues active and mills have no difficulty in booking as much business as they can handle. The price situation is unchanged, the leading interest continuing to quote at the old price, which is considerably below that named by independents. The latter appear to be shading this figure somewhat on occasional tonnages, although as a rule the level is being maintained.

Coke Consumers Covered

Little Being Done in Contract Market—$5 Being Talked of as Basis of September Shipments—Few Sales of Spot Made at 4.90c

Pittsburgh, Sept. 2.—Although a few small sales of spot furnace coke recently have been made as high as 4.90c, ovens, the more general maximum is $4.75, and basis in sales still exists for a quotation as low as $4.50. In the Connellsville region at the close of last week only a few loaded cars were on the track, and with the suspension of mine and oven operations over the holiday, much talk has been heard of a possible shortage. While coal offerings admittingly are small, they are ample for present demand. Except for small tonnages moved at a higher price, $4.75, ovens, has not been exceeded. Nothing is being done in contracts as those merchant furnaces which now are inactive but which are likely to go in blast at an early date are provided with supplies. While $5 has been talked as the basis of September shipments, it is extremely doubtful if much business of this sort has been placed at higher than $4.75. Foundry coke is in steady demand with most sales at $6, ovens. Few producers of standard 72-hour fuel have any surplus over their contract obligations. Because of the scarcity of labor, makers are not anxious for new business, especially when buyers insist on box cars for shipment. The Connellsville production of coke for the week ended Aug. 23, is estimated by *The Connellsville Courier* to have been 240,440 tons as compared with 236,482 tons in the previous week.

More Foreign Orders

New York, Aug. 30.—Orders have been placed during the past few days for an additional 3000 tons of foundry coke for export. This business was placed with the northern New Jersey by-product producer. The coke market continues to reflect strength. A fair amount of beehive foundry coke has been sold in this district for both spot delivery and shipment over the rest of the year at $5.75 and $6, Connellsville. The price of the northern New Jersey by-product maker on foundry coke continues $6.

St. Louis Market Firm

St. Louis, Aug. 30.—A number of inquiries are out for Connellsville 72-hour foundry, covering delivery over the balance of this year. There is one inquiry pending for 1800 tons, for the first half of 1920, but the purchasing agent submitting this inquiry has not received prices interesting enough to justify placing the order. The market is firm at $5.50 to $6.25 on Connellsville 72-hour foundry, covering shipment up to Jan. 1.

Car Shortage Delays Shipments

Cincinnati, Sept. 2.—Operators in the Wise county, Pocahontas and New River fields are having difficulty in trying to supply fuel for the foundries, owing to the car shortage. Foundry coke in Wise county and Pocahontas fields ranges from $7 to $7.50 ovens, and New River is firm at $8. There has been an easing up in the Connellsville situation, as far as the supply of spot furnace and foundry coke is concerned, although considerable room for complaint as to the scarcity of cars still exists. Oven operators are said to be averse to taking on much more contract business and are naming only nominal figures, all of which are on a sliding scale basis. Information as to some furnace coke sales above $4.75, ovens, has been received, but quotations may now be said to range from $4.50 to $4.75.

Southern Ovens Sold Up

Birmingham, Ala., Sept. 2.—Coke producers in the Birmingham district are practically out of the market for the present, having sold considerable tonnage. The Sloss-Sheffield Steel & Iron Co. expects to be able to start up some of its by-product coke ovens at North Birmingham within the next 40 days. A shortage of railroad cars is being felt in this district. Further shipments are being made to Texas.

Ore Market

Still Quiet, Although All Furnaces Are Not Covered

Cleveland, Sept. 2.—Only one complaint was heard that the strike of workmen on the docks of the upper lakes delayed shipments to furnaces. This was from a Buffalo furnace and the delay in receiving ore was reported to have deterred this interest from accepting a contract for iron for delivery in the first quarter.

Ore companies said they were fortunate in keeping some of those interests which placed orders late supplied during the strike, but apparently the possibility of a recurrence of the trouble and more serious delay in shipments has not disturbed the furnace interests, as ore companies report no new orders were received during the past week.

The strike of dock office employes interfered to some extent with the compilation of records of shipments in August, but they are estimated by certain authorities as being 4,000,000 tons, compared with 9,725,331 in August, 1918.

While the labor trouble on some of the coal docks continues, more tonnage is being devoted to the handling of ore, with the expectation of making up the 5,000,000 tons in shipments lost by reason of the strike on the ore docks. Shipments of grain, however, are increasing and taking considerable vessel tonnage that otherwise would be devoted to the movement of ore. The market is dormant so far as new business is concerned, although a few furnace interests have not closed on their full requirements for the remainder of the year.

Scrap Market Dragging

Consumers Hold off From Making Purchases—Prices More or Less Nominal—Heavy Sales of Shell Steel Made Lower

FOR COMPLETE SCRAP PRICES SEE PAGE 672

Pittsburgh, Sept. 2.—A deadlock exists between consumers and sellers of scrap, and with business confined largely to rejected cars values are not clearly defined. Steel manufacturers seem to have ample supplies for the present. Dealers, believing that the present dullness will not be protracted, are not inclined to press sales. Under the circumstances, little room for price changes exists. Rejected shipments are selling below last week's quotations, shippers seeking to avoid paying demurrage. Recent government sales of shell steel have reflected the easier tendency which set in about a month ago following a withdrawal from the market by most of the big steel manufacturers. The Midvale Steel & Ordnance Co., recently bought 8000 to 10,000 tons of shell steel at $20 to 21, delivered at its eastern plants; the McKinney Steel Co., from 12,000 to 14,000 tons at $21 to $22, delivered, Cleveland, and the Donner Steel Co., a good tonnage at $21.50, Buffalo. The high mark on this kind of material was about $24.50, delivered, Pittsburgh. The Pennsylvania railroad scrap list for September offers 19,786 gross tons of various kinds of material. The largest single item is 4000 gross tons of No. 1 steel rails. This offering is below the average of the past few months.

Steelmakers Out of Market

Boston, Sept. 1.—Large steelmakers were absent from the scrap market during the past week, activity in some grades being due to competitive buying among dealers. No. 1 machinery continues scarce and in demand, but the market generally is quiet. A report from Pennsylvania consumers indicates a demand there for turnings and borings and this has been reflected in local activity in these grades. Borings sold up to $11.50 delivered, dealers yards, in several cases. Heavy melting steel has been gradually stiffening in price despite the lack of consumers in the market. It has been sold to dealers at $16.50 to $17.50. The government again offered considerable quantities of scrap. Eighteen net tons of special bessemer scrap located at Scituate, Mass., were awarded to C. M. Liphart, Philadelphia, at $33 a ton. Approximately 15 tons of steel located at South Boston was not awarded because bids were considered too low. Another lot of nearly 2,000,000 pounds of bessemer screw stock was not sold, although bids were received. It is understood some bids on this last lot were as high as $31 per gross ton. Eighty-one tons of steel blooms went to the Erie Iron & Metal Co., Erie, Pa., at $21 per gross ton. Twelve thousand, five hundred pounds of special chrome alloy steel were sold to the Roxbury Iron & Metal Co., at 75 cents per 100 pounds f.o.b. Framingham, Mass. Several sizable tonnages of No. 1 machinery scrap were sold to central Massachusetts foundries. One lot of 400 tons was sold at $27.50, delivered. Cotton ties for rebailing purposes have been in demand and have sold as high as $13.50 and $14 at the point of shipment.

Some Grades Are Lower

New York, Sept. 2.—Although there is a better undertone in the local scrap market, one or two grades have weakened. Stove plate is off about $1 and grate bars 50 cents. Heavy melting steel also is slightly lower and now is holding at $15 to $15.25. Although the rather inactive market makes it difficult to define prices, other materials appear unchanged. The feature of the week was the sale of one lot of 15,000 tons of shell forgings at Poughkeepsie.

Labor Situation Helps

Philadelphia, Sept. 2.—The improved labor situation has been followed by a decidedly improved scrap market. The fact that scrap is comparatively scarce coupled with the seeming assurance that there is to be an end to disturbances on the part of organized labor has caused a much stronger feeling. While the market is quiet there is no disposition on the part of dealers to shade prices. One large eastern steel works which had been trying to buy machine shop turnings at $14 was forced to raise its price to $15 and at this figure bought 4000 to 5000 tons. Another big steel company bought 1000 tons of stove plate at $21, delivered.

Mills Dipping Into Reserves

Buffalo, Aug. 30.—Prices are firm in scrap and the market is strong. Mills are not accumulating stock but are dipping into their supplies. The labor situation is the most potent factor in the present condition of the market, prompting caution. Few sales have been made during the week.

Weakness Still Prevails

Cleveland, Sept. 2.—Prices on all grades of scrap iron and steel here continue weak. While dealers believe that the backbone of the depression has been broken, and that the trend will be upward shortly, the market externally gives no indications of strength. Two of the largest consumers in this district are out of the market for several weeks, their purchasing agents being on vacation. Practically all users engaged supplies for several months, in the course of the recent buying movement, and hence are not expected in the market for some time. Dealers feel certain danger of a strike in the industry is past, and that fears on this score will be definitely removed soon. Several dealers who sold short when melting steel was $22 are reported reaping a harvest. Many of the larger brokers claim not to have a single order on their books.

Wants Good Tonnages

Youngstown, O., Sept. 2.—While the scrap market cannot be termed strong some good sized tonnages are moving. One dealer here is in the market for 2000 tons of low carbon, machine shop turnings; 1000 tons of flashings or No. 1 busheling; and, 500 tons of soft steel punchings. These tonnages are wanted monthly. A southern Ohio mill recently purchased 2000 tons of sheet bar crops at $22. This is $5 per ton lower than an order which was closed recently by a dealer in this district.

Chicago Market Waiting

Chicago, Sept. 2.—Under the double threat of a strike by steel workers and by railroad shopmen and further influenced by the holiday, consumers of iron and steel scrap in the Chicago market are buying practically nothing. Inasmuch as dealers have comparatively few contracts on which to make deliveries, the situation is unusually dull as there is not even the usual buying among dealers to apply on their contracts. Steel mills are especially apathetic in view of the possibility of lost time if workers decide to strike, bar iron mills are taking little material because demand for their output is slack, and rerolling mills are not in need of old rails because of former purchases which provide sufficient reserve for the present. Foundries are taking some cast scrap but this demand is not sufficient to make the market active. Railroads are furnishing an unusually small total of scrap, and the only important list now pending is that of the Chicago & Northwestern involving 2200 tons.

Postpone Buying

Cincinnati, Sept. 2.—The market for heavy melting steel scrap is weak. Stove foundries are buying in small quantities for prompt shipment, but most of the jobbing foundries are fairly well supplied for this year and are waiting to see what future conditions will be before placing any more orders for future delivery. Cast borings also show some weakness and are off about 50 cents a ton. There is a very limited demand for steel turnings and nothing except a nominal quotation on this class of scrap may be made.

Southern Market More Active

Birmingham, Ala., Sept. 2.—A little more activity is noted in the scrap iron and steel market in this district. No. 1 cast is moving well and some of the consumers in this district are asking for early delivery on contracts placed some time ago. Cast iron pipe plants are seeking immediate delivery. Consumers of heavy melting steel have advanced their offers. Dealers however, are maintaining their price, $3 above that offered. Stocks show a little reduction. Country scrap is coming in, and railroads and industrial plants are ready to sell in quantity. Quotations are on a firmer basis than for some time.

Sheets Scarce

With Makers Well Sold to Year End —Some 1920 Orders

Youngstown, O., Sept. 2.—A few sheetmakers here continue out of the market because they have all the orders they can handle for the next eight to 10 weeks. Some mills, however, are in a position to take on fourth- quarter business but are choosing attractive specifications. Spot business is good and a few buyers are successful in obtaining tonnages in this direction. Galvanized in light gages for early shipment are hard to buy in this district. One dealer here, however, is offering for immediate shipment, 45 tons of 16-gage galvanized, 27½ x 83 and 70 tons of 16-gage galvanized, 36 x 71, all prime stock at $3.75 f.o.b. Philadelphia. Other offerings for immediate shipment include 300 tons of 22 gage, 30 x 120 and 30 x 84, open-hearth, one pass, regular mill bundling at $3.85 f.o.b. Canton, O., 220 tons of prime, open-hearth, single-pickle sheets assorted as to gage and size at $4.15 f.o.b. Chicago, 180 tons of prime, one-pass, oiled and crated, 20-gage block, 52 x 38, at $4 f.o.b., Pittsburgh; 625 tons of open-hearth, full-pickled and annealed, extra deep drawing, oiled at $4.25 f.o.b. Philadelphia. Considerable business is being done in the second and waster market. Toy makers are beginning to come out after light tonnages, several sales having been made this week in this direction.

Blue annealed sheets continue strong and several good-sized inquiries are now pending. The entire output of a Pennsylvania mill rolling this product has been contracted for by a dealer in this district who reports that a large Ohio consumer has closed for 1000 tons monthly. The monthly output of this mill will average 800 tons.

More Specifications Placed

Philadelphia, Sept. 2.—While less contracting features the sheet market more definite specifications have been placed for fourth quarter delivery. Eastern capacity is pretty well occupied, but western mills which usually solicit business here now are out of market entirely.

Still Pressed With Business

Pittsburgh, Sept. 2.—No let up is noted in the demand for sheets but with makers already sold up for the remainder of the year, little capacity is available for prompt shipment orders but as yet only one or two mills have opened their books for the first quarter and half of 1920 delivery. Buyers do not seem particularly anxious to get under cover for the first part of next year, but makers as a general rule equally are indifferent about selling beyond the end of this year. The American Sheet & Tin Plate Co. is operating more than 90 per cent of its sheet mills, but the showing of the independents is not quite so favorable due to the fact that at the Newport Rolling Mills, Newport, Ky., 28 mills are idle and at the Stark Rolling Mills, Canton, O., 21 mills are idle owing to labor troubles. Prices are holding firm at the March 21 level with some makers who booked tonnages below this basis asking premiums of from $2 to $5 a ton to average up their prices.

Most Mills Full

Chicago, Sept. 2.—Activity in demand for steel sheets has suffered no diminution, and most mills are practically filled with tonnages as far as they desire to cover. This demand comes from all classes of users and indicates great activity in the manufacturing field. One factor to be reckoned with by sheet makers is inability to obtain sheet bars, but this has comparatively little effect in the case of local producers, who provide their own supply.

Light Rails

Are in Best Demand of Year at Home and Abroad

Chicago, Sept. 2.—Demand for light steel rails is active, and business is being booked at a better rate than at any previous time during the present year. Much of this is going to coal mines, which appear to be making considerable extensions and improvements. Standard rails are being sold only for miscellaneous uses in small lots. Car buying is practically absent, except for occasional sales of tank cars made necessary by enlarged activity of oil producers. The Mt. Vernon Car Mfg. Co. has closed an order for 25 cars for the Sacramento & Northern railroad.

Wilson & Co., Chicago, has an inquiry out for 200 refrigerator cars. The Pennsylvania Tank Car Co. has taken orders for 25 tank cars for the Bolene Refining Co., 100 tank cars for the Livingston Refining Co., six for the Wilhoit Refining Co., and 25 for the Commercial Car Line. The American Car & Foundry Co. has taken an order for 600 tank cars for the Mexican Petroleum Co., 200 for the Ohio City Gas Co., and 50 for the White Eagle Oil & Refining Co.

Good Demand for Tank Cars

Philadelphia, Sept. 2.—Tank car demand continues active. The Union Tank Car Co. is considering buying 1000 tank cars. The Ohio Gas Co. bought 300 tank cars, while the Mexican Oil Co. bought 500. The Swift Packing Co. let a contract for 700 refrigerators and the Havanna Central railroad let a car order to the American Car Co. The New York Central and other railroads are figuring on large car repair orders.

Light Rails Wanted for Export

Pittsburgh, Sept. 2.—Domestic demands for light rails have dwindled considerably, but export inquiries still are numerous and a fair amount of business is being placed, with makers quite generally holding for 2.45c, Pittsburgh. Nothing yet has developed in connection with a possible order for 100,000 tons of standard rails from the railroad administration. Railroad spikes are slow in keeping with the demand for rails and prompt deliveries are being made against all inquiries.

Report Premiums

In Sheet Bars But Supply Situation Seems to Be Easier

Pittsburgh, Sept. 2.—With the sheet mills running better than 90 per cent of capacity and the tin plate mills at a higher rate, consumption of sheet bars is extremely heavy. But as the Carnegie Steel Co. for several weeks past has been running around 95 per cent of ingot capacity and other producers have been doing as well, if not better, the spread between production and consumption of sheet bars has narrowed considerably and few finishing mills now lack sufficient supplies. Less talk now is heard of premiums over the regular base of $42, Pittsburgh or Youngstown, and those makers seeking them may be said to be taking this course to discourage orders. Brokers having tonnages they would like to sell at slight premiums over the market have had few opportunities to do so in the past week. Consumption of rolling billets also is heavy, but here, too, consumers are getting ample supplies on contracts. Current demands for slabs are being met easily. Less strength is noted in slabs than in other semifinished forms. Most steel manufacturers have some surplus of wire rods over their finishing needs. These surplus rods are being offered for prompt shipment. England is seeking 1000 tons and against this inquiry $57, Pittsburgh, has been quoted for soft rods and $67 on those of high carbon.

Advances Forging Billets

Philadelphia, Sept. 2.—Practically all mills are out of market on semi-finished material and particularly on rerolling billets due to high cost as compared with the present market. One mill which some time ago withdrew on rerolling billets, sheet bars and wire rods had advanced forging billets $3 to $54 Pittsburgh. Several inquiries for rerolling billets of 2000 to 3000 tons each are now out.

Demand is Heavy

Chicago, Sept. 2.—Demand for sheet bars and steel for wire mills is making heavy calls on the steel capacity of the leading interest, and is taking considerable tonnage which otherwise might go to finishing mills for plates, shapes and bars. While demand for the latter is strong and seems to be increasing, it is not as heavy as that experienced by producers of sheets.

Demands Still Heavy

Pittsburgh, Sept. 2.—Heavy demands still are being made upon the makers of strip steel and most of them now are running 100 per cent capacity. Shipments of cold rolled strip steel are somewhat restricted because of a scarcity of box cars, but since hot rolled strip can be shipped in hopper cars, shipments along this line are normal. Manufacturers have all the business they can handle for the remainder of the year. Books have not yet been opened for the first quarter of 1920. Prices are firm at 5.65c base Pittsburgh for cold rolled and 3.30c base Pittsburgh for hot rolled.

Steel Bar Mills Are Filled

Western Producers Booked to Year End—Export and Some Domestic Sales at 2.50c—Shafting Activity Broadens

Chicago, Sept. 2.—Demand for steel bars continues strong, and this product remains one of the most active departments of the finished steel market. Soft steel bars have been contracted to a point where most mills are practically full for the remainder of the year. Consumers are asking prompt delivery and specifications are being received in full volume, considerably in excess of present shipments. Delay resulting from the recent strike of railroad shopmen has been practically overcome during the past fortnight and mill conditions are close to normal.

Consumers betray little interest in bar iron and mills are losing considerable time, one interest in this district being closed down all this week. Inasmuch as this material depends largely for its activity on railroad buying, the present situation is not surprising.

Buying of hard steel bars rerolled from rails is heavy, large specifications being received from agricultural implement makers, while other manufacturers are specifying on their contracts and some are entering new orders.

Machine Tool Builders Buy

Boston, Sept. 1.—Increased numbers of machine tool manufacturers are coming into the steel bar market to complete their requirements for the present year. In some cases they are finding difficulty in locating a producer ready to accept their business.

Still Sell Iron at 2.35c

New York, Aug. 30.—Although in the majority of cases new business in common iron bars is being entered at the new base price of 2.50c, Pittsburgh, to which makers advanced recently, sales continue to be made right along at 2.35c, Pittsburgh. The latter price, however, may be considered exceptional, and is benefiting only regular customers whose third-quarter requirements had been placed before the advance. Demand for bolts and nuts is active and since prices were advanced the middle of August consumers have been specifying liberally on the contracts placed at the old prices for their third quarter requirements. The first advance in the price of steel bars in the east has been made by the Cambria Steel Co. which has quoted 2.50c, Pittsburgh on a number of inquiries as previously announced. It is understood some business already has been booked on the new basis. As far as known, none of the other makers have followed suit. All of the bar mills are well booked ahead and on many sizes, particularly the small sizes, 12 to 15 weeks' delivery is the earliest that some producers are able to quote. The Cambria Steel Co.'s advance applies to all bar products, making bands 3.20c base.

Want Premiums On Angles

Philadelphia, Sept. 2.—The steel bar situation is getting more interesting. In addition to the advance by the Midvale and Cambria Steel companies to 2.65c Pittsburgh to the outside trade a Pittsburgh mill is asking premiums on small angles, etc., which have to be rolled on high cost equipment. Bar makers say most consumers already have specified all their third quarter tonnage and have begun specifying their fourth quarter material.

Export Bar Orders at 2.50c

Pittsburgh, Sept. 2.—Advances ranging up to $3 a ton recently have been obtained by makers here on export orders for the smaller sizes of bars. Foreign consumers, most of whom prefer to make their own requirements of bolts and rivets instead of buying the finished products, are heavy buyers of the smaller sizes of squares and rounds and this demand on top of big domestic orders has put most makers out of the market for the next few months on sizes 1½-inch and smaller. Makers of cold finished steel bars are specifying freely against contracts. Altogether, the steel bar market is quite satisfactory, although makers could take on more business in large rounds. Urgent demands are coming out for concrete reinforcing bars, as with the approach of fall, construction work is being speeded up. Some makers of rerolled bars have withdrawn mill quotations, as they are doing little except a warehouse business owing to the character of the demand. Out of warehouse, rerolled bars are selling at 2.75c in carloads, or $8 a ton above the mill base. All makers have big orders. Ordinary and refined iron bars, made largely from scrap, are not moving with much snap and efforts to obtain more than 2.75c on the latter grade are not successful save in less than carloads.

New Orders Not Sought

Cleveland, Sept. 2.—Except for supplementary buying from regular customers to fill out needs previously contracted for but found insufficient, leading producers of steel bars are not inclined to accept much new business. This is because of their heavily booked position which will take up their capacity in large part to the end of the year, and to the extended deliveries that now are being made. Specifications are coming in in liberal tonnage. The demand for reinforcing steel continues lively. A local contractor has placed with a Buffalo mill 2600 tons covering several jobs recently taken. For the construction of 16 miles of concrete road between Bedford and Hudson, 300 tons of reinforcing steel will be required.

Bolt Market Booming

Chicago, Sept. 2.—Manufacturers of bolts and nuts find as much business being offered them as they can possibly handle and most plants are operating now at capacity. This means better than 90 per cent and in some cases up to the limit, although ability to obtain sufficient labor is holding back production in a few instances. Mill books are loaded with orders and sufficient material has been bought to keep operations at a high level for a long time.

Makers Well Sold Up

Pittsburgh, Sept. 2.—Orders for nuts, bolts and rivets are heavy and plants in this district are running practically full. Some fair sized orders are being placed by the Emergency Fleet corporation for bolts and nuts and the general demand is good save in track bolts. Books for the last quarter have not yet been opened; indications are that when they are an advance over present prices will be asked. In explanation, it was stated that labor arising over present quotations leave altogether too small a margin for the manufacturer.

Best Week Since Armistice

Pittsburgh, Sept. 2.—With most makers of cold finished steel bars and shafting, last week was the best in the matter of specifications since the signing of the armistice. Surplus war supplies, which have restricted new business throughout this year, appear to have become absorbed, and the outlook now is considered to be the best in some time. Confusion which resulted among jobbers with the inauguration of the base and extra card, replacing the list and discount scheme of quoting, has passed and business now is progressing without a hitch. Mill operations range from 60 to more than 70 per cent of capacity.

Reject Orders

In Lapweld Pipe—Big Orders Hang—Foundry Sales Uneven

Pittsburgh, Sept. 2.—Pipe manufacturers still are so heavily committed on the lapweld sizes as to be unable to give any attention to numerous inquiries which exist for big tonnages of line pipe. It is estimated that if they were so disposed manufacturers could take on business aggregating several thousand miles of line pipe in sizes running from 6 to 16 inches, An inquiry for 300 miles of 8-inch pipe, put out by a Pittsburgh contracting firm, for the Sinclair Oil Co., has not yet been closed and among other projects upon which makers have had a chance to quote is a line from Kansas into Chicago, about 1000 miles. About the only new business in lapweld pipe that is getting attention is that from regular customers, who are being given small tonnages to meet pressing needs. Active building operations in the west and Middle West find reflection in an increased demand for buttweld pipe from those sections. Generally, the buttweld pipe business is good and few furnaces now are idle. Activity in the automobile business helps mechanical tubing, but room for much improvement still exists in boiler tubes.

Export Lots Are Placed

New York, Sept. 2.—Slightly improved conditions are noted in the

eastern cast iron pipe market. In buying for export during the past week or so 1000 tons were closed for Cuba and South America. This business is said to have been done around the level of the domestic market which as recently noted was advanced $2 per ton. Buying still is confined to domestic requirements there being virtually nothing of importance in municipal tonnage.

Late Buying Active

Chicago, Sept. 2.—Lack of balance in buying of cast iron pipe continues with most tonnages running to small sizes. Large-pipe orders are scarce, and this is proving embarrassing to producers. Demand for over 12-inch sizes are unusually light and probably reflect the effort of most cities to keep down their purchases and to take only what is needed for urgent extensions in outlying sections. The National Foundry Co. is low bidder on 1800 tons at Hamilton, O., on which the formal award has not yet been made. Detroit has split equally its 3080 tons between the United States Cast Iron Pipe & Foundry Co., and the American Cast Iron Pipe Co. Bids were opened Sept. 1 at Elmhurst, Ill., on 1700 tons, a contractor's job. Figures will be taken Sept. 3 at Crowley, Wyo., on 150 tons, and Sept. 10 at Rock River, Wyo., on 160 tons.

Pipe Business More Active

Birmingham, Ala., Sept. 2.—Cast iron pipe plants in the south are receiving an increased number of specifications, with requests for early delivery. Many cities are in need of pipe to proceed with public work before cold weather sets in.

Sell on Pound Basis

New York, Aug. 30.—Warehouses in this district have decided to do away with the old method of selling cold rolled shafting and screw stock at list prices less discount. Hereafter they will sell this material in terms of cents per pound. The new base price on cold rolled rounds out of stock in New York as announced by one leading interest during the past week, is 5c, while the new base on cold rolled flats, squares and hexagons is 5.50c. A card of extras for size and quantity has been issued. The New York warehouses which recently advanced their warehouse differential from 75 cents to $1 per 100 pounds have gone back to the old method of quoting which was on the basis of 75 cents per 100 pounds. They found it impossible to establish the new prices because the majority of the warehouses continued on the old basis. Although the advance has been abandoned as far as New York territory is concerned, Philadelphia and Baltimore warehouses generally continue to obtain the $1 differential. There is some variation in prices on sheets out of store. The largest interests are quoting 4.57c on No. 10 blue annealed sheets, 5.50c on No. 28 black sheets and 7c on No. 28 galvanized. In some cases, however, dealers are selling galvanized sheets at 6.75c for No. 28, while some warehouses are disposing of No. 28 black sheets at 5.60 and 5.62c.

Big Plate Lots Sought

Shipbuilding Work Calling for Good Tonnages—17,000 Tons Wanted for Export—Round Sales Reported Both at and Below 2.65c

Philadelphia, Sept. 2.—The navy department is opening bids Sept. 9 on 4200 tons of plates for tender No. 3 to be built at the Philadelphia navy yard and about 10,000 tons are involved in four vessels expected to be let shortly for private account. An inquiry for 17,000 tons of ship steel and several smaller lots for export are current. During past week it is reported the Pennsylvania railroad placed approximately 5000 tons of plates at less than 2.65c Pittsburgh this being in addition to 6000 tons bought by this interest a few weeks ago. On the other hand it is learned that 10,000 tons of plates for domestic use were placed here about two weeks ago at full price. A large export company here says it sold 20,000 plates, shapes and bars during August for shipment to various foreign destinations. In addition there has been a considerable improvement in small orders so that eastern capacity now is finding no difficulty in keeping occupied to extent of about 50 per cent of capacity.

Best Demand from Tank Makers

Pittsburgh, Sept. 2.—Manufacturers of oil tanks still are crowded with business, as the oil companies, unable to secure sufficient supplies of line pipe, are being obliged to add considerably to their storage facilities. The prosperity of this industry is accountable for the bulk of current activities in plates, as other consumers still have ample supplies to meet all current demands. Some export inquiries are coming out, but the resultant business is moderate. Prices of plates are not overly strong and probably will not be until the mills are better supplied with orders. The recent quotation of the Carnegie Steel Co., of 2.50c, Pittsburgh, for the plates for battleships, Nos. 49 and 50, is said not to have been the first evidence of price cutting in plates. A valley manufacturer omitted the extra in his bid on 3000 tons for a navy department supply ship several weeks ago, and on recent export business only in a few instances has more than 2.55c, Pittsburgh, been obtained. Fairly large stocks of plates in the hands of shipbuilders who had government contracts which were cancelled remain something of a factor in the situation.

Figure on Vessel Contracts

Cleveland, Sept. 2.—New ship work is before lake yards and inquiries have been put out for 5000 to 6000 tons of hull plates covering this. Inquiries for a number of marine boilers involving 700 to 800 tons additional also are current. This is the first new construction of consequence upon which lake yards in this district have figured in some months. The matter still is in a preliminary stage and details of the character of the work being figured are not available. Local plate mills continue to receive tonnage in an increasing amount. Talk of the shading of prices continues and it is manifest that some mills are willing to make concessions from 2.65c Pittsburgh on an attractive tonnage.

Mills Keeping Busy

Chicago, Sept. 2.—Demand for steel plates is excellent and the leading independent in this district has sufficient business booked to care for practically its entire output for the remainder of the year. As is usual in such cases, small tonnages here and there can be slipped into the schedule occasionally. The leading interest has a heavy order book, but its capacity is that it will not be embarrassed by further inquiry. A recent inquiry for 1150 tons of ship material, mostly plates, for a tankship to be built by the Union Construction Co., San Francisco, has been followed by a definite order and the tonnage will be furnished by the leading interest here.

The National Shipbuilding Co. has placed in the South 3500 to 4000 tons of plates for two colliers.

Tin Plate Record

Established in August—Orders Largest Ever Received in Period

Pittsburgh, Sept. 2.—August was a record month in tin plate. While orders and specifications did not reach the proportions of some other months, they are estimated to have exceeded any other August since statistics have been compiled. This is due to the fact that the big can companies did not specify as freely during the early part of the year as usual because they carried over rather heavy stocks and early estimates of the size of the perishable food crops fell far short of actual production. The result was a rush of orders for immediate shipment which ran for practically the entire two months beginning with July 1. New domestic demands are expected to be lighter from now on, but orders on the books of the manufacturers are sufficient to keep them running practically full for some time and in addition some huge export demands are coming out. The American Sheet & Tin Plate Co. is operating more than 90 per cent of its mills and independent capacity is equally well employed. It is probable that this rate of operation will continue well into the last quarter in marked contrast with most years when this period is the quietest. Tin plate production for the current year probably will fall considerably below that of last year. Because consumers are likely to close the year with depleted stocks, expectations are running strong for a new high record production in 1920. In only two years of the last 20 has production failed to make an advance over the previous year and in both cases the succeeding year more than made good the decrease.

Awards Show Good Total

All Districts Report Liberal Contracts—Railroad Bridge Tonnage Appears—Eastern Shape Mills Average 80 Per Cent Operations

Philadelphia, Sept. 2.—As recent business in plain shapes has been good mills are active. Operations at eastern mills during August were 80 per cent of capacity, or better. One large eastern maker has some rollings closed as much as five weeks ahead. The current demand for ship shapes is considerable. Several small export shape orders were booked during the past week, and several foreign inquiries are out, including one for 4000 tons. Several fair size structural contracts are expected to be closed soon.

Small Jobs Are Let

Boston, Sept. 1.—Small contracts continue to be let but the aggregate of structural steel business on the books of local fabricators has fallen off some during the past week. A storage building for the French Worsted Co., of Woonsocket, R. I., has been let to the Eastern Construction Co. Another storage building, approximately 100 tons, has been awarded the Casper Ranger Construction Co. to be built at Greenfield, N. H. Bids are being taken on many new projects, including a factory at Everett, Mass., for the Boston Fibre Co.; a manufacturing building in Boston, for Alles & Fisher; a hotel at New Bedford, Mass., to cost $300,000, and a steel and wooden storage building at New Haven, Conn.

August Tonnage Satisfactory

New York, Aug. 30.—Reports from all sides indicate that bookings both of the plate mills and of the fabricating shops were better in August than in any previous month this year. One shapemaker says that for the first time since the signing of the armistice, it has had to close rollings in some cases for three or four weeks ahead, due to the heavy business on books. The current shape tonnage consists almost entirely of small orders. Large single lots are few and far between. Despite the recent concession the price of shapes to the navy department, the shape market continues to be maintained at the regular price of 2.45c, Pittsburgh. The sale to the navy had no effect whatever on the regular market.

Bookings Somewhat Better

Pittsburgh, Sept. 2.—Although considerable room for improvement still exists in the demand for shapes, most makers here note a distinct betterment and expect further improvement in view of optimistic reports from the Middle West and West concerning building activities. Mill operations, however, still are at a comparatively low rate and the fabricating shops as a rule could take on considerable business and still not be up to capacity. Fabricators of steel still note an active inquiry. New construction at the plant of the Pittsburgh Valve, Foundry & Construction Co. will require about 800 tons. The New York Central railroad proposes to add 13 stories to its terminal in New York City and has asked for bids on between 4000 and 5000 tons. The market is distinctly in favor of buyers on fabricated material under active competition from shops who need business to keep going, but plain material prices are holding well at 2.45c, Pittsburgh.

New Bids Are Opened

Cleveland, Sept. 2.—New bids on 2100 tons of steel for the Cuyahoga county jail were opened Sept. 2 by the county building commissioners. The Van Dorn Iron Works bid $109.40 a ton, the King Bridge Co. $109.50 and the McClintic-Marshall Co. $114.20. Bids were taken originally in July, the lowest being $111.90 and the only other one received, $123. Both bids were rejected because they exceeded the architect's estimate of $110, although the lowest bidder submitted his offer on a basis of an estimated requirement of 1700 tons, the total bid being $41,000 less than the architect's estimate. The Cleveland public library commission has decided to open bids Sept. 23 on a fair-size tonnage required for the new library building. A bond issue of $2,000,000 was voted previous to the war but recent estimates showed that the present building cost would exceed the figure by about $500,000. It was decided, however, to take bids to determine present costs. New structural business continues to make a good showing. Bids are to be taken in a few days on 4000 tons of structural shapes for a 13-story apartment house. New hotel projects are pending in Ashtabula, Sandusky and Cedar Point, O., while the new Belle Isle bridge project in Detroit is becoming active again. The Standard Oil Co. also is said to be inquiring for a good tonnage of structural shapes for new buildings in Detroit. The Pennsylvania railroad has awarded 500 tons of bridge work at Columbus. The McClintic-Marshall Co. has been awarded the contract for an additional tonnage of 4000 tons for a building for the Kelly Springfield Tire Co., in Cumberland, Md., making the total awarded for this job 8000 tons.

Building Demand Continues

Chicago, Sept. 2.—Numerous building projects continue to come into the market, and a number of them become contracts on the books of fabricators. However, it appears that many of them hang fire a considerable time and that more new projects appear from week to week than are closed. Among tonnages let in the west recently the two largest are for structures on the Pacific coast, the Balfour-Guthrie Co., San Francisco, placing 1061 tons for an office building, and W. R. Rust, Tacoma, Wash., 900 tons also for an office building. Among new inquiries are 400 tons for an addition to the plant of the St. Louis Smelting & Refining Co., Collinsville, Ill., and 268 tons for a warehouse building at St. Louis for the J. I. Case Threshing Machine Co. The National Shipbuilding Corp., New Orleans, which has been inquiring for material for two colliers to be built on the Gulf, has increased the tonnage of shapes from 1700 tons to 3000 tons. Plates for these vessels will be placed with mills in the Birmingham district, but the latter apparently are not in position to furnish shapes.

CONTRACTS AWARDED

Machine shop, round house and office buildings, for Cuban railways, 1400 tons, to Lackawanna Bridge Co.

School buildings, Williamsport, Pa., 300 tons, to Kellogg Structural Steel Co.

Shop and office buildings, Clearfield Bituminous Coal Co., Clearfield, Pa., 400 tons, to John W. Cowper Co., Buffalo.

Tanks for Humble Oil Refining Co., 700 tons; to American Bridge Co.

Mill buildings for J. & P. Coates Co., Providence, 600 tons; to J. H. Tower, Providence.

Bridge for C. N. O & T. P. railroad over Chattanooga river, 2300 tons; to American Bridge Co.

Pennsylvania railroad bridge at Newark, N. J., 500 tons; to American Bridge Co.

Additional tonnage for Kelly-Springfield Tire Co., Cumberland, Md., 4000, making total awarded 8000; to McClintic-Marshall Co.

Theater, Philadelphia, 250 tons; to Montgomery Iron & Steel Co.

Warehouse for John Mansley, Philadelphia, 300 tons; to Montgomery Iron & Steel Co.

Building for John and James Dobson, Philadelphia, 200 tons; to Montgomery Iron & Steel Co.

Building for Jeffrey Mfg. Co., Columbus, O., 2000 tons; to Case Crane & Engineering Co.

Building for Goodyear Rubber Co., Los Angeles, Cal., 5000 tons; to Burger Iron Works.

Building for Lang Body Co., Cleveland, 200 tons; to Fort Pitt Bridge Works.

Building for Worthington Pump Co., Cleveland, 125 tons; to Fort Pitt Bridge Works.

Building for Anderson Motor Co., Cleveland, 125 tons; to Fort Pitt Bridge Works.

Building for Paige Motor Co., Detroit, 1500 tons; to the American Bridge Co.

New hotel Linard, New York City, 4000 tons; to the McClintic-Marshall Co.

Extension to boat shop, Philadelphia navy yard, 800 tons, to the McClintic-Marshall Co.

Chevrolet factory, General Motors Corp., Detroit, 400 tons; to the McClintic-Marshall Co.

Bridge work for the Pennsylvania railroad at Columbus, O., 500 tons to the Mt. Vernon Bridge Co.

Office building for the Balfour-Guthrie Co., San Francisco, 1061 tons; to the Pacific Rolling Mill Co.

Steel frame building for W. R. Rust, Tacoma, Wash., 900 tons, to the Minneapolis Steel & Machinery Co.

Machine shop and extension to foundry No. 2, for the American Steel Foundries, Granite City, Ill., 378 tons; to the Kenwood Bridge Co.

One truss span across Puyallup river, Tacoma, Wash., for the Chicago, Milwaukee & St. Paul railroad, United States Railroad administration, 269 tons; to the American Bridge Co.

Structural steel for improvemnts to the Larrowe Milling Co., Rossford, O., 229 tons; to the Riverside Bridge Co., Martins Ferry, O.

Structural steel for building for the Flambeau Paper Co., Park Falls, Wis., 205 tons; to the Milwaukee Structural Steel Co.

CONTRACTS PENDING

Coal bunkers for American Coke & Chemical Co., Granite City, Ill., 700 tons; bids being taken.

Building for Corn Products Refining Co., Edgewater, N. J., 1800 tons; bids being taken.

Bridge across Allegheny river, for Baltimore & Ohio railroad, 5500 tons; award pending.

Addition to Railway-Mail-Express building at Grand

Central terminal, New York, 4000 tons; award pending.

Theater, Richmond, Va., 250 tons; bids being taken.

Building for Crown Cork & Seal Co., Baltimore, 200 tons; bids being taken.

Tanks for Standard Oil Co., 5500 tons; bids being taken.

Plant addition for the St. Louis Smelting & Refining Co., Collinsville, Ill., 400 tons. Bids asked.

Warehouse for the J. I. Case Threshing Machine Co., at St. Louis, 268 tons. Bids asked.

Extension of plant of Pittsburgh Valve Foundry & Construction Co., Pittsburgh, 800 tons; up for figures.

Jail for Cuyahoga county, O., 2100 tons; Van Dorn Iron Works lowest bidder.

Apartment house, Cleveland, 4000 tons; bids to be taken in few days.

Allan Motor Co., Cleveland, 400 tons; bids being taken.

Public library, Cleveland, tonnage indefinite; bids to be opened Sept. 23.

Bridges for Southern railroad, 500 tons; inquiries out.

Carbon Steel Better

Philadelphia, Sept. 2.—While high-speed tool steel is weak at $1.35 to $1.50 per pound and there is a lack of big buying, the carbon tool steel market is better. Buying has improved. The regular market on standard material is 15c per pound while ordinary carbon tool steel may be had as low as 12 cents.

Ferro Inquiry Broadens

Large Consumers Come Into the Market—English Competition Uncertain—$95 Seaboard Refused

New York, Aug. 30.—Inquiry for ferromanganese has taken a sudden spurt, and several large lots now are before the trade. The Youngstown Sheet & Tube Co. is inquiring for prices on 2000 tons for this year, and the American Steel Foundries wants 1000 to 1500 for the last quarter of this year and the first quarter of 1920. Several smaller inquiries are out, including one for 500 tons for this year. It is still too early to know how the market will be developed by these inquiries. Importers of English ferromanganese are taking an active interest and have cabled their principals for prices. Just how low the English makers will go to take this business is not known. An indication of their position, however, is reflected in the refusal of one English maker within the past week to accept an offer from a western consumer of 1000 tons at $100, delivered, which is equivalent to not more than $95, c.i.f. Atlantic tidewater.

Demand for spiegeleisen continues of small proportions and sales of carloads comprise most of the current business. Practically all of this business is being done at $35 furnace for 18 to 22 per cent. Owing to the lack of business, no test is afforded as to what might be done on an attractive tonnage.

Fair Sales Made in East

Philadelphia, Sept. 2.—Fair sales of 78 to 82 per cent domestic ferromanganese were made during the past week at prices that established the domestic metal at from $105 to $110, delivered. Some business is reported as having been done at $100, but this is not confirmed.

Several Inquiries Come Out

Pittsburgh, Sept. 2.—While sales of ferromanganese have not increased, consumers are more interested. Evidence of this is found in several good inquiries for supplies for shipment in the next 60 days. One of the inquiries is from a valley steel manufacturer and calls for 3000 tons. In view of the impression that consumers were fairly well covered on this material, the appearance of these inquiries is ascribed in some quarters to a canvass of the trade by the agents of English makers. These factors are believed to have some shipments on the seas and are currently reported to have offered 76 to 80 per cent alloy at $100, delivered, Pittsburgh or valley districts. These offers have led consumers to "feel" out domestic producers, who, it is understood, have named a price of less than $110, delivered, which they lately have been quoting on 78 to 82 per cent material.

Only occasional inquiries are coming out for spiegeleisen, while business in 50 per cent ferrosilicon is almost entirely in carload lots. The market on the latter material is not quotable at better than $80, delivered, Pittsburgh. Only one maker, as far as can be learned, is quoting this alloy as low as $80, but in a market as inactive as the present one, it is usually the lowest seller who makes the price.

The Nonferrous Metals

	‡Copper	Future Straits N. Y.*	†Lead, New York basis	Zinc St. Louis basis	Aluminum	Spot antimony	Nickel ingot
Aug. 27	23.50	52.375	6.00	7.55	33.00	8.75	41.00
Aug. 28	23.50	52.25	6.00	7.475	33.00	8.75	41.00
uAg. 29	23.50	52.625	6.00	7.475	33.00	8.625	41.00
Sept. 2	23.50	53.75	6.00	7.425	33.00	8.625	41.00

* August shipment from Singapore, c.i.f. New York.
† American Smelting & Refining Co.'s price.
‡ Producers' price. Outside market up from 21.75c to 22.25c, casting 21.75c to 22c.

NEW YORK, SEPT. 2.—Trading in nonferrous metals continued slow with the opening of the new month, though there had been expectations of better inquiry after the holiday for which the trade seemed to wait during the latter part of August. However, sentiment was more cheerful, as the labor situation looked more hopeful, so it may be that buying soon will reassume good proportions. This expectation is backed with the belief that stocks of metal held by manufacturers generally are not large enough to run much longer than 30 days, or through October at the most.

Exchange is a dampening factor also. Ordinarily, about half of the country's copper is exported, but exports now are running only about half of normal, and in some recent months even much less than that. Zinc might also be exported except for exchange. Lead, however, is moving in quantity to South America and the Orient, and as a result the lead market is strong, though domestic buying is not heavy.

Tin is bought actively but mostly in small lots and for nearby use. Solder manufacturers lately have been in the market for good quantities, probably reflecting the good business in tin plate. Exchange makes this metal very uncertain. Today the market was strong, and August-September shipment of Straits tin from Singapore, c.i.f. New York, was quoted at a variety of prices, mostly 53.25c to 54.25c. Spot Straits at New York is 56c and 99 per cent tin 54.50c to 54.75c. The London tin market went up sharply in the past two days. The reason is not yet known, except that it was reported recently that buying for American account had cut into stocks in England.

Copper has been unchanged the past few days at 22.25c for spot and September, delivered, in the outside market, while producers continue to quote 23.50c. A buying movement by brass mills is expected soon. The latter are running at a prosperous rate but new orders on their books have not grown so rapidly in the past few weeks. Brass and copper products are unchanged. Brass sheets are 27.75c, rods 26.75c, seamless tubing 36c, copper sheet 33.50c, seamless copper tubing 37.50c. Deliveries by brass rolling mills now take from a few weeks on certain sizes of tubing and rod carried in stock, to several months.

Zinc continues weak. Japan is buying some prime western. Some high grade sold to domestic consumers at about 8.50c, New York. Price of western is today at 7.40c to 7.45c, St. Louis, for prompt, 7.50c to 7.60c. The market still is ruled by second hands.

Antimony is easier at 8.62½c, New York, for spot. Demand is light.

Other metals are unchanged.

Nickel is unchanged at 41c for ingot, 43c for shot, 45 for electrolytic.

Enlarging Contract Board

Washington, Sept. 2.—The board of contract adjustment is being enlarged to meet growing demands. The work is piling up faster than the present board can handle it, and additions are being made to the personnel, announcement of which is to be made later. Col. John Ross Delafield has been made chairman of the board and Col. Joseph Fairbanks vice chairman. Colonel Delafield succeeds Col. C. B. Garnet, who has left the service to resume the practice of law. Lieut. Col. Edward S. Malone has also retired from the board and left the service.

Export Business is Concentrated

England Now the Only European Purchaser of Importance—Sales to France Practically Impossible While Italy is Buying Little—Chilean Railroad Business Develops—Orient Still Sends Large Miscellaneous Orders

NEW YORK, Sept. 1.—Exporters have settled down to face the serious situation which has arisen as a result of the decided drop in foreign exchange on European countries. The sales which have been possible with these countries in the past have declined sharply and now inquiries are falling off. It is feared some months will elapse before there is a material improvement in the situation. In the meantime attention is being directed to South America and the Orient where the exchange on the United States is at a par or nearly so.

The volume of iron and steel exports however, does not appear to be falling off in the least. The business done during August, which is normally a dull month, was much better than some previous, and some of the exporters are of the opinion that September is going to be much better. This optimistic view is held despite the unfavorable situation in Europe, and is prompted by the volume of inquiries which have been received from other sections of the world.

One of the most gratifying developments is the fact that English export houses now are purchasing in the American market not only for India but also to enable them to fill inquiries which they have received from the Orient. These English merchants are doing their best to retain their old customers in this way. The American houses also have discovered that foreign purchasers are beginning to buy for stock, whereas heretofore their buying has been mainly a hand-to-mouth affair. There is still no future buying, but the sales being made to stock up merchant supplies indicate that a better tone is developing in the foreign markets. The effort of American producers to prevent any undue enhancement in quotations is an aid to this movement. Exporters declare that it is becoming increasingly difficult to obtain supplies.

According to a statement published this week, the Consolidated Steel Corp. has been exporting at the rate of 90,000 tons a month during the first seven months of 1919. Steel men estimate this to be approximately 10 per cent of the total iron and steel exports of the United States. If this is true the exports at this date are running at the rate of more than 8,000,000 tons a year. This figure is larger than a number of steel men had been led to believe, and while it is somewhat startling considering the circumstances, they have no reason to doubt its accuracy. During the month of June iron and steel exports totaled some 600,000 tons and that month was by no means out of the ordinary. Heretofore iron and steel exports have been crowded out by the heavy sales abroad of American food and coal. The tendency now is toward a decided decline in the exports of these commodities which should give a wider opportunity to steel.

England is the only customer of importance in iron and steel in Europe today, and yet the sales made there have been made in small lots. A sale of 200 tons of strip steel is noted. England has also purchased at least 5000 tons of sheets during the past month. The inquiries are coming chiefly from merchants who have discovered that they cannot get their wants filled by their own producers. The volume of such inquiries is good. One house reports that it has sold England approximately 500 tons of bars every week for the past several weeks, and has received inquiries for wire rods and wire aggregating several thousand tons. England is asking for sheets, bars and billets, some of the inquiries mentioned being for approximately 2000 tons of each commodity.

Italy and France are about the poorest of the European market for this country, although Italy has purchased a small tonnage of plates, and has made large inquiries for coal. She is also buying rails, plates and pipe, the recent sales of one house running to an aggregate of 6000 tons. French business has been practically dead, and the exchange situation operates seriously against American producers obtaining any business there. It is reported, nevertheless, that a sale of 500 tons of wire rods was recently consummated with France. An inquiry for 2000 tons of sheets has been received.

An inquiry for approximately 250,000 boxes of tin plate has been received from Germany, while Sweden has sent in inquiries for sheets, bars and shapes aggregating about 1000 tons.

India has been buying both directly and through English export houses. Recent sales included bars, tin plate, pipe and sheets. An inquiry for 50,000 pounds of aluminum sheets has been received from India.

The Oriental business appears to grow despite the unsettled conditions. Japan has been buying heavily of sheets. Orders for several thousand boxes each of tin plate have been received from both Japan and China. Japan has recently sent in a new inquiry for 2000 tons of ship plates. The purchases made by the Orient have consisted largely of bars, plates, sheets, and angles. They range between 200 and 500 tons each, whereas the aggregate, it is said, is very large. Japan has purchased 1000 tons of wire, and 1000 tons of wire rods. Inquiries for 3000 tons of heavy rails have been received from Japan, and China has been inquiring again for nails. There has been a very good bar business with both China and Japan. China has also sent in an inquiry for 580 tons of structurals.

Exporters generally agree that the bulk of the export business today is going to South America and the Orient. The minister of ralroads of Chile has asked for bids on approximately $4,000,000 worth of railroad material. These bids are to be opened Oct. 7. Among the requirements specified are 8500 tons of rails and 1000 tons of accessories. Quotations are also being made to Chile on many locomotives and cars. One house is quoting on 20 cars. Smaller sales of railway material including wheels, plates and rails,, are being made to Chile. Chile annually spends approximately $5,000,000 on her railroads, and would spend $50,000,000 this year on extensions provided credits could be arranged upon a reasonable basis.

One house reports inquiries for 60,000 tons of rails, 20,000 tons of tin plate and for lots of tank plates, sheets, structural shapes, etc., all from South America.

The most aggressive of the export houses, and especially those who were most aggressive in striving to develop French business immediately after the armistice, are today practically deserting the European field. They have turned to South America and the Orient where the most stable business is to be had and where credits and payments can be arranged without great difficulty. On the other hand some of the general foreign trading houses are inclined to desert the iron and steel field entirely. They are almost compelled to do this in view of the growth of the Consolidated Steel Corp. and the United States Steel Products Co.

British Still Turning to America

Settlement of Coal Strike to Have Beneficial Effect on Industry, but Pig Iron Production is Still Restricted, and Steel Consumers Place Larger Orders in This Country — Slow Deliveries Deter Some Buyers

Bureau of THE IRON TRADE REVIEW,
Prince's Chambers, Corporation street,
Birmingham, Eng., Aug. 15.

SETTLEMENT of the Yorkshire coal strike and a subsidence of the strike fever in Great Britain has come as a great relief to all industries, and particularly those in the iron and steel trade. The latter have been dominated by the coal strike during the past few weeks, and while production of pig iron is not likely to improve for at least a fortnight the settlement of the most troublesome features of the labor situation is expected to have a beneficial effect. Coincident with the coal strike the hot weather has prevented the working of full shifts, while the general steel shortage has reacted upon the demand for pig iron by restricting manufacturing work generally.

Pig iron prices, so far as published quotations show, have not advanced but those who are compelled to buy are required to contract to pay any increase in cost of production which may accrue prior to delivery.

There is still a great shortage of foundry iron in all markets, and business in pig iron is everywhere restricted. Consumers are not inclined to buy more than necessary for the present, while producers in view of fuel difficulties are not seeking business. East coast hematite is reported to be less scarce, although the supply is still short of consumers' needs. There is a plentiful supply of the lower qualities of Cleveland iron but for this there is little demand.

In the Midland district there has been a further damping down of blast furnaces owing to fuel shortage. Pig iron in the northern and midland markets is firm at last week's prices. Cleveland No. 3 is quoted at 160s ($34.56) for the home market and 165s ($35.64) for export, but the quantities available for export are negligible. Lorraine iron is reported to be available in quantities, f.o.b. Antwerp, but difficulties arising out of exchange have prevented English consumers from buying.

Price of Bars Advanced

In the midland market one or two important advances have been established. Puddled bars are now at £17 5s ($74.52) a ton, although there were still some being offered on Aug. 14 at £16 ($69.12). An advance of £2 ($8.64) for 3/8-inch rounds was obtained by a number of leading firms, making the price £27 2s 6d ($117.18), but this advance has not become general. There is an improvement in the demand for galvanized sheets, which are firm at £29 ($124.28), f.o.b Liverpool.

Much activity is reported from Glasgow and the west of Scotland. Iron and steel works have considerably increased output. The shipbuilding orders for the Clyde have greatly strengthened demand for all kinds of ship plates and angles. The west of Scotland quotations are: Boiler plates, £22 ($97.04) per ton; ship plates, £18 15s ($81); angles, £18 5s ($78.84), all net and delivered in the Clyde area. The home price of black sheets has been increased by 10s ($2.16) a ton, making the basis price for 3/16-inch sheets £22 10s ($99.20).

Prices in the South Wales tin plate trade remain firm. Good inquiries are reported from France, Italy and Portugal. It is stated that of a recent order of 150,000 boxes of all sizes a portion has been placed in Wales. Most local works are booked up to the end of September. The price of tin and sheet bars as regulated by the South Wales Siemens Steel association remains at £14 ($60.48) but the market is firm. Tin plates for the basis size I. C. 20 x 14, 112 plates, 108 pounds, are being quoted at 35s 9d ($7.58) to 36s ($7.64) per box and the tendency is considered to be upward. Galvanized sheets at Welsh works are quoted at £28 10s ($123.12) for 24-gage in bundles. Inquiries are coming in from the Far East and also from South America, chiefly for thinner gages. The returns of shipments of tin plates show 43,048 boxes were shipped last week as against 93,163 boxes the previous week, while the stocks amounted to 252,100 boxes, as compared to 214,252 for the week preceding and 103,539 for the corresponding week of 1918.

Conditions in the Midlands still tend to turn the thoughts of buyers to America. One of the latest examples is the purchase by a large firm of constructive engineers of American structural steel. The prices are said to be substantially below those of home steel works, and large tonnages are now on the way. The difficulty as to freight charges and delivery is considered to be the only obstacle to a large development in this direction. The import of finished bars from America is assisting a number of firms in meeting the difficulties encountered by steel users due to the shutting down of a large Welsh steel concern. A curious result of the tendency to look to America is reported in this district. At certain mills the steelmaking plants were shut down in reliance upon American supplies. The purchases were readily made at advantageous prices as compared with those of British steelmakers, but deliveries were so slow that the firms had to seek the assistance of rival British steel works to avert the stoppage of their finishing mills.

Purchasing from American concerns and foreign trade dealings in general are not only hampered by the shortage of shipping tonnage but are further complicated by the financial situation. A number of prospective buyers of American steel here are said to have been deterred by the demand for cash against bills of lading. As regards rates of exchange, these have moved substantially in favor of Britain as far as France, Belgium, Italy and Portugal are concerned, but under present conditions this does not help Britain. At the same time New York has again moved heavily against us, and the value of the British pound in New York is $4.32 on which basis the American price equivalents are quoted in this article.

Points to Need of More Production

Foreign competition in the iron and steel trade has been the subject of speeches by many leading members of the labor party this week. Mr. Roberts, food minister, as president of the Industrial League convention dwelt strongly on the importance of increased output and decreased cost of production if foreign trade is to be maintained, and pointed out that without foreign trade wages must go down.

Pig Iron Increases 12.5 Per Cent

August Output Continues on Rise for Third Consecutive Month — Nonmerchant Production is Responsible for Large Gain of 302,369 Tons — 23 Stacks are Blown in During Month

PRODUCTION of coke and anthracite pig iron in August increased at practically the same rate as during July, the percentages being 12.5 and 13.3 respectively. August concludes the third month to show increased production after a steady decline for eight months. The month's output represents 77.5 per cent of the high mark production of September, 1918, and is the highest figure reached since March of this year.

AVERAGE DAILY PRODUCTION

	1919	1918	1917	1916	1915
Jan.	106,654	77,523	101,930	102,319	51,323

June	70,467	110,538	108,675	107,127	78,998
July	78,200	105,954	107,659	103,907	82,687
Aug.	87,954	108,983	104,483	103,156	89,510
Sept.	.....	113,774	104,691	106,935	94,478
Oct.	.....	112,335	106,332	113,167	100,656
Nov.	.....	111,595	106,620	110,593	101,174
Dec.	.....	110,602	93,077	102,715	103,278
Av.	87,328	105,293	104,562	106,610	81,022

The August total was 2,726,581 tons, a gain of 302,369 tons over the July total of 2,424,212 tons. Daily production was 87,954 tons, an increase of 9754 tons over the July average output of 78,200 tons. Production is still continuing to rise at a greater rate than that at which it fell.

Nonmerchant or steel works production in August was responsible for the greater part of the total gain, the increase in tonnage being 262,223 tons out of the total of 302,369 tons. The total steel works output was 2,171,760 tons compared to 1,909,537 tons in July. Nonmerchant daily production averaged 70,056 tons compared to 61,598 tons during the previous month, a gain of 8458 tons. Merchant iron production was 536,682 tons, a gain of 43,177 tons over the July figure of 493,505 tons. The daily output of merchant iron of 17,312 tons showed a gain of only 1392 tons over the July average of 15,920 tons.

Active stacks in blast on Aug. 31 totaled 263 or a gain of 23 stacks over the July number of 240. This net increase was made up of practically equal gains in merchant and steel works stacks. Of steel works stacks, 16 were lighted and 4 were put out of blast, a net increase of 12. Of merchant stacks, 17 were lighted and 6 were blown out, a net gain of 11. During July the greater number of stacks blown in were steel works furnaces.

The total pig iron made in the first eight months of the year is 21,188,781 tons compared to the totals for the same periods of 1918 and 1917 of 24,759,915 tons and 25,643,971 tons respectively.

Spiegeleisen production showed a slight gain in August of 349 tons, with a total of 8179 tons compared to the July total of 7830 tons. Ferromanganese production, however, fell from 13,340 tons in July to 9960 tons in August, a loss of 3380 tons.

The Milton Iron Co., Wellston, O., blew out its Milton stack on Aug. 18. A new stove, 18 x 85 feet, and a draft stack, 6 x 150 feet, will be built. The furnace and two old stoves will be relined.

Navy Contracts Awarded

Washington, Sept. 2.—The navy department has awarded to the Carnegie Steel Co. contracts for approximately 25,500 tons of plates, shapes and bars and to the Phoenix Iron Co, through R. C. Hoffman & Co., contract for 2500 tons of channels, all of this material for battleships Nos. 49 and 50. It was on this tonnage that Carnegie quoted 2.50c, Pittsburgh, for plates, 2.40c for shapes and 2.35c for bars. The Phoenix bids were at the levels established by the late industrial board and which have been the current market prices.

Made President's Aid

William Thompson has been named as assistant to President W. P. Palmer of the American Steel & Wire Co. with headquarters at Cleveland, effective Sept. 2, succeeding the late Alvah S. Chisholm. Mr. Thompson has been attached to the office of the president of the company for many years.

Buys 30-Mile Railroad

New York, Aug. 30.—The New York office of Wilkoff Bros. recently bought the Elk & Little Kanawha railroad, with a line of about 30 miles of track and with headquarters at Gassoway, W. Va. The purchase included about 2200 tons of steel rails and equipment, including bridges, buildings, locomotives, cars, etc. The Wilkoff Co. already has sold one-half of the rail tonnage for shipment to the Far East.

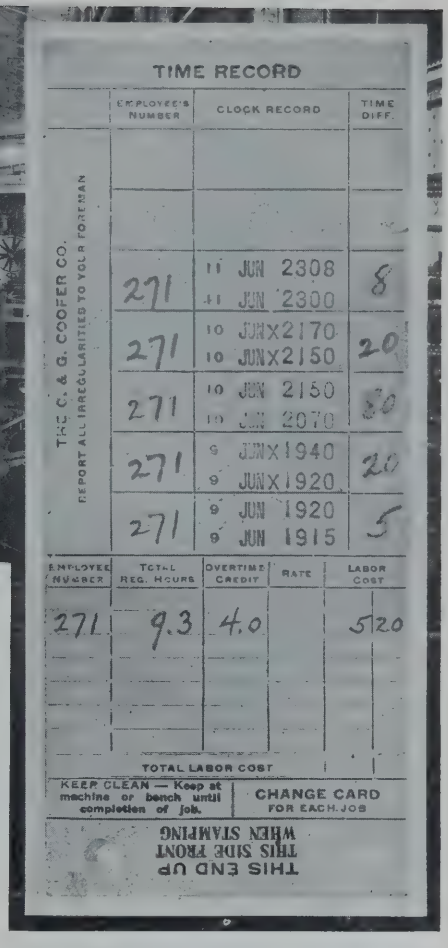

FIG. 1—PERIODOGRAPH CARD, INDICATING HOW TIME OF OPERATOR IS RECORDED

Controlling Production in a Jobbing Shop

BY E. L. SHANER

FUNDAMENTALLY, manufacturing consists of obtaining materials, fashioning them into suitable shapes and assembling them into the finished product. Primitive man, desiring to construct a knife or other tool, looked for metal or stone for the blade and wood or bone for the handle. Having secured the materials, he worked them into the desired shapes. Finally, he fastened the various parts together, thus completing the job.

Unconsciously, the man reduced to such methods follows the sequence of these simple operations instinctively, yet it is a singular fact that in the complex ramifications of modern industry, manufacturers often lose sight of these fundamenatls. In large plants, work on certain jobs frequently is held up because an item of material has been overlooked. Costly delays often occur because work is not properly planned in advance of its execution. Because of these deficiencies in many present methods of manufacture, plant executives are realizing more and more that control of production is essential to

successful operation. An adequate system of control keeps the management constantly informed of conditions in the plant and permits intelligent supervision of operations. The progress made on any job may be ascertained at a glance, and accurate cost data are always available.

Many manufacturers engaged in multiple production of standard articles are employing control and cost systems in their plants. Factory control is an acknowledged success in this field, and perhaps that fact is partly responsible for the belief, generally held by many plant managers, that the system is not adapted to jobbing shops and plants where scarcely, if any, duplicate work is done. That production control can be exercised efficiently and to unusually good advantage in such an establishment, is proved by the experience of the C. & G. Cooper Co., Mt. Vernon, O. This company operates a large foundry and machine shop and builds large gas and steam engines, forging presses, rolling mill and general machinery. The majority of these machines are built to special specifications, there being very little duplicate work in the shop.

For more than four years, the company has employed a system of controlling production, which, in addition to greatly increasing the efficiency of operation, also has enabled the management to obtain costs with simplicity, efficiency and accuracy.

Company Has Interesting History

The history of the C. & G. Cooper Co. dates back to 1833 when Charles and Elias Cooper erected a foundry at Mt. Vernon. In order to finance the undertaking, Charles Cooper sold one of his three horses for $50, accepting a note payable in coal for that amount delivered at Zanesville, O. This note was exchanged for another, payable in

LANT SHOWING LOCATION OF PRODUCTION AND DISPATCH OFFICES. FIG. 6—PRODUCTION OFFICE
IG. 7—(AT THE RIGHT) MOVE ORDER, WHICH IN PART IS DUPLICATE OF MACHINE SHOP ORDER

paper at wholesale, which Mr. Cooper traded to P. A. Taylor & Co., Granville, O., for the bottom and staves for a cupola. The foundry material was moved from Zanesville to Mt. Vernon in November on two wagons. A drive propelled by a horse was built to operate the cupola fan. In 1836, a small 6 x 24-inch steam engine was built to operate the fan and since that time, the C. & G. Cooper Co. has been engaged in building engines and heavy machinery.

Production Control Becomes Necessary

For many years the business progressed favorably without any definite attempt being made to control production or to arrive at exact costs. The company successfully survived the panics of 1837 and 1857, although it suffered losses in the latter year on account of the failure of several railroads for which the company was building locomotives. In more recent years, when competition became a more prominent factor in the business, it was apparent that more accurate costs must be obtained and production must be better controlled if the company was to engage in the large amount of work offered. This desire to systematize the operations of the plant resulted in 1915 in inaugurating a system of cost finding and production control. Prior to that time the company was satisfied to know its approximate costs and its earnings or losses annually; now it receives the cost information at the completion of each job and is able to present a monthly profit and loss statement.

Under this system, when an order is received by the company, a copy is sent to the engineering department, which prepares a production list, showing the drawing numbers, pattern numbers, description of materials, and names of parts of all articles required for the

completion of the order. This information appears on a blue printed sheet 8½ x 11 inches, one of which is shown in Fig. 2. The sheets containing lists of all the parts for one job are bound together in booklet form and sent to the production department.

Upon receipt of the production list, requisitions are immediately issued for the castings, forgings and other materials necessary for the completion of the order. At the same time, the head of the production department calls the foremen of the various operating departments to confer on the routing of the job through the plant. The foremen carefully study the production list, and after discussing the problems involved, determine upon a plan of handling the job. The plan of routing which they adopt is set down on a detailed time and routing record, as shown in Fig. 9. This form provides for the print number, the item, the name and description of the article, the material of which it is made, the number required and the department and machine on which each operation is performed. A number of abbreviations, shown in the illustration, simplify the notations on this routing record.

The detailed time and routing record represents one of the greatest labor and money-saving features of the control plan adopted by the Cooper company. The preplanning of the job, performed as it is through collaboration of foremen of the various departments, tends to prevent discord as the work goes through the shop. It also insures that each detail will be more carefully considered than if the routing were left to a single department. Moreover, since each foreman has had a hand in planning the work, he feels under obligation to make his work good by living up to the schedule. This practice of planning work beforehand has contributed largely to the success of the system of plant control.

After the detailed time and routing record has been prepared, part of the information is entered on a form known as a controlling record of patterns, material and labor. This form will be mentioned in greater detail later. At the same time the controlling record is prepared, a 3¼ x 8-inch card, similar to that shown in Fig. 4, is made out for each operation for each article required to complete the job. A pink slip of paper of the same size as the card and containing the same information, accompanies each card. The cards serve as shop orders and the pink slips as move orders.

The cards, with their pink duplicates, of all operations of the same piece are fastened together and held in suitable files in the office of the production department until the material for the job arrives in the shop. Each group of cards and pink slips comprises the complete routing of a certain piece.

When advised that the material for a certain job has been received, the production department sends the shop or-

TION. FIG. 10—CONTROLLING RECORD OF PATTERNS, MATERIAL AND LABOR, ON WHICH T

der cards to the various dispatch offices. The location of the production office, dispatch offices and the various departments is shown in Fig. 5. It will be noted that in some cases one dispatch office serves for two departments. Each dispatch office is in charge of a dispatch clerk and is provided with a feeder box for holding cards representing jobs ready to be worked; a cabinet made by the McCasky Register Co., Alliance, O., for holding cards of jobs in operation; and a periodograph register made by the Gisholt Machine Co., Madison, Wis., for stamping on the cards the time each operation is started and stopped. As the cards and their duplicates are received by a dispatch clerk from the production department, they are placed in the feeder box where they are sorted according to jobs. As the time for doing the work on a certain job in the shop approaches, the card is removed from the feeder box and placed in the McCasky cabinet. Each metal divider of this cabinet carries a tab showing the number of a certain machine. The card of the work being done on that machine is inserted in the cabinet directly under the machine number. The cards for the next jobs for that machine are placed to the right of the number. The dispatch clerk depends upon the position of the cards to determine the sequence in which the jobs are to be handled on a particular machine.

When a workman completes a job and is ready for another, the foreman of the department notifies the dispatch clerk that the job is completed and the workman is starting another. The dispatch clerk then takes the card for the completed job from the McCasky cabinet and rings the man off the finished job on the periodograph register. He then immediately rings the man in on the card for the next job. The workman has previously been provided with the necessary blue print and instructions, and the periodograph cards have been carefully arranged in the proper sequence.

The periodograph register records on the card the day and month, and the time in tenth-hour periods, instead of hours and minutes. It is only necessary to insert the card in the periodograph and pull the lever once to print this information. Perforations prevent the card from being inserted upside down and make it impossible to stamp one record over another.

Inasmuch as the shop order, or periodograph card, is the keystone of the entire system of production control and cost keeping, the apparatus which enables the register to properly stamp the card should be mentioned. All of the registers, one of which is shown in Fig. 3, are controlled by a centrally located clock, similar to that shown in Fig. 13.

The apparatus is adjusted so that the time is stamped on the card in terms of 6-minute periods. The first period begins on the first day of each pay period, and other periods are numbered consecutively until the end of the

pay period. Referring to Fig. 1, it will be noted that workman No. 217 started a certain job at period 1915 on the 9th of June. He worked until period 1920 and continued until period 1940, the elapsed time from 1920 to 1940 being overtime, as designated by the cross. On June 10 the man worked 80 periods, an equivalent of 8 hours, and 20 periods, or 2 hours overtime. As the periods represent tenth hours it is easy to compute the net time consumed, and as they are counted consecutively every fraction of each workman's time can readily be accounted for.

In case a piece of work is spoiled, a blue card similar to the machine shop order is made out and used. All forge orders appear on green cards which are similar in all other respects to the shop order already described. At the end of the month, the original card of each operation which is unfinished is turned in to the general office in order to balance the payroll, and to check against in-and-out cards. A duplicate is prepared which follows the work throughout the next pay period or until the job is finished. The time of all men engaged on nonproductive labor is kept upon general purpose periodograph cards. Cranemen, sweepers, electricians, oilers and repair men use these cards.

When an operation is finished, the dispatch clerk takes the pink slip from the feeder box and gives it to a trucker as his order to move the material to the department or machine where the next operation is to be performed. Work that is completed and ready for assembling, is sent to the finished stock room, which is a repository for finished goods awaiting assembly.

When an operation is completed, the dispatch clerk sends the card to the production department. Here it is checked against the form known as the controlling record of patterns, material and labor.

This record, a copy of which is shown in Fig. 10, shows the drawing number and a description of each article, the kind of material from which it is made, the number of pieces required, and under the heading "Machine Shop Record," a list of the various operations. As the card for each operation is returned to the production department, the operation is checked off in the last column. By referring to this control record of patterns, materials and labor, it is possible at a glance to determine

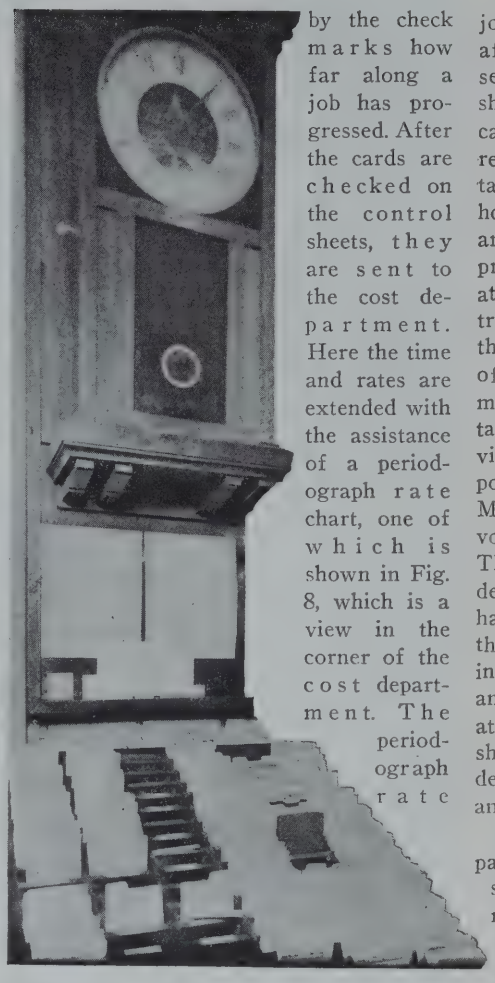

FIG. 13—CLOCK WHICH CONTROLS PERIODOGRAPH REGISTERS. (BELOW) FEEDER BOX IN A DISPATCH OFFICE

by the check marks how far along a job has progressed. After the cards are checked on the control sheets, they are sent to the cost department. Here the time and rates are extended with the assistance of a periodograph rate chart, one of which is shown in Fig. 8, which is a view in the corner of the cost department. The periodograph rate chart enables the operator to determine the labor cost for any number of periods at the various rates. The operator is also aided by a card system index which shows for each workman, the number, name, rate of pay for eight hours and rates for overtime. After the time on the card has been extended and the labor cost inserted as shown in Fig. 1, the values are transferred to the proper jobs or account number and the cards after having been classified and assembled, are placed on file in the rack shown in Fig. 8. The items from the cards chargeable to jobs are copied directly onto a record known as the detailed direct labor cost record. The hours and labor costs from the cards are entered on this sheet in the spaces provided. Information from this sheet at the completion of the job is again transferred to another record known as the summary of cost of job. The cost of material is entered onto this summary from a record known as the detailed material cost record which previously has been made up from reports sent to the cost department. Material records are made from invoices, store stocks or foundry costs. The direct labor is entered from the detailed direct labor cost record which has just been mentioned. After adding the factory overhead to the direct labor, indirect charges such as administrative and selling expenses are added as shown at the bottom of the summary cost sheet. Various forms used in the cost department are shown in Figs. 12, 14 and 15.

Another form used by the cost department is the repair stock order cost sheet, which contains the information regarding labor, material and indirect costs of repair jobs and stock orders.

Information relative to labor distribution, stores distribution and invoice payments is accumulated under account or job numbers and given to the general bookkeeper monthly for use in the controlling journal. The monthly profit and loss statement is made up from the entries in the controlling journal which is ruled to take the following accounts: Accounts receivable and payable; stores, including finished stock; work in progress, divided into material, labor and expense; administrative or general expense, and selling

expense. The system of production control is operated in the foundry department of the C. & G. Cooper Co. in a manner similar to that of the machine shop department. Although the work of the foundry consists of odd jobs, there being very few operations which are duplicated, the system has met with the utmost satisfaction. An individual cost is secured on every casting produced. Instead of the general purpose cards for nonproductive foundry labor, a special card is used for workmen who are engaged on cleaning castings, pouring metal, handling sand and doing other work which cannot be charged directly to any particular job. When the present system was inaugurated some of the workmen looked upon it with suspicion, believing that it was designed to thrust additional hardships upon them. However, as they became used to this new system, they discovered that in reality it saves time for them and now that they realize the accuracy with which this method keeps track of their earnings, they are strongly in favor of it.

The present officers of the C. & G. Cooper Co. are D. B. Kirk, president; B. B. Williams, vice president and general manager; F. H. Thomas, treasurer and manager of sales; Z. E. Taylor, secretary and assistant general manager; N. L. Daney, assistant treasurer and auditor, and B. L. Larsen, general superintendent. During the war the company successfully completed a contract for 3-inch shells and constructed a large number of special machines for munitions making. Among these were nearly 50 large forging presses. The company also has successfully executed a large order for the Emergency Fleet Corp. for marine engines. The above equipment was built in addition to the regular line of steam and gas engines. It is a significant fact that owing to the system of cost keeping in effect in its plant, the C. & G. Cooper Co. has been unusually successful in securing prompt and satisfactory settlement for its government work. Increased production and earnings have been secured and the company has been able to carefully analyze various branches of its business and to determine accurately what work is best fitted to its plant and organization.

To Build Homes

Housing facilities at Wilmerding, Pa., the home of the Westinghouse Air Brake Co.'s works are to be increased by the erection of a number of dwellings for employes. Official announcement is made of the organization of the Westinghouse Air Brake Home Building Co., with a capital of $1,000,000 to transact all business relative to real estate and dwellings which have been transferred to this company by the Westinghouse Air Brake Co. It includes the ownership of over 400 houses and considerable vacant property. Since the air brake company built its first houses for employes in 1890 there has never been an increase in rents and the new company will carry out the same policy.

The Van Dorn & Dutton Co., Cleveland, exhibited the operation of a Gleason spiral bevel-gear generating machine on a prominent street corner in Cleveland. The nine operations in making the gear were also displayed and the gears themselves as fast they were produced were applied on an actual order from a prominent builder of tractors.

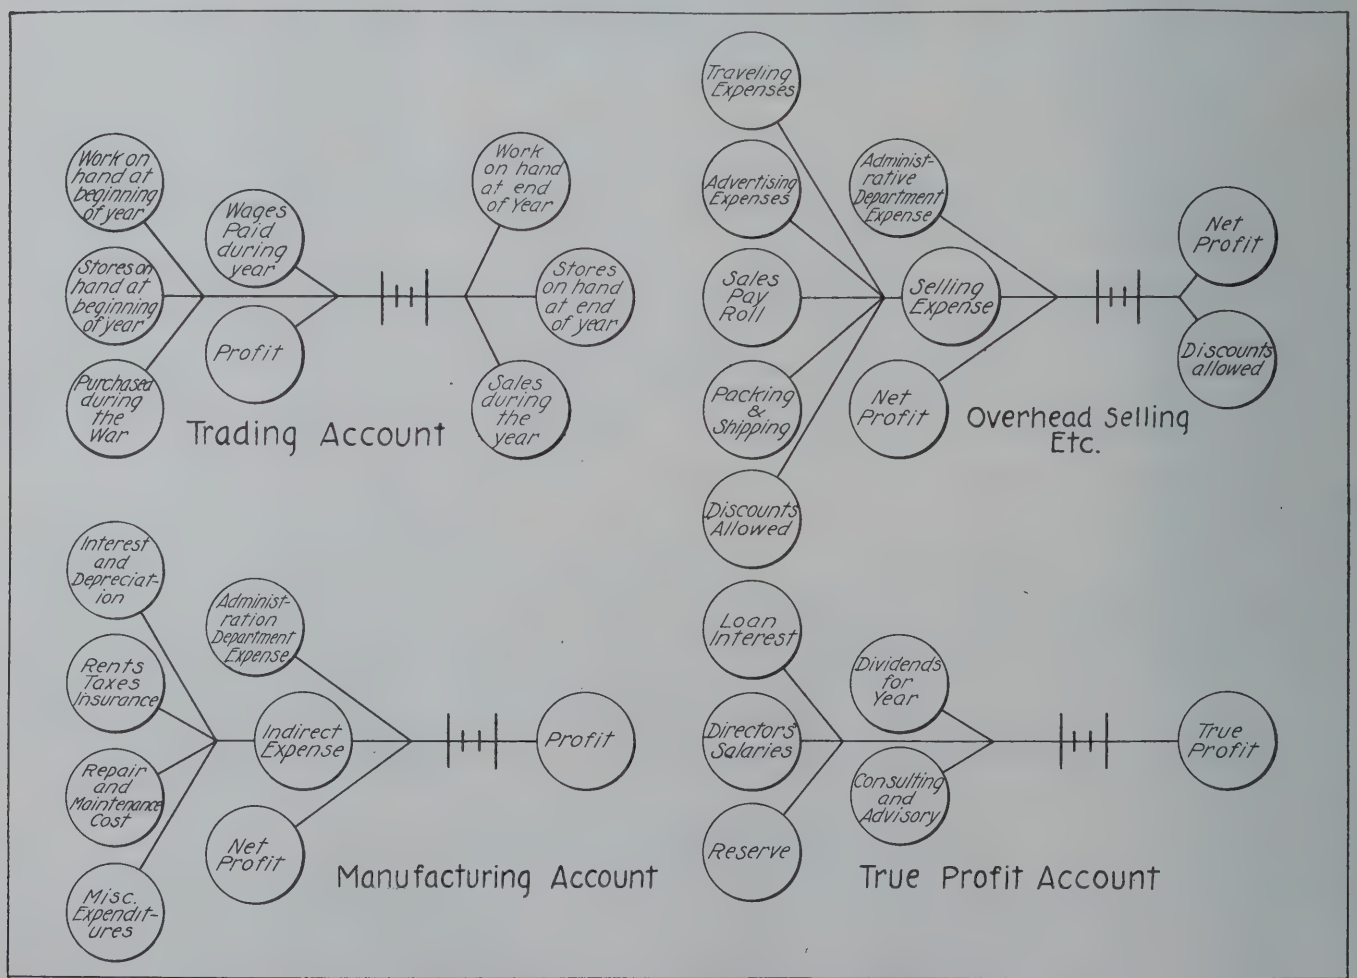
Summarizing All Cost Factors

Easy Method for Determining Basis for Fixing of Selling Price Outlined—Plotting of Expenditures of Value in Making Comparisons—Figuring Depreciation Charges Explained

BY M. H. POTTER

VARIOUS accounts into which expenditures are divided are illustrated in Figs. 1, 2, 3 and 4. It will be noted that profits are recorded in each account and finally are listed as a total in Fig. 4.

Not only is the division of each account of interest, but also the method and reasons for using figures which represent the expenditures for certain articles or classes of articles. It is readily understood that expenditures should be recorded in accordance with certain articles, or, perhaps, classes of articles, because certain lines may be experimental and require a large amount of money to cover selling expenses. At this time when so many new lines of manufacture are being taken up and when large expenditures are necessary to introduce them, this important subdivision must be thoroughly accounted for.



As previously pointed out, the method of subdivision outlined in this series of articles detects abnormal and excessive expenditures in any department. It is of great value for comparison. Principal expenses, no matter what they may be, which vary according to the character and line of manufacture are readily determined; for example, tooling costs necessary to produce a certain article. This expense may be distributed over a certain period and a percentage obtained to cover the tooling cost of each article produced in that period. The selling price may be determined immediately. This is true in regard to all of the various expenditures either direct or indirect.

Fig. 5 illustrates a method of plotting expenditures and is of value for comparison, week by week, month by month, or by financial periods. By subdividing into departments, certain expenditures may be readily seen and checked against estimated figures.

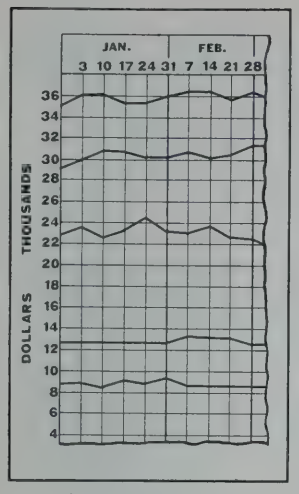


Fig. 6 illustrates depreciations which are most important, and records which should be carefully kept if economical and correct cost figures are to be obtained. The importance of determining the correct percentage of depreciation in each and every department of the organization can not be emphasized too much.

It must be understood that expenditures made for maintenance and repairs tend to offset depreciation due to wear and tear, but only in certain

This is the eighth and last article of this series on industrial accountancy written for THE IRON TRADE REVIEW by M. H. Potter.

FIGS. 1, 2, 3 AND 4—DIVISION OF EXPENDITURES INTO VARIOUS ACCOUNTS

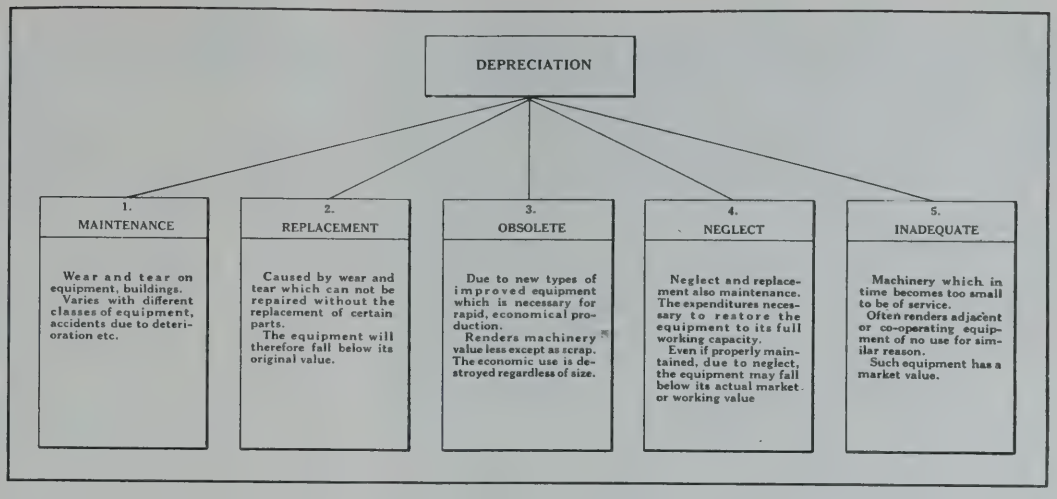

FIG. 5—CHART FOR PLOTTING EXPENDITURES. FIG. 6—OUTLINE OF SYSTEM FOR DETERMINING DEPRECIATION CHARGES

cases may they be considered as balancing depreciation losses. In some plants the equipment will wear out so rapidly that it will need frequent renewals. On the other hand, in many cases a large amount of renewals and additions are constantly under way and depreciation is fully compensated. However, there are many instances where repairs and replacements do not compensate depreciation. Equipment may be kept in the best of repair, but there comes a time when renewals of complete equipment must be made. It has been a "rule of thumb" among many manufacturers to consider the amount spent for additions, renewals and repairs sufficient to compensate for all depreciation. While this rule serves the purpose in some instances, it is advisable when accurate profit is to be determined to analyze depreciation as suggested in Fig. 6.

While a machine several years old may appear to be in first class condition and will perform its work correctly, its working life shortens yearly and provision should be made for that time when it must be replaced.

Depreciation should not only be computed as related to each department, but it also is important where several lines of goods are manufactured that distinct separate analysis be made, in order that depreciation charges related to one shall not be charged to another. As many manufacturing systems and processes change from year to year foresight must be used when depreciation percentages are calculated.

Better Grade of Steel is World's Need

MANY of the difficulties which beset American manufacturers of steel for ordnance materials during the war would have been eliminated if the quality of the steel used had been better, according to Maj. F. F. McIntosh, associate chief metallurgist of the ordnance department's technical staff, who read a paper on the subject at the March meeting of the Engineers' Society of Western Pennsylvania at Pittsburgh. Major McIntosh was sent to England and France by the inspection division of the ordnance department to study the methods of inspection and manufacture of ordnance materials in those countries as well as the metallurgical phases of the work. He declared that if American manufacturers are to compete successfully with the English in the world's market, they must give less attention to tonnage and more to the quality of their product.

Major McIntosh went abroad to find out if there were short cuts that might aid American manufacturers, but found that English and French tests of material were even more severe than those made in this country and that success was achieved by manufacturers in those countries by foregoing speed in favor of care in production. Not only in this but in practically all other directions, English practice is quite the opposite of American, the major found. Only acid furnaces are used in the making of steel, the few electric furnaces in use there being employed in remelting scrap. A close record of each heat and the temperature is kept.

By taking small amounts of metal before tapping, and submitting it to the forging test, it is known before pouring whether or not the steel is satisfactory. The hot ladle is unknown in England, although the ladle is warmed and dried by a small wood fire before the metal is run off. Ladle nozzles are from three-quarters to seven-eighths of an inch in diameter. Top casting is general, as it has been discovered that where bottom casting has been tried rejections of from 8 to 10 per cent have resulted, as compared with less than a tenth of 1 per cent by the former method. Hot top inverted molding of ingots has been found to make the metal sounder and to result in horizontal rather than longitudinal segregation.

The molds are carefully cleaned before teaming. Forging difficulties in England have been due largely to heating methods. Good steel has been obtained regardless of the shape of the dies whether heated in coal or gas furnaces. Oil furnaces have been found to give too intense a heat for safe practice. Since nickel and nickel chrome steels are generally used in gun forgings temperatures are carefully observed owing to the danger of forging them at low temperatures.

Heating for quenching is far less of a problem to the English than American steelmakers. Major McIntosh explained this was due to the tendency of the latter to cling too closely to theory. Forgings for the 75-millimeter gun in England are heated for about one hour and a half at from 850 to 900 degrees Cent., and allowed to remain at maximum heat for about 15 minutes. This contrasts with American practice of 14

Erects Fabricating Shop in South

Fairfield Works of Tennessee Coal, Iron and Railroad Co. is Equipped With Largest Plate Mill in South—Blooming, Bar and Structural Mills and Fabricating Shop Complete Plant

THE development of a modern plant in the South for rolling and fabricating plates, bars and shapes for shipbuilding and other construction purposes, which is described on this and following pages, is of unusual significance. In completing various extensions to its Fairfield works, the Tennessee Coal, Iron and Railroad Co. provides and links together the manufacturing units necessary to make the South independent of northern material. For the first time in history, the South is producing from its own ores the structural material for its needs. The shape mill at Fairfield is the first of its kind to be established in the South; the Fairfield plate mill while preceded by the mill at Bessemer, is the first wide plate mill to be built in the land of Dixie. Southern ore now may pass through the various steps of refinement in southern furnaces, mills and fabricating plants and emerge as finished structural material suitable for southern ships and buildings. The Fairfield and Chickasaw plants are expressive of the impetus given to shipbuilding in the South by the war. The modern facilities at Chickasaw, reinforced by the supply of the necessary plates and shapes afforded by the Fairfield works, place the South in a position to compete with other sections of the country in the building of steel cargo ships.

INDUSTRIAL development in the South, due to the war, has been rapid and has brought about the construction of plants for handling work new to southern manufacturers. The new plant of the Tennessee Coal, Iron & Railroad Co., at Birmingham, Ala., for fabricating shipbuilding material, is of such a character, as it opens up a new line of industrial activity in the South. This plant is known as the Fairfield works and is located about 1 mile west of the by-product coke plant of this company. The initial installation consists of a 45-inch blooming mill, a 36 x 110-inch plate mill and a combination bar and structural mill.

Hot ingots are carried from the Ensley plant of the Tennessee company to the Fairfield works over a broad-gage track. The ingots are taken direct from the Ensley open-hearth plant to the stripper building at the new works on specially designed ingot cars.

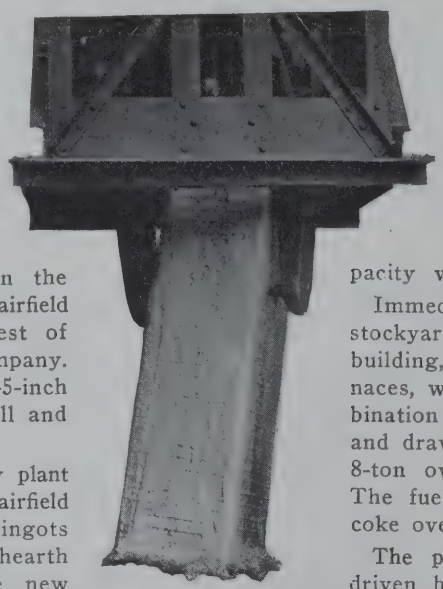

FIG. 1—INGOT CRANE IN SOAKING PIT BUILDING

The stripper crane runway is 180 feet long and has a span of 86 feet, center to center of crane rails, and is served by a 200-ton stripping crane. There are four 4-hole soaking pit furnaces, each hole being 7 x 10 feet in area. This building is 300 feet long, 86 feet crane span, with a 35-foot leanto over the valves for its entire length. The capacity of the charging crane for these pits is 15 tons. The top of the pits is approximately 6 feet above floor level, the ingots being delivered to the blooming mill by means of an electrically operated ingot buggy.

The 45-inch blooming mill is located in a building adjacent to the furnace building, having a length of 440 feet and 75-foot span, and is served by a 50-ton electric overhead traveling crane. This mill has a lift of 52 inches, the top roll being lifted electrically, and is driven by a motor set consisting of two 2800-horsepower, 55 revolutions per minute, 900-volt motors, constituting a 5600-horsepower unit of a maximum capacity of 20,000 horsepower. The flywheel motor generator set is made up of three 2000-kilowatt, 360 revolutions per minute generators driven by one 4000-horsepower, 360 revolutions per minute, 6600-volt induction motor, and provided with a 100,000-pound flywheel. This mill motor, together with its motor generator set, is located in a motor house adjacent to and parallel with the main mill building and is served by an overhead traveling crane of 50-ton capacity. This building is 240 feet long and 70 feet wide, and in this same motor house there is located a substation.

For shearing the slabs and blooms there has been installed a 1200-ton hydroelectric shear of a capacity to cut a slab 12 inches thick and 44 inches wide.

Between the blooming mill and the finishing mills, there is a stockyard having a span of 100 feet and a length of 500 feet, which is served by an overhead traveling crane of 25-ton capacity with a 10-ton auxiliary hoist.

Immediately adjacent and parallel to the stockyard is a well equipped reheating furnace building, provided with eight reheating furnaces, which serve the plate mill and the combination bar and structural mill. The charging and drawing for these furnaces is done by two 8-ton overhead, electric, slab charging cranes. The fuel used in these furnaces is by-product coke oven gas and tar, or fuel oil.

The plate mill, 36 x 110 inches in size, is driven by one 4000-horsepower, 82 revolutions per minute, 6600-volt, mill type motor with flywheel. The leveler for this mill has has a capacity of straightening plates 96 inches wide x 1⅛ inches thick. The end cutting shear has a blade 110 inches long and is motor-driven. The side cutting shear has a knife 190 inches long and this also is motor driven. There are two motor-driven, vertical scrap shears and one motor-driven circle cutting shear.

The building over the plate mill proper is 400 feet long by 62 feet wide, provided with one 50-ton overhead traveling crane. The shipping building for the plate mill is 440 feet long x 100 feet wide, and has one 96-foot span crane with two 10-ton trolleys on the bridge. The motor house is 100 feet long x 80 feet wide, and is served by one 50-ton overhead traveling crane which

has a span of approximately 76 feet.

The furnaces in the reheating furnace building, in which the slabs for the plate mill will be heated, have a hearth dimension of 10 feet wide by 42 feet long, while the furnaces for the combination bar and structural mill, for heating blooms and beam blanks, are 14 feet wide x 42 feet long.

The combination structural and bar mill is a mill after the type of the cross-country mill and consists of one stand of three-high, 28-inch rolls, three stands of 26-inch rolls and two stands of 24-inch rolls. The roughing mill on the 28-inch three-high mill is driven independently by one 2500-horsepower, 82 revolutions per minute, 6600-volt mill type motor, while the 26-inch and 24-inch trains—with the exception of the finishing train—is driven by a variable speed motor of 3000 horsepower, 6600-volt, by means of a long driving shaft with bevel gear connection to each train

The finishing train of rolls is driven independently by a 1000-horsepower, high-speed motor, direct-connected to a gear-reducing set. This mill is provided with variable speed motors arranged for rolling speeds from 500 feet up to 750 feet per minute. The slowest speeds are used on the heavier and the fastest speeds on the lighter sections.

The main building is 560 feet long x 75 feet wide, and the motor house located adjacent and parallel to the main mill building is 320 feet long x 60 feet wide. Roll changing in this mill is done by two electric overhead cranes. These cranes lift the housings, with the rolls in them, from the shoes and set them out to one side on stands prepared to receive them. The worn rolls are replaced by sets of extra housings and rolls previously built up and adjusted and in readiness for the mill at the time of changing rolls. By this method of roll changing, a great deal of time is saved in the mill over the old method of changing the rolls in the housings in place in the mill. A 75-ton and a 25-ton crane have been installed in the mill building, and in the motor house there is one 50-ton crane. The mill is provided with two hot beds, each located in a building 85 feet span x 180 feet long, and over the larger one of these hot beds, designed for heavy sections of I-beams and channels, is a 5-ton electric, overhead traveling crane with which to make repairs.

FIG. 3—INGOTS FROM THE ENSLEY PLANT GO THROUGH THIS 45-INCH BLOOMING MILL

Immediately adjacent to the hot bed building there is another narrow building known as the straightener building, in which the large roller straightening machines are located and where a 15-ton crane has been placed to serve in the making of rapid changes and repairs of these machines.

Two yard crane runways, each 85 feet span, one being 676 feet long and the other 576 feet long, are provided. These crane runways connect the shipping end of the plate mill with the shipping end of the combination bar and structural mill. This permits the loading of cars with miscellaneous products. Each crane runway is served by two cranes, 81 feet span, having two 10-ton trolleys on each bridge girder.

The No. 2 substation building, which is 52 feet 8 inches x 90 feet 3 inches, is located between the plate mill motor house and the combination structural and bar mill motor house and is connected with a 7 x 7-foot underground conduit. In this building are located the three 750-kilowatt motor generator sets, together with transformers and equipment for producing current. This building is served by a 10-ton traveling crane.

Between the plate mill and the combination bar and structural mill is the roll shop. This building is 280 feet long with a 60-foot span and has a roll storage crane runway 155 feet long with a 60-foot span. The usual equipment of

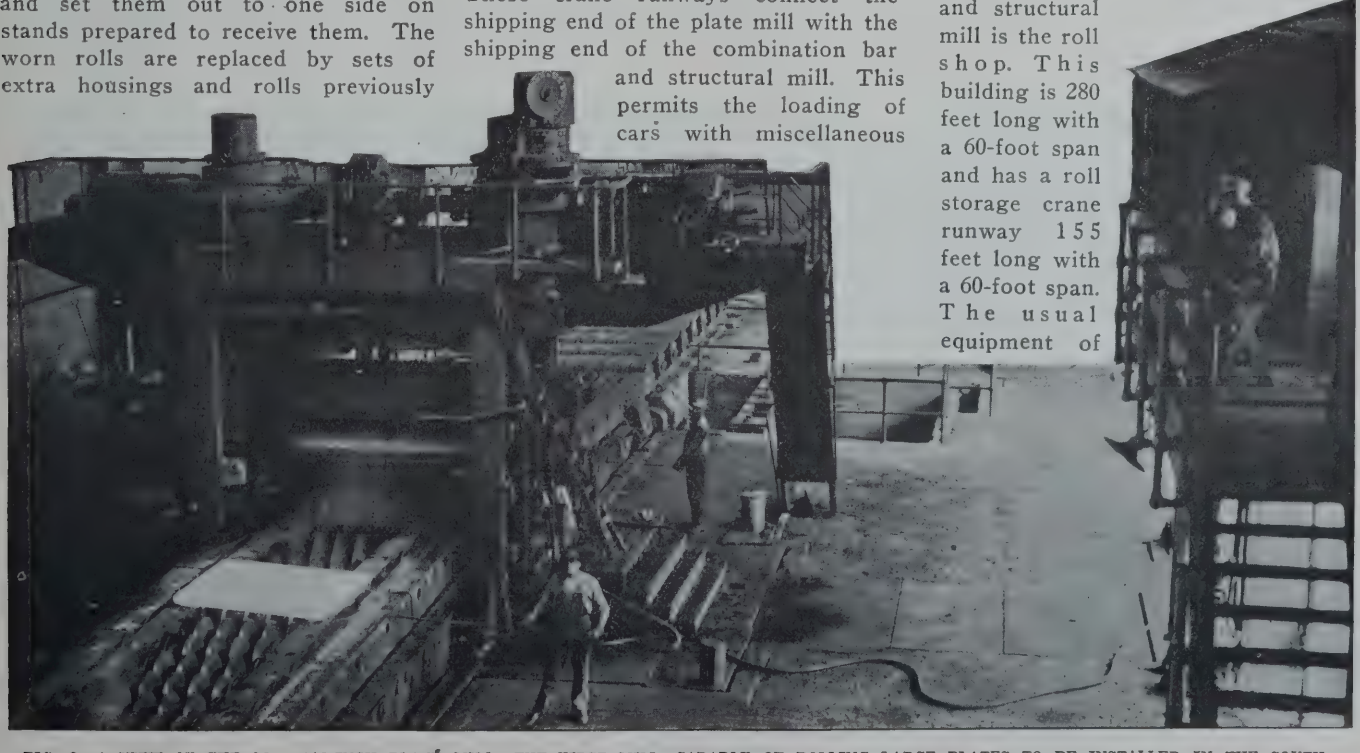

FIG. 2—A VIEW OF THE 36 x 110-INCH PLATE MILL—THE FIRST MILL CAPABLE OF ROLLING LARGE PLATES TO BE INSTALLED IN THE SOUTH

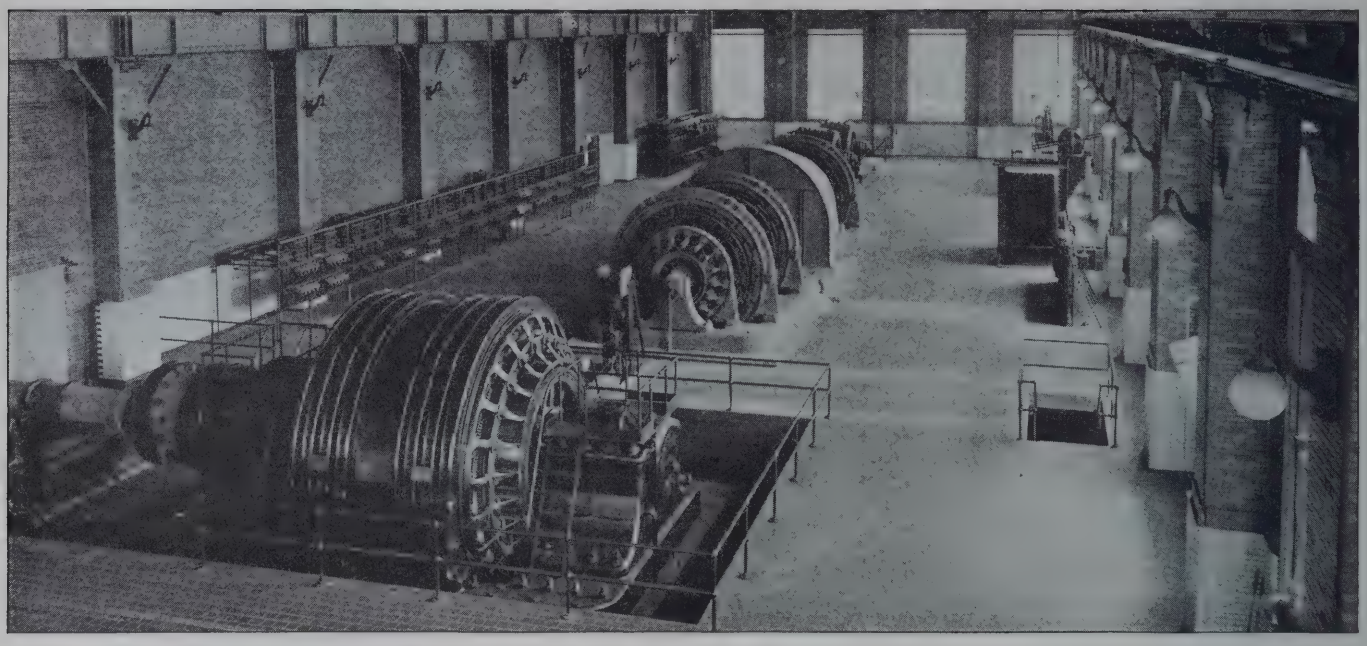

FIG. 4—MANY MODERN IDEAS IN POWER PLANT DESIGN ARE INCORPORATED IN THE MOTOR HOUSE FOR THE 45-INCH BLOOMING MILL

roll lathes and grinders will be installed. Just south of the roll shop building is the roll shop office, which is 30 x 80 feet.

In a separate group, located to the west of the mills, is the shipbuilding fabricating shops, consisting of a plate and shape fabricating shop, machine shop and forge shop. The plate and shape fabricating shop, building is a steel structure with a saw tooth roof, approximately 352 x 630 feet, in which are located numerous machines for punching, shearing and working up plates and shapes that make up the hull construction of ships. The material for this work comes directly from the mills and is fabricated, as far as possible, ready for shipment and final assembly at Mobile, Ala.

The machine shop building consists of a main span of 85 feet with leantos on either side of 70 and 40 feet, in which are located heavy traveling cranes which serve numerous machines. The building is 240 feet long. The forge shop building consists of a main span 85 feet wide, and leantos on one side 50 feet wide, and on the other 40 feet wide. The building is 240 feet long. In this will be located a 1000-ton forging machine with large steam hammers and furnaces for doing ship work. A substation known as No. 4 substation serves all of the above shops. The current and air lines, and hydraulic lines run from this station to the various shops.

Water for this plant is secured from the Village Creek water works system and the main lines are tapped at a point close to the by-product coke oven plant. The soaking pit furnaces use by-product coke oven gas entirely as fuel, this gas being supplied through a 30-inch main from the by-product coke plant. Drinking water for the employes of the mill is furnished by a main connected to the Birmingham water works system. Every sanitary measure possible is installed in these plants for the use and comfort of the company's employes.

The main trunk sewer for this plant is 7 x 7 feet. A novel combination has been arranged on the major portion of this sewer by making a double deck, the upper deck being 6 x 7 feet. It will be used for carrying the high tension electric cables to the various substations, thus doing away with all poles and extensive overhead power lines in the plant.

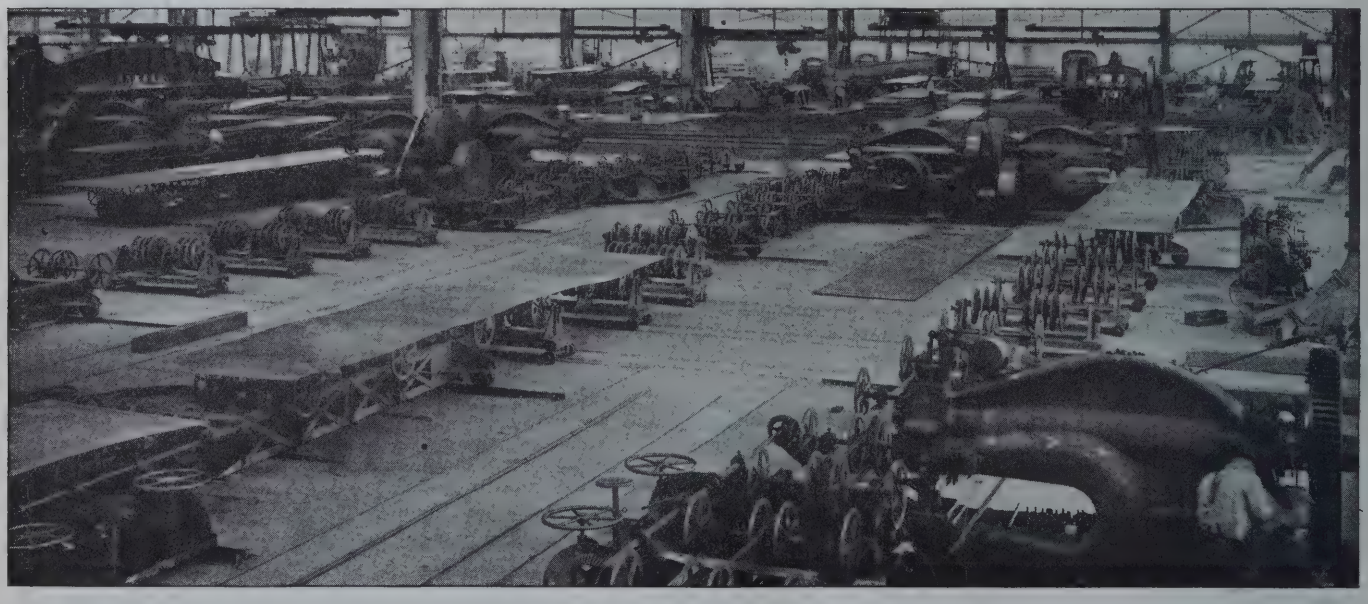

FIG. 5—APPROXIMATELY 75 PER CENT OF THE SHIP MATERIAL ERECTED AT THE CHICKASAW PLANT IS ASSEMBLED IN THIS 352 x 630-FOOT FABRICATING SHOP

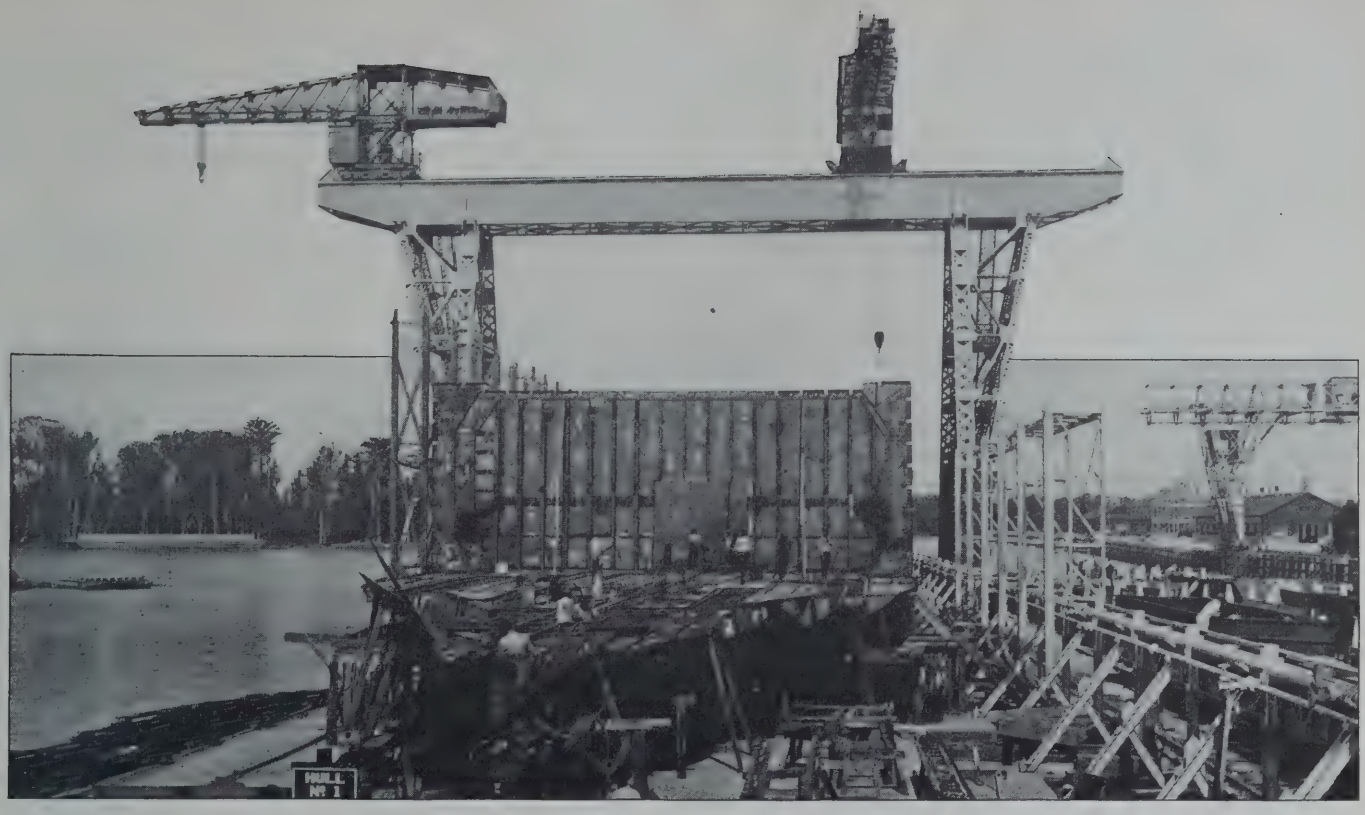

Fig. 6—A View of One of the Six Berths at the New Plant of the Chickasaw Shipbuilding Co. Fabricated Work May Be Lifted from Barges and Swung into Place by the Gantry Cranes in One Lift

Builds Yard for Steel Cargo Ships

MOST of the extensions to the Fairfield works, which were begun in November, 1917, were made for the purpose of providing fabricating facilities for a new shipbuilding plant then being built at Chickasaw, Mobile county, Ala., by the Chickasaw Shipbuilding Co. Practically 75 per cent of the material now used in the Chickasaw plant is fabricated in the Fairfield works, the remaining 25 per cent being assembled in the fabricating shop at Chickasaw.

The shipbuilding plant is about five miles north of Mobile and has an easterly frontage on Chickasaw bogue, a tributary of the Mobile river. As there was no village near the point chosen for this plant, it was necessary to build villages for the white and colored employes. A street railway line, connecting with the Mobile system at Pritchard, was built to afford a means of travel between Mobile and Chicasaw. The village for the white laborers was built on one side of the car line and the village for the colored people was built on the side of the tracks nearest to the ship yard.

The shipbuilding plant consists of six berths arranged two each on the north side of basins Nos. 1 and 2, and two on the south side of basin No. 1. Basin No. 1 is 150 feet wide by about 1000 feet long, and basin No. 2 is 200 feet wide by about 1000 feet long, both being designed for side launching.

The shipways are commanded by gantry cranes, one being provided for each berth. These cranes are of a special design, having two 10-ton locomotive cranes mounted on the bridges, enabling them to handle material from barges in the basins, from incoming cars, or from the stockyard alongside each berth directly to the ship. These cranes are illustrated in Figs. 7 and 8. As previously noted, all fabricated material ready to enter into the ship construction is delivered to the shipways underneath these cranes, where it is unloaded and either placed directly in the ship or in a space provided for storage until such time as it is needed. Materials which require additional fabrication are delivered to the plate shop, located at the west end of the shipways.

Many Cranes Serve Fabricating Shop

Each of the two main aisles of the plate fabricating shop is 80 x 400 feet, and is served by a 15-ton overhead traveling crane. On the west side of the building is a receiving crane runway 85 feet wide by 400 feet long, and on the east side is a shipping crane runway of the same dimensions. Each runway is served by a 10-ton crane. The shop equipment, including punches, plate planers, angle and plate heating furnaces, bending slabs, shears, etc., is in the main aisle of the building.

Adjacent to the plate shop at the north end there is a 61.5 x 300-foot template shop which is used for laying down certain portions of the ship on the floor and getting out the necessary templates to be used in the shop for the fabrication of material. On the south side of basin No. 1 there is a power station of brick and steel construction. The equipment consists of two 4000-kilowatt, 60-cycle, turbo-generators, complete with condensing apparatus, and three large air compressors and the necessary auxiliary machinery.

The boiler plant consists of four 750-horsepower water tube boilers, designed to furnish superheated steam for the operation of the turbo-generators and air compressors. These boilers are equipped with stokers and the necessary pumps and auxiliary machinery. Water for the condensing purposes is taken from basin No. 1 through an intake tunnel and the discharge from the condensers is returned to basin No. 2.

The coal for operating the station is delivered in river barges to a coal unloading dock, commanded by a coal unloading and storing bridge, which delivers the coal into a storage pile. The coal is carried from the storage pile by an incline belt conveyor to a 2200-ton bin in one end of the boiler house.

The coal is delivered to the stokers by means of an electrically driven coal larry.

The blacksmith shop, 60 x 120 feet, is equipped with the necessary steam hammers, forge furnaces, etc., the steam for operating the hammers being delivered from the power station through an overhead pipe line. The machine shop, situated east of the blacksmith shop, is 120 feet wide and 240 feet long and is equipped with modern machines. All machine tools are served by means of overhead electric cranes. Other units of the shipbuilding plant include a carpenter shop, rigger shop, sheet metal shop and paint shop.

West of basin No. 1 is a main stores building, 60 x 300 feet, and of brick and steel construction and on the outfitting dock there is a branch stores building designed to facilitate the outfitting of ships. The outfitting dock is served by a 100-ton derrick crane which is used for placing engines and boilers aboard ship. The crane is a duplicate of the 100-ton derrick crane used at the plant of the Federal Shipbuilding Co., Kearny, N. J.

Steel Staging is Employed

The shipways are designed for side launching and permanent staging of steel construction is employed. The temporary staging on the launching side is also of steel, but is designed so that it can be taken down or put up in sections in accordance with requirements. Facilities for welding and cutting are provided by an acetylene gas generator of the low pressure type. The gas is piped along the shipways where convenient outlets have been provided. Acetylene burners or welding apparatus may be quickly connected to these outlets, thus enabling workmen to use the equipment at practically any part of the shipyard. A refrigerating machine in the basement of the power house pumps cold drinking water through a continuous system of piping to all shops, buildings and shipways of the plant, insuring the workers a good supply of cold water at all times.

At the present time four 9600 steel cargo ships are on the ways and work on six additional ships will be started at an early date.

Book Review

Abrasives and Abrasive Wheels, by Fred B. Jacobs; cloth, 340 pages, 5 x 8 inches; published by the Norman W. Henley Publishing Co., New York, and furnished by THE IRON TRADE REVIEW for $3.

Abrasives and Abrasive Wheels contains valuable information for the shop or foundry superintendent and for the man who is engaged in the operation of grinding machinery of any kind.

The forepart of the book is devoted to natural and artificial abrasive materials such as emery, corundum, garnet, quartz, etc. Under the heading of artificial abrasives, the manufacture of carborundum and other well known manufactured abrasives is fully explained. The chapter on the manufacture of grinding wheels describes the lengthy process through which the material progresses until it is ready for shipment.

The testing of grinding wheels for efficiency is fully explained and illustrated by examples taken from actual working conditions. It is pointed out that by getting the right wheel in the right place, the manufacturer who is a large consumer can save thousands of dollars annually. In one chapter it is claimed that large wheels are more economical than small ones. The author has analyzed several popular sized wheels from a standard wheel list, determining the cubical contents and cost per cubic inch. It is shown that as the size increases the price decreases.

The subject of grinding wheel grits and grades, generally a confusing one to the average layman, is made plain.

Other subjects treated include safeguarding grinding wheels, information for ordering grinding wheels, the design of dust collecting systems, etc. The latter part of the book is devoted to cylindrical, internal and surface grinding, cutter sharpening, etc. Several special grinding operations are fully described.

Better Steel is Need

(*Continued from Page* 631)

to 15 hours' heating and long holding at heat. In support of his contention that rapid heating and short holding was the better method, Major McIntosh pointed out that the Sheffield district last September produced more than 5000 gun forgings and that 89 per cent of them passed inspection. This is a much better showing than made in this country where only 60 per cent of the forgings withstood the first tests.

Major McIntosh found that the French used basic open-hearth steel for cannon, but the method follows closely the acid practice with all additions in the furnace after the slag has been run off. Tests are made of the steel before pouring, but the ladle nozzles are larger than those in English plants ranging from 1 to 1½ inches and occasionally 1¾ inches. The ladle is dried by a small wood fire, but never heated. Only one plant in France bottom casts. The French forge at lower temperatures than do the English, but give more time in

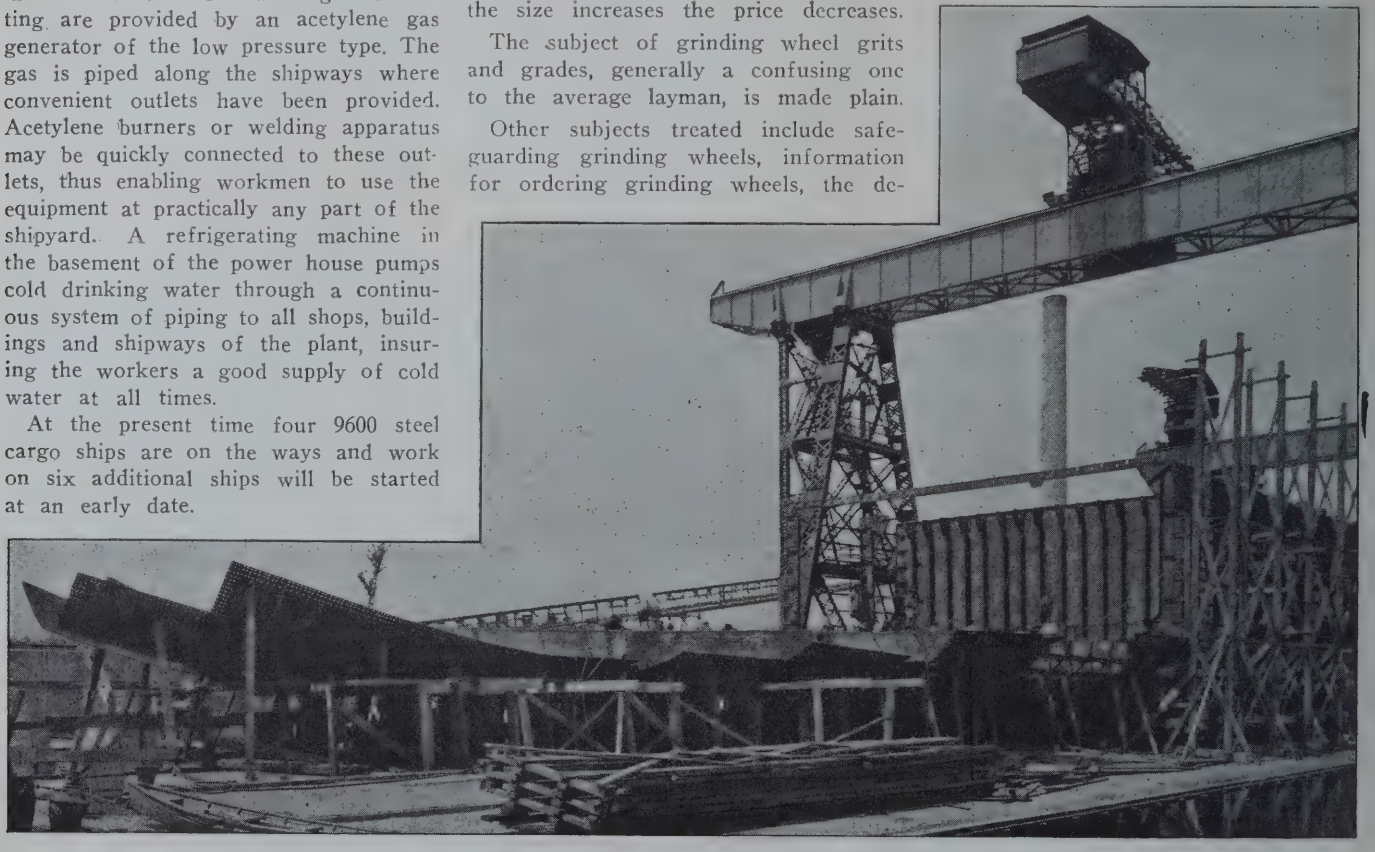

FIG. 7—FOUR 9600-TON STEEL CARGO SHIPS OF THIS TYPE ARE ON THE WAYS AT CHICKASAW AND SIX MORE ARE TO BE BUILT LATER

heat treating. Quenching is entirely in water in France, while in England the bath is water and oil, but the French run almost entirely in straight carbon steel, while the English employ nickel and nickel chrome.

Flakes, or Z fractures as they are called in England, because of the unknown quantities, are generally ascribed to the inclusion of foreign materials. On both the bend and tensile test, bad, banded fractures resulted from flakes. Inclusions were generally believed to be due to the fact that deoxidizing agents give off nonmetallic products. It was the speaker's opinion that in forging steel Americans were too prone to follow specifications of inheritance rather than scientific facts, mentioning as an example the four-to-one reduction that our steel men insist upon. He considered the etching test for forgings employed abroad preferable to the trepanning method, the former providing the better reference to the finished forging.

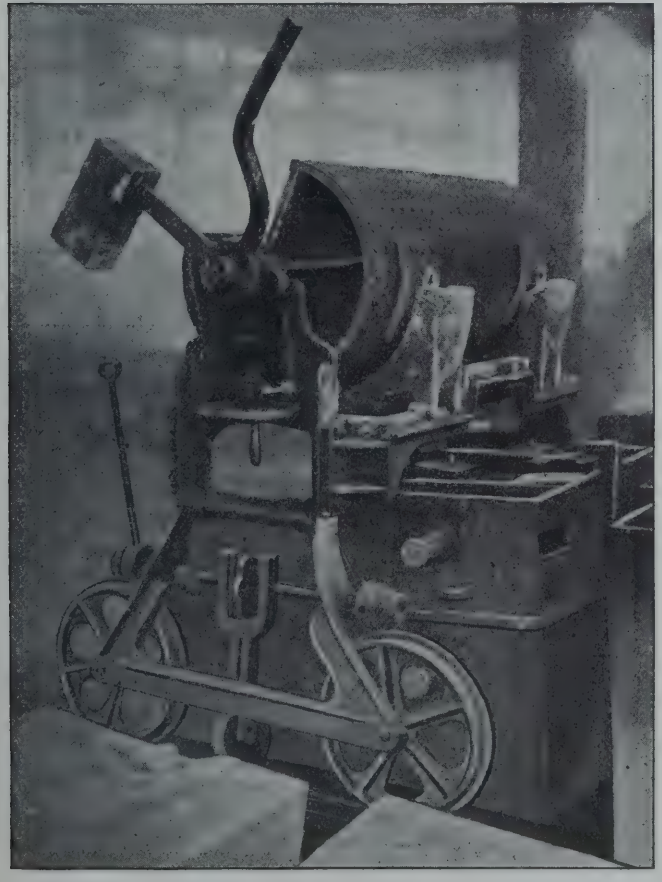
Invents Labor Saving Pouring Device

IN gray iron foundries making automobile cylinders and other relatively light castings, the task of pouring each day's heat is particularly arduous. This has led to the development of a large field for the application of mechanical pouring apparatus.

The accompanying illustrations show the details of one of the latest devices of this character, invented by Daniel Ryan of the Allyne-Ryan Foundry Co., Cleveland. Although designed primarily for automobile cylinder molds, the Ryan pouring device may be advantageously employed on any other work of similar character. The device consists essentially of a cylindrical ladle mounted on trunnions in such a way that the iron may be discharged through nozzles which become submerged when the ladle is rotated. The metal flows from the nozzles into two semicircular guide troughs which convey it to the runners leading to the mold. The entire apparatus is carried on a frame mounted on wheels which render it readily portable.

The ends of the pouring basin are constructed of cast iron with a segment removed as shown in Fig. 2. The sides are made of heavy boiler plate perforated and securely riveted to the end castings. The inside of the basin is lined with one course of 1-inch fire brick. The basin is supported by trunnions which rest in sliding shoulders. The shoulders move in vertical guideways and are raised or lowered by an adjusting screw operated by a hand wheel. By this arrangement, the level of the pouring basin may be maintained and any depression in the track will have no effect on the iron level if the trunnion shoulders are adjusted. The rotary motion of the basin is controlled by a lever securely bolted to the trunnion flange on the operator's side of the machine. An extension arm carrying a counterweight is provided; this offsets any danger of the basin turning over of its own accord while the iron is being poured into it from the crane ladle. Two cast-iron guide troughs rest upon the side frames and may be lifted off when it becomes necessary to reline them with clay. A 1-inch opening through which the iron flows to the sprues is provided in the bottom of each trough. The distance from the floor to the bottom of the basin is 3 feet 2 inches.

The entire device is supported by three flanged wheels—two on the operator's side and one on the helper's side—which run on rails spaced 4½ feet apart and permit the machine to be moved in a straight course over the molds. When several rows of molds are to be poured the machine may either be moved from one row to an-



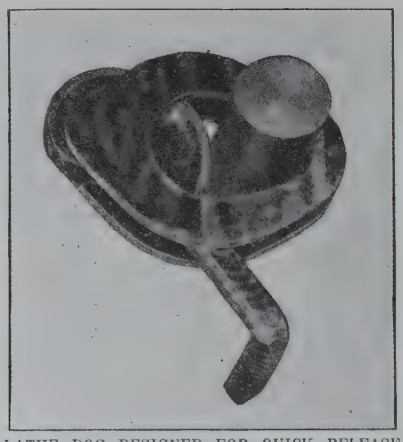


FIG. 1—SIDE VIEW SHOWING POSITION OF CANOE TROUGHS

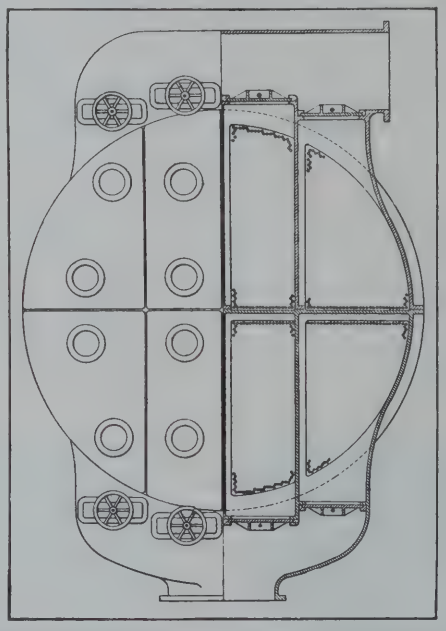
FIG. 2—MACHINE IN POSITION TO RECEIVE CHARGE OF IRON

LATHE DOG DESIGNED FOR QUICK RELEASE

other by a traveling crane, or run to the end of the track and wheeled to the adjacent row of molds. For this latter purpose a lifting device is provided. It consists of two shafts equipped with an eccentric operated through cams which engage three pedestals. Each pedestal is equipped with a caster as shown in Fig. 2. One caster is placed between the two flanged track wheels on the operator's side of the machine and the remaining two casters are installed on the helper's side, there being one on each side of the flanged wheel at the ends of the carriage frame. Levers inserted in collars on the ends of the eccentric shafts actuate the cams controlling the motion of the pedestals. This raises the machine from the track and transfers its weight to the three casters.

The trunnion flange on the side of the basin is provided with a stop and when this stop is tight against the lug attached to the trunnion slide, the basin is in position to receive its charge of iron. This position is shown in Fig. 1.



When the basin has been filled the operator moves the machine over the flask to be poured and by means of the pouring handle tilts the basin so that the iron is discharged through the openings into the guide troughs. In Fig. 1 these openings are shown just clear of the tops of the guide troughs.

The basin holds enough iron to pour four 6-barrel or seven 4-barrel automobile cylinder castings. It is said that two machines will take care of the output of a cupola which melts between 18 and 20 tons per hour and that only four men are required. Bull ladles required 14 men.

Hoisting Unit Maintains an Even Balance

A new type of hoist, which is particularly adapted for use where headroom is limited or where space is otherwise restricted, has been designed by Victor R. Browning & Co., Cleveland. The hoist, which is shown in the accompanying illustration, is equipped with a special-designed motor for use with either direct or alternating current, and may be suspended from an overhead trolley or I-beam. The main casting encases all moving parts and contains individual compartments for the various units.

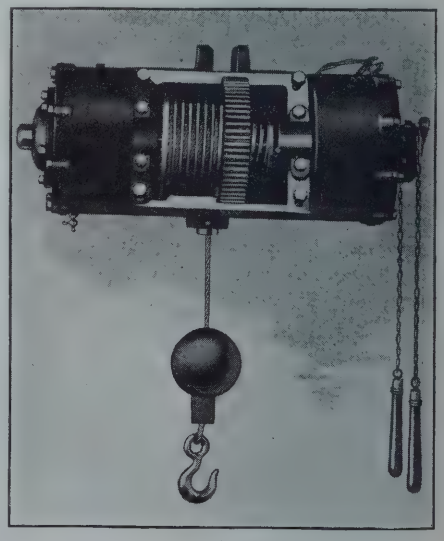
Heat-treating gears and a disc-load brake are assembled in one end of the casting. These revolve in oil. At the reverse end, the controller and motor shaft are carried in another individual compartment. The entire controller may be removed quickly for inspection or repairs. The removal of a plate gives access to the gears and load brake. Between the gear and controller units are two long compartments, one of which contains the motor and the other the hoisting drum. The latter is carried on a threaded shaft and travels longitudinally while rotating. This feeds the cable through a bushing in the main housing and directly onto the drum grooves. It is claimed this type of construction adds considerably to the life of the cables and maintains an even balance of the hoisting unit.

STEAM SURFACE CONDENSER OF THE COMPARTMENT TYPE

Limit attachments are installed at both ends of the drum shaft to prevent overtravel of the drum. All bearings are bushed in phosphor bronze with the exception of the motor shaft which revolves on ball bearings. Two bearings are provided with grease cups while the other four are lubricated by the splash system.

The Four-Drive Tractor Co., Big Rapids, Mich., has increased its capital stock from $200,000 to $500,000.

Eliminates Set Screws on Lathe Dog



The lathe dog shown in the accompanying illustration is a recent development in small tool design made by the Efficiency Device Corp., Long Island City, N. Y. It grips the work through a cam which is made integral with the driver. For this reason, the power transmitted from the face plate in driving the work holds securely the piece to be turned.

As there are no screws to loosen the time required to put the dog in position and to remove it after the cut is taken is reduced to a minimum. Another factor that deserves attention is that there are no protruding parts that might catch the operator's clothing. The device is made of steel drop forgings and punchings and is case hardened to protect it from undue wear.

Develops New Condenser

A steam-surface condenser of the compartment type, which may be cleaned or repaired without interrupting the operation of the turbine or condenser, is now being built by the Wheeler Condenser & Engineering Co., Carteret, N. J. The condenser is equipped with four compartments which have individual sets of valves for controlling the circulating water. The arrangement of the compartments is shown in the accompanying illustration.

According to figures compiled by the bureau of mines, there were on Jan. 1, 259,717 tons of ore at the furnaces containing 35 per cent manganese and 346,316 tons containing less than 35 per cent, making a total of 606,303 tons in stock.

HOIST FOR USE WHERE HEADROOM IS RESTRICTED

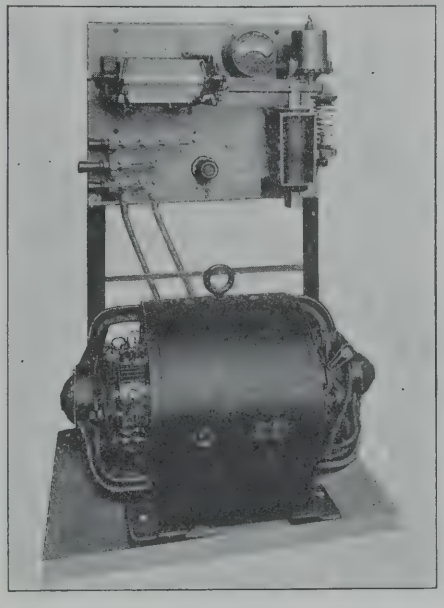
Control Panel Designed to Insure Constant Heat

A new electric welding unit, designed to produce a constant heat in the weld, has been developed by the Wilson Welder & Metals Co., New York. The principal parts of the outfit are a motor-generator set and a constant-current control panel. A normal voltage of 35 volts is maintained at the terminals of the generator, which is flat compound wound, at both no load and full load. The panel, as shown in the accompanying illustration, is 20 x 27 inches and has mounted on it a small carbon pile, a compression spring, and a solenoid operating in opposition to the spring.

This solenoid is connected in series with the arc so that any variation in the current causes the solenoid to vary the pressure on the carbon pile and thereby maintain the current at the value for which the apparatus is adjusted. Three switches on the panel provide the means of current adjustment between a minimum and maximum of 25 and 175 amperes. By means of a shunt around the solenoid, no more than 25 amperes flows through the solenoid, although the current in the welding circuit may be any value between 25 and 175 amperes.

Equipment is Portable

To give this welding set wide application several types of driving power may be supplied. Electric motor drives of the standard motor characteristics 110-220-volt, direct-current or 220-440-volt, 60-cycle, 2 or 3-phase alternating current may be supplied. If desired, a gasoline unit can be furnished or the set can be equipped for a belt drive from external power. The normal generator speed is 1800 revolutions per minute. The weight of this welding outfit varies from 550 pounds without driving power to 1200 pounds with gasoline engine power and may be mounted on a truck for portable use.

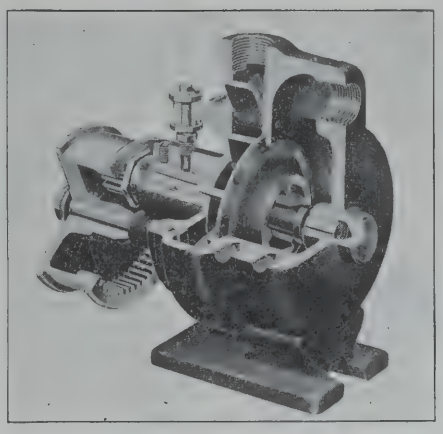


Designs Reversing Pump

The device shown in the accompanying illustration is a reversing, centrifugal pump recently developed by the Fulflo Pump Co., Blanchester, O. It is a self-contained unit, driven through the medium of internal spur reduction gearing by an overhead belt, and is said to be specially adapted to machine tools for pumping cutting mediums.

The reversing feature of the pump is accomplished by the design of the volute and the incorporation of a gate in the discharge. This gate deflects the fluid as the pump is reversed. The gate is bronze, mounted on a bronze pin, to eliminate corrosion.

The pad on which the pump is located is detachable and can be placed in any one of three positions. As the illustration shows, the packing is placed relatively near the water chamber, which feature protects the main bearing. The gland in which the shaft revolves is of ample length to insure a good bearing and is adjustable from the outside.



All steel parts are protected from undue wear by hardening, while all shafts are hardened and ground. The intake opening is placed high above the water chamber so that a full prime is retained in the body at all times. No relief or check valves are required and no strainer is used, due to the fact that the openings are proportionately large so that foreign matter which may enter the pump passes through freely.

GENERATOR SET AND CONTROL PANEL

Efficiency tests recently conducted showed that with a pulley speed of 600 revolutions a minute the pump delivered 16 gallons per minute with a 4-inch head. It is pointed out that higher heads can be reached as the volume of liquid and the height to which it can be raised depends entirely upon the peripheral speed of the impeller.

Much excitement was recently aroused over a reported oil strike in Derbyshire, England, but investigation revealed the alleged strike was nothing more than filtered oil found below the parent oil sand. It is believed that the real oil-bearing stratum of the district is confined to the millstone grit formation which has already been passed through.

CENTRIFUGAL PUMP DESIGNED TO RUN IN EITHER DIRECTION

Early History of American Steel Practice

Two papers, one entiled the "History of the Bessemer Manufacture in America", and the other entitled the "Evolution of the American Rolling Mill", were presented respectively before the American Institute of Mining Engineers, June 23, 1876, and the American Society of Mechanical Engineers, Nov. 16, 1891, by Robert W. Hunt, Chicago. The methods described in these papers have since become the basis upon which the great achievements of bessemer steel making and rolling-mill practice have been accomplished. For this reason Mr. Hunt has seen fit to reprint his two articles in a 54-page booklet for distribution.

The first 19 pages are given over to the early history of the bessemer process in America. The author tells of the many difficulties which were encountered in inducing capitalists and manufacturers to attempt the introduction of the bessemer process. Having enumerated the various bessemer works according to the order in which they started and in so doing having referred to the increase in product, the paper on bessemer practice concludes with a brief review of the causes leading to the remarkable strides made by this branch of the steel industry.

In the second part of his book Mr. Hunt deals with prominent facts connected with the evolution of American rolling mills. Throughout this paper is found the early history of many well-known steel companies in this country. A description is given of the Fritz-type mill which was adopted universally by railmakers in this country in 1866.

Says One Base Stabilizes Industry

Inland Steel Co. Answers Complaint of Western Consumers Against Pittsburgh Basing System in Iron and Steel—Local Monopoly Would Follow Quotations Founded Solely on Production Costs, is Claim

WASHINGTON, Sept. 2.—A carefully prepared argument in favor of the retention of the Pittsburgh basing system for iron and steel prices has been submitted to the federal trade commission by the Inland Steel Co. in answer to the petition of the Western Association of Rolled Steel Consumers for the establishment of Chicago as a separate basing point. The arguments advanced by the Inland company in a large measure are representative of the claims which the steel producers generally, and especially those in the West, are setting forth in their defense of the present system.

Experts of the federal trade commission now are engaged in classifying and digesting the answers and views expressed by iron and steel manufacturers and consumers on the merits and demerits of basing steel prices on Pittsburgh. As soon as this work is completed, the commission will make some of the records, if not all, public, and will announce the course it will pursue in taking up the case.

The complete statement of the Inland Steel Co. which is submitted over the signature of G. H. Jones, first vice president, is as follows:

The Inland Steel Co. fully approves of the fact that this application has been made to the federal trade commission and is quite willing to ignore any personal interest it may be supposed to have in the continuing of the present selling methods, if the government will carefully investigate the conditions and set its approval on such method as the federal trade commission may decide to be fair and reasonable to both buyers and sellers.

The Inland Steel Co. has no steel works east of the Chicago district and sells very little, if any, steel east of Indiana. Its natural market is west of Ohio, south to the Ohio river, and thence west to the Pacific coast. The Inland Steel Co. does not have and never has had access to the cost sheets of the subsidiary companies of the United States Steel Corp. and is, therefore, unable to state from knowledge what are the comparative costs of the production of steel in the plant of Carnegie Steel Co. or the Illinois Steel Co.

The application apparently seeks to convey the impression that the main factor in the cost of steel is the freight rate upon iron ore. This is obviously misleading. In the production of pig iron the tonnage of coal and limestone involved in the process of conversion is approximately equal to the tonnage of ore, and in the production of steel the tonnage of coal alone employed in the process largely exceeds the tonnage of ore. The coal used in the manufacture of coke for pig iron by the Inland Steel Co. must be hauled to its plant from the Pennsylvania and West Virginia fields and the steam coal obtained from Indiana and Illinois for heat-making purposes is more expensive in proportion to quality than is the coal of the Pittsburgh district.

Much of the equipment, machinery and supplies used in the manufacture of steel is produced in quantities only in the Pittsburgh district and have to be imported from that district by outside plants.

Pittsburgh Has Lower Cost

Without attempting to discuss the details of the costs in the respective territories and without accurate knowledge on the subject, the Inland Steel Co. desires to express its conviction that production of steel by equal plants in the Pittsburgh and Chicago districts would show lower cost in the Pittsburgh district. The industry was first established in the Pittsburgh district. Many of the large producers in the Pittsburgh district entrenched themselves by the acquirement at a comparatively early period of iron mines and other sources of raw material at a price lower than that at which similar sources could be acquired when Chicago competitors entered the field. This more than offsets any advantage which the Chicago district steel makers enjoy in connection with transportation costs.

The Inland Steel Co. emphatically denies all insinuations contained in the application to the effect that it is or has been a party to price fixing or that it is not engaged in active competition with other steel mills, including the subsidiaries of the United States Steel Corp. The Inland Steel Co. is absolutely independent of all other concerns engaged in the same line of business and offers its products to its customers, quoting prices based upon its desire to obtain a reasonable profit and primarily governed by market conditions in the industry.

When the Inland Steel Co. entered upon its business career, the Pittsburgh district was, as it still remains, by far the largest producer of steel products in the country. Pittsburgh competition was the controlling competition which plants located elsewhere were required to meet in order to sell their products. Customers invariably insisted upon comparing prices quoted in the Pittsburgh district and the simplest method of assuring such comparison was the use of the Pittsburgh quoted prices as a base.

The Chicago district never has and does not now produce iron and steel sufficient to meet the demands of consumers in the district. A very large part of such consumers must necessarily buy their steel and iron products from the Pittsburgh district.

The investment in modern steel plants is very large and for that reason steel plants are not mobile. They cannot readily move from point to point and to endeavor so to do would involve very great economic waste in the amortization of the cost of abandoned plants and would be altogether undesirable.

The controlling factor in determining prices has always been the question of whether demand is in excess of production or production in excess of demand. The use of the Pittsburgh price as a base in no way controls the price which the producer makes to the consumer. If there is a surplus of steel products on the market, the desire to dispose of the product involves a reduction of prices sometimes to the point of an actual loss. Where the supply is less than the demand, consumers often offer to pay advanced prices or premiums to insure deliveries and the result is the same whether a Pittsburgh base price is the ground work of competition or whether each steel plant arrives at the prices demanded by some other method of computation.

If prices were fixed by agreement among the producers, it would be a matter of small importance by what system of figures the agreed price was reached. When prices are made as a result of competition, as is the case with all sales made by the Inland Steel Co., it is likewise of little importance what method of computation is used. The Inland Steel Co. has a given output. That output it markets at the best prices, reasonably and fairly obtainable. When customers are not plentiful, it cuts that price down to a figure which will enable it to sell its products.

The individual members of the association making the application have seemed generally to have enjoyed a period of great prosperity during the last few years. The public statements of such of them as have been accessible have shown profits favorably comparable in proportion to capital invested with the profits of the steel producers so far as the same are matters of public knowledge.

Under the present system of quoting prices, with the Pittsburgh base as a standard, the members of the association are enabled to readily compare prices quoted by steel producers located in any part of the country. If the use of a different base price did not materially alter prices quoted it would obviously be useless to disturb the present custom.

If, in fact, the steel producer in any given locality undertook to base his prices solely on cost of production, giving the customer the benefit of all freight costs from competitive points it is plain that the result would be to create a local monopoly on behalf of

the steel producer in any given locality until the entire product of such local producer had been sold. Thereafter the customer would be obliged to pay higher prices to producers at other points through the addition of freight rates. It is believed that this would result in absence of competition where only a single producer was located, or in competition restricted to the local competitors in all other districts except Pittsburgh, which is the only district producing a considerable surplus.

The competitor buying his steel products from the Pittsburgh district, after the local limit had been reached, would be at a disadvantage with his competitors who had bought at lower price from the local producer, while in years of normal demand the Pittsburgh producer, knowing that the local supply was unequal to the local demand, would be able to await the necessary inquiries from those who had been unable to supply their wants from local sources.

Under such circumstances it is respectfully submitted that ordinary business judgment would lead the surplus local demand to bid up the local supply to approximately the cost of delivery from Pittsburgh and the element of vexation and uncertainty would have resulted without materially changing the situation. If such a result did not ensue then conditions of inequality among the different consumers in the same locality would create hardships far greater than the present system, because in most articles into which the rolled steel products enter, contracts must be made long prior to the ultimate completion of the article and reasonable certainty as to price is quite as important as any slight difference in cost.

As a uniform standard of money in a given market is a prime requisite of successful commerce, so a standard level of prices for steel, resulting from nation-wide competition, is of almost equal importance to industry.

If it were possible, as the application seems to contemplate, to procure producers of steel to sell their products wholly upon the basis of cost, plus some percentage, and with every producer figuring a different cost, or the same producers figuring different costs at different plants, with such uncertain elements of cost as the obsolescence and amortization of very large capital values involved in the installation of modern plants and equipment, and with competition localized as far as such action could localize it, it is respectfully submitted that a system of individual bargaining must spring up which would be contrary to the modern theory of commerce to which the commission is committed.

Moreover, as glut or deficit more commonly occur in localities than in the entire country, the disadvantageous features of oversupply or overdemand would, in the particular locality, be of more frequent occurrence and of accentuated disadvantage, and local conditions could be met only by return to what is practically the Pittsburgh base; that is, the stabilization of supplies throughout the country by drawing on the locality where production is in excess of demand to make good the deficiency in the localities where the reverse is the case.

The Inland Steel Co. having its plant entirely, and its business mainly, in the western field is not confronted with any problems which might affect a competitor having plants in different districts, but any regulation which would compel the competitor having plants in the same district as the Inland Steel Co., and other plants in other districts, to sell in the district in which it directly competed with the Inland Steel Co. at a price lower than that naturally based upon the laws of supply and demand and market conditions generally, would be obviously injurious to the Inland Steel Co. perhaps to a greater degree than to the competitor, which might make up in one district for its loss of profits in another.

The Inland Steel Co. respectfully suggests that trade customs like the practice under consideration which have grown up in times of keenest competition, are usually based upon some adequate reason and should not lightly be set aside. Moreover, this particular trade custom of basing steel prices upon Pittsburgh was officially approved by the war industries board (official bulletin June 24, 1918), and by the President as evidenced by official announcements made by them.

The Inland Steel Co. has maintained its competitive business under conditions of nation-wide competition. It believes that it can maintain its business if such competition is localized, but it believes that localization of competition would be a disadvantage as against universal competition, which, based on a clearly understood scale of prices, produces a better understanding and relationship between the steel producers and their customers.

Moreover, the results of the present use of Pittsburgh as a basing point are largely exaggerated in the application in so far as that practice affects the great bulk of the western and northwestern territory. The use of through rates based upon the practice of fabrication in transit, and the difference between through rates and the sum of local rates in many parts of the country minimize the freight differential, and in many cases all-water or combined rail-and-water rates as compared with all-rail rates from Chicago to points west leave little margin in the local rate from Pittsburgh to Chicago.

The Inland Steel Co., therefore, expresses its conviction that the applicants, as well as steel users generally, would be quite as likely to be harmed as to be helped by the granting of the application, and the Inland Steel Co. believes that the obvious result of forbidding the use of the Pittsburgh base rate would be to introduce a large element of confusion and uncertainty into steel and iron prices which would be especially injurious under the present conditions of economic unrest and uncertainty.

Dealer Says Change Would Upset Trade

AN interesting and thoughtful communication giving the viewpoint of the smaller dealer in steel, has been addressed to the federal trade commission on the advisability of retaining or abolishing the Pittsburgh base for steel prices, by W. A. Collings of the W. A. Collings Co., Kansas City. This communication is as follows:

Aug. 27, 1919.

Federal Trade Commission, Washington, D. C.

Gentlemen:

Referring to general circular No. 419 issued by Chamber of Commerce of United States of America, in relation to the basing point for steel and your invitation to make a statement to the commission, I beg to state that after 35 years of experience in steel buying as a small dealer, I do not think of any injustice brought about by using Pittsburgh as the single basing point for steel prices, in fact, when considering the small buyer as well as the large one, I feel that the single basis has always had a steadying influence on the market, considering all the varying conditions which exist.

I think every steel buyer will agree that after all, the most important feature of the matter is SERVICE, that is, whether one can get steel when needed and in my opinion we shall have a hard time getting steel for the next four or five years.

This subject is so intricate and far-reaching and has so many angles, some apparently diametrically opposed to each other that it is almost impossible to properly present it and I do think with the present unsettled conditions of labor, building construction and the steel market, it is a very bad time to take up ths matter.

We all know there are times when the Chicago mills are crowded with orders and the Pittsburgh mills may be slack. In this case, a dealer in the west who had figured on the Chicago basis, and who could not get steel from Chicago, but who had contracted to furnish his customer at the Chicago basis price, would either have to get steel from Pittsburgh, on a Pittsburgh basis price, or go without. This would cause constant confusion.

To present my views briefly, may I ask the following questions?

Can we, in peace times, force any company to sell any commodity at any price we wish?

If we have a double price basis, would it restrict competition by keeping the Chicago mills out of the Pittsburgh district and vice-versa, when competition is just what we want?

How far east of Chicago would the Chicago basis apply?

Would the dealer who bought steel on a Chicago basis sell at a cheaper price than the dealer who bought on a Pittsburgh basis?

How would we arrive at the proper price to charge at Chicago, above the Pittsburgh price? (I assume the other

basing point would be Chicago.)

At present, a small dealer can buy a mixed car of a number of steel products, all carrying the same freight rate, but not made in the same mills, the steelmakers carrying stocks in their warehouses for this purpose. A double price basis might stop this, as the mills could not carry stocks, forcing the small dealer to buy a full car of each commodity, some at Chicago, some at Pittsburgh, which of course, he could not do, as he cannot use a full carload of each.

There are at present independent mills at Pittsburgh, which make products that are not made in the Chicago district, but which compete with a product made by the United States Steel Corp. mills in Chicago district; if the Chicago *two-base* price should apply, it would put the independent Pittsburgh mill out of business.

How would it affect the large jobbers, say in Chicago, who carry large steel stocks, bought either at Pittsburgh or Chicago mills at the present satisfactory single base price—suppose the Chicago mills being congested, they had to buy in Pittsburgh at Pittsburgh price and mix with stock bought at the Chicago price—would this not be most fearfully confusing? How could they make staple quotations to their customers and would they not have to quote two prices on all steel bought at either Chicago or Pittsburgh? Would this not apply to the local jobber and small dealer also?

There are many steel products that are made in the Pittsburgh mills but which are not made in the Chicago district. What price basis would we use for Chicago district sales?

If we make two basing points, say Chicago and Pittsburgh, why not eight or ten—such as Sparrows Point, Cleveland, Birmingham, Ala., Dallas, Duluth, Los Angeles, San Francisco and Seattle?

We have a small mill here at Kansas City—what basis would this mill use?

Of course, we must consider the interests of the steel producer, the manufacturer who uses steel, the jobber, the small dealer and the ultimate consumer, but it appears to me that the parties who are pushing this investigation and who are in favor of a double basis, are considering only the ultimate consumer.

All mills cannot make steel equally economical; many of the older Chicago mills perhaps would have to shut down if forced to make a less price than the more highly efficient mills at Pittsburgh, with Chicago freight added.

Are we sure that the Chicago mills can make all the steel needed in the Chicago district and in the West? If not, it will be seen what confusion would arise when two dealers compete in the same town—one who buys on the Chicago basis and one who buys on a Pittsburgh basis.

Suppose it should be found that the Chicago mills could not turn out a sufficient amount of any particular kind of steel to fill the Chicago district's needs, then some small dealers (the large jobber would be sure to get his at the lower price) would have to buy at Pittsburgh at the higher price. How could the small dealer stay in business? This applies also to the Pittsburgh district.

Many works in the Chicago district only handle semifinished billets or rods, turning these into the finished products, such as wire, barb wire, nails, etc., buying the raw material on a Pittsburgh base and selling on a Chicago base. If the difference between Pittsburgh and Chicago was not enough, these mills would have to go out of business.

If we make a lower basing price at Chicago than the Pittsburgh price (say 10 cents above Pittsburgh), with freight added to Chicago, what would hinder the mills from raising the price at Pittsburgh, to make up for the difference, automatically raising the price at Chicago?

There are many disadvantages which I can see would work against the small dealer, and I am only considering him, if any change is made in the present single Pittsburgh base and I feel confident any change would put many small dealers out of business as well as some of the independent mills by the larger, favored firms being able to get their stock on a Chicago basis, while the small less favored dealer would have to get his stock at Pittsburgh on a Pittsburgh basis.

On this account and for the further reason that it would add to the present commercial confusion, when everything should be done to encourage and coax business, I believe it would be very unwise to make any change at the present time.

Yours very respectfully,

W. A. COLLINGS.

Kansas City, Mo.

Pittsburgh Chamber Asks System be Retained

Strong protest was made against any increase in the number of basing points on iron and steel by the Pittsburgh chamber of commerce at a largely attended meeting held last Friday afternoon, when a set of resolutions setting forth why the application of the Western Association of Rolled Steel Consumers to the federal trade commission for a Chicago base should be denied unanimously was adopted. These resolutions, drawn up by the chamber of commerce committees on trade and commerce and transportation and railroads, jointly, point out that the Pittsburgh district is the largest producer of iron and steel of any in the United States; draw attention to development, stimulation and stabilization which are more certain from a single basing point and to the possibility of injury to the industry which might result from a number of basing points.

The resolutions, which will be filed with the federal trade commission, follow:

Whereas, the Pittsburgh iron and steel district has always been the largest producer of iron and steel in the United States, and

Whereas, it has by common usage been the practice of all manufacturers of iron and steel, on account of the large production of iron and steel in the Pittsburgh district, to make Pittsburgh the basing point for prices of iron and steel, and

Whereas, the practice of making the Pittsburgh district the basing point for iron and steel, by reason of its very large production, existed, by common usage many years before the United States Steel Corp. and other large steel interests were organized or located in the Chicago district, and

Whereas, a basing point is a trade necessity looking to the development, stimulation and stabilization of business, and is necessary to enable the buyer to compare quotations, and

Whereas, in establishing a basing point we are removing, as far as possible, obstacles to the free movement of merchandise from manufacturer to consumer, as when all prices are quoted f.o.b. the basing point a comparison of prices is all that is necessary, the freight being equalized, and

Whereas, two or more basing points will work an injury to industry as a whole, will mean a division into districts and interfere with the buyer placing his orders to advantage with the manufacturers best fitted to meet his needs, thus restricting competition, and

Whereas, Pittsburgh, first the sole basing point, is the foundation of the steel industry, and by reason of location and tonnage output, is the logical sole basing point. Pittsburgh will always remain a basing point and as two or more basing points tend to restrict competition, it should remain the sole basing point,

Be It Therefore Resolved, that the chamber of commerce of Pittsburgh file with the Federal Trade commission its formal protest against any change being made in the sole use of Pittsburgh as a basing point in making prices on iron and steel.

Private Interests Pay Half of Job Bureau's Cost

Washington, Sept. 2.—According to a statement given out by the department of labor, one-half of the expense of maintaining the United States employment service now is being borne by the chambers of commerce, welfare organizations, municipalities and other outside agencies. During July these outside contributions, which have been promised until congress acts upon the Nolan-Kenyon bills for a permanent employment system, aggregated $61,424.85.

Because of this voluntary support, which prevented 300 employment offices throughout the country from closing on July 1, the federal employment service has been able to maintain its previous placement rate and soldiers and civilian workers were placed in jobs during July at the rate of 60,000 a week, the department says. The total placements for July, it is stated, were only slightly under those of June, being 234,683, with reports from several states not yet received. The cost for each placement to the government during the past month is given as 39 cents.

Gompers Puts Brake On Radicals

Federation's Executive Council Refuses to Sanction Steel Strike and Also Postpones Action on Shopmen's Strike for 90 Days—Judge Gary in Letter to Committee Declares it Does Not Represent the Will of the Workers

WASHINGTON, Sept. 2.—The American Federation of Labor evidently is not willing, at least at this time, to back the demands of the self-styled committee headed by John Fitzpatrick, in the efforts to organize workers in the iron and steel industry. This was plainly indicated at a meeting late last week of the committee and the executive council of the federation with President Gompers.

The council took the request of the committee "under advisement," it is reported, without any promise whatsoever that it would commit the federation to supporting a strike in the industry. It is believed that this action is tantamount to a refusal by Gompers and the executive council to give recognition to the abortive attempt of the steel workers' committee to stir up trouble. The position of the executive council is taken to mean that it recognizes there are two fundamental elements in the labor and industrial situation of the country. These elements are:

FIRST—That radical steps by organized labor at present would react unfavorably upon it through resentment of the public and that good politics prompts it to proceed with caution and to discourage steps that extremists are urging. This is implied by the influence brought to bear by Gompers in the case of the threatened railroad strike as a result of which the executive council postponed the strike, with the inference that it will not be called if the price of living is brought down within 90 days.

SECOND—Gompers and the executive council apparently realize fully that organized labor has only a small representation in the steel industry and that attempts to unionize it would fail, resulting in a further setback to the federation. In other words, this is interpreted as showing that the federation realizes the truth of the statement of E. H. Gary, chairman of the United States Steel Corp., to Fitzpatrick's committee that it does not represent the views of the steel workers.

While Fitzpatrick, his committee, or others at the conference would not talk as to how the conference regarded the attempt to organize the steel workers, it was evident that those seeking to bring this about are discouraged over the attitude of the executive council, because their extravagant claims and their threats to strike were not supported. Efforts are being made at further conferences to enforce the demands, but it is believed the council will not heed them for the present, if at all

Gompers is charged by the radical element in the labor federation with being too conservative in his attitude in urging caution about creating a labor turmoil in either the railroad or steel strike situation. This is said to have prompted the steel workers' committee to insist that Gompers arrange for a conference with President Wilson. The conference was held Aug. 29 and lasted 45 minutes. The labor delegation, headed by Gompers, in addition to him, was composed of John Fitzpatrick, D. J. Davis, Edward J. Evans, William Hannon and William Z. Foster.

The steel workers' committee prior to the conference here had spoken of the likelihood of an immediate and general strike. Therefore considerable significance was attached to a statement made by one of its members after the White House conference that the committee had the power "to extend the date of the strike, while negotiations are pending." A few hours previous the committee sent a telegram to James Mulholland, secretary of the Gary, Ind., Allied Iron and Steel Workers' council, asking the workers not to strike "under any circumstances" until the strike date had been set by the committee.

It is assumed that the delegation sought to have the President intervene in the steel strike situation, but the President has made no move. In a statement issued on Labor day the President called for a conference of representatives of employers and employes to be held in Washington to study the entire labor situation with a view to establishing a new basis of understanding between capital and labor. He urged employes in all lines of endeavor to remain at work, at least until the government has had a fair chance to reduce the cost of living, and to increase production. From the general nature of the President's appeal it is believed that he will not interfere at present in the steel controversy.

It is assumed that the conference will be held early in October. Curiously enough, neither labor nor employing interests have shown any enthusiasm for such a conference, which has been suggested for some time in administration and congressional circles. Reports in circulation that the President will ask Judge Gary to come to Washington for a conference before the former leaves Washington Sept. 3 are lacking verification.

Judge Gary on Aug. 27 refused for the second time to meet with or enter into any discussion with the committee. The committee, as stated in last week's issue of THE IRON TRADE REVIEW, appeared at Judge Gary's office, 71 Broadway, New York, on Aug. 26, but Judge Gary declined to see it, asking that it submit its proposals in writing. After their visit, the trades union men sent to the judge the following letter:

New York, Aug. 26, 1919.

Hon. Elbert H. Gary, Chairman, Finance Committee,
United States Steel Corporation,
71 Broadway,
New York City.

Dear Sir:

During a general campaign of organization and education conducted under the auspices of the American Federation of Labor, many thousands of men employed in the iron and steel industry made application and were enrolled as members of the various organizations to which they were assigned.

This work has been carried on to a point where we feel justified in stating to you that we represent the sentiment of the vast majority of the employes of this industry, and acting in behalf of them, we solicit of you that a hearing be given to the undersigned committee, who have been selected by the duly accredited representatives of the employes, to place before you matters that are of vital concern to them, and concerning hours of labor, wages, working conditions and the right of collective bargaining.

The committee called at your office at 3 p. m., Tuesday, Aug. 26, and requested a conference. We were advised by your messenger that you wished to be excused from a personal interview at this time and requested us to state our business in writing and whatever matters we wished to submit would be taken up by yourself and your colleagues and given consideration.

Therefore, we are submitting, in brief, the principal subjects that we desire to have a conference on. The committee has an important meeting in another city on Thursday next and will leave New York at five o'clock on Aug. 27,

1919. May we respectfully request that your answer be sent before that time to Mr. John Fitzpatrick, Continental Hotel, Broadway and Forty-first street, New York City?

Yours very truly,
(Sgd) John Fitzpatrick,
David J. Davis,
Wm. Hannon,
Wm. Z. Foster,
Edw. J. Evans,
(Committee).

Judge Gary, in a reply which was communicated to the labor representatives, Aug. 27, stated that he did not believe the labor committee represented the sentiment of the vast majority of the employes of the United States Steel Corp. He pointed out that the position of the corporation had not been changed, that it was opposed to the closed shop and favored the open shop, because the latter promotes the welfare of both the employes and the employer.

Judge Gary added that the Steel corporation does not combat labor unions as such, but refuses to discuss business with union representatives. Judge Gary's reply follows:

Aug. 27, 1919.

Messrs. John Fitzpatrick,
David J. Davis,
William Hannon,
Wm. Z. Foster,
Edw. J. Evans,
Committee.

Gentlemen:

Receipt of your communication of Aug. 26 instant is acknowledged.

We do not think you are authorized to represent the sentiment of a majority of the employes of the United States Steel Corp. and its subsidiaries. We express no opinion concerning any other members of the iron and steel industry.

As heretofore publicly stated and repeated, our corporation and subsidiaries, although they do not combat labor unions as such decline to discuss business with them. The corporation and subsidiaries are opposed to the "closed shop." They stand for the "open shop," which permits one to engage in any line of employment whether one does or does not belong to a labor union. This best promotes the welfare of both employes and employers. In view of the well known attitude as above expressed, the officers of the corporation respectfully decline to discuss with you, as representatives of a labor union, any matters relating to employes. In doing so no personal discourtesy is intended.

In all decisions and acts of the corporation and subsidiaries pertaining to employes and employment their interests are of highest importance. In wage rates, living and working conditions, conservation of life and health, care and comfort in times of sickness or old age, and providing facilities for the general welfare and happiness of employes and their families, the corporation and subsidiaries have endeavored to occupy a leading and advanced position amongst employers.

It will be the object of the corporation and subsidiaries to give such consideration to employes as to show them their loyal and efficient service in the past is appreciated and that they may expect in the future fair treatment.

Respectfully yours
E. H. Gary,
Chairman.

After receiving Judge Gary's letter, which was discussed at the meeting of the executive council in Washington, the committee sent a letter from which the following is quoted:

We have received your answer to our request for a conference on behalf of the employes of your corporation and we understand the first paragraph of your answer to be an absolute refusal on the part of your corporation to concede to your employes the right of collective bargaining.

You question the authority of our committee to represent the majority of your employes. The only way by which we can prove our authority is to put the strike vote into effect and we sincerely hope you will not force a strike to prove this point.

We asked for a conference for the purpose of arranging a meeting where the question of wages, hours, conditions of employment and collective bargaining might be discussed. Your answer is a flat refusal for such a conference.

We read with great care your statement as to the interest the corporation takes in the lives and welfare of the employes and their families, and if that were true, even in a minor degree we would not be pressing consideration through a conference of the terrible conditions that exist. The conditions of employment, the home life, the misery in the hovels of the steel workers is beyond description. Surely this is a matter which might well be discussed in conference.

You also made reference to the attitude of your corporation in not opposing or preventing your employes from joining labor organizations. It is a matter of common knowledge that the tactics employed by your corporation and subsidiaries have for years most effectually prevented any attempt at organization by your employes.

Some few days are still at the disposal of our committee before the time limit will have expired when there will be no discretion left to the committee but to enforce the decree of your employes whom we have the honor to represent.

British Strike Movement is Broken

Special Staff Correspondence

BIRMINGHAM, Eng., Aug. 15.—The general industrial situation here has brightened with the decision of the Yorkshire miners to resume work, although full operations in some parts of the coal fields will not be possible for weeks, and in some instances for months. Neither the necessary pumping nor ventilation was maintained during the strike. In West Yorkshire a dispute as to the retroactive date for the payment of the increase to enginemen may delay work, but the general belief is that the difficulty will be removed soon by some provisional understanding.

It is not only in the coal mines that the difficulty arising out of the strike will persist for some time. The closing of many of the Sheffield works has not only caused great loss to employers and much suffering to their workpeople, who are in no way responsible for the action of the miners, but it has also seriously affected every industry in the country. At least 20 manufacturers in the Birmingham and Staffordshire district have had to curtail production and, in certain cases, all departments had to be shut down because of the lack of supplies of steel from Sheffield. The effect upon the general fuel situation has been even more widespread. It will not be possible to make up the shortage of coal before winter, and beside the hindrance to industry there is danger of great hardship for domestic consumers.

It is probable that the Yorkshire miners will now be content to accept the national basis agreed on between the government and the miners' federation for the adjustment of tonnage rates to meet the loss of earnings which would otherwise be sustained by the piece workers through the reduction of the shift from eight hours to seven. The difference between this basis and that for which the Yorkshire men struck is only one decimal point, a ratio of 14.2 per cent as compared with one of 14.3 and represents a very trifling sum on a day's earnings.

Other evidences have come to light indicating a decline of the strike fever. A strike of 65,000 northern railroad employes over the application of a recent government wage award is threatened,, but an offer has been made which may avert the trouble.

The threat of direct action by the "triple alliance," the miners, railroad men and transport workers can now be considered negligible. It is not intended even to take a vote of the members of their unions on the subject. The explanation given by the leaders is that the occasion for an attempt to influence the political situation by a general strike has passed, but there is little doubt that the advocates of direct action concluded that public opinion was overwhelmingly against them.

Another welcome announcement is that of the decision of the government to avoid future intervention in labor disputes, except in cases of grave danger to national interests. There is no doubt that the readiness with which advances were granted when wage disputes were settled by government tribunals has had much to do with the frequency of new demands.

The increasing sentiment among employers and employes in favor of cooperation and negotiation was manifested this week in Birmingham by the success of the first convention of the Industrial League. The league was formed during the war largely at the instance of leading trade unionists who foresaw that peace would bring labor troubles, and having had long and bitter experience with the strike method of settlement were anxious to find a better way. The three-day convention was attended by many leading employers from all parts of the country and by representatives of many of the principal trade unions. The spirit displayed by both sides was gratifying.

British Firm Gives Fifth of Profits to Workers

William Gray & Co., a large shipbuilding corporation of West Hartlepool, Eng., have decided to set aside 20 per cent of their profits to be divided among their workers. The amount to which each employe is entitled to will be based on earnings exclusive of overtime, and will be dependent upon his having attained the age of 21 years, having been in the service of the company at least one year, and having lost through his own fault not more than 12 days' time in a year.

Furness Wilthy & Co., another large British shipbuilding firm, adopted a profit-sharing plan about nine years ago, making an employe a shareholder and guaranteeing him a dividend of 4 per cent. The company deducted from the employe's wages amounts sufficient to purchase shares in the company. This was objected to by trades unions on the ground that the employe needed all his wages to live, and also, that he could not seek work in another yard without losing his dividend. The plan failed owing to the objection of the trades unions.

The plan adopted by William Gray & Co. aims to overcome these objections by sharing profits without making the worker a stockholder. It is provided that time lost due to strikes will not be considered as time wilfully lost, while there is no reference in the plan to strikes in breach of an agreement.

Puddling Wage Rates Remain Unchanged

No change will be made in puddlers' wages during the next two months by mills in the Western Bar Iron association as a result of bimonthly settlement made in Youngstown last week.

Examination of the sales sheets of the mills disclosed there had been no change in the average price from the card rate of 2.50c on which the last previous settlement was made at Atlantic City, July 1. Settlements made March 1, May 1 and July 1 showed progressive reductions from the 3.45c card prevailing when the settlements of the six months preceding March 1 were made. The comparative bimonthly bar iron average price per ton since January, 1918, and the resulting puddling rate for the two months following are as follows:

	1918		1919	
January-February	3.10c	$15.05	3.10c	$15.05
March-April	3.30c	$16.05	2.75c	$13.30
May-June	3.35c	$16.30	2.50c	$12.38
July-August	3.40c	$16.55	2.50c	$12.38
September-October	3.45c	$16.80		
November-December	3.45c	$16.80		

Advance Housing Plan

Chicago, Aug. 25.—Expenditure of several million dollars to add to housing facilities at Indiana Harbor, Ind., to provide living quarters for employes of the Inland Steel Co. will result from the formation of the Indiana Homes Co. which has practically completed the purchase of 340 acres in the southern part of Indiana Harbor. This will accommodate about 2000 families.

Labor conditions have been poor in the vicinity of Indiana Harbor and the Inland Steel Co., the largest industry there, has had trouble finding homes for all its workmen. The new housing project is being financed by members of that company. As a result the company may be enabled to go ahead later with its plan of adding to its sheet mills and building a rail mill to round out its equipment.

Hammond Strike Broken

Chicago, Aug. 26.—Under protection of state militia the strike of workmen at the plant of the Standard Steel Car Co. at Hammond, Ind., seems to have been broken and strikers are returning to work. Each day sees more of the former employes returning to their tasks and there has been no disorder for several days. The company had considered evicting strikers from company houses to make room for new workers but this probably will not be necessary under the circumstances.

LABOR NOTES

The Midvale Steel & Ordnance Co., as a part of its interest in communities where its plants are located, is fostering erection of a new Methodist Episcopal church at Coatesville, Pa. It has donated land upon which the church will be built, its engineers have drawn plans for the new church free of charge, and the company is furnishing the building material to the congregation at cost.

* * *

F. E. Bath, representing the Graton & Knight Mfg. Co., Worcester, Mass., and John J. Lacava, representing its employes, have started on a country-wide tour to make a survey of conditions in about 50 leather factories, in compliance with the terms of agreement in the settlement of the recent strike. The result of their trip will determine the question of granting the 8-hour day and increased wages, this depending on the hours and wages which prevail in other cities taken as an average among the employes.

* * *

The average increase in the cost of operating the new state compensation law over the old law will be approximately 30 per cent, according to E. H. Downey, rate expert of the Pennsylvania state department of insurance. He has figured that in the mining districts the increase will amount to 20 per cent, 30 per cent in the manufacturing industries and 25 per cent in construction work. There will be an advance in death benefits of 10 per cent, in permanent disability 30 per cent, and temporary disability, 40 per cent. While the advance of medical costs will be nearly 50 per cent.

Reduced Stocks

Cause Good Demand for Refractories from Steel Industry—Cars Short

Pittsburgh, Sept. 2.—Steel manufacturers are specifying quite freely against their contracts for refractories and manufacturers of the latter are all fairly busy. Extensive repairs to both blast furnaces and open-hearth furnaces of the steel plants appear to have exhausted reserve supplies and current orders and specifications are believed to be largely for the purpose of replenishing stocks. Demands for silica brick are especially large. Prices show no special change than those of the past four or five weeks but the tendency is stronger as a number of the smaller producers have cost closely approximating current selling prices. While no particularly strong effort is being made to boost prices, most manufacturers have enough business in sight as to be disinclined to take on additional business at any lower figures.

Complaints of car shortages still are being heard and the fact that plants are running only about 60 to 70 per cent of capacity may be ascribed partly to this condition. The supply of box cars is much curtailed, due to the demands for equipment for moving the grain crops. Some manufacturers now are freely using gondolas to move their product.

Refractories

(Per 1000 f. o. b. works)

FIRE CLAY BRICK
(First Quality)

Pennsylvania	$36.00 to 41.00
Ohio	36.00 to 38.00
Kentucky	36.00 to 41.00
Illinois-Missouri	30.00 to 40.00

FIRE CLAY BRICK
(Second Quality)

Pennsylvania	$30.00 to 35.00
Ohio	20.00 to 25.00
Illinois-Missouri	25.00 to 30.00

SILICA BRICK

Pennsylvania	$40.50 to 45.00
Chicago	45.50 to 50.50
Birmingham	46.50 to 51.50

MAGNESITE BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 85.00

CHROME BRICK
(Per Net Ton)

9 x 4½ x 2½	$80.00 to 90.00

BAUXITE BRICK
(Per Net Ton)

55 per cent.	$ 40.00 base
76 per cent.	100.00 base

The H. E. Barton Tool Co., 106 South Jefferson street, Chicago, now is Chicago agent for the independent lathe chucks, manufactured by Terkelsen & Wennberg, 326 A street, Boston, and all sizes are carried in stock. The latter company now is New England representative for the roller bearing drill chuck, made by the Neilsen-Barton Chuck Co., Chicago.

Tender Dinner to Hoover

Under the auspices of the American Institute of Mining and Metallurgical Engineers, a banquet is to be tendered Herbert Hoover, after his arrival in this country before the middle of September. The actual date is to be decided upon after a cable is received from Mr. Hoover. This dinner will be in testimony of the admiration of the engineers of America for services rendered by Mr. Hoover in international affairs during the past five years and it is expected to tax the capacity of the largest of banquet halls among New York hotels. An executive committee has been appointed, with W. L. Saunders, 11 Broadway, New York, as chairman; Charles F. Rand, 71 Broadway, vice chairman; E. P. Mathewson, 120 Broadway, vice chairman, and Albert C. Ludlum, secretary. The first three hold the same positions on the general committee, made up of over 100 prominent mining and metallurgical engineers.

Raise Castings Standard

A new booklet on malleable iron and its production, which describes the methods that are being employed toward the improvement of malleable cast iron has been issued by the American Malleable Castings association, 1900 Euclid building, Cleveland. This association has for its purpose the establishment of a high standard of quality, and its various activities are being directed to that end. Aside from the various laboratories of its members, the association has maintained at Albany a research department for investigation and experiment and for testing and analysis of the daily output of each of its members. Results of these tests, together with directions for improvement where the need has been indicated, are forwarded to the respective members. The association will continue these daily tests and analyses in order to grade the products of each member. Where a member's product has daily met the requirements of the prescribed standard for a period of three months, a certificate of quality will be issued and the member then may call his product "Certified Malleable Castings."

Pig Iron Output

For First Half of 1919 Indicates Heavy Annual Loss

Pig iron production in the United States for the first six months of 1919, compared with both the first half of 1918 and the last half of 1918, shows a material loss. If production for the last six months of this year is continued at the same rate as during the first half, the 1919 total will fall 6,495,641 tons below that of 1918. The slump in blast furnace activity from January to June is responsible for the low production figure. Judging from the improved production of July and the number of idle stacks blown in during the month, the last six months' total will be considerably larger, with the result that the 1919 output may compare favorably with the 1918 output.

According to the statistics compiled by the American Iron and Steel institute, the production for the six months ending June, 1919, was 16,278,175 tons, 1,949,555 tons less than for the same period last year and 4,546,086 tons less than for the six months ending Dec. 31, 1918. Of the 16,278,175 tons produced, 16,036,218 tons were made with coke compared with 17,933,932 tons the first half of 1918 and with 20,488,243 tons the last half of 1918. Anthracite iron with 67,592 tons fell from 120,404 tons and 163,188 tons, respectively. Charcoal iron with 174,365 tons was about an average of the two six-month periods last year.

Production of pig iron by grade shows the following: Basic, 7,910,295 tons; bessemer and low-phosphorus, 5,181,621 tons; foundry including ferrosilicon, 2,436,023 tons; malleable, 465,823 tons; forge or mill, 104,874 tons, ferromanganese, 106,056 tons and spiegel, 38,136 tons. Merchant iron or iron made for the market totaled 4,499,133 tons while iron made for the maker's use totaled 11,779,042 tons.

Wants Catalogs

C. Carnoy-Vandensteen, Gand, Belgium, is interested in receiving catalogs and prices from American manufacturers of iron and steel tubes, valves, fittings and parts for steam and hot water heating systems, pumps of various kinds, radiators, etc.

Cole & Krentler, 220 Burlingame avenue, Detroit, are representing the McInnes Steel Co., Corry, Pa., in the sale of tool steels.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE Oliver Rim Co., Atlantic, Ga., manufacturer of the Oliver split demountable rim, has purchased a 14-acre tract of land on the Altanta and West Point & Southern railroads, near Camp Jessup, as the site for a new plant. The contract for the building has been let and actual construction is to begin at once. The plant is to be modern, fireproof buildings, of brick and steel, with more than 15,000 feet of floor space. It will be of the latest saw-tooth type of construction. J. S. & C. R. Collins, in the Empire building, Atlanta, have the contract for construction of the plant, which will be equipped for the manufacture of 1000 rims per day. Part of the machinery has been purchased and some of it is already in operation in temporary quarters in order that dies may be made and other equipment prepared for the rolling of rims just as soon as the new plant is completed, which will be before Jan. 1.

The Oliver Rim Co. is incorporated under the laws of the state of Georgia with a capital stock of $1,000,000 and has offices in the Empire building here. Elmer Oliver is president, V. G. Collis, vice president, and R. H. Lukenbill secretary and treasurer.

* * *

THE new electric welding plant of the United States Chain & Forge Co., at York, Pa., is nearing completion and the company expects to start operations on Nov. 1. This 1-story structu e, 150 x 800 feet, will be used for the manufacture of bright chain.

* * *

THE Charter Oak Machine Co., Hartford, Conn., recently incorporated under the laws of that state, has organized by the election of the following officers: President, A. L. Bleauchine; vice president, Frank Johnson; secretary and treasurer, W. J. Gengres.

* * *

THE Strauss Bascule Bridge Co., Chicago, has submitted plans and specifications to the city council of Kenosha, Wis., for the proposed new double-leaf bridge across the harbor inlet at Main street. The span is 145 feet and the cost of the structure is estimated at $300,000, including grading and paving. Approval of the plans by the railroad commission of Wisconsin will be necessary before bids are asked for the work. B. T. Brennan is city engineer.

* * *

THE Bridgeport, Conn., branch plant of the American & British Mfg. Co., Providence, R. I., which was devoted to the making of munitions during the war, is to be equipped for the building of automobiles. A four-cylinder, 6-valve car that will sell for $8000 and upwards is to be one of the products.

* * *

THE Southern California Iron & Steel Co. is preparing to erect a plant at Huntington Park, Cal., where it has bought a site containing 25 acres. The first construction will include eight buildings to house open-hearth furnaces, machine shop, forge shop and other utilities. Plans now in hand call for the expenditure of about $1,500,000.

* * *

THE new manufacturing plant of the Bridgeport Tube Works, 250 North avenue, Bridgeport, Conn., was sold at public auction, Aug. 14, to H. B. Houghton, Asbury Park, N. J., for $17,100. The mechanical equipment, machinery, machine tools, stock, office furnishings, etc., were sold in 368 lots to about 75 different manufacturers in the eastern part of the country.

* * *

THE International Harvester Co. has bought a block of real estate at Ninety-ninth street and Muskegon avenue, Chicago, covering about three and three-quarter acres. This is the second block of this size recently purchased. It adjoins the plant of the Wisconsin Steel Co. and will be held for future growth of that plant, no immediate plans for enlargement being made.

* * *

THE Erickson-Young Pattern & Mfg. Co., Beaver Dam, Wis., has been organized to manufacture wood and metal patterns for the general foundry trade and to conduct a machine shop. The principal owners are James Erickson, who has resigned as superintendent of the pattern department of the Western Malleables Co., Beaver Dam, and Harry Young, who has been associated with the Standard Steel Car Co. as resident inspector at the western shops in Beaver Dam, but who resigned Sept. 1 to take charge of the new business.

* * *

ORDERS for 100 tank cars recently were placed by the Livingston Refiners Corp., Tulsa, Okla., with the Pennsylvania Tank Car Co., Sharon, Pa., for use in transporting the Livingston Refiners Corp.'s petroleum products. Offices in addition to the general offices at Sharon are maintained by the Pennsylvania company at 50 Church street, New York; Third National Bank building, St. Louis, and 503 Market street, San Francisco.

* * *

FROM Swansea, Wales, it is reported that the Gravesend Steel & Tin Plate Co. has bought the Bryngwyn Steel Tin Plate Co., Messrs. W. Lewis & Son's Works, and the Cambria Tin Plate Works at Gorseinon. All these are situated in the Swansea district. The purchase price is approximately $1,216,625. It is considered an important development, and further similar combinations are regarded as probable.

* * *

THE plant of the Buffalo Metal Goods Co., Buffalo, maker of coaster brakes, which has been taken over by the General Motors Co., is to be operated under the general supervision of the New Departure Mfg. Co., Bristol, Conn., one of its most important subsidiaries. The management of the New Departure Mfg. Co. states for the present there will be no change, so far as the Bristol company is concerned.

* * *

AT THE present time, L. G. Williams, East View Farm, R. 6, Box 50, Hopkinsville, Ky., is organizing a company to manufacture a special line of farm and mining machinery in a new town in Oklahoma. A small foundry, equipped with all modern appliances will be built as will an up-to-date brass foundry, machine, blacksmith, forge and pattern shops. Modern tools, automatic machinery and labor-saving devices will be purchased.

Here and There in Industry

Live Information Which Records the Expansion of Various Lines of Productive Enterprise

THE Higgins Spring & Axle Co., of Racine, Wis., has disposed of its business, equipment and materials to a new corporation formed at Edgerton, Wis., under the name of Continental Axle Co., by James W. Menhall, who is head of the Highway Trailer Co., of Edgerton. The Continental company has been incorporated with a capital stock of $200,000 and will specialize in axles for motor trucks, trailers and tractors, as well as continuing the manufacture of heavy vehicle springs. The machine tool and other equipment of the Higgins works at Racine will be moved to Edgerton, where a new plant, 200 x 300 feet, will be erected at once. Foundations are being laid. This adjoins the Highway Trailer plant, but will be conducted as a separate institution, building axles for the Highway company as well as other truck, trailer and tractor concerns. Members of the Higgins company have a considerable interest in the Continental company, the other stockholders in which are members of the Highway concern.

* * *

THE Hart & Cooley Co., New Britain, Conn., maker of warm air registers, has sold its factory buildings on Booth and Orange streets in that city to the Fafnir Bearing Co., New Britain, for $123,500 cash. The seller occupies adjoining buildings.

* * *

THE Hartford Batteries Co., Hartford, Conn., has purchased the former plant of the Clark Bros. Bolt Co. in Milldale, Conn., and will begin operations as soon as alterations have been made. The Clark Bros. Bolt Co. has moved into a new factory in Southington, Conn.

* * *

THE Framingham Foundries of Framingham, Mass., have been reorganized through the purchase of the controlling interest by the B. F. Sturtevant Co. of Hyde Park, Mass. The new organization is operating under the name, Framingham Foundries, Inc., and has as its new officers, Noble Foss, president; W. Emerson Barrett, vice president; G. L. Briddy, treasurer, and John J. McElroy, chief engineer. The plant is being enlarged to provide for making brass and aluminum castings. Three hundred men are at present employed and the foundry is working at full capacity.

* * *

THE Federal Electric Co., manufacturer of electrical equipment, Lake and Desplaines streets, Chicago, and the Wabash Vehicle Co., builder of vehicles, Wabash avenue and Thirty-ninth street, have bought a tract of 38 acres on which they will build a plant for each company for the production of their several lines.

* * *

LANCASTER IRON WORKS, INC., Lancaster, Pa., which recently increased its capital stock advised this action was taken for the purpose of enlarging its plant. It is doubling its boiler shop and installing new and heavier equipment so as to do larger and heavier work. It is not in the market for new tools and equipment, orders for which have been placed.

* * *

PRACTICALLY all equipment in the condensing line, such as boilers, engines, ice machines, air compressors, motors, etc., will be required by the Galloway-West Co., Fond du Lac, Wis., which will build a combination condensory and milk factory. The main building will be 85 x 207 feet with a garage 52 x 65 feet and both buildings will be of reinforced concrete construction.

* * *

TO FACILITATE the handling of inbound materials as well as outbound shipments of its products, the Pittsburgh Crane & Equipment Co., Sharpsburg, Pa., is extending the crane runway over the railroad and making other improvements. It is at work on several modifications of its plant and is increasing its facilities for the manufacture of electric traveling cranes, hand power and jib cranes, etc.

* * *

THE Driver-Harris Co., Harrison, N. J., now is selling its wire rope products direct to the trade instead of through its former selling agents. These products include sash cord and tiller rope in plain iron, galvanized iron, phosphor bronze, special bronze, monel metal, and all special grades. In addition to this, the company has increased its facilities to include all grades of rope in 6 x 7, 6 x 12 and 6 x 19 construction, such as drilling cable, elevator rope, haulage rope, sand lines, etc., in all sizes up to ¾-inch.

* * *

IN order to provide for the needs of its rapidly increasing volume of business, the stockholders of the A. R. Purdy Co., Inc., 127 Christopher street, New York, have authorized the board of directors to increase the company's capitalization from $10,000 to $100,000. No change in the managing personnel will take place. A new warehouse recently was leased at 506 Hudson street, and alterations have connected it with the main warehouse at 125 to 127 Christopher street.

* * *

THE Duff Mfg. Co., Pittsburgh, is constructing an addition, 160 x 80 feet, to its works. The new building is of brick and steel, following the standard Austin industrial construction. It is designed to accommodate the forge shop and heat treating department. Provision has been made for installing 16 steam hammers, with an equal number of trimming presses. The heat treating department will be equipped with furnaces of the latest type, burning either oil or gas. The completion of the new forge shop, about Oct. 1, will enable the production of the company's jacks to be greatly increased.

* * *

THE Eisemann Magneto Corp. has been incorporated at Albany, N. Y., and will take over the business and assets of the Eisemann Magneto Co. Directors of the new organization include Joseph A. Bower, vice president of the Liberty National bank; Abram I. Elkus; Jacob S. Farlee, a voting trustee of the Buffalo & Susquehanna railroad; Franklin S. Jerome, of the Seymour Mfg. Co., of Connecticut; Raymond E. Jones, president of the Merchants' National bank; George E. Matthies, president of the Seymour Trust Co., of Connecticut; Horace A. Moses, president of the Strathmore Paper Co.; Latham R. Reed, of McClure, Jones & Reed, and William N. Shaw, vice president of the New York Air Brake Co. The company did a gross business of approximately $4,000,000 last year, according to a recent announcement.

Foreign Markets

Sought by Canadian Steel Manufacturers—Works Are Being Expanded

Toronto, Ont., Sept. 1.—Canadian steel producers are now looking abroad for new markets, and Canadian steel may find its way to England, South America and even Australia. It may be too soon to say England will be permanently at a disadvantage in the steel trade, but conditions since the armistice have been such that Canadian manufacturers think now is their chance to get a foothold in foreign markets. Canada imports much steel and therefore its capacity for exporting might be doubted. The answer to this may come in a greatly expanded steel industry in Canada. The Lake Superior Corp. is now enlarging its plant at Sault Ste. Marie, Ont., the Lake Huron Steel Corp., recently formed with head office at Goderich, Ont., is looking for a site for a large electric steel plant; the Dominion Steel Corp. is building a $5,000,000 steel plate mill and making improvements to its present plant, while the Nova Scotia Steel & Coal Co., New Glasgow, N. S., is contemplating enlargements. A new company, the Consolidated Iron & Steel Corp., Ltd., of Toronto, backed by $8,000,000 of Toronto and Detroit capital, also is to engage in the iron, steel and mining business, as recently announced.

The Brockville Moulding Sand Co., Ltd., has been incorporated to develop extensive bodies of molding sand in the vicinity of Fernbank, two miles from Brockville.

Labor troubles at the plant of the Algoma Steel Corp. are reported to have resulted in almost a complete shutdown. According to M. T. Gleason, secretary of the Trades and Labor council, men in the blooming mill were given the preference of having the force reduced or the plant closed.

Word has been received from C. Hartlett, acting Canadian trade commissioner at Melbourne, Australia, stating that he has received a letter from H. R. Harper, chief engineer for the electricity commissioners recently appointed in the state of Victoria to erect and operate a large powerhouse on the coal fields about 90 miles from Melbourne, respecting the electrical machinery and material required. Bids will be called for early next spring, and manufacturers in this country will be given ample opportunity to bid. In the meantime, in order that the chief engineer may familiarize himself with the latest type of machinery in use in America, manufacturers interested are invited to submit catalogs of electrical machinery and equipment.

Canadian Site Obtained For Steel Plant

Toronto, Ont., Sept. 1.—After several weeks of negotiations a site has been obtained in Goderich, Ont., for a plant for the Lake Huron Steel Corp., recently organized. The company is planning a steel plant to include six electric furnaces and equipment for the manufacture of steel products. The site comprises 250 acres along the shore of Lake Huron. The company will spend $2,000,000 the first year, and an additional $6,000,000 the second year in establishing the plant. Among those interested in the company are J. J. Mahon, Newark, N. J., former chief inspector of the imperial munitions board, formerly of the Crucible Steel Co. of America; J. A. Durfee, Pittsburgh, former general manager of the British Forgings, Ltd., Toronto; J. C. Jones, Cleveland, president of the Cleveland Steel Co.; Charles R. Talbot, Detroit, vice president of the National Bank of Commerce; Harry S. Hall, Detroit, general manager of the Lewis Hall Iron Co., and president of the Hall Motor Truck Co.; Stuart A. Howard, Detroit, representing New York and Detroit financial houses; Alan Warren, Cleveland, representing New York financial interests; C. F. Megow, St. Paul, Minn., president of the Charles Megow Tractor Co., and formerly of the Ford Motor Co., and Bert H. McCreath, Toronto.

Awarded Forgings

The McKinney Steel Co., Cleveland, has been awarded by the committee on the sale of materials of the Detroit ordnance district salvage board, 7100 tons of 240-millimeter shell forgings, located at the plant of the American Car & Foundry Co., Detroit, at $19.60 per ton. The bids on this material ranged from $17.50 to $19.60 per gross ton.

Will Witness Process

Metallurgists and mining engineers who attend the meeting of the American Institute of Mining and Metallurgical Engineers at Chicago, Sept. 22 to 26, will be given opportunity to witness a demonstration of the production of metallic tungsten and molybdenum at the plant of the Fansteel Products Co., North Chicago. An excursion to Milwaukee has been arranged for that day for the purpose of visiting plants in and about Milwaukee which manufacture mining machinery. A stop will be made at North Chicago to visit the Fansteel plant, and the entire metallurgical process will be shown, from the preparation and purification of the commercial concentrates including sintering the pulvurent metal into homogeneous billets by high amperage currents.

20,000 See Schwab Given French Decoration

A notable tribute was paid to Charles M. Schwab at his home in Loretto, Cambria county, Pa., Wednesday, Aug. 20, for the part he played in the winning of the war. In the presence of 20,000 persons, Monsieur N. J. Casenave, minister plenipotentiary from France, presented to Mr. Schwab the insignia of the French legion of honor, while the people of Cambria county presented him with an American flag. Gen. George S. Goethals, J. Leonard Replogle and Charles E. Piez, as well as local and state officials attended the ceremony. Included in the assemblage also were many business associates and close personal friends of Mr. Schwab.

The tribute was paid to Mr. Schwab particularly for his work as the head of the Emergency Fleet corporation. President Wilson sent a letter in which he said: "I wish I might be present to say to your neighbors how heartily we have all admired and appreciated the service you rendered the government in pushing forward the shipbuilding schedule." Letters were also received from Governor Sproul of Pennsylvania and Senator Boise Penrose in which they expressed appreciation of Mr. Schwab's services for the government.

"When the days were dark, when France had to yield ground to the enemy Mr. Schwab helped us," said Minister Casenave. "We came to him and he gave us everything we needed. He was always ready in every emergency. At Bethlehem there was melted the steel of liberty. Mr. Schwab helped us not only with steel, but with money and with credit, and by the confidence he showed in my country. Now that with your help we are victorious, France must recognize what this great optimist has done."

The Liberty Knife Co., New Haven, Conn., has increased its capital stock from $20,000 to $50,000.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

FRANK D. EGAN, formerly works manager of the Pittsburgh Iron & Steel Foundries Co., has become steel mill application engineer for the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. He will devote his entire time to the development of electrical apparatus for steel mills. Mr. Egan's experience with electrical devices as applied to steel mills, covers a period of about 20 years, all of which has been spent in the mills of the Pittsburgh district. In 1899, he entered the electrical department of the Homestead, Pa., plant of the Carnegie Steel Co., under the direction of Alva C. Dinkey, who then was superintendent of the electrical department. In 1903, he resigned to enter Grove City college where he completed a college course. After he was graduated, he entered the inspection department of the Westinghouse Electric & Mfg. Co., remaining a little over a year. He resigned to become assistant chief electrician at the Carrie furnaces of the Carnegie Steel Co. He then joined the electrical engineering force of the National Tube Co. While devoting the major portion of his time to his work, he attended the University of Pittsburgh for two years and then gave up his course to enter the electrical superintendent's office. Later he became assistant superintendent of the electrical department. In 1911, he resigned to become electrical engineer with the Pittsburgh Crucible Steel Co. Late in 1917, he left the Crucible company to enter the employ of the Pittsburgh Iron & Steel Foundries, Pittsburgh, as works manager in charge of war work. He remained until his recent return to the Westinghouse organization. Mr. Egan is a member of the iron and steel committee of the American Institute of Electrical Engineers, a past president of the Association of Iron and Steel Electrical Engineers, and a member of the American Iron and Steel institute.

August H. Tuechter, president of the Cincinnati Bickford Tool Co., Cincinnati, celebrated his fiftieth birthday on Aug. 23.

Hugh K. Lindsey has returned to Columbus, O., as manager of the Columbus office of the Galion Iron Works & Mfg. Co., Galion, O., manufacturer of road machinery, succeeding Curtis C. Latimer.

D. R. Salisbury has been made London, England, representative for the Allied Machinery Co., of America, New York City. He sailed on Aug. 30 on the BALTIC for London, where he will remain indefinitely.

John Bergan, purchasing agent for the Russell & Erwin division of the American Hardware Corp., New Britain, Conn., has resigned to accept a position with the Trumbull Electric Mfg. Co., Plainville, Conn.

W. H. Holt, who recently resigned his position at the Woonsocket Machine & Press Co., Woonsocket, R. I., has accepted a position as superintendent of the Sipp Machine Co., Paterson, N. J.

Louis Stephanson, who has resigned as advertising manager for Landers, Frary & Clark, New Britain, Conn., to join the McCann Advertising agency, New York, has been succeeded by H. G. Nichols.

Edward L. Dunn, formerly manage of the Standard Plunger Elevator Co, Worcester, Mass., and for the past year or more in the government service in Washington, has accepted a position as associate editor of the *American Machinist*, New York.

Jerome R. George, vice president of the Morgan Construction Co., Worcester, Mass., returned home Aug. 26 after an absence since Dec. 30, during which time he made extensive trips through England, France and Belgium.

H. F. Harris, an industrial engineer, recently was made general sales manager of the Bethlehem Motors Corp., Allentown, Pa. He has held important positions with various automobile companies, including Everett, Studebaker, Maxwell and Overland. He recently was general sales manager of the Republic Truck Co.

D. V. Holcomb, formerly connected with the John Lauson Mfg. Co., New Holstein, Wis., has been made general sales manager of the General Tractors, Inc., with executive offices in New York and Chicago, which is a reorganization of the Monarch Tractor Co., a South Dakota corporation with main works and offices at Watertown, Wis.

Frank P. Turner, controller of the Buick Motor Co., Flint, Mich., has been promoted to controller of the General Motors Corp., with headquarters at Detroit. Mr. Turner was formerly connected with the duPonts at Wilmington, Del. E. W. Proctor, assistant treasurer of the Buick company, will succeed Mr. Turner as controller and W. W. Bacon of the accounting department will be made assistant treasurer.

William J. Wooldridge has resigned as engineer with the Pittsfield, Mass., branch of the General Electric Co., after 27 years of service, and will leave that city, Sept. 1 for Portsmouth, O., to take a position with the Whitaker-Glessner Co. He was for 11 years at the Lynn, Mass., works, five years at the Schenectady, N. Y. works and 11 years at the Pittsfield works of the General Electric Co.

H. I. Kahn has been made manager and placed in charge of the new branch office established in the Jefferson county bank building, Birmingham, Ala., by the Keller Pneumatic Tool Co., Chicago and Grand Haven, Mich. W. H. Woody, division manager for the Keller company at Washington, recently was awarded a victory loan medal made from German cannon by the victory liberty loan committee of Portsmouth, Va. The medal is one of seven awarded for distinguished service in the five loan campaigns.

H. H. Hills, formerly assistant general manager of the Packard Motor Co., has been promoted to be vice president in charge of distribution. Mr. Hills was general sales manager for a number of years, after becoming affiliated with the company in 1908. George R. Bury has been made general distribution manager for the Packard company. For the past year he has been head of the Packard Motor Co., of Chicago, and prior to that time he was carriage sales manager.

Men of the Machinery Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

CHARLES E. HILDRETH, president and general manager of the Whitcomb-Blaisdell Machine Tool Co., Worcester, Mass., and general manager of the National Machine Tool Builders' association, who recently resigned as chief of the machine tool section of the office of the director of sales in the war department, was given a welcome home banquet by the Foreman's club of the company, Aug. 22, at the Sterling Inn, Sterling, Mass., and presented a silver loving cup. Supt. Maurice Downey, president of the club, was toastmaster and made the presentation speech, after which Mr. Hildreth related some of his experiences while in Washington as representative of the machinery industry.

C. F. Megrow, formerly of the Ford Motor Co., Detroit, and Henry Ford & Son, Dearborn, Mich., has designed a tractor to be manufactured at Holly, Mich.

H. H. Hills has been made vice president in charge of distribution and George R. Bury general distribution manager for the Packard Motor Car Co., Detroit.

C. F. Hepburn has been made vice president and general manager of the Republic Motor Truck Co., of Alma, Mich., relieving President F. W. Ruggles of some of his duties.

Lawrence W. Kinnear has been named manager of the newly opened Detroit branch office in the Penobscot building, of W. S. Kinnear & Co., 111 Broadway, New York, engineers.

Ex-Gov. Eugene Noble Foss, president of the B. F. Sturtevant Co., Hyde Park, Mass., and Richard H. Long, head of the R. H. Long Machinery Co., Framingham, Mass., are candidates for the democratic nomination for governor of Massachusetts.

Hiram N. Cudworth, Chicago representative of the grinding machine department of the Norton Co., Worcester, Mass., and Mrs. Cudworth, are spending their vacation in Falmouth, Mass. They renewed acquaintances in Worcester, their former home, this week, on the way to the shore.

N. S. Franklin, for eight years associated with the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., in its testing, engineering and sales departments, has been appointed assistant superintendent of the New Britain, Conn., district of the Connecticut Light & Power Co.

Jerome R. George, vice president of the Morgan Construction Co., Worcester, Mass., who has been in Europe since the first of the year, has booked return passage on the steamship BALTIC, whose sailing date is indefinite because the ADRIATIC took her place on the July 21 trip to this country.

Maj. Harry C. Martin, U. S. A., who has been on duty at the Sandy Hook proving grounds for some time, has been transferred as the ordnance officer of the northeastern department and will relieve Col. T. C. Dickson, commander of the Watertown, Mass., arsenal of the department ordnance routine.

Frederick C. Billings, president of the Billings & Spencer Co., Hartford, Conn., has succeeded his father, Charles E. Billings, as a trustee of the Hartford-Connecticut Trust Co., the latter resigning because of physical disability. Charles E. Billings was the first president of the Billings & Spencer Co., serving from 1869 until September, 1917, when he was succeeded by his son.

A. D. King, Flint, Mich., for three years in charge of motor production, Chevrolet division, General Motors Corp., has been transferred to Janesville, Wis., to be general works manager of the Samson Tractor Co., a division of the corporation. Mr. King entered the industry with the old Leland-Falkner organization, now the Cadillac Motor Car Co., and later was with the Ford Motor Co. as mechanical engineer for six years.

James M. Buick, vice president and general manager of the American Car & Foundry Co., has been made director of sales, the office of general manager having been abolished. His present title is vice president in charge of sales. William C. Dickerman will direct the production division and will be known as vice president in charge of operations. Frederick A. Stevenson will be assistant vice president in charge of operations and he also will be head of the manufacturing section, in charge of production in car plants, rolling mills and foundries.

Homer C. Johnstone on Sept. 1, after three years' service resigned as manager of the steel department of Gaston, Williams & Wigmore, Inc., New York City, to accept a position with the exporting house of W. H. Knox & Co., 18 Old Slip, New York City, where he will have charge of all steel and metal sales. Prior to becoming affiliated with Gaston, Williams & Wigmore, Inc., Mr. Johnstone was connected with the Midvale Steel & Ordnance Co., for about 14 years.

Frederick C. Gilbert has resigned as vice president and director of the Timken-Detroit Axle Co., Detroit, in charge of sales and publicity, after an affiliation dating back to the company's formation 10 years ago. For 14 years prior to that time, Mr. Gilbert was connected with the Pope Mfg. Co., as general production manager of a number of its plants, including the Pope Motor Car Co., Toledo, which later was sold to the Willys-Overland interests, and the Columbia Steel Co., Elyria, O.

E. M. Webb who recently was discharged from military service as first lieutenant, ordnance corps, has been appointed shop superintendent of the Duff Mfg. Co., Pittsburgh. Mr. Webb was stationed at the Rock Island arsenal in charge of experimental work, including the development and testing of the French 75-millimeter recoil mechanism. Before being commissioned, he was assistant to the production superintendent of the American Tool Works, Cincinnati. Mr. Webb is a 1915 graduate of the University of Cincinnati.

E. W. Morgan, for 31 years foreman of the brass foundry department of the Turner & Seymour Mfg. Co., Torrington, Conn., has resigned to become superintendent of the brass foundry to be established in Bridgeport, Conn., by H. B. Houghton, who recently purchased the plant of the Bridgeport Tube Co. at auction. Mr. Houghton was formerly of the sales force of the Turner & Seymour Mfg. Co. Mr. Morgan took up his new duties Sept. 2 and the foundry is expected to be in operation about the middle of this month.

Men of the Iron Trade

Personal News of a Business Character Regarding the Men of Affairs of the Industry

WALTER A. JANSSEN, who has been operating manager of plants for the Canadian Steel Foundries, Ltd., with headquarters at Montreal, has resigned and has been appointed assistant general manager in charge of operations of the American Steel Foundries, New York, Chicago and Pittsburgh, with headquarters at Chicago. In August, 1917, Mr. Janssen resigned as foundry superintendent, after a 10-year connection with the Bettendorf Co., Davenport, Ia. Upon leaving, his former employes tendered him a banquet and presented him with a gold watch and diamond ring in token of their esteem. Shortly after, he was appointed operating manager of the plants of the Canadian Steel Foundries, Ltd., located at Longue Pointe and Pointe St. Charles, Que., and the steel foundry and rolling mill at Welland, Ont. In 1917 Mr. Janssen was a director of the American Foundrymen's association and chairman of its committee on steel foundry standards. Last year at the Milwaukee meeting of that organization he was elected vice president.

Hamilton Stewart, Pittsburgh, recently was elected director of the Crucible Steel Co., of America, in place of the late T. H. Given.

Gen. T. Coleman du Pont and Henry Payne Whitney have been elected to positions on the board of directors of the Vanadium Steel Co. of America.

E. F. Kidd has been appointed traffic manager of the Republic Iron & Steel Co., Youngstown, O., to fill the vacancy caused by the death of H. R. Moore.

Arthur Smith, who succeeded his father some time ago as superintendent of the foundry of the Ingersoll-Rand Co., at Phillipsburg, N. J., has resigned. William Turner, who comes here from Canada, will be his successor.

Baylor Hickman, president of the Ewald Iron Co., Louisville, Ky., recently was appointed exclusive agent in the Louisville and St. Paul districts for the Woodward Iron Co., Woodward, Ala.

J. R. Edwards has resigned his position with the A. M. Byers Co., Pittsburgh, to become affiliated with the Reading Iron Co., Reading, Pa., with headquarters at Dallas, Tex. He will have charge of the Texas, Louisiana, Oklahoma and Kansas territory.

J. B. Arnold, assistant general manager of sales of the Illinois Steel Co. at Chicago has been appointed acting manager of sales for the same company at St. Paul, Minn., to succeed D. R. Cotton, resigned, in addition to his regular duties. A. H. Warren is appointed assistant manager of sales at the St. Paul office.

WALTER A. JANSSEN

John Q. Reid, who has been superintendent of the Longue Pointe works of the Canadian Steel Foundries, Ltd., Montreal, has been promoted to the position of general superintendent of the company. Before going with the Canadian Steel Foundries, he was works manager of the Chester, Pa., plant of the American Steel Foundries.

W. H. Forbes, who has been a member of the sales staff of the Carnegie Steel Co. in the Cleveland district for the past 12 years, has resigned, effective Sept. 1. Mr. Forbes will devote his attention to private business undertakings in which he is interested and will be identified with the Leader Construction Co., Cleveland.

R. L. Mason, as general agent, has been placed in charge of the new sales office established in the Oliver building, Pittsburgh, by the Pennsylvania Iron & Steel Products Co., Ellwood City, Pa., which is specializing in the manufacture of steel barrels, drums and other sheet metal products. Mr. Mason has had charge of sales of the Clarke Car Co., the Steubing Truck Co., and the Edwards Mfg. Co.

Presley Hamilton, who was formerly traveling representative for the Midvale Steel & Ordnance Co., and later for the Brier Hill Steel Co., has recently opened offices in the Singer building, to act as eastern sales agent for the Keystone Bronze Co., Pittsburgh; McAleenan Brothers Co., Pittsburgh; Pittsburgh Knife & Forge Co., Pittsburgh, and the Youngstown Foundry & Machine Co., Youngstown, Ohio.

O. H. Taylor, with headquarters at 308 Stuart building, 280 Broadway, New York City, has been appointed New York representative of the Merrill-Stevens Shipbuilding Corp., Jacksonville, Fla. C. W. Hendley has been made purchasing agent of the Jacksonville plant of the corporation to succeed H. W. Hebb, resigned. W. W. Helvenston has been appointed acting purchasing agent at its South Jacksonville plant. Mr. Hendley and Mr. Helvenston formerly were assistant purchasing agents.

Joseph A. Halls resigned on Sept. 1 as superintendent of the Tod-Booth plant of the United Engineering & Foundry Co., Youngstown, O., to become superintendent of the fireproofing department of the General Fireproofing Co., whose headquarters and principal plant is located in that city. Mr. Halls has been affiliated with the United Engineering & Foundry Co. since it absorbed the William Tod plant, of which he then was superintendent. He was taught the machinists' trade at the Tod plant and subsequently became foreman. Samuel J. Reilly, superintendent of erection in the field for the United company, succeeds Mr. Halls as superintendent of the plant.

Brighter Business Outlook Seen

Saner Sentiment Permeating Ranks of Labor—Public is Aroused to the Need for More Production—Steel Employes Wage Gains Beat Living Costs—No Definition Given for Average Living Standard

BY JOHN W. HILL, FINANCIAL EDITOR

MARKED improvement in the business outlook has followed in the wake of President Wilson's admirable stand upon the wages question and his appeals to labor for a truce in industrial disputes pending the outcome of the government's efforts to check the flight of living costs. Brought face to face with the problems confronting it, the country is in no mood softly to indulge outcroppings of radicalism spelling curtailment of production.

A widespread awakening has occurred to the critical world shortage of goods and to the fact that the only real permanent solution of the high prices lies in bringing the supply of goods more nearly up to the level of the demand. As a result the public will not be slow in displaying its impatience toward any group of workmen who, either through strikes of demands for unreasonable wages, would retard rather than speed up the productive machinery which eventually will correct the prevailing unsettled conditions. This new spirit is permeating the ranks of the rational laboring classes, and most observers believe that the noisy disturbing element of radicalism is on the wane, to be replaced by a dominant note of sober, clear-thinking on the part of the great mass of true American workmen who have no taste for the unspeakabe terrors of bolshevism.

With the growing shortage of labor causing its services to be at a premium in practically every industry in the country, wages are higher in proportion to the cost of living then ever before. Strikes or threats of strikes upon the plea of failure of wages to meet the cost of living in most cases are based upon a bogus claim. Millions are suffering from the high cost of living but they are in the class of brain workers, such as office help, bookkeepers, professional men and those living upon fixed incomes —not wage earning manual laborers or mechanics.

That is why the steel men's union leaders here placed themselves in a ridiculous light when they attempted to angle for popular sympathy by drawing a picture of alleged wretched conditions under which steel employes are compelled to live. These tactics, aimed at roping in a gullible public unacquainted with the facts will prove a boomerang. A truthful history of the steel employes wage advances, always several leaps ahead of the cost of living increases, is calculated to bring tears of envy rather than of pity from the average citizen.

Although the highest authorities fix the increase in the cost of living, weighting each item of the family budget in proportion to its importance, at 71 per cent since 1914, the wage increases in the steel industry have advanced from 114 to 170 per cent. Common laborers now earn an average of $5 a day against an average of $2 for the same hours of work before the war. However, only a small portion of the vast number of steel employes are classed as common laborers, the higher classes earning from $6 to $18 daily, with $10 as an ordinary wage. It is significant to note in this connection that the labor cost per ton of steel output has increased 225 per cent, while the efficiency of labor has decreased 20 per cent.

Union Claims are Absurd

These undisputable facts reduce to an absurdity any claim of union officials that steel employes are underpaid. With such a wide margin of wage gain over living costs rises, any steel workman who has failed to better his living conditions since 1914 has only himself to blame. The great mass of sober-minded steel employes are not blind to all this.

The phrases "high cost of living" and "maintaining a standard of living" have been much overworked of late. They are used as though those who employ them have had a tangible and definite idea of what constitutes the "standard." But do they? To maintain a "standard of living" would necessitate an average man with an average number of children with average aspirations respecting living conditions.

Some men are saving, others are spendthrifts, some have large families and others none at all. Some have no desire for automobiles and not all, by any means are content with low-priced cars. How then is it possible to adjust an average wage to maintain a "standard of living"? The fallacy of dwelling upon the "high cost of living" in connection with most wage demands at present is evident in view of the "orgy of extravagance" sweeping the land, on the authority of the government thrift bureau and of every retail dealer in any industrial center. This condition has done much to encourage high prices and profiteering.

It is no one's business how the wage earner spends his income under ordinary conditions. But when labor begins to clamor for more wages because "of the high cost of living" inquiries upon the subject are pertinent. If it is shown that wages are consumed by the "cost of high living, an extravagant demand for luxuries and by unwholly economical mode of life, then the public may well ask if it is bound to maintain such a standard.

Efficient workmen are entitled to a wage sufficient to properly cloth and feed their families educate their children, save something for advanced age and enjoy some of the comforts and pleasures of life. That is unquestionable. From all present appearances, however, it is the craving by labor for the last items in the category that is keeping up the demand for higher and higher wages.

A great middle western merchant says the war wages have created a "new standard of extravagance—not of living." Stores that once catered to the laboring classes complain they are losing their identity because cheaper grades of goods are no longer in demand. They must compete with the high-priced stores and stock up with $10 to $18 colorful silk shirts for mill hands and mechanics and expensive hats, furs and silk stockings for their wives. With foods the same story is told. The demand for all commodities has been concentrated at the top for the higher priced products of supposedly better quality, with the result that prices have been pushed up and up. One authority contends that there never was so little suffering from lack of necessities in the history of the country. No excuse for unemployment

exists in any line and wages everywhere are high.

The plain truth of the matter is that labor has been profiteering, which has given many manufacturers and sellers of necessities an excuse to profiteer in their turn. The steel industry is conspicuous among the industries of the nation for lowering its prices and sticking to it. In most lines there has been an evident scramble on the part of all factors to take advantage of the situation and "get all they could while the getting was good." The government has undertaken to check profiteering by dealers in necessities. Proper education should bring labor back to earth also stimulating increased production and greater economy in buying.

Urge Action on Exports

Washington, Sept. 2.—Gaston, Williams & Wigmore and George Mogensen, New York, exporters, have telegraphed Senator Owen, former chairman of the senate committee on banking and currency, to urge the President to call a meeting of a special committee to solve the problem confronting industries and exporters in moving heavy tonnages now waiting shipment abroad. The export business of the United States, the telegram reads, is paralyzed today. Continuing the message says:

"If it is the desire of the government to preserve to America its foreign commerce and prevent the horrors of overproduction in the near future, something must be done at once to get the government and all interested members of the community together to provide a present remedy. If a committee is convened by call of the President in Washington, consisting, say, of two appointees of the President, two members of the banking and currency committee of the senate, two members of the appropriate house committee, two members of the bankers' committee, two members of the American Manufacturers' Export association, two exporters and two appointees of the national chamber of commerce to sit in Washington, to hold hearings, and bring forth a plan, a solution will be forthcoming, having the support of all, in 30 days. There is a great crisis which will admit neither of delays nor of differences between those charged with the responsibility of averting a great misfortune. Anything we can do to help, regardless of time and expense, will be done."

No Advance Tax Rulings

Internal Revenue Commissioner Roper has issued a statement explaining that no attempts will be made to answer the multiude of inquiries swamping his bureau for information concerning abstract propositions involving questions of income tax and profit liability. No advance information will be given concernig taxation features of companies about to be reorganized. Requests for information must be accompanied by concrete facts and the transaction involved must be completed. Names of all real parties interested, and not dummies must be stated regardless of who presents the problem. Mr. Roper says that experience has proven that advance details of plans of business reorganizations do not always coincide with the facts as they appear when finally worked out.

Todd Ship Surplus Falls

A decrease in the surplus of the Todd Shipyards Corp. for the year ended March 31 is shown in the company's annual report. After depreciation, taxes and sinking fund reserve the surplus for the year was $1,134,582 against $3,943,237 in 1918. Net earnings were shown to have increased $294,217 to $12,292,767 in the year and there was an increase in reserves for depreciation, taxes, amortization of $2,919,145 to $8,784,605 over the year before. The net working capital of the corporation as of March 31 was reported as $5,690,580 as compared with $4,848,200 the preceding year. President William H. Todd says that since March 31, 1919, all of the outstanding $786,000 6 per cent convertible notes have either been converted into stock or called for payment. The number of shares now outstanding is 95,000. The net working capital March 31, 1919 was $5,960,580 compared with $4,484,200 a year previous.
